4. Church. Matthew alone among the evangelists uses the word "church" in his gospel. Although it occurs only three times (16:18; 18:17 [twice]), the whole of the public ministry aims at gathering disciples into the embryonic church that is then led up to Jerusalem for the death-resurrection, which makes possible the full founding of the Church in the last pericope of the gospel. At the death-resurrection, Israel disowns its Messiah (27:25) and the kingdom is transferred from Israel to the Church (21:43). Because of this note of rupture, Matthew never calls the Church the new or true Israel (contra, Trilling 1964); it is rather "another people," the Church of Jesus. All the discourses, but preeminently chap. 18, contain directions for the disciples living in the Church and spreading the Church up until the Parousia. Up until then the Church remains a mixed bag of "bad and good" (notice the word order in 22:10), and hence in need of authoritative direction (16:18–19) and disciplinary action (18:15–18; Bornkamm 1970). But the Church cannot presume to anticipate the final judgment (13:24–30), to which the Church and church leaders as well as nonbelievers will be subject (24:45–25:30).

Matthew gives no detailed description of church order and leaders. Christian prophets, just men (10:40–41), wise men, and scribes (13:52; 23:34) are all mentioned, with no indication of how they are ordered or whether they overlap. Peter is presented as the "chief rabbi" of "my church," i.e., the whole church of Jesus (16:18–19). He is depicted as the firm rock of stability, ensuring the Church against the powers of

death and empowered to interpret the words of Jesus. The concentration on Peter, especially in Book Four, may reflect both the historical Peter's moderating role at Antioch between the Paul and James factions and Matthew's preference for such a middle path between extremists of left (amoral charismatics) and right (scrupulous legalists) in his own day. There is no indication that any single prominent figure presided over the Antiochus church in Matthew's day, though possibly the emphasis on Peter reflects a gradual movement from the loose college of prophets and teachers (Acts 13:1) in the first Christian generation to the one-bishop polity of Ignatius in the third Christian generation. The local assembly acts to excommunicate without any mention of church leaders (18:15–18), though this could be due to Matthew's desire to call all members to participation in church life in the face of a rising "clericalism" among leaders (cf. 23:1–12).

5. Discipleship. The theme of discipleship mediates between the themes of church and morality. As 4:18–22 graphically portrays, a disciple is one who heeds Jesus' call to follow him with total commitment. This following is not just a matter of physical movement. The ambivalent crowds, attracted to Jesus by his teaching and miracles, also follow him, but they lack the faith and understanding that mark true disciples. Unlike the Markan disciples, the Matthean disciples do believe (14:33) and understand (13:51); yet they are not idealized unrealistically. Faced with a crisis, the disciples panic and act as though they had no faith. This is the "little faith" (8:26; 14:31; 17:20) that characterizes disciples even during the time of the Church (28:17). Nevertheless, true disciples do accept the teaching of Jesus in the five great discourses; they are always the main or sole audience. The successes and failures of the disciples make them types of both Christians in general and of church leaders in particular; this holds true of Peter as well. That for Matthew discipleship need not always entail an itinerant life and literal abandonment of all possessions is intimated by such figures as Jairus (9:18–26), the host of the Last Supper (26:17–19), and Joseph of Arimathea (27:57–60). The decisive element of discipleship is rather hearing the word of Jesus and obeying it exactly (7:21–27; 21:6; 26:19). This is equivalent to doing the will of the Father (12:46–50); such obedient action makes disciples brothers and sisters of Jesus in the family of God—a good definition of the Matthean church. Hence the theme of discipleship naturally flows from the theme of church into the theme of morality.

6. Morality. Matthew has no single word corresponding to our "morality" or "ethics." The closest he comes to such a technical category is *dikaiosynē,* "justice" or "righteousness." While "justice" seems to mean God's saving activity or his gift of salvation in three cases (5:6; 6:33; probably 3:15), the other four occurrences have the ethical sense of good behavior, right conduct (5:10; 5:20; 6:1; probably 21:32). Significantly, this ethical sense of "justice" is never applied to Jesus' actions, since 3:15 probably refers to the fulfillment of God's saving plan, mapped out beforehand in prophecy. Justice in the moral sense is therefore the abstract form of Matthew's favorite phrase, "to do the will of the Father (or God)"—according, of course, to the teaching of Jesus. Jesus' teaching on the will of God is contained first of all in the five discourses, and preeminently in the Sermon on the Mount, the "Magna Carta of discipleship." The radical, demanding morality of the Sermon extends from general attitudes and actions (no anger, love of enemies) down to specific prohibitions affecting church life (no divorce, no oaths). This emphasis on stringent morality may come partly from Matthew's conservative Jewish-Christian tradition, which he finds useful in catechizing the increasing number of gentiles entering his church. This emphasis on moral endeavor does not, however, lead Matthew into Pelagianism. Forgiveness and salvation remain a free gift from God, received in faith (18:21–35; 20:1–16; 9:27–31; and 20:29–34) and made possible by the atoning death of Jesus (1:21; 20:28; 27:51–54). Radical demand flows from radical grace. It would be a mistake, though, to impose a Pauline approach to morality and the Law on Matthew; the key Pauline themes of the Law's multiplying transgressions and the Christian's freedom from the Law are foreign to the evangelist. Matthew's approach to the Law is more positive. Jesus basically affirms the Law (5:17–20), radicalizing and internalizing it (5:21–48), focusing upon its essential elements: love of God and neighbor (22:34–40; 19:18–19), the golden rule (7:12), mercy instead of ritual sacrifice (9:12; 12:7), and justice, mercy, and faithfulness (23:23). Disciples must first look within to the source of moral good and evil, i.e., the heart, and purify that; then whatever actions flow from the heart will be pure (15:1–20; cf.

5:21–30). Yet at times Jesus so radicalizes the Law that individual commandments are abrogated (e.g., his prohibition of divorce, oaths, and retaliation [5:31–39]; his rescinding of food laws [15:10–19]. From such instances, and from the general antithetical formula in 5:21–48, it becomes clear that it is the word of Jesus, not the words of the Law, that is the ultimate norm of morality for the disciple. Hence the gospel ends with the risen Jesus commanding the eleven to teach all nations to observe "all whatsoever I commanded you"—be it according to, contrary to, or simply apart from the Mosaic law. Finally, it should be noted that morality is taught not only in the discourses; the narrative likewise inculcates "doing the will of the Father" by example and counterexample. Jesus, of course, is the prime example of the obedient Son and servant of the Father (e.g., 4:1–12). In addition, from the "just" Joseph of the Infancy Narrative to the faithful women at the cross and empty tomb, various men and women exemplify in dramatic narrative the cost and reward of discipleship. Matthew has no difficulty in having Jesus speak about reward (*misthos*); it is an acceptable paraenetic motif. It is balanced, however, with the affirmation of God's sovereign freedom in rewarding (20:1–16) and with an emphasis on the disciples' attitude of trust in and abandonment to the care of their loving Father (6:25–34).

JOHN P. MEIER

MATTHEW, GOSPEL OF PSEUDO-. The *Gospel of Pseudo-Matthew,* also known as the *Liber de Infantia* or the *Liber de Ortu Beatae Mariae et Infantia Salvatoris,* dates, most probably, to the 6th century although some scholars put it later. The gospel, which was compiled in Latin, is based upon two principal sources: the *Protevangelium [or Gospel] of James,* and the *Infancy Gospel of Thomas.* As the name of the work implies, the gospel became attributed to Matthew, though in some mss it is attributed to James. The real author of the work is unknown.

The gospel is introduced by three letters, one of which claims Jerome as its author. While there are some contradictions in these letters, in general they seek to confirm the authenticity and value of the gospel, stating that it was written by the apostle and in the Hebrew language.

The contents of the gospel may be summarized as follows.

A. The Birth of Mary and of Jesus

This first section of the gospel (chaps. 1–17) is based largely upon the *Protevangelium of James;* however, the author has felt free to add to and omit from his source.

Mary's parents, Joachim, a shepherd of Jerusalem, and Anna, daughter of Ysachar, have no child. Anna laments her childlessness and is visited by an angel who promises that she will have a daughter. Mary is born. At the age of fourteen, Mary refuses marriage on the grounds that she has taken a vow to virginity; however, an angel makes it clear that Joseph is to be her guardian. The section ends with the stories of the annunciation, the trip to Bethlehem, the birth of Jesus, the murder of the innocents, and the instruction to go to Egypt.

B. The Flight into Egypt

The origins of the traditions found in this section (chaps. 18–24) are unknown. Mary, Joseph, and Jesus set off for Egypt and come to rest outside a cave. Suddenly out of the cave come a number of dragons which proceed to worship Jesus. In this way the words of Ps 148:7 are fulfilled. Later other ferocious animals bow their heads to Jesus. Resting again, Mary wishes to have the fruit from a very high tree, while Joseph is more concerned with water. The tree bends down and allows Mary to take its fruit, and under its roots is found a spring. Arriving at a city called Sotinen, they enter a temple in which reside 365 idols. At the sight of Jesus, the idols fall; and thus is fulfilled Isa 19:1.

C. The Boyhood of Jesus

With the exception of chaps. 25–26, the traditions found in this section (chaps. 24–41) come largely from the *Infancy Gospel of Thomas.* One sabbath day Jesus is playing by the Jordan when a boy spoils the pools he has made. The boy is struck dead; but seeing Mary's grief, Jesus restores the boy to life. Jesus next makes twelve clay sparrows, claps his hands; and they fly away. The son of Annas the priest breaks up the pools with a stick and is subsequently "withered up" by Jesus. On the way home Jesus slays another boy who is intent on injuring him, but later raises him again. Next follows a section on how Jesus astounded all with his wisdom. In chaps. 25–26 (not from the *Gospel of Thomas*) we hear again of Jesus' control over ferocious beasts. We hear also of how Jesus stretched a piece of wood that was too short, how he again astounded the teachers with his wisdom (and caused the death of one who struck him), and how he raised a rich man from the dead.

D. Conclusion

The final chapter (chap. 42) is not found in the *Gospel of Thomas* or the *Protevangelium of James.* It reports how Jesus blessed the members of his family and concludes by noting that whenever Jesus slept, the glory of God shone over him.

Clearly the gospel comes from the hand of one who held the persons of Mary and Joseph in high esteem. This is seen, for example, by the fact that whereas in the *Infancy Gospel of Thomas* the wood which Jesus stretched was accidentally cut too short by Joseph (13:1–2), in the *Gospel of Pseudo-Matthew* the wood is cut by one of Joseph's workers (chap. 37). So, too, in the *Infancy Gospel of Thomas,* Joseph takes Jesus by the ear to lead him home (5:2), a detail omitted by the *Gospel of Pseudo-Matthew.* Noticeable also is the desire to show that in the events of Jesus' life, certain OT prophecies are fulfilled.

As James (1924: 79) points out, the importance of the *Gospel of Pseudo-Matthew* does not center upon its contents, for most of the traditions are to be found elsewhere; rather, the gospel is important in that it was the means by which these traditions were communicated to the medieval Church. The *Gospel of Pseudo-Matthew* contributed significantly to the growth of the cult of the Virgin Mary and was a source of inspiration to later artists and poets (Warner 1976: 24–25, 30; James 1924: 79; *NTApocr* 1: 368). The *Gospel of Pseudo-Matthew* was in turn used as the basis for the *Gospel of the Birth of Mary*.

KENNETH G. C. NEWPORT

MATTHEW, HEBREW VERSION OF. Texts of Matthew in Hebrew first appeared in print in 1537 when Sebastian Münster published a manuscript of Matthew that he received from the Jews. In 1555 Jean du Tillet published another Hebrew Matthew (not radically different from Münster's) that also had been preserved by the Jews. Subsequently scholars incorrectly identified these texts as a translation of the Latin Vulgate. In 1690 Richard Simon mistakenly equated Münster and du Tillet with an earlier unpublished Hebrew Matthew preserved in the 14th-century Jewish polemical treatise, the *Even Bohan,* by the Spanish author, Shem-Tob ben-Isaac ben-Shaprut (= ibn Shaprut). The identification of Münster and du Tillet with the text of Shem-Tob discouraged subsequent scholars from investigating the latter

until recently. Shem-Tob's Hebrew Matthew has now been published in full, accompanied by a critical apparatus, an English translation, and an analysis of the text (Howard 1987).

Apparently Shem-Tob's Hebrew Matthew is a Hebrew composition overlaid with scribal errors and layers of scribal modification. The modifications are (1) stylistic, consisting primarily of improvements in grammar and diction, and (2) revisions designed to make the Hebrew correspond more closely to the canonical Greek and Latin texts. Münster and du Tillet appear to be systematic revisions of the Shem-Tob type text designed to make it read even more closely to the Greek and Latin.

A pre-14th-century date for Shem-Tob's Hebrew Matthew is evidenced by its unique textual agreements with earlier Aramaic and Hebrew quotations of or allusions to Matthew in Jewish and anti-Christian writings. These include the Talmud (*b. Šabb.* 116^{b}), the *Tol'doth Yeshu* (6th–10th centuries), the *Book of Nestor Hakomer* (between the 6th and 9th centuries), the *Milhamot HaShem* by Jacob ben Reuben (1170), *Sepher Joseph Hamekane* by Rabbi Joseph ben-Nathan Official (13th century), and the *Nizzahon Vetus* (latter part of the 13th century).

The old substratum to Shem-Tob's Matthew is shown to be a Hebrew composition by a multiplicity of puns, word connections, and alliterations that are workable in Hebrew but not in Greek and Latin. The old substratum has textual affinities with some writings that vanished in antiquity but were rediscovered or recognized, in whole or in part, in modern times. These include the Old Syriac, the *Diatesseron* of Tatian, the *Gospel of Thomas,* and the hypothetical gospel source known as Q. On occasion the old substratum gives a Hebrew basis for variation between the Synoptic Gospels. Linguistically, it has characteristics that one would expect of a document written early in the common era and preserved by medieval Jewish scribes. It is written in biblical Hebrew with a healthy mixture of Mishnaic Hebrew and Aramaic forms overlaid with medieval scribal revisions designed to improve its grammar, diction, and general style.

Whether Shem-Tob's Hebrew Matthew is to be equated with the Hebrew Matthew referred to by Papias (ca. 60–130 C.E.) is unknown. (His reference is preserved in Eus. *Hist. Eccl.* 3.39.16). A comparison of Shem-Tob's text with quotations of a Hebrew Matthew or of a Hebrew apocryphal gospel cited by later writers (Epiphanius and Jerome) leads to the conclusion that Shem-Tob's Matthew was unknown by early gentile Christians.

Shem-Tob's Hebrew Matthew has a number of distinctive characteristics that place it into a different theological mode from that of the Greek text. Salient differences are the following:

First, in the Hebrew Matthew Jesus assumes a role somewhat different from his role in the Greek Matthew. Several times where the Greek reads "Son of Man," the Hebrew reads "Son of God" (16:27, 28; 26:64). Once where the Greek reads "Son of David," the Hebrew reads "Son of God" (21:15). Once where the Greek reads "Son of God," the Hebrew reads "God" (4:6). With one possible exception (16:16) Jesus is never seriously identified as the Messiah/Christ. In the Greek texts, for example, "Christ" appears at 1:1, 17, 18; 11:2, but not in the Hebrew. Primarily, the role Jesus assumes in the Hebrew Matthew is that of judge and avenger (Heb *gō'ēl haddām*). According to the Hebrew he will come with the "fire of the Holy Spirit" (3:11). This sets the stage for later references to his coming in judgment (13:41; 19:28; 24:37–41; 25:31ff.). Other matters of interest are: (1) Jesus adheres to the Law more strictly in the Hebrew text than in the Greek (5:17–48), and (2) his execution is depicted as a Jewish hanging in the Hebrew text rather than a Roman crucifixion (27:23, 26, 31, 38, 44; 28:5).

Second, in the Hebrew Matthew John the Baptist assumes a more salvific role than in the Greek text. In 11:11 the Hebrew reads that none has arisen greater than John the Baptist (without the additional words that appear in the Greek: "Yet he who is least in the kingdom of heaven is greater than he"). In 11:13 the Hebrew reads: "For all the prophets and the law spoke *concerning* (Gk reads "until") John." In 17:11 the Hebrew reads: "Indeed Elijah [= John the Baptist] will come and will *save* all the world."

Third, the Hebrew Matthew, in good Jewish fashion, envisions the inclusion of the gentiles to take place at the end of the present era rather than during it. In this respect it is anti-Pauline. The great commission (Matt 28:19–20) in the Hebrew text lacks mention of the gentiles and the trinitarian baptismal formula. This creates a new theological dimension for the First Gospel, which contains the limited commission at 10:5–6: "Go nowhere among the gentiles, and enter no town of the Samaritans, but go rather to the lost

sheep of the house of Israel" (RSV), and the derogatory words regarding the gentiles at 15:26: "It is not fair to take the children's bread and throw it to the dogs" (RSV). The harshness of these words is unsoftened in the Hebrew by the final commission to all the nations (28:19–20) found in the Greek. According to the Hebrew the only hope for the gentiles in the present world is to be as dogs who eat the crumbs that fall from their master's table (15:27).

Even more decisive against the inclusion of the gentiles during the present era is the Hebrew text at 24:14–15. It reads: "And this gospel … will be preached in all the earth for a witness concerning me to all the nations and then the end will come … This is the abomination which desolates which was spoken of by Daniel as standing in the holy place. Let the one who reads understand." Thus the Hebrew gospel interprets the "abomination which desolates" as the preaching of the gospel to the gentiles *before* the end.

It is not the case, however, that no hope of salvation is given to the gentiles by the Hebrew gospel. According to it the Son of Man will return in glory and gather all the gentiles before him. He will assign some to eternal life; others he will assign to eternal abhorrence (25:31–46). Salvation to some gentiles therefore will come at the end of the present era.

GEORGE HOWARD

MATTHEW, MARTYRDOM OF. How the apostle Matthew met his death is in some dispute. According to Heracleon (Clement *Strom.* 4.71.3) Matthew passed away naturally; this is a minority opinion, however; and Matthew has long been revered by the Christian Church as a martyr.

The traditions concerning the exact nature of Matthew's martyrdom are not unanimous regarding either the place or mode of Matthew's execution. The most influential tradition is that found in the official *Roman Martyrology* of the Catholic Church, according to which Matthew was martyred in Ethiopia (O'Connell 1962). This tradition is found also in *Foxe's Book of Martyrs,* where it is reported that Matthew was slain with a halberd in the city of Nabadar. The belief that Matthew was slain with a halberd, sword, or other sharp instrument is apparent in the depiction of Matthew in art, where the apostle often carries a spear.

According to the 5th-century *Hieronymian Martyrology* (*PL* 30: 433–86), on the other hand, Matthew was martyred in Persia, in the town of Tarrium; while according to the Greek *Martyrdom of the Holy Apostle Matthew* the apostle suffered execution by fire in the Roman province of Pontus, dying "around the sixth hour" (Lipsius and Bonnet 1898: 217–62). The Babylonian Talmud (*b. Sanh.* 43a) reports briefly that Matthai, one of the disciples of Yeshu, was executed (by the Sanhedrin) but gives no details. The relics of St. Matthew were reportedly found in Salerno in 1080.

KENNETH G. C. NEWPORT

MATTHIAS (PERSON) [Gk *Maththias* (Μαθθιας)]. The disciple chosen to fill the vacancy left by Judas among the Twelve (Acts 1:23, 26).

Matthias is a diminutive form of the common name Mattithiah, "gift of Yahweh." Apart from his election to the Twelve nothing else is known about him. Later legends numbered him among the Seventy disciples of Luke 10, identified him with Zacchaeus or Barnabas, and gave two different accounts of his death. An apocryphal gospel was written in his name.

Since there is no reliable information about him beyond these few verses in Acts, his importance lies in the ideas connected with the story of his election.

Luke, with two exceptions, limits the use of "apostle" to the Twelve. Paul seems to distinguish the Twelve from apostles (1 Cor 15:5–7). In unraveling the traditions behind the story of Matthias' election to the Twelve, it appears that Luke has imposed his own definition of the apostolate upon an earlier time. The Twelve were not originally apostles. They were eschatological representatives of messianic Israel. Symbolizing the twelve tribes, they stood as the foundation of the true Israel. It was essential that the vacancy left by Judas be filled in order to fulfill this function. With Matthias' election the early community stood ready for the eschatological gift of the Spirit at Pentecost and their anointing as the true Israel. It is doubtful that the Twelve functioned in this sense outside of Jerusalem or that they functioned for very long as a definite group within Jerusalem. This helps to explain the lack of knowledge about Matthias and others of the Twelve.

For Paul "apostle" refers to someone called to mission by a special appearance of the risen Lord. See APOSTLE. Luke gives Matthias' qualifications as having been with Jesus from his baptism by John until the ascension. This statement is the origin of speculation that he was one of the Seventy. The probable requirement for membership in the Twelve was simply being a witness of the resurrection. Luke has expanded this to include witnessing Jesus' life as a means of grounding the gospel tradition in eyewitness testimony. Luke's restriction of the term to the Twelve seems to reflect a later solution to the problem already felt in Paul's epistles as to how to distinguish true from false apostles. There are only twelve apostles, the foundation not only of the true Israel but also the Church (cf. Eph 2:20; Rev 21:14).

Luke tells us that Matthias was elected by lot. The exact meaning of the phrase in v 26 and the procedure it describes are uncertain. Some have thought that the verb (*didōmi*) implies that Luke may have meant by *klēpos* not "lot" but "vote." But it seems more likely that Luke, familiar with the LXXand the Hellenistic practice of selecting responsible officials by lot, understood the OT practice where stones with names on them were put in a vessel which was shaken until one fell out. It has also been argued that the word "lot" acquired a metaphoric usage in Judaism. In this view the story indicates that the community selected Matthias (the procedure left unspecified) and that they believed the decision was from God. It was his God given "lot" in life to be one of the Twelve. In this reconstruction Luke's source portrayed a metaphoric use of the word "lot" which he has objectified as a literal "casting of lots" (Beardslee 1960: 245–52). In any event the story makes it clear that God selected Matthias to fill Judas' vacancy. This causes speculations that Paul was meant to be the twelfth apostle and that Peter and the early community overstepped their authority in appointing Matthias to appear polemical.

THOMAS W. MARTIN

MATTHIAS, TRADITIONS OF. A work named and quoted by Clement of Alexandria, who attributes it to "Matthias the Apostle." This presumably refers to the Matthias who is named in Acts 1:23–26 as the man chosen to replace Judas among the Twelve. According to Eusebius (*Hist. Eccl.* 1.12.3) Matthias was one of the Seventy (Luke 10:1).

The extent and genre of the *Traditions of Matthias* is uncertain. Clement's citations from it are brief hortatory sentences (*Strom.* 2.9.45; 3.4.26; 7.13.82). But if *Strom.* 4.6.35 is derived from the same source, then the work may also have contained some narrative about Jesus. The quotations are not overtly gnostic, but according to Clement (*Strom.* 7.17.108) teachings of Matthias were used by Basilideans and perhaps

other gnostic groups. According to Hippolytus (*Haer.* 7.20.1) Basilides and his son Isidore claimed to have learned from Matthias "secret words," which he had received in private teaching from the Savior.

Traditions of Matthias probably was composed in Egypt in the first half of the 2d century. It sometimes has been identified with a work called the *Gospel of Matthias*, but there is too little evidence to decide this question definitively (*NTApocr* 1: 312). The earliest author to mention a *Gospel of Matthias* is Origen (*hom.* I. *in Lc.*), whose information is repeated by Ambrose and Jerome. Eusebius (*Hist. Eccl.* 3.25.6) mentions it together with gospels of Thomas and Peter. He describes them as works which were composed by heretics, but which nonetheless were known to most writers in the early Church. The *Gospel of Matthias* is also named in lists of heretical works: the Decretum Gelasianum, the Catalogue of the Sixty Canonical Books, and a list in the Samaritan Chronicle No. II of false books allegedly used by Nazarene Christians.

MATTHIAS, ACTS OF. See ANDREW AND MATTHIAS, ACTS OF.

MATTITHIAH (PERSON) [Heb *mattityâ* (מַתִּתְיָה), *mattityāhû* (מַתִּתְיָהוּ)]. Var. MATTATHIAH. 1. A Levite and son of Jeduthun (1 Chr 25:3) who played musical instruments before the ark during the time of David. Given the Chronicler's extreme interest in the installation of temple musicians (Braun *1 Chronicles* WBC, 186), further details are provided. Within a list that also includes a director, singers, and those who played harps, trumpets, and cymbals, Mattithiah played the lyre (1 Chr 15:18, 21; 16:5; 25:21). That this activity carried considerable religious significance is emphasized by the writer's describing it as "prophecy" (1 Chr 25:1).

2. A Korahite Levite and the first son of Shallum who served at the temple following the return from Exile (1 Chr 9:31). Mattithiah's specific responsibility was to bake the liturgical cakes for the temple service.

3. A son of Nebo who, persuaded by Ezra, agreed to renounce his foreign wife (Ezra 10:43 [LXX *Mathathia*]; 1 Esdr 9:35 [Gk *Mazitias*]). Not included within the lists referring to priests and Levites, Mattithiah was a member of the Israelite laity.

4. One of the men who stood on Ezra's right hand during the great public reading of the Law (Neh 8:4; 1 Esdr 9:43). Not designated as a Levite, Mattithiah's position at this event suggests that he was an influential or representative member of the Israelite laity. In 1 Esdr 9:43, Mattithiah appears as Mattathiah (RSV).

MAZAR, TELL EL- (M.R. 207181). An Iron Age site nestled geographically and chronologically among its larger sister tells at Deir ʿAlla and Saidiyeh. Though N. Glueck in the 1930s identified it from its surface pottery as an important Iron Age site (Glueck 1951: 302–3), Tell el-Mazar remained untouched until the University of Jordan excavated it during four seasons between 1977 and 1981.

Tell el-Mazar is located 3 km N of Tell Deir ʿAlla and about 3 km E of the Jordan river. It rises 24 m above the valley floor, at an altitude of 250 m below sea level. In antiquity the settlement at the site exploited the year-round waters of the Jabbok river and the rich agricultural lands around the tell. The ancient identification of the site remains unknown, but the modern name of Tell el-Mazar is thought to come from the nearby mosque and pilgrimage site of Mazar Abu 'Ubaidah, where the early Islamic general Abu 'Ubaidah was buried in A.D. 622.

Occupation of the site extends from the 11th century B.C. to the middle of the 4th century B.C., with signs of human occupation going back to the 13th century B.C. The site consists of the main tell and an associated sanctuary/cemetery area to the NW (Yassine 1983).

The earliest architectural remains on the tell are from the 8th/7th centuries B.C., when the Ammonite kingdom controlled the area from its capital at Rabbath-ammon (modern Amman). The formerly

independent Ammonite kingdom came under the control of the Assyrians after the campaigns of Tiglath-pileser III in 732 B.C. While they paid tribute to the Assyrians, the Ammonites enjoyed a measure of local autonomy and prospered from the trade that flourished under the regional security provided by the Assyrian Empire (Bennett 1978, Lindsay 1976). Remains from this Iron Age II period include parts of a building with a square courtyard, whose floor was paved with flagstones. A storage jar in one room was still filled with wheat grain, while in another corner of the same room a bathtub was built on a brick platform. The rooms from this early settlement were destroyed by fire at the end of the 8th century B.C.—perhaps reflecting the destruction inflicted by the 701 B.C. campaign of Sennacherib (Yassine 1983: 512).

During the 7th century, the site was rebuilt and included a large, nonmilitary building that was used as a residence. It had a stone-paved open courtyard surrounded by rooms used for different purposes, including cooking and storage. A series of *tabuns*, or ovens, were found from this level. There is no evidence of destruction at the end of this phase (Yassine 1983: 510).

The next phase of occupation (the 7th/6th centuries B.C.) seems to have been during a period of prosperity and peace, to judge by the remains at the top of the mound of a large and impressive building. It commanded a fine view of the entire central Jordan valley and has been called a "palace fort." It was composed of rooms at two different levels, connected by a staircase. The utilitarian lower rooms included a kitchen and rooms for storage, weaving, and meat preparation. Because of the smaller size of the tell and the relatively more sophisticated mudbrick architecture compared to other Iron Age tells in the area, we speculate that this may have been the residence of a local governor or other official.

This settlement ended suddenly and violently, with great fires destroying the buildings. There were no human skeletons but many intact objects and full storage jars, suggesting that the inhabitants of the settlement escaped the final destruction by fire but were unable to take many belongings with them. This destruction may date from the Neo-Babylonian conquests during the reign of Nebuchadnezzer (Yassine 1983: 507–8).

During the 7th century B.C. the Ammonite, Moabite, and Edomite kingdoms in Jordan had prospered as self-governing vassals of the Assyrian Empire. This era of prosperity ended with the Neo-Babylonian conquests of Jordan and Palestine around 586 B.C., which may be recorded in the destruction levels at Tell el-Mazar. In the middle of the 6th century B.C., Neo-Babylonian rule in Jordan and the Ammonite kingdom ended when the Persians conquered the area and ruled for two centuries.

The tell was once again inhabited in the 5th century B.C., when intensive filling operations leveled the destroyed remains of the 6th-century-B.C. city. The quality of mudbrick construction seems inferior to that of the previous settlement, though the 5th-century-B.C. buildings are planned in a uniform and orderly manner, with a series of rooms around a central courtyard. These seem to have been "private industrial houses." The domestic utensils and industrial artifacts indicate that this settlement dates from the two centuries of Achaemenid Persian domination of Jordan/Palestine (from 538–332 B.C.). The Persian influence at Tell el-Mazar is reflected in stamp seals and impressions, metal products, bronze and silver jewelry, and ceramics (Yassine 1983: 503–7).

The latest occupation phase at Tell el-Mazar in antiquity was during the late Persian years of the 4th century B.C., a few decades before the armies of Alexander the Great conquered the area in 332 B.C. and ushered in the era of Hellenism. The most striking feature of the late Persian occupation was dozens of deep, rounded storage pits and silos. Some are over 2 m in diameter and 4 m deep. Usually, but not always, lined with bricks, stones, or mudbricks, these cylindrical or barrel-shaped pits were used to store chaff, charred grains, pottery, copper, stone vessels, or just rubbish. The excavators believe such grain silos were built on top of the Jordan valley tells because the dry climate of the valley and the steep slope and compact deposit of the tell combined to allow rainwater to run off quickly, producing ideal grain-storage conditions. The storage of grain on a large scale (also attested at Tell Deir ʿAlla and Tell Saidiyeh) may have been as security against famines, or may reflect a tax-gathering facility or support for a military force. The tell seems to have been abandoned in 333 B.C., when Alexander the Great's armies conquered the area.

The second part of the site is a low (1-m-high) mound located about 400 NW of the main tell, covering an area of some 1200 m^2. This area was first occupied in the 11th/10th centuries B.C., during the Iron Age IB–C. The excavations revealed the remains of a large, rectangular-plan building measuring 24 × 16 m. See Fig. MAZ.01. We called this an "open-Court Sanctuary," since it consists of an open courtyard flanked by rooms. The solid, 1.2-m-thick walls of the rooms and courtyard were made of mudbricks. The sanctuary seems to have been built toward the end of the 11th century B.C. and was destroyed late in the 10th century B.C. (Yassine 1984a: 115).

Three rooms on the N side of the courtyard yielded cult vessels (cylindrical incense burners and chalices), underground cisterns, storage jars, and a great deal of pottery. The large courtyard, with its main entrance in the S wall, facing Tell el-Mazar, was covered with a thick layer of ashy debris and burned materials, including pottery sherds, animal bones, grain, and fuel materials (brushwood and charcoal). There were three *tabuns*, or ovens, in the courtyard, a shaft tomb with three male burials, and, near the middle of the courtyard, a stone table that may have served as an altar. The sanctuary seems to have been the site of large-scale food processing, with refuse being disposed of in the courtyard.

It is believed that the sanctuary served a public purpose but was not a place of large-scale public worship.

After the sanctuary went out of use, the site NW of the tell was deserted for nearly 500 years. It was used again in the 5th century B.C., this time as a cemetery; and 84 graves were excavated in late 1979. The skeletal remains show the average life expectancy of the Ammonite people at that time was around 33 years (Yassine 1984b: 187).

Many of the warlike objects excavated from the tombs, such as arrowheads, swords, daggers, and spearheads, suggest the male burials were those of warriors (Yassine 1984b: 8). Five different kinds of burials were documented, including brick- and stone-lined pits, skeletons in shallow ceramic jars, and skeletons in bathtub-like clay boxes with handles. Some of the graves contained stamp or cylinder seals, which were placed on the deceased's chest or hung from the belt. A few had the name of the deceased (such as "Lhmyws son of Smṭ;"Yassine and Bordreuil 1982: 193; Yassine 1984b: 133). Most are important for their artistic and iconographic information, showing the cultural links between the Ammonite people and some of the nearby great civilizations in Persia, Egypt, and Assyria (Yassine 1982).

The seals, made of colored marble, agate, lapis lazuli, jasper, or limestone, had a variety of motifs. Among them were winged bulls and lions, a rider on a galloping horse aiming his bow and arrow at a gazelle whose foreleg is being bitten by a god, a Neo-Babylonian worshipper, a representation of two eyes around a nose, a cult scene of two worshippers flanking a stylus and a spade, two animals flanking a hero, two falcon-headed solar deities in human form flanking a stylistic tree, and walking bovine animals (Yassine 1982: 189–92).

A few ostraca from Tell el-Mazar were uncovered dated between the 6th century B.C. and the early Hellenistic period. Most of the personal names contained in the inscriptions have parallels in other sources. Of particular interest are the many personal names with the theophoric element *ʾl* (Yassine and Teixidor 1986).

MAZOR, THE MAUSOLEUM (M.R. 145161). The site of a monument known as Makâm en-Nabi Yahyah, located on the road between the Tower of Aphek and Lod, near the abandoned village of el-Muzeiriah. This monument, which stands out noticeably on the landscape, measures 9.4 × 10.2 m, and in front it measures 4.8 m high; it is one of the few Roman period buildings in the country to be preserved virtually intact.

It was first investigated in 1872 and 1873; its ground plan was drawn; and the monument was dismissed as a "curiosity" (Condor and Kitchener *SWP* 2: 265–67). Initial trial excavations were carried out in 1964 and later in 1973 (Kaplan 1985). The interior of the building was discovered to have two rooms, with a portico in front. Room A is an ordinary burial chamber with two sarcophagi, in which were interred the bodies of a man and a woman. Presumably, the persons buried here were the owner of an agricultural estate (or a high government official) and his wife, since only such persons would have the wealth required to build such a mausoleum. Room B, which has niches or cells in its walls, is a "columbarium" room, evidently set aside for the master's slaves or freed slaves, whose cremated remains were placed in bags in the cells of the room.

The mausoleum also exhibits some unusual architectural elements, apparently related to some of humankind's earliest beliefs about death and resurrection. The "columbarium" contains certain features associated with doves, which characteristically served as emblems of Near Eastern goddesses (mother goddesses, fertility goddesses, Astarte, Aphrodite, Atargatis, etc.). The dove is always depicted flying with outstretched wings, possibly symbolizing humankind's hope that the dead will yet return to the scene of life: the dove, taking off in flight from cemeteries and burial places, plucks the soul of the deceased from the netherworld and returns it to the world of the living.

The mausoleum has been dated to A.D. 300, the period of Emperor Diocletian, when the mystery cults (i.e., cults of the netherworld) still flourished and when Christianity had not yet become the state religion. It is possible, however, that the mausoleum was built during the brief reign of Julian the Apostate (A.D. 361–63), who wanted to reinstate the pagan cults.

JACOB KAPLAN

ME-JARKON (PLACE) [Heb *mê-hayyarqôn* (מֵי־הַיַּרְקוֹן)]. A river or town mentioned in Josh 19:46 as part of the territory of Dan, prior to that tribe's northward migration to LESHEM (= LAISH [PLACE]). The boundary is described as going by way of Bene-berak, Gath-rimmon, "Me-jarkon, and Rakkon, with the territory over against Joppa."

There is general disagreement over whether Me-jarkon (lit. "waters of the Jarkon") refers to a perennial stream N of Tel Aviv called the Nahr el-Auja (= Yarkon river) or to a settlement. Scholars who believe that Me-jarkon was a town point out that it is not an impossible place name (cf. Me-jericho, Josh 16:1; Me-nephtoah, Josh 15:9). Thus Abel (*GP* 2: 53) identified Me-jarkon with Tell Jerîsheh (M.R. 132167), while Simons (*GTTOT*, 201) proposed Tell Qasile (M.R. 131168) a bit farther to the W. Those who say that Me-jarkon is a watercourse, indicate that the Nahr el-Auja is the most prominent geographic figure in the area and would readily serve to distinguish between tribal allotments (Lakkai *EncMiqr* 3: 888).

Any possibility of consensus, however, is complicated by textual problems. The MT in v 46a reads, *ûmê hayyarqôn wĕharāqqôn* ("and from the waters of Jarkon and the Rakkon"). The reference to *harāqqôn* is generally regarded to be a duplication of the preceding *mê-hayyarqôn* with some transposition, even though a suitable place name can be found for Rakkon in Tell er-Reqqeit (M.R. 129168). This conclusion is apparently confirmed by the LXX, which does not mention Rakkon: *kaí apó thalásses Ierakon* ("and on the west [seaward], the Jarkon"). The LXX also seems to indicate that the MT has lost the final *mem* of *ûmê,* reading "and the waters of" instead of "and on the west [seaward]." Following the LXX, the MT is thereby restored to read "and on the west [*wmym*], the Jarkon with the border opposite Joppa." Kallai (*EncMiqr* 3: 888) though, argues that the LXX is not reliable at this point, since the Syro-Hexapla, which

is based on the LXX, reads the same as the MT. He therefore prefers to retain the original MT reading. He also believes that "the Rakkon" is a river and refers to the Nahr el-Barîdeh, the lowermost course of Wâdī Musrara (= N Ayyalon), which streams from S to N and parallel to the Mediterranean Sea, leaving Joppa W of the boundary line (*HGB*, 370). Naʾaman (1986: 112) prefers Noth's proposal and identifies this same stream bed with Me-jarkon. In either case the Nahr el-Barîdeh would denote a westward abutment of the border on the territory of Joppa, leaving it outside of the inheritance of Dan.

In the end most scholars prefer to identify the Me-jarkon with the Nahr el-Auja ("the tortuous river") which originates at the Rosh ha-ʿAin springs (M.R. 143168), the site of OT Aphek and NT Antipatris. From there it flows westward, where it is soon joined from the N by the Kanah stream (Josh 17:9–10), finally ending its winding 26-km course at the Mediterranean, about 6.5 km N of Jaffa. The name *yarqôn* is related to the Heb word *yarôq* ("green"), and probably refers to the large quantity of organic matter carried by the stream, giving it a pale green appearance. This same river was called Mê-Pîga during the Hellenistic period; it was named after the city of Pegae, which was located at Rosh ha-ʿAin before Herod built Antipatris.

Today the river is barred by sand banks; but in antiquity it was navigable for a certain length, explaining the existence of an anchorage at Tell Qasile, about 3 km inland on the N bank of the river. Maisler (1950–51: 62) and others have proposed identifying the Jarkon with the biblical Sea of Joppa. If so, then maybe the "cedar trees" cut down in Lebanon in Solomon's and Zerubbabel's days were floated up the Jarkon to Tell Qasile, where they were unloaded and forwarded to Jerusalem (1 Kgs 5:9 [= 2 Chr 2:16]; Ezra 3:7).

MEAL CUSTOMS. This entry consists of three articles that discuss eating customs in the world of the Bible. The first deals mainly with the kosher dietary laws of Judaism that are rooted in the legislation of the Hebrew Bible. The second deals with eating customs in the Greco-Roman world, while the third focuses specifically on sacred meals in the Greco-Roman world.

JEWISH DIETARY LAWS

In its broadest sense the traditional designation *kašrût*—deriving from the Hebrew word the literal meaning of which is "correctness," "appropriateness"—can be applied to any matter of ritual acceptability or appropriateness, whether in reference to a written Torah scroll, to a temporary dwelling constructed for the pilgrimage Festival of Succoth, or to food. As it applies to food, kashruth covers the full range of biblical precept, rabbinic ordinance, evolving custom, and local practice within the Jewish community.

First, consideration will be given to those agricultural commandments that impinge on food consumption and that are relevant only to those residing in the land of Israel (as defined by its traditional biblical boundaries) including: the precepts of the Sabbatical and Jubilee Years, tithing and other priestly and levitical rights, the firstfruits, and the dues owing to the poor. Other agricultural restrictions—which may or may not apply to foods grown in the Diaspora (depending on which sources and authorities are consulted)—concern *ʿorlâ* (the fruit of young trees; see Lev 19:23) and new grain (Deut 16:9).

Apart from the matter of the fruit trees in the Garden of Eden, biblical references to dietary matters begin in Genesis with the observation that the "sinew of the thigh" is not eaten "until this very day" in commemoration of Jacob's nocturnal wrestling injury. This is the sole dietary matter mentioned in Genesis (Gen 32:33), with the exception of the Noachian prohibition on eating of a limb cut from a live animal (based on an interpretation of Gen 9:4).

The second restriction mentioned has to do with the way in which the original paschal sacrifice was to be eaten (Exod 12:8–14), followed by the ban on grain fermentation in connection with the Passover celebration, scattered throughout Exodus, Leviticus, Numbers, and Deuteronomy.

A third concern is the thrice-mentioned admonition dealing with "seething the kid in its mother's milk" (Exod 23:19; 34:26; and Deut 14:21). By far, the largest text is the listing of kosher animals in Leviticus 11.

In all areas of Jewish law, the biblical commandments are implemented in accordance with the interpretations and procedures recorded in rabbinic literature of late antiquity as expounded and elaborated in the commentaries and codes that begin appearing in the Gaonic period (ca. 9th century C.E. through the high Middle Ages). It is important to remember that—notwithstanding many wide areas of absolute conformity—evolving Jewish law, even within the normative Orthodox wing alone, has never been monolithic. As a result, it is usual for all popular guides to the practice of kashruth (including cookbooks) to contain strong disclaimers and exhortations to the reader to consult local competent rabbinic authority at all times.

The ban on the "sinew of the thigh" is accordingly implemented in the dissection of the entire sciatic complex as part of the ritual preparation of meat for consumption, while the restriction on "seething the kid in its mother's milk" is reflected not only in the practice of complete separation of meat and dairy foods and utensils in cooking, but also in prohibitions of eating these items together or benefiting from any other use of the combination.

Grain fermentation, while primarily concerned with the production and eating of leavened bread, also refers to other edible or potable commodities, including beer, food mixtures, food items such as sourdough that are not in themselves considered to be edible, and even nonfood items such as library paste.

But it is with meat and animal derivatives that the greatest bulk of legislation is concerned. The eleventh chapter of Leviticus details the division of animals into categories of permissible and forbidden. Biblical taxonomy, which is a system of classification unto itself, subdivides the animal kingdom into (a) land beasts, further divided into domesticated animals and wild beasts, (b) flying things, including birds and insects, (c) sea things, and (d) creeping things. See also ZOOLOGY.

Permitted land beasts include all warm-blooded animals, domesticated or wild, that are characterized as being both ruminants and ungulates. As examples of forbidden warm-blooded animals, the hare and the camel, which are not ungulates, and the pig, which is not a ruminant, are specifically mentioned.

By inference, pigeons and doves, which are included among possible sacrificial offerings, are permitted foods. Among the other permitted flying things are locusts, which have segmented legs, and those birds not specifically forbidden by list (Leviticus 11 and Deuteronomy 14). Thus, the chicken, duck, goose, and turkey, which are not specifically mentioned at all in biblical literature, are held to be permissible by common tradition.

Aquatic creatures that are permitted are restricted to fish which must have both fins and scales of a specified type; whales, eels, swordfish, shark, and sturgeon are, for various reasons, among the forbidden varieties.

Another parameter concerns the relationship between the sacrificial cultus and permissible food. While any animal that could be sacrificed was deemed fit for consumption, not all permissible food had a role in the various sacrifices. Fish, for example, were never offered on the altar; and the only birds that were sacrificed were the dove and the pigeon. Among the mammals, only cattle, sheep, and goats were offered. Furthermore, those animals which could be eaten, whether included in the sacrifices or not, are to be slaughtered in accordance with the specific procedures applicable to sacrificial mammals, which is to say that they are put to death by one sweep of an unblemished sharp knife that severs the jugular as well as the windpipe. In this manner, all meat that is consumed is in some way symbolically associated with the sacrificial cultus. Needless to say, an animal that dies of natural causes is forbidden. Fish and locusts are the only exceptions to the requirement of ritual slaughter.

But the symbols of sacrifice are not restricted to the manner of slaughtering the animal. A careful examination of the carcass is made, and any obvious organic oddity or malformation as well as any damaged organ that would render the animal unfit for sacrifice renders the animal unfit for consumption. These matters apply even to birds and mammals that never had a sacrificial role.

In addition, the animal's blood and tallow fat are never to be eaten, since the blood was drained and then dashed or sprinkled on the altar and the tallow fat (as distinct from suet) was always burned on the altar as the essentials of sacrifice. Kosher preparation, therefore, requires that the blood be drained as completely

as possible and that the appropriate portions of fat be removed (although the tallow of wild animals, according to most authorities, is not banned). At the same time, the sciatic nerves are completely dissected out. (Because of the enormous labor involved in the dissection of the hind quarters, with respect to both the sciatic nerves and the removal of the tallow, meat beyond the twelfth rib is generally not prepared for commercial kosher consumption.)

The next step in the kashruth process is the effective removal of remaining surface and capillary blood by a process of salting, broiling, and rinsing of the meat or, except for the liver, by the alternative method of salting, soaking, and rinsing. This process of "kashering" is necessary for all animal protein, with the exception of locusts and fish.

Another parameter is the division of foods into categories of meat, dairy, and pareve (neutral), based on the biblical injunctions against "seething the kid in its mother's milk" that were cited above. This threefold biblical commandment is interpreted as a ban on the actual cooking together, as well as on the eating or other significant use of the product. It further affects the mere intermingling of meat and milk as well as the respective utensils or dishes used for cooking or eating.

Because the designation "kid" is interpreted to mean the young of any mammal (compare the English usage of "calf" to refer to elephants and whales), the prohibition is applicable to include the meat of one mammal and the milk of another. Rabbinic elaboration further applies the prohibition to the flesh of birds cooked in milk, possibly paralleling the reason for which birds require ritual slaughter. An interesting extension applies to the ban on cooking fish together with meat or fowl, as mentioned in passing in the Babylonian Talmud (*Ḥul.* 103-bff.), but not the consumption of fish and meat at the same meal. This stricture is perhaps the only area of kashruth where a ban is based on consideration that the combination may be toxic.

Other areas of kashruth concern the ban on wine (but not other fermented beverages derived from fruit or grain) pressed, processed, or handled by a non-Jew and less stringent restrictions on milk.

Because of the obvious complexity of all of the issues involved, the modern kosher food industry requires supervision by a cadre of professional personnel thoroughly versed in the disciplines of chemistry and food technology as well as rabbinic law. Since many ingredients may be derived from animal sources as opposed to vegetable sources, or by synthesis, the inclusion of stearates or other staple ingredients becomes and remains a problem unless the source of the product is determined. There is no guarantee that a well-known commercial product is universally kosher just because it is so certified at a specific manufacturing site.

The rationale behind kashruth, from the biblical and rabbinic standpoint, is simply a concern for sanctity. The eminent jurist Maimonides, for example, put forth the educated guess that the ban on cooking meat and milk together was related to an ancient pagan fertility sacrifice. Except for the matter of the supposed toxicity of fish cooked together with meat, all claims of a hygienic rationale are relegated to the status of additional benefit. And even here the medieval legal and philosophical sources disagree strongly.

The best indication that physical health is not at issue is perhaps to be seen in the principle of nullification, which is invoked in cases of the accidental commingling of foods, such as meat with dairy or kosher with nonkosher. If the problem involves solid masses—such as kosher and nonkosher cheese or kosher and nonkosher meat that have no distinguishing characteristics at all—which somehow get mixed together, then the principle of nullification by the majority takes hold. Essentially (although there are many variations on the implementation) if two of the three items are known to have been kosher, they all are kosher, and vice versa.

Nullification by the proportion of less than one part in sixty applies to situations which at least one of the commodities is a liquid. Most frequently, this involves the accidental mixture of meat and dairy, but the problem is by no means restricted to this illustration. If the one element is less than one-sixtieth of the total volume, the mixture is considered kosher.

Beyond this, specific instances adducing medical or hygienic reasons for kashruth are as different in nature as are the individuals who proposed them. Maimonides provided medical-philosophical arguments,

while Nahmanides countered with medical-mystical ones. The former sought to justify his rationale by stressing the practice of kashruth as a depaganizing process, while for the latter the process was a humanizing one. In the 19th and 20th centuries, hygienic considerations were brought forward by both those who wished to perpetuate and continue with time-hallowed tradition and those who wished to do away with ritual law altogether in the process of religious reformation.

But the effects of practicing kashruth, from a socio-religious standpoint, are clear: the strictures of kashruth make social intercourse between the practicing Jew and the outside world possible only on the basis of a one-sided relationship, and that is on the terms of the one who observes kashruth. For further discussion see *EncJud* and *JEnc* articles on "Dietary Laws."

GRECO-ROMAN MEAL CUSTOMS

The NT and other Christian literature, as well as the religious literature of Judaism, have frequent references to meals of various kinds. The meal customs and rules of etiquette presupposed in such references are largely those of the surrounding Greco-Roman culture. Therefore a study of Greco-Roman meal customs provides the proper background for interpreting NT references to meals.

A. History and Development of Meal Customs

Meal customs in the entire Mediterranean region seem to have become standardized in certain broad details during the Hellenistic and Roman periods (ca. 200 B.C.E. to 200 C.E.). Certainly the various ethnic groups maintained some practices unique to themselves such as the Jewish practices connected with the religious food laws or *kašrût.* Nevertheless, Greeks, Romans, Jews, and eventually Christians shared major components of the standard meal customs of this period.

The development of common dining customs is related to the adoption of the custom of reclining at formal meals by the various peoples of the Mediterranean world. Greeks, Romans, and Jews had traditions that their people once sat at meals before taking up the custom of reclining. This custom seemed to have originated in the Eastern Mediterranean world and was known to the Jewish people as early as the 8th century B.C.E. (Amos 6:4–7). The Greeks appear to have adopted the custom from the Assyrians and were practicing it as early as the 6th century B.C.E. (Dentzer 1971, 1982). The Romans soon followed suit. Since reclining tended to carry with it other meal conventions and since Greeks, Romans, and Jews were interacting culturally in many ways in this period, their meal customs also soon came to be standardized and shared in common.

B. Main Features of Meal Customs

1. Occasions for Meals. Generally speaking, our evidence attests to the common practice of eating three meals a day, although among certain groups, most notably the Jews of the Mishnah, two meals a day was more common. The major meal of the day in all cases was the evening meal (*deipnon* in Greek; *cena*

in Latin). This was the meal that tended to have the most formalities connected with it. If a meal was to be used as a special occasion for a social gathering of friends or family or for a meeting of a club or religious group, it would normally be the evening meal. Thus the formal evening meal, or banquet, is the one to which the most elaborate traditions and rules of etiquette became attached.

a. Private Banquets. A householder might invite special friends to his home for a banquet. Such gatherings are referred to quite frequently in the literature (Pl. *Symp.* 174A; Plut. *Quaest. conv.* 615C–D, 626E, 628A, 635A; Petron. *Sat.* 26; Sir 13:9; 1 Cor 10:27). Customarily they were social occasions only for the free adult males of society. Meals of the *hăberîm* in Judaism seem to have been such a gathering of friends who took meals together; the meals of Jesus with his disciples have often been compared to this type of Jewish meal gathering. See also ASSOCIATIONS, CLUBS, THIASOI.

b. Special Family Occasions. Birthdays, weddings, funerals, and other special family occasions were regularly celebrated with a banquet (Plut. *Quaest. conv.* 717B; Lucian, *Symp.* 5; Matt 22:1–14; Luke 12:36; 14:8; John 2:1–11).

c. Religious Festivals. These were common in both pagan religion and in Judaism and were marked by sumptuous feasts. In the pagan world banquets would often be provided for the populace at large on the occasion of a religious festival.

d. Club Meetings. Formally organized clubs, whether trade guilds, funerary societies, religious associations, or even philosophical schools, usually centered their regular meetings around a communal meal.

e. Religious Sects. Religious sectarian groups, such as the Essenes and the Christians, had a formal organization similar to that of the clubs and also centered many of their meetings around meals (IQS 6:1–6; IQSa 2:11–22; Jos. *JW* 2.8.5; 1 Cor 11:20, 33; Pliny, *Ep.* 10.96).

2. The Banquet. The banquet was a social event of the first order, not just a time to eat. Invitations would be extended in advance either informally or in formal, written form (Pl. *Symp.* 174A; Xen. *Symp.* 3–4; Sen. *Ben.* 4.39.3; Pliny *Ep.* 1.15.1; Sir 13:9; Matt 22:1–10; Luke 14:16–24). Elaborate preparations were often made before the banquet. Standard customs included visiting the baths, dressing in special clothing, and otherwise preparing one's appearance (Pl. *Symp.; ILS* 7212.2.30). The Jewish Essenes seem to have elevated the custom of bathing before meals to the level of religious ritual (Jos. *JW* 2.129).

When each guest arrived, he was directed to the couches by a servant who removed the guest's sandals and washed his feet before he reclined (Pl. *Symp.* 175A; Luke 7:44–46). After the guests had reclined and before the meal began, water would be brought for them to wash their hands, a custom that became connected with religious ritual in Judaism (Ath. 14.641d; Mark 7:3; *m. Ḥag.* 2:5).

Banquets tended to take place in rooms especially designed for dining, although presumably any room large enough to hold the couches would suffice. Excavations have revealed certain standard features of dining rooms whether in private homes, sanctuaries, or public buildings. A "standard" dining room was designed to hold couches end-to-end along the walls in a configuration whereby the diners were all facing inward toward one another. The *triclinium*, or three-couch arrangement, which provided for nine diners or three per couch, was the most widely used, although there were many variations. The term *triclinium* eventually came to be used to refer to the dining room in general.

Positions around the table were customarily given a ranking. The location of the "highest" position might vary from place to place (Plut. *Quaest. conv.* 619B); but there was always some sense of ranking presupposed by the position of the diners, beginning with the "highest" position, which position could vary somewhat, and then proceeding in a descending order, usually to the right around the room, to the "lowest" ranking position. Thus the host had to decide where to place the guests according to their rank in society. Plutarch relates a situation whereby a distinguished guest arrived late to a banquet and, not finding an available position worthy of his rank, left angrily (*Quaest. conv.* 615D). Luke's Jesus plays on this same theme in the parable of the places at table (Luke 14:7–11).

Diners would all recline on the left elbow and eat with the right hand so that the placement of the recliners would be orderly. Couches were of varying designs and often were intended to hold more than one diner. Alcibiades, for example, joined Agathon and Socrates on their couch when he arrived late at

the banquet of Agathon in Plato's famous *Symposium* (213B). Similarly, the NT references to "lying close to the breast of Jesus" or in the "bosom" of Abraham (John 13:23; Luke 16:22) are best understood as references to the position of a diner reclining in a normal position to the right of the person named and probably sharing the same couch; such a position to the right of the host is a position of honor.

There were two major courses in a banquet, the *deipnon*, or eating part, and the *symposion* (symposium) or drinking part. This form is reflected in the Lord's Supper traditions in the NT in which the wine is drunk "after supper [*deipnon*]" (Luke 22:20; 1 Cor 11:25). In some cases there was also an appetizer course at the beginning of the meal (Ath. 2.58b–60b). This custom is reflected in our earliest Jewish Passover liturgy in which an appetizer course precedes the main course (*m. Pesaḥ.* 10:3).

The courses were marked off by special rituals. At the end of the *deipnon,* the servants removed the tables, swept the floor, brought water for washing the hands, and sometimes passed around garlands and perfumes (Ath. 11.462c–d). Then the bowl of wine was brought in and mixed with water for drinking. The proportion of water to wine varied, but common mixtures were five parts water to two parts wine or three parts water to one part wine (Ath. 10.426d). This was to be determined by the presider at the meal, either the host or the "symposiarch." The beginning of the symposium would then be marked by the offering of a libation to the gods and other religious ceremonies, such as the singing of a hymn (Pl. *Symp.* 176A; Xen. *Symp.* 2.1). These ceremonies are mirrored in the blessing over the wine in Judaism and the wine ceremony in the Christian Eucharist (*b. Ber.* 51a; 1 Cor 10:16).

3. The Symposium. Although wine could be drunk during the meal itself, the major part of the wine drinking took place after the meal proper during the second course known as the symposium. This was a period of extended leisurely drinking during which time the entertainment of the evening would also take place. The symposium entertainment took many forms. There were traditional games, such as kottabos, a popular party game in which the guests would compete for accuracy at flinging the last drops of wine from their cups at a target in the middle of the room. There were also various types of traditional performances—dramatic, musical, and dancing (Xen. *Symp.;* Pliny *Ep.* 1.15, 1.2; Sir 32:3–6). It was not uncommon among Greeks and Romans to indulge in sexual practices during the symposium, either with the female flute players, who were widely assumed to be prostitutes, or with their male companions. Jews and Christians, however, as well as the more moralistic of the Greeks and Romans, made a point of avoiding such activities at their banquets (Pliny *H.N.* 14:28; Philo *Cont.* 75–78).

Symposium entertainment might also take on a nobler or more serious purpose. In the philosophical schools, for example, the entertainment might consist of a philosophical discussion, a dialogue on a topic and in a form consistent with the meal occasion (Plato *Symp.* 176E; Ath. 5.185a; Plut. *Quaest. conv.* 7.7). In religious associations, such as Bacchic and other pagan religious societies, the symposium entertainment was a form of community worship or proclamation, as we know from inscriptions in which the rules for the meetings of these associations define such activities at their gatherings for communal meals (*SIG*^{3} 1109.111–17). Similarly, discussion of the Torah at meals was highly commended in Judaism (Sir 9:15–16; Philo *Cont.* 75–78; *m. ʾAbot* 3.3).

Literary descriptions of symposium dialogues led to the development of the literary form of the symposium, a form that is widely utilized in philosophical writings of this period and is influential in Hellenistic Jewish and early Christian literature as well (see e.g., the *Symposium*s of Plato, Xenophon, and other philosophical writers; compare the *Letter of Aristeas*). Both the Jewish Passover liturgy and the description of early Christian worship found in 1 Corinthians 11–14 contain formal elements that are related to the literary form of the symposium (Stein 1957; Smith 1980).

C. Rules of Etiquette

Etiquette to the ancients was a part of the theory of ethics and was therefore included in ethical discussions in philosophical literature. Various philosophers are said to have written treatises on meal ethics or "symposium laws" (Pl. *Leg.* 2.671C; Ath. 5.186b). In these treatises the emphasis is placed on proper behavior at a meal and the ethical grounding of that behavior. Some of the same types of concerns are also found in the statutes governing the banquets of clubs and associations. Many traditional elements of these ethical discussions come to be incorporated into the ritual and ideology of religious meals.

Aspects of social ranking in society were especially addressed in rules of etiquette. Besides the ranking of positions at table, the custom of reclining itself carried implications of social ranking. Thus only the upper echelon of society were to recline; women, children, and slaves were to sit at the meal. In the Roman period this custom in regard to women seems to have been relaxed somewhat since we find evidence of women reclining at meals (Val. Max. 2.1.2; Petron. *Sat.* 67–69; Lucian *Symp.* 8). Furthermore, these customs might be varied by various social groups. For example, some religious and funerary associations seem to have freely included slaves and women in their banquets. Similarly, Jews specified that even the poor were to recline at the Passover (*m. Pesaḥ.* 10:1). Another way in which social ranking was addressed was by providing a greater quantity or quality of food to those of the upper echelon; this custom has been suggested as a major reason for the problems at the Christian meal in Corinth (1 Cor 11:17–34; Theissen, 1982).

Since social ranking was so firmly a part of meal customs, rules of etiquette were often addressed to the proper ways in which the host was to place the guests (Plut. *Quaest. conv.* 1.2). Similarly, guests were urged to accept the position assigned to them and not try to usurp someone else's position (Association of Diana and Antinous [*ILS* 7212.2.25]; Sir 13:11; 32:1; Luke 14:7–11). Another characteristic ethical concern, found especially in the Jewish wisdom tradition but not uncommon in Greco-Roman moralism as well, is the call for moderation in food and wine (Pliny *H.N.* 14.28; Philo *Cont.* 74.81–82; Sir 19:1–3; 31:12–18, 22–30; cf. Prov 23:1–3).

Rules of etiquette tended to be especially concerned with maintaining good relations among the guests. The table was no place for argument, accusation, or loud and abusive language (*SIG*^{3} 1109.63–75; Sir 31:31). Indeed, "factions" of any kind at the meal were especially out of order (*ILS* 7212.2.26–28; 1 Cor 11:17–34). Entertainment should be planned so that all can enjoy it. Thus conversation at the meal should proceed in an orderly manner and on subjects in which all can participate (Plut. *Quaest. conv.* 614E, 675A; *SIG*^{3} 1109.63–67; Sir 13:8–13; 32:3–9; 1 Cor 14:26–33).

The philosophical discussions of ethics at a meal became rather standardized over the centuries and apparently penetrated into popular morality at all levels of society. The standard arguments of the philosophers describe meal ethics in terms of the virtues of friendship, pleasure, and love (*eros*). Although this technical terminology is not used consistently in the nonphilosophical literature, the ideas are similar. Because the meal is a time of sharing food and companionship, one's behavior should be concerned with the welfare of the other or with the enjoyment or pleasure of the group as a whole (Pl. *Leg.* 671C–E; Plut. *Quaest. conv.* 618A, 660B; Sir 31:15; 41:19; 1 Cor 14:12, 26–33, 39–40).

DENNIS E. SMITH

GRECO-ROMAN SACRED MEALS

In scholarly discussion, the term "sacred meal" has often been equated with the idea of "sacramental meal," using the Christian Eucharist as a model. This rather narrow definition restricts the phenomenon in a way that does not do justice to the range of religious meals in the ancient world. Here the term is being defined more broadly, to refer to meals that function as religious ritual or that include or are a part of religious ritual. Such meals were quite common in all religious traditions in the ancient world. Furthermore, they often seemed to have common elements, as Paul states in 1 Cor 10:21 when he

counsels against confusing the "table of the Lord" with the "table of demons." To understand properly Jewish and Christian religious meals of this period therefore one must understand the phenomenon of sacred meals in general.

———

A. Religious Ritual in Everyday Meals
B. The Religious Banquet
C. The Sacrificial Banquet
D. Eating Sacred Foods

———

A. Religious Ritual in Everyday Meals

Normal, everyday meals had customary religious components. Such formalities were especially pronounced at the formal evening meal, the *deipnon* or banquet. Here there were customary religious rituals, typified by the reference in Plato's *Symposium* to the ceremonies marking the transition from the supper to the symposium: "… they made libation and sang a chant to the god and so forth, as custom bids, till they betook them to drinking" (176A). The libation was a ceremony in which a special cup of wine, customarily the first of the course, was dedicated to a traditional deity, most often Zeus Sōtēr or some epithet of Dionysus such as "to the Good Deity" (Diod. Sic. 4.3; Ath. 11.486f–487b, 15.675b–c). Throughout the banquet there was a sense of connection to Dionysus, the god of wine. Thus dishes and dining rooms were lavishly decorated with his image and his presence at the gathering was equated with the presence of wine and was appealed to in discussions of the proprieties of the banquet (Plut. *Quaest. conv.* 615A).

Similar religious customs were found in Judaism; for example, here also there were specified prayers over various foods and especially over the wine (*m. Ber.* 6:1–8:8; see also 1 Sam 9:13; Jos. *JW* 2.131). In this case, of course, the prayers were directed to the one God of the Jews. Although not much is known about everyday meal practices among the early Christians, a Jewish version of the benediction over the eucharistic wine is evidently indicated by the terminology "cup of blessing" in 1 Cor 10:16 (compare e.g., *b. Ber.* 51a).

B. The Religious Banquet

Since the banquet was the formalized meal par excellence, it was the meal most often utilized in religious ritual. The meal itself would follow the same pattern as a normal banquet. It would take on a special religious nature, however, according to the setting, such as in a sanctuary; or according to the occasion, such as a sacrifice or religious festival; or according to the group gathered for the meal, such as a religious association. In such cases, the religious interpretation of the meal would most often involve a special elaboration of a traditional custom or motif already present in the meal. Thus the Jewish Passover meal, the Christian Eucharist and agape, the Greek and Roman meals of religious associations, as well as the ubiquitous sacrificial meal were all meals with special religious significance that also were structured as standard Greco-Roman banquets.

The primary banquet motif that was utilized in religious ritual was the idea of festivity. That is to say, a religious meal was not a solemn occasion, but rather was an occasion for joy and celebration. Thus in Greek the term *euphrosynē,* meaning "mirth" or "merriment," came to be used as a technical term for meals in general, and specifically sacrificial meals (*SEG* 1.248.19–20; Dio Chrys. *Or.* 3.97; Pl. *Resp.* 364B–C). The LXX utilizes the term and its verbal form with this same meaning in OT texts. Here one finds the command to "rejoice before the Lord" at Jewish festival meals (Lev 23:40; Deut 12:12; 14:26; 16:11; 16:15). In the NT, the joyful nature of the banquet is mentioned less frequently (but see Acts 2:46) and is most often connected with eschatological themes, as in Luke 14:15: "Blessed is he who shall eat bread in the kingdom of God" (see also MESSIANIC BANQUET). Other references to festive joy (*euphrosynē*) in early Christian worship most likely refer as well to the fellowship meal, especially the form of the meal known as the agape (*Barn.* 15.9; *Sib. Or.* 8.485; on the agape see Jude 12; Ign. *Smyrn.* 8.2; see also Reicke 1951: 201–22). In general therefore religious banquets retained the sense of pleasure

and celebration inherent in the occasion of a meal and simply interpreted these as part of the religious experience.

C. The Sacrificial Banquet

Sacrifice was a primary form of religious worship in all of the major cultures of the ancient world, including those of the Greeks, Romans, and Jews. There were, of course, some forms of sacrifice in which the entire animal was burned or destroyed (e.g., *sphagia* in Greek religion; compare the *ʿōlâ* [RSV: "burnt offering"] in Judaism). However, a standard type of sacrifice was one in which a portion of the meat was used by the worshippers for food (e.g., *thysia* in Greek religion; compare the *šĕlāmîm* [RSV: "peace offering"] in Judaism). In the Greek form of this type of sacrifice, the animal was first slain at the altar by the priest, then it was cut up and portions divided among the deity (whose portion was burned on the altar), the priest or temple (for the ongoing support of the cult), and the worshippers (as a gift from the god; see classic descriptions of Greek sacrifice in Homer, e.g., *Od.* 3.439–63, 14.418–36; see also Burkert 1983: 3–7; on the inherent connection of the meal to the sacrifice, see Dio Chrys. *Or.* 3.97; for Jewish sacrificial ritual, see Leviticus 1–7; Sir 50:11–21; *m. Tamid*). Among the Greeks it was sometimes specified that sacrificial meat was to be eaten within the temple precinct (see the *ou phora* restrictions ["Do not carry away"] in various Greek sacred law inscriptions [e.g., Dow 1965]; compare Lev 7:15–18; 22:30); in most cases, however, it was apparently left up to the worshippers as to whether they would eat it at the sanctuary site, take it home to be eaten, or sell it to the public (on sacrificial meat's being sold at the marketplace, see 1 Cor 10:25–29). Dining rooms were commonly provided at sanctuary sites; the meals held there could presumably vary from highly religious to purely social.

The nature of the religious meaning to be attached to sacrificial meals in Greek religion has been the subject of much debate in scholarship. Paul, for example, is aware of meals at temples as being purely social (1 Cor 8:10); yet he can also contrast the "table of the Lord" with the "table of demons" (1 Cor 10:19–22), implying that they can also be similar in religious meaning. Apparently the meaning of the meal could vary from person to person and from place to place without the meal itself being significantly different in form.

The primary religious motifs connected with the sacrificial meal include the element of joy or festivity as mentioned above as well as some sense of what is often called "communion with the deity." Plato, for example, refers to festival meals as times when human beings may find "respite from their troubles" by "associating in their feasts with gods" such as "the Muses, and Apollo the master of music, and Dionysus," who are presumably present in the music and wine respectively (*Leg.* 653D).

The presence of the deity at the meal could be expressed in various ways. Often, the deity was regarded as presiding over the entire meal insofar as the sacrifice took place at the temple in the deity's presence. Similarly, in Jewish tradition, sacrificial meals and festival meals were to take place "before the Lord" (Deut 12:17–18; cf. 12:12; 14:26; 16:11; et al.). Other texts and rituals are more specific as to the role of the deity in the ceremony. In some cases the deity is specifically defined as host at the meal; see, for example, the invitations of the God Serapis to dine at his temple (Youtie 1948). To these one might compare the representations of Jesus as host at various meals in the Gospels, especially in the Last Supper accounts (Mark 14:22–25 = Matt 26:26–29 = Luke 22:15–20 = 1 Cor 11:23–25). In other cases the gods are pictured as guests at the meal, and sometimes a place at table is even provided for them. This type of ceremony is known as the *theoxenia* in the Greek world and the *lectisternium* in the Roman world (e.g., Pind. *Pyth.* 3.93–96; Livy 29.14.14). To this may be compared the OT story of Abraham and Lot entertaining divine guests (Gen 18:1–19:26) and the various ways in which dining with Jesus and with the risen Lord are depicted in the Gospels, with obvious ramifications for the interpretation of the Christian Eucharist and agape (Smith 1987).

The NT makes use of the imagery of sacrificial meals in its descriptions of the Lord's Supper, connecting the ceremony with a sacrificial interpretation of the death of Jesus ("This is my body which is for you," 1 Cor 11:24; "This is my blood of the covenant, which is poured out for many," Mark 14:24). Here there is no meat but rather bread which, along with wine, is connected symbolically with the "meat" and "blood" of the sacrificial victim. The presence of the Lord at the meal is referred to in various ways

(besides the images of guest and host mentioned above) such as: memorial ("Do this in memory of me," 1 Cor 11:24); eschatological proclamation ("You proclaim the Lord's death until he comes," 1 Cor 11:26); symbolic representation ("The cup of blessing which we bless, is it not a participation in the blood of Christ? The bread which we break, is it not a participation in the body of Christ?" 1 Cor 10:16; "He who eats my flesh and drinks my blood has eternal life," John 6:54); and community identity ("Because there is one bread, we who are many are one body, for we all partake of the one bread," 1 Cor 10:17).

D. Eating Sacred Foods

Another way to define the concept of sacred meals is to place the emphasis on the eating of sacred foods rather than on the formal meal ceremony. This perspective is most closely related to the idea of sacramentalism in Christian eucharistic tradition. It is, of course, probable that sacrificial meat took on some sort of sacred quality, although the evidence for this is sketchy and much debated. Furthermore, wine tended to take on a numinous quality connected with the god Dionysus. But the idea of sacred foods is most often associated with rituals in the mystery religions. For example, during the initiation ceremony of the mysteries of Demeter at Eleusis a special potion concocted from grain, called the *kykeon*, was drunk; and this ceremony seemed somehow to be connected with the experience of the divine (Clem. Al. *Protr.* 2.21.2). In the mysteries of Mithras, there are references to a ritual meal with water and bread that was supposedly so close in meaning to the Christian Eucharist that Justin accused the Mithraists of copying the Christians (*Apol.* 1.66.4). Such "mystery meals" are often compared to the Christian Lord's Supper traditions since they seem to offer the nearest parallels to the idea of ritual food being somehow imbued with divine or "spiritual" power (as in 1 Cor 10:1–5; and *Ign. Eph.* 20.2).

A variation of this idea has the worshipper actually ingesting the deity, a practice referred to as "theophagy." This is the apparent sense of the Christian Lord's Supper in John 6:53–57 and in many liturgies outside the NT (Ign. *Smyrn.* 7.1). Some scholars have proposed finding a parallel to this idea in a ritual connected with Dionysus whereby worshippers acted out the actual ingestion of the deity by eating a raw animal. The evidence for this ritual is rather vague, however; and its interpretation is disputed in many recent studies, leading some to conclude that there is no evidence for the actual ritual practice of theophagy in the ancient world outside of Christianity (Henrichs 1980: 230). Indeed, there is still much debate over the form and meaning of sacred meals in the various mystery religions in general (Kane 1975). In most cases it would appear that where we have firm evidence of meals being eaten, it is simply another variation of the ordinary Greco-Roman banquet being utilized in a religious setting.

DENNIS E. SMITH

MEARAH (PLACE) [Heb *mĕʿārâ* (מְעָרָה)]. A place located between the ancient coastal cities of Tyre and Sidon, and identified among the numerous territories yet remaining for Israel to occupy (Josh 13:4). The exact identification and location of Mearah have been greatly disputed because of the difficulties of the text. The LXX reads *enantion* (or *apo*) *Gazēs*, "before [from] Gaza," which might

suggest the reading *mē‹āzâ* (with *mem* representing the preposition and *zayin* replacing *reš*). But it can hardly be said that Gaza belonged to Sidon. A number of places have been suggested with reference to the nature and location of Mearah, including the caves of Mughar Jezzin E of Sidon; a location along the Wâdī Ara in the plain of Megiddo; and the reading of *mē‹ārîm* as "from the cities." The place has also been identified by some scholars as Mogheiriyeh, 6 miles (ca. 9.5 km) NE of Sidon.
RAY L. ROTH

MEASURE, MEASUREMENT. See WEIGHTS AND MEASURES.

MEAT. See MEAL CUSTOMS (JEWISH DIETARY LAWS); ZOOLOGY.

MEBUNNAI (PERSON) [Heb *mĕbunnay* (מְבֻנַּי)]. Mentioned only in 2 Sam 23:27 as one of "the Thirty" (2 Sam 23:18–39), David's corps of military elite (*haggibbōrîm*). He was known as a native of Hushah (*ḥūšâ*), a village probably to be identified with modern Husan, 6 miles SW of Bethlehem. In spite of the possible kingdom period attestation of the name (Zeron 1979: 156), MT *mbny* (LXX *sabouchai*) should most likely be understood as a textual corruption (McCarter *2 Samuel* AB, 492) and the man himself identified with Sibbecai the Hushathite of 2 Sam 21:18 (= 1 Chr 20:4; see also 11:29; 27:11). See also DAVID'S CHAMPIONS.

DAVID L. THOMPSON

MECHERATHITE [Heb *mĕkērātî* (מְכֵרָתִי)]. The gentilic designation of Hepher, one of David's champions, a select class of warriors directly attached to the king for special assignments, named in the list of 1 Chr 11:10–47 (v 36), a list which, up to v 41a, parallels that of 2 Sam 23:8–39. If the designation is correct in this form, it refers to an unknown family group or place for the origin of Hepher. However, whereas 1 Chr 11:35b–36a reads, "Eliphal the son of Ur, Hepher the Mecherathite," the parallel text in 2 Sam 23:34 reads, "Eliphelet the son of Ahasbai of Maacah." Both texts appear to have suffered corruptions. If in Chronicles two names have been derived from the original name of Eliphelet's father (Driver *NHT*, 371; Rudolph *Chronikbücher* HAT, 102), then "the Mecherathite" is a variant of "son of the Maacathite" (RSV "of Maacah"), which might then be a reference to a Judahite clan associated with Eshtemoa the Maacathite (1 Chr 4:19), ancestor of a town S of Hebron (McCarter *2 Samuel* AB, 498–99).
RODNEY K. DUKE

MECONAH (PLACE) [Heb *mĕkōnâ* (מְכֹנָה)]. 1. Settlement in S Judah listed among the villages occupied by those returning from Exile in Babylon (Neh 11:26). Its name may be derived from the root *kwn* ("be fixed"), perhaps meaning "resting-place" or "residence." There is general agreement that the list in Neh 11:25–36 is derived from an official document of the postexilic period (see Myers *Ezra, Nehemiah* AB, 187). If this list follows geographic order, Meconah should be found somewhere in the vicinity of Ziklag and En-Rimmon, both of which are located in the Negeb district of the tribal territory of Judah (Josh 15:31–32). Based on this geographic hint, Simons (*GTTOT*, 145) proposes an identification with Khirbet umm ed-Deimineh, on the NE outskirts of Beer-sheba. Unfortunately, we do not know whether this site was occupied during postexilic times.
WADE R. KOTTER

MEDAD (PERSON) [Heb *mêdād* (מֵידָד)]. According to Num 11:26 and 27, one of two elders of Israel (Eldad is the other) who received the spirit and prophesied inside the camp of Israel. Num 11:16–30 report God's distribution of a portion of the spirit given Moses to seventy elders of Israel. Moses and these seventy went outside the camp to the tent sanctuary. The elders received the spirit and prophesied

there. Eldad and Medad had been "registered" (RSV), but did not go out of the camp, and so received the spirit there.

Gray (*Numbers* ICC, 114) points to the tension in the description of the relation between the seventy and Eldad and Medad (i.e., if "registered" means they were part of the seventy specified by God [Num 11:16], this conflicts with the report that seventy went out to the tent [Num 11:24]). Noth (*Numbers* OTL, 90) on this basis regards Num 11:26–29 as an addition to the story of the seventy elders and speculates that Eldad and Medad represent actual prophetic groups in Israel that used this story to claim Mosaic legitimation as part of their struggle for recognition.

The Sam. Pent. and LXX offer a variant spelling of the name "Modad" (*môdād*)—perhaps under the influence of the name Almodad (*ʾalmôdād*) in Gen 10:26. (Gray, 114) and Snaith (*Numbers* NCBC, 232) seem to favor this. However, in view of the support for the MT provided by the Vg and Peshitta, as well as the Targums, the spelling Medad should be retained.

The Palestinian Targums, by offering words for the prophecies Medad and Eldad were said to have delivered, exemplify some of the later exegetical interest these figures attracted. A like interest is attested in the Christian tradition by the lost *Book of Eldad and Modad.* See ELDAD AND MODAD.

RICHARD D. WEIS

MEDAN (PERSON) [Heb *mĕdān* (מְדָן)]. A son of Abraham and Keturah and brother of Midian (Gen 25:2; 1 Chr 1:32). The "sons of Keturah" are a group of Arabian tribes and cities of the 8th through 5th centuries B.C. See also KETURAH. Medan could have been a tribe or a settlement in Wâdī Mudân (or Madân), which was situated in the basalt fields S of Midian. The wadi is mentioned by Islamic historians and geographers for the 7th century A.D. (Knauf 1985: 20–21). The name can be explained by either Arabic *dûn,* "low, inferior," or *madân,* a plant (*Ocymum hadiense*). Whereas Medan in Gen 25:2 and 1 Chr 1:32 is an independent geographic entry and not a variant for Midian mistakenly included, the reference to the "Medanites" in Gen 37:36 is an intentional misspelling for "Midianites" in order to mark this verse as a gloss (Knauf 1988: 27).

ERNST AXEL KNAUF

MEDEBA (PLACE) [Heb *mêdĕbaʾ* (מֵידְבָא)]. One of the cities of the Moabite Mishor that was conquered and occupied by the Israelite tribes (Num 21:30; Josh 13:9, 16). The battle between the army of David and the coalition of Ammonites and Arameans (1 Chr 19:7) occurred in the vicinity of this city. Liberated by Mesha, the king of Moab (Mesha Stele, lines 7–9; *ANET,* 320), it is mentioned in the later biblical texts among the cities of Moab (Isa 15:2). During the Maccabean revolt "the Sons of Jambri" came out of the city and laid an ambush for a Jewish convoy led by John. They plundered the caravan and killed the brother of Judah. His death was avenged by Jonathan and Simon (1 Macc 9:36–42).

Josephus reveals that Medeba was subsequently conquered by John Hyrcanus after a long siege (*Ant* 13.9.1) and remained in the hands of the Jews at the time of Alexander Jannaeus (*Ant* 13.15.4). Hyrcanus II, in exchange for aid requested by him in the war against his brother Aristobulus II, promised to restore the city to King Aretas of Petra together with the other cities in the region (*Ant* 14.1.4).

The *Onomasticon* (128.20), and the geographers of the Roman-Byzantine period, Ptolemy (5.16), Hierocles (n. 721), and Giorgio Ciprio (n. 1062), record it as a city of the province of Arabia.

Christianity had spread by the end of the first two centuries to Arabia, and the region of Medeba had its martyrs during the persecutions of Diocletian. Only from the Acts of the Council of Chalcedon (A.D. 451) do we learn of the existence of a Christian community at Medeba headed by a bishop supported by Constantine, the Archbishop and Metropolitan of Bostra, who signed the conciliar decisions.

A. The Exploration of the City

The ruins of Medeba that preserve the name of the ancient city (M.R. 225124) are 30 km S of Amman on the King's Highway and were visited by U. Seetzen in 1807. Burckhardt passed by in 1812. The canon Tristram, who stopped among the ruins for four days in 1872, gives the first accurate description. In December of 1880 some bedouin Christian families, the Azizat of Kerak, pitched their tents among the ruins, which were given to them by the Turkish authorities, and soon they began to construct a provisional shelter with the squared stones from ancient buildings. Sensitized by their priests, among whom was don Giuseppe Manfredi, the new arrivals took care to conserve what they occasionally discovered. In 1881 the explorers of the survey brought to light the first significant evidence of the site's antiquity and history. In 1887 the missionary sent to Jerusalem the transcription of the first inscriptions of the mosaic floors of Medeba that turned out to belong to the Church of the Virgin. A guest of don Manfredi, G. Schumacher, stopped at Medeba in October 1891 and supplied the first general plan of the ruins and its monuments. The following year, P. Sejourne, after a stay at Medeba, wrote a brief summary about the discoveries that became ever more numerous. This was followed by Bliss in 1897, don Manfredi in 1898, Kluge and Pavlouskin in 1903, and Musil and Metaxakis in 1905. In 1897 the Medeba Map (see below) was discovered and published, which brought scholarly attention to Medeba. In the same year the mosaic of the crypt of Elisha and of the Church of the Prophet Elijah were brought to light with their inscriptions, along with other mosaics. In that year Medeba became "the city of the mosaics." Regular excavations were conducted in the city from 1965 to 1968 and again beginning in 1979.

B. Historical and Archaeological Synthesis

Medeba was built on a natural elevation of the Jordanian plateau with steep slopes to the W, S, and SE; the area to the N gradually slopes toward the surrounding plain. The tell has an easily recognizable acropolis and lower city. Until recently, the discoveries have been concentrated on the system of terraces of the acropolis slopes, and in the lower city where habitation developed in the Roman-Byzantine period. On the slopes of the heights that surround Medeba to the W and S was a necropolis which existed until the middle of the 2d millennium B.C. The chance discovery of two tombs in this area are until now the only witnesses of the occupation of the tell of Medeba from the 13th to the 10th centuries B.C. Otherwise, tombs go back to the 1st century B.C.

A great number of tombs from the 1st century A.D. were discovered and found to contain inscriptions attesting that Medeba and its surrounding territory belonged to the Nabatean kingdom of Petra. One inscription on basalt, in two exemplars, came from a funerary monument constructed in A.D. 37 (the time of Aretas IV) by the commander of the city of Abdobodat of the Amirat tribe for his father, Itaybel. A second bilingual inscription in Nabatean and Greek, dated to the third year of the province of Arabia (constituted by Trajan in A.D. 106), records the same tribe of the Amirat. A Greek inscription, from a tomb constructed by Abdallah the son of Anamos, is dated to the 43d year of the province (A.D. 148). With the exception of a centurion of the III Cyrenian legion, Gaius Domitius Alexander, who was honored by the city for his "worthy act," personal names in the inscriptions of Medeba are for the most part Semitic during both the Roman and Byzantine periods.

Coins minted in the city from the period of the Province of Arabia, with which Medeba was always associated, have been dated to the time of Septimius Severus, Caracalla, Geta, and Severus Alexander. There are essentially three types of scenes on the reverse of such coins: the Helios in four rows, the Tyche of the city, and a *betyl* in a four-columned temple. The Tyche is shown in two variants: standing and holding a cornucopia in her left hand, with a *betyl* in her right hand; or seated on a throne with a scepter in her right hand and an unidentified object in her left hand. From the Roman period is the colonnaded street oriented E-W that passed in front of the exedra (or nymphaeum) on which the Church of the Virgin was constructed, as are the capitals and pediments reused in the church of the 6th century.

Medeba's maximum urban extent, along with its most opulent lifestyle, occurred in the 6th and 7th centuries A.D. However, the inscriptions which accompany the mosaic floors of the churches are the primary sources of historical information available. Probably in the first decades of the 6th century, while Cyrus was bishop of Medeba, the baptistery of the cathedral and the church of the monastery of Kaiano on Mt. Nebo in the vicinity of the springs of Moses were decorated with mosaics. In 531 and 536 the

bishop of the city was Elias, as recorded in the mosaics on Mt. Nebo. In 562, when the bishop of the diocese was John, a mosaic was completed in the chapel of Saint Theodore the Martyr in the atrium of the cathedral. During his episcopate John had a chapel built in the SE sector of the city in which was a mosaic. The Church of the Apostles was later built next to this chapel.

Two churches were built with mosaics in the city of Nebo. Probably in the same period a mosaic depicting iconographic motifs from the tragedy of Euripides was placed in the Room of Hippolytus to the N of the nymphaeum on the columned street. In the mosaic, the anonymous artist represented the Christianized Tyche of Medeba, seated with a cornucopia in her right hand and the cross in her left, beside the Tyche of Rome and of Gregoria-Constantinople, the two capitals of the empire of Justinian. At the same time the geographic map of the biblical lands (see C below) was placed in the church in the vicinity of the N gate of the city. An inscription on the plaster of a great cistern, on the N side of the church, attests the interest that the central authority had for Medeba, which lacked natural springs and therefore had to rely on aqueducts to supply water. In the valley SE of the acropolis was a great reservoir, 100 m square and 10 m deep.

The inscriptions record that from 576 until 602, Sergius, "the friend of God, the contemplative," was bishop. During his episcopate a mosaic was placed in the atrium of the cathedral (A.D. 576); the Church of the Apostles was built (578); the Basilica of Nebo was built in honor of Moses with the addition of the new baptistery, and the diaconicon was begun and brought to completion (587–98); the construction began of the ecclesiastical complex along the Roman road including the Church of the Virgin; and the Church of the Prophet Elijah which was finished, except for the crypt alleged to be Saint Elisha's (A.D. 602).

In 603 the bishop Leonizo, "sweetest and true friend of peace," succeeded Sergius. In that year a mosaic was placed in an empty space N of the church in the complex of the cathedral. In 608 the complex along the Roman road was completed with the funds set apart by Mena the son of Pamphylius. A chapel dedicated to the Virgin Theotokos was added to the baptistery on the S wall of the basilica.

Besides these dated monuments, several other churches and public areas had mosaics in them in the second half of the 6th century, when the activity of the mosaic artwork at Medeba was most intense.

After a period of silence in the historical sources and following the arrival of the Muslim forces, perhaps in 662, Bishop Theophanus led the Christian community. In February 662 the restoration of the mosaic of the Church of the Virgin on the Roman road was completed. The dedicatory inscription reveals that "the people—lovers of Christ of the humble city of Madaba" contributed to the completion of this work.

During the Umayyad period (A.D. 719/20), a mosaic was built in the church at Main, which was on the highest point of the acropolis. This building still stands and was the last-dated Christian monument of the region of Medeba. The mosaic is usually included in the school of Medeba.

C. The Madeba Map

The Madeba Map is the most famous of the antiquities of the site and is a mosaic map in the floor of one of the 6th-century churches. It is cartographically significant since it is the earliest extant map of Palestine. It apparently portrayed originally the area from Byblos, on the Mediterranean coast, to Thebes in Egypt. The inscriptions are written in Greek, and the layout generally follows the geographic orientations described in Eusebius' *Onomasticon.*

Taking into account the floor plan of the church and the position of the remaining fragments of the mosaic, the map must have decorated a panel 15.7 m long and 5.6 m wide. The approximately 150 remaining toponyms, which have for the most part been identified, refer to places located from the N extremity of Tyre and Sidon S to the delta of the Nile and from the Mediterranean Sea to the Arabian desert. The map is oriented towards the E, as are the cities and the buildings with their captions, which could be seen and read by whoever entered the church and faced the altar. In spite of the space limitations, which resulted in only approximate locations of the cities, it is clear that the intention was to provide the location of places along the highway networks of the region.

The places are indicated for the most part by vignettes and captions. The vignettes indicate the importance of the toponyms. The physical features of the Palestinian region are rendered with a pictorial

realism that makes them easily identifiable: the central axis is formed by the course of the Jordan river and the Dead Sea; the Transjordanian plain with its steep wadis extends to the E; and to the W the mountains of Samaria and Judah are distinguished from the coastal plain. Along with the watercourses, the sea, and the mountains the mosaicist has added other easily comprehensible symbols, such as the palm trees that accompany the oases of Jericho and Zoar, the sources of the Jordan valley, the thickets along the course of the river, the ford with its characteristic hanging ferries, fish in the current, and two boats on the waters of the Dead Sea.

More important from a historical perspective are the peculiar indications of a place, like the twelve stones inserted into the wall of the Church of Golgotha, the well of Jacob at Shechem, the basin baptistery of the spring of Philip in the vicinity of Beth-zur, the terebinth or oak of Mamre, the basins in the springs of Calliroe, and the configuration of Kerak as a city-fortress in an isolated position on the mountain.

The mosaic reaches its figurative summit in the vignette of Jerusalem, which in some way is the central idea of the composition if not its exact physical center. The city, seen from a bird's-eye view, is represented with its walls, gates, streets, and principal buildings identifiable. The Cardo, which starts in the N with a central plaza in which is erected a memorial column, is dominated by the Constantinian complex of the Basilica of the Holy Sepulcher.

On the level of historical geography, the map's originality lies in these details. It depends on an ancient road map brought up to date for the needs of pilgrims of the 6th century who visited the Holy Land. On the artistic level, the map can be viewed as part of the renewed classicism of the Justinian era, of which the mosaics of Medeba provide numerous witnesses.

From the captions of the toponyms and principally by the direct references to the tribes of Israel (from the blessing of Jacob, which is cited in full), it is clear that the map is, above all, a document of biblical geography that had the *Onomasticon* of Eusebius as its primary source. The map encompasses the territory of the twelve biblical tribes and the surrounding regions, in such a way as to reflect the confines of Canaan as promised to Abraham (Gen 15:18). The addition of the localities of the NT and the preeminence given to Christian sanctuaries, to churches, and to the Basilica of the Holy Sepulcher make the map a contemporized Christian rereading of the story of salvation in its geographic aspect. At the center of the redeemed world is the holy city of Jerusalem that has as its primary building the Constantinian complex constructed on the Rock of Calvary and on the Tomb of Jesus.

MICHELE PICCIRILLO

MEDIA (PLACE) [Heb *māday* (מָדַי)]. An ancient Iranian kingdom which rose to power in the 7th century B.C., was allied with Babylon in the overthrow and destruction of the Neo-Assyrian Empire in 612 B.C., and was eventually absorbed into the Achaemenid Empire by Cyrus II. See CYRUS. Throughout Achaemenid history the Medes remained the second most important people in the empire after the Persians (see Esth 1:3).

Medes first appear in a Neo-Assyrian account of a military campaign in 835 B.C. in central W Iran. Continuing references to W Iran in Assyrian documents from the 9th to the 7th centuries B.C. show that

the Medes were concentrated in central W Iran in the area of modern Kermanshah and along the High Road leading to modern Hamadan. To the S lay the kingdom of Ellipi; to the N the kingdom of Mannea.

It is clear that in the 9th and 8th centuries there was no unified kingdom of Media. The Assyrian texts speak of many small polities which are of either mixed ethnic composition or primarily Median, and which are ruled by "kings" or tribal chiefs. The Median language, documented in onomasticons, some place names, and loan words in Persian, is old NW Iranian (possibly the ancestor of modern Kurdish). There is, however, evidence in cuneiform texts for growing Median political unity during the 7th century; and Herodotus in his *Persian Wars* provides a detailed story of the creation and growth of that unity which is undoubtedly largely legendary.

According to Herodotus, Deioces was the founder of a centralized Median state in the 8th century B.C. Deioces was famous for his sense of justice, and the Medes invited him to be an adjudicator of their disputes. On condition that they make him king and build a great city at Ecbatana (Hamadan), he agreed. He is supposed to have reigned for 53 years. Deioces was succeeded by his son, Phraortes, who is reputed to have conquered the Persians. He lost his life in battle against the Assyrians after ruling 40 years. His son, Cyaxares, ruled 40 years and completely reorganized the Median army. Having done so, he allied himself with the Babylonians; and together they successfully effected the capture of Nineveh in 612 B.C. and the overthrow of the Neo-Assyrian Empire. Cyaxares was succeeded by his son, Astyages, who ruled for 35 years at Ecbatana, the capital of Media, until overthrown or conquered (the texts are not clear) by Cyrus the Great of Persia in 550 B.C.

Astyages and Cyaxares are well documented in contemporary cuneiform texts. From these sources it is clear that Cyaxares was the king of a united Media, which played a major role in the overthrow of the Neo-Assyrians. Following the fall of Nineveh, the Neo-Assyrian Empire was divided between the Medes and the Babylonians. Tradition has it that this expanded Media included territories as far E on the Iranian plateau as the area of modern Tehran, the whole of central-western and NW Iran, the mountainous areas of Anatolia as far W as the river Halys, and parts of N Syria (probably including the city of Harran). Thus when Cyrus the Great conquered Media, he fell heir to vast highland territories of the Near East. Astyages, and his war with Cyrus and the Persians, is also well documented in contemporary cuneiform texts. On the other hand, careful examination has failed to identify in contemporary texts the Phraortes and Deioces mentioned by Herodotus. Thus there remains no sound textual basis for the early history of a united kingdom of Media extending back through the early 7th and into the late 8th century. Nevertheless, a growing Median unity and power is historically documented for the latter half of the 7th century.

Depending on one's interpretation of the data, it can be argued that there is some evidence in the archaeological record of the 7th century B.C. which indicates increasing cultural unity in central-western and NW Iran and which might be associated with the political and military unification of Media. The three principal sites thus far excavated in W Iran which can with some certainty be described as Median are Baba Jan, Nush-i Jan, and Godin level II.

The geographic term "Media" is still used in Hellenistic times to refer to NW Iran, primarily to the regions now called Kurdistan and Azerbaijan. Clearly Media, and the Medes, played an important role in the early history of Iran.

T. CUYLER YOUNG, JR.

MEDICINE AND HEALING. Throughout the biblical tradition, healing is perceived as the work of Yahweh and his divinely empowered agents. In the Hellenistic period, these agents include physicians, although for the most part the biblical writers are hostile toward medicine, or they simply ignore it as having a potential for healing. How sickness is viewed, and therefore how healing is accomplished, are variously understood in the biblical writings. It is evident that changes in these perceptions correspond with changes in the cultural setting of the various biblical writers.

A. Yahweh as Healer

In all three sections of the Jewish Scriptures—the Pentateuch, the Prophets, and the Writings—the image of Yahweh as healer is present as a central aspect of God's relationship to the covenant people. In

Genesis 20, where the story is told of Abraham's having deceived Abimelech by telling him that Sarah is his sister, Abraham intercedes with God to ward off punishment for Abimelech's unwitting sin. The result is that God heals Abimelech, his wife, and his slaves of the infertility which God had sent upon them (Gen 20:17). Following God's deliverance of Israel from slavery in Egypt by means of the plagues and the crossing of the Red Sea, Yahweh promises that if Israel obeys the commandments of God, the nation will escape all the diseases which beset the Egyptians, because "I am Yahweh, your healer" (Exod 15:26). Similarly in the Song of Moses (Deuteronomy 32), Yahweh declares, "There is no other god beside me; I kill and I make alive; I wound and I heal" (32:39).

Job celebrates the correctional role of God and "the chastening of the Almighty," and notes: "For he wounds, but he binds up; he smites, but his hands heal" (Job 5:17–18). The theme of God's restoring the faithful, following either human disobedience or divine chastening (which runs through the Psalms), is linked with healing (Pss 30:2; 41:4). At times healing is associated with forgiveness (Ps 103:3), with deliverance from imminent destruction (Ps 107:19–20), and with renewal of wounded human spirits (Ps 147:30).

It is in the Prophets, however, that Yahweh's role as healer is most fully represented. In Isaiah there are the repeated appeals to Israel to turn back to God and be healed (Isa 6:10; 19:22; 30:26), as well as the report of the ailing king Hezekiah's appeal to God to give him health and life (Isa 38:16). The dual roles of Yahweh as the one who both smites and heals are described with respect to the Egyptians (Isa 19:22) and Israel (Isa 57:18–19). In Isa 53:5, however, it is the suffering of the Servant of Yahweh that is to effect healing of God's people. Jeremiah appeals to the nation in God's behalf to return to God in order to find healing (Jer 3:22). Although he elsewhere laments the apparent absence of a physician to restore the health of the people (Jer 8:22), he also affirms in God's behalf the divine intention to restore and renew them (Jer 30:17; 33:6). The Exile of Israel to Babylon is a divine judgment from which there is no escape, since the sickness of the nation is beyond healing (Jer 8:15, 18, 22; 10:19; 14:19; 15:18; 17:9; 30:12–13; 46:11). The same note of the inescapable judgment, for which there is no healing, is sounded by Hosea and Nahum in connection with the captivity of the N tribes by the Assyrians (Hosea 5:13; Nahum 3:19). Analogously, God's vindication of Israel after her captivity in Babylon will result in judgment on that city, for which there is to be no healing (Jer 51:7–9). The image of Yahweh as healer in a more specific sense is offered by Ezekiel in his rebuke of Israel for its failure to care for the sick and the crippled (Ezek 34:4)—a role which Yahweh will fulfill for the benefit of the weak, the ailing, and the lost (Ezek 34:16). Zechariah offers a similar rebuke to those leaders of the people who fail to meet the needs of the maimed and the needy (Zech 11:15–17). Malachi announces the coming of an agent of God, "the Sun of Righteousness"—which means here, "the one who sets things right"—whose chief resource is "healing in its wings" (Mal 4:2).

B. Healing and Sickness as Signs of God's Favor and Punishment

Already implied in the roles of Yahweh and his agents, as sketched above, is the conviction that God gives or restores health to the faithful and sends sickness to the erring and disobedient. In addition to the previously mentioned punishment of Abimelech for taking Abraham's wife (Gen 20:1–18), there are reports of similar judgments on pharaoh (Gen 12:10–20) and again on Abimelech for taking Isaac's wife (Gen 28:1–14). The fact that these stories may be variants of a single tradition serves only to underscore the conviction evident in these materials that God brings sickness on those who violate the divine statutes, even unintentionally.

For members of the people, Israel, there is a direct link between sickness and ritual impurity, as is spelled out in great detail with respect to leprosy (Leviticus 13–14). That healing has taken place is to be confirmed by the priest (Lev 13:16; 18:37; 14:3), and atoning sacrifices are to be offered with the aim of attaining a cure of the disease (Lev 14:19–21, 29). Miriam is stricken with leprosy for her audacity in claiming a role equal with that of Moses as God's instrument (Numbers 12). Moses appeals to God for her healing, which takes place shortly (Num 12:13–15). Similarly, the bitter complaints of the people about the food supplied by God for them during the wilderness journey result in God's sending deadly serpents among them; when they become penitent, God provides through Moses a remedy from the deadly bite of

the serpents (Num 21:4–9). When the Philistines captured the ark of the covenant and took it to their territory, the plague of tumors that broke out led their leaders to send the ark back to the land of Israel (1 Sam 4:10–6:18). Those who looked into the sacred ark out of curiosity (1 Sam 6:19) and even one who reached out to steady it as it was being transported on a wobbly cart (2 Sam 6:6–7) were struck dead for having violated the instrument of Yahweh's presence among his people. Similarly, Jeroboam's initial resistance to the unnamed "man of God" results in his arm's drying up, while the latter's failure to obey the word of Yahweh is punished by his being eaten by a lion (1 Kgs 13:1–25). On the other hand, Hezekiah's petition to Yahweh concerning his seemingly fatal illness is answered by the king's being restored to health. The assurance that this will take place is given by the backward movement of the sun on the sun dial (2 Kgs 20:1–11).

C. Physicians Offer Useless Advice

The relatively rare passages in the Hebrew Bible which mention physicians associate them with embalming or with unreliable claimants to healing powers. Joseph arranges with Egyptian "physicians" to prepare his father's body for transport to Israel and burial there (Gen 50:1–14). Asa, the king of Israel, is condemned because he did not seek healing from God for his lingering illness but turned instead to the physicians (2 Chr 16:12). The worthlessness of physicians is implied by Job in his rebuke of those who offer him useless advice (Job 13:4), as it is by Jeremiah's rhetorical question about the lack of a healing agent for God's people (Jer 8:22–9:6) and his sarcastic counsel to Egypt and Babylon to turn to physicians for help to escape the impending judgment of God (Jer 46:11; 51:8).

D. Prophets as Agents of Healing

Elijah, who took up residence at the home of a widow in Zarephath in the land of Sidon (1 Kgs 17:8–16), restores to life her son who was stricken with a fatal illness (17:17–23). This leads the widow to recognize the prophet as a man of God in whose mouth the word of Yahweh dwells (17:24). Similarly, the Syrian army commander, Naaman, seeks and receives a cure for his leprosy through Elisha, the prophet of Yahweh, who instructs him to bathe in the river Jordan, which he does and is cured (2 Kgs 5:1–14). This experience of a cure through obedience to the word of the man of God leads Naaman to declare that there is no God in all the earth except Yahweh, the God of Israel (5:15).

E. Physicians as Agents of God

In the midst of advice about seeking the way of truth from the Most High and living according to wisdom (Wisdom of Sirach 37), the author advises his reader to show due honor to the physician, whose ability to heal comes from God (38:1). The writer goes on to explain that it is God who created medicines out of the earth (38:4) and has granted human beings knowledge of these natural means of curing human ills. The druggist prepares the medicines, and the physician administers them. Both the patient and the physician are to pray to God for healing, but it is through the efficacy of these natural medicines that healing will take place, and God will give to the medical doctors the insights for effecting cures and restoring the ill to health (38:12–14). It is implied that sickness is the result of human sin, so that one is to pray that the sinner will fall into the hand of a physician—not because he is a charlatan, as implied in the older biblical sources, but because God has given him knowledge of the natural resources to bring about cures (38:15). It is noteworthy that this advice appears in a document written in the early 2d century B.C.E., which shows the influence of Greek culture at many points. With regard to medicine, it reflects the Stoic notion of natural law, which the physician can draw upon for effecting healing. It was in this period, and especially in Alexandria (where Sirach in its Greek version may well have originated), that the medical tradition linked with the 5th-century-B.C.E. figure of Hippocrates was flourishing, with its emphasis on the inherent healing capabilities of natural substances and the task of the physician to recognize and utilize these inherent powers. Sirach has taken over these basic insights and has adapted them within the framework of belief that the God of Israel is the ultimate power and wisdom guiding the universe and the affairs of the human race. Physicians are the divinely instructed instruments through which these powers which God has built into the created order may become available for human well-being. These insights and healing capabilities are not inherent in humanity, as might be the case with the

Stoic view of natural law permeating the universe. Rather, they are part of the wisdom which God communicates for the welfare of earthly creatures.

Although Josephus credits some of human illness to the demons, as we shall note below, he shares with Sirach the belief that the inherent qualities of natural substances are potentially important for curing human ailments. Thus in his description of the Essenes (*JW* 2.136) he notes that they study ancient books and writings, especially those that seek to benefit the human body and soul through the cure of diseases, which are effected by medicinal roots and the properties of certain stones. Josephus also traces this kind of knowledge of natural healing substances back to Solomon (*Ant* 8:44–45), who studied all natural forms and substances and who knew their basic properties for effecting cures. On the other hand, Philo of Alexandria, in his treatise *On the Contemplative Life*, describes the Therapeutae as performing therapy in two ways: (1) The cures which they perform are superior to those performed by medical means, since the latter cure only the bodies, while the Therapeutae treat the human soul. Though the soul may be oppressed with seemingly incurable diseases, these are in fact caused by wicked pleasures; by desires, fears, and griefs; by covetous, foolish, and unjust acts; and by the forces of human passion and vice. (2) Through worship (which is a second meaning of *therapeuein*, from which the name of the group derives), the members of this sect are attuned to nature and its sacred laws, in accord with which they honor and obey the one true God. Like Stoic-oriented Greek medicine, Philo thought that the path to health—physical and psychic—lies through obedience to the God, whose laws are immanent in the created order of the world.

F. Sickness as Evidence of Demonic Powers

Written about the same time in the early 2d century B.C.E. as the Wisdom of Sirach is the book of Tobit, in which sickness is seen as the result of the work of demons in human life. When Tobit was blinded by sparrow droppings which fell in his eyes, physicians were unable to cure him (Tob 2:10). The entrails of a fish were the remedy to restore his sight (11:8) and at the same time were effective in expelling demons (Tob 6:7; 8:1–3). It is appropriate that the angel who assists in transmitting the information to make possible these cures and exorcisms is named Raphael: "God heals." But in the postexilic life of Israel, God works healing through intermediate agents, rather than directly as in the older layers of the biblical tradition. A similar role in the causing of human ailments is attributed in *1 Enoch* 6–11 to the fallen angels. They have disclosed to human beings the charms and enchantments and heavenly secrets (*1 En.* 7:1; 8:3; 9:6). It is Raphael once more who announces the doom of the fallen angels and the subsequent healing of the earth (10:4–14).

The book of *Jubilees* combines features of both Sirach and Enoch, in that the cures for human ailments are to be found among medicinal herbs, as well as through the direct action of the angelic powers in their cosmic struggle with the demons. The herbal remedies are ingredient in the creation; knowledge of their use has been granted to certain select ones among God's people (*Jub.* 10:10–14). Although God is ultimately in control over the fallen angels and the demons, he allows some of them to continue to exercise their malevolent power on earth as a part of the divine judgment of disobedient humanity (*Jub.* 10:7–8). The remedies for the evils that the demonic leader, Mastema, and the Egyptians work on earth are not given to them, however, but are vouchsafed to chosen human beings (*Jub.* 48:10). God permits human sickness and other disasters to occur, but in the end these powers will be overcome, and God's work of renewing the creation will be complete.

In his description of Solomon in *Ant* 8:44–46, Josephus portrays this archetypal wise man as possessing complete knowledge of the natural world, not merely for identification of all the birds and trees and animals, but also for the philosophical principles which underlie their existence. This, too, sounds like Stoic natural law; but Josephus then goes on to claim that Solomon was granted by God knowledge of the means for safeguarding humans from the power of the demons, so that the healing benefits might come to them. He composed the incantations for the relief of illnesses and passed on exorcistic formulas so that demons might be permanently expelled. Josephus attests that he has seen firsthand the efficacy of these exorcistic formulas attributed to Solomon, which had been invoked by one of his fellow Jews during the reign of the emperor Vespasian.

Direct evidence of the attribution of human ailments to demonic powers is available in the Dead Sea Scrolls. In the *Genesis Apocryphon* (1QapGen 20:12–29) there is a report of Abraham's healing action in behalf of the pharaoh. When Abraham lays his hands on the Egyptian monarch, the plague is expelled in the form of the demon that has been causing it. (The technical term *g‹r* is used here, conveying the sense that a hostile power has been brought under control, as does the Gk term *epitimao,* which in the gospels is often translated inadequately as "rebuke" [cf. Mark 1:25; 4:39; Luke 4:35; 8:24; Matt 8:18]). Because of pharaoh's unwitting violation of the law of Yahweh by taking Sarah as his wife, he has come under demonic control, from which he is released in response to his request to Abraham and that patriarch's action in expelling the demon. Similarly, in the Prayer of Nabonidus (4QPrNab) there is a report that the king has been struck by a severe sickness, just as in Daniel 4 Nebuchadnezzar had lost his mind and wandered like a wild animal. The term used in Nabonidus' prayer for deliverance is from the root *gzr,* which appears also in Dan 5:7, 11, and is to be linked with *g‹r,* and translated as "exorcist" rather than "astrologer." In all these cases what is at issue is the cure of an ailment and the pronouncement of the forgiveness of sins of a pagan ruler. Here again there is evidence that sickness is linked with subjection to demonic powers; and conversely, healing is achieved through exorcism of the hostile force. God is the ultimate source of healing in these documents, but the therapeutic power is administered through the medium of exorcism of the demonic agents.

G. NT Attitudes toward Physicians

In some strands of the tradition there are references to physicians as a given factor in the culture of the time, as when Jesus offers justification for his associations with tax collectors and sinners by a proverb-like utterance, "Those who are well have no need of a physician, but those who are sick" (Matt 9:12; Mark 2:17; Luke 5:31). At the same time there is a direct challenge to the adequacy of their methods of therapy, as when Mark 5:26 and Luke 8:43 report the inadequacy of the medical agents to cure the woman who in vain had spent all her wealth to procure their services. Luke also reports another proverbial saying of Jesus in response to his detractors who want evidence in Nazareth of his healing capabilities as reported to have occurred in Capernaum (Luke 4:23). The statement would seem to fit the context better if his detractors had said, "Physician, heal!," since what they are calling for is concrete local evidence of his reported healing activities elsewhere. It is the more striking, therefore, that one of the early Christian leaders, with whom the third gospel and Acts came to be associated in the traditions of the Church, was "Luke, the beloved physician" (Col 4:14).

H. Jesus as God's Healing Agent

In the gospel tradition three verbs are used to describe the healings performed by Jesus: (1) *hiaomai,* "cure," "deliver from illness"; (2) *therapeuo,* "wait upon," "care for," "heal"; (3) *sothesomai,* "make whole," "restore." Throughout the Synoptics there are summary statements about the healing activity of Jesus: examples may be found in Mark 1:32–34; 1:19; 6:56; Matt 4:23; 8:16; 14:15; 15:30; 21:14; Luke 6:5, 17; 7:20. The two features which appear in these are an emphasis on his role as healer, and the widespread interest that this activity evokes from his contemporaries.

In the healing stories, the response of faith is essential in order for the healing to occur, whether that faith is resident in the victim or in some person or persons who are hoping for a cure of a friend or relative. It is the faith of the friends of the paralytic who have lowered him through the roof that leads Jesus to pronounce forgiveness of the man's sins and to enable him to walk (Mark 2:4–12). It is Jairus' confidence in the ability of Jesus to heal his daughter that brings him to ask Jesus to do so (Mark 5:23), just as it is the faith of the woman with the bloody flow who reaches out in faith to touch Jesus and is thus healed (Mark 5:27–34). Similarly, in one of the summary accounts of Jesus' healing activity, there is mention of those who reach out in faith to touch the fringe of Jesus' garment (Mark 6:53–56; Matt 14:34–36). The father of the epileptic boy who comes to Jesus in behalf of his son declares his faith, and as a consequence Jesus expels the demon that causes the sickness (Mark 9:14–27; Matt 17:14–18; Luke 9:37–43). It is the faith of Bartimaeus that results in his sight's being restored by Jesus, as Jesus makes explicit (Mark 10:52). In the Q tradition, it is the faith of the centurion that brings about the restoration to health of his child (or servant) as is apparent from Jesus' contrast of this Roman officer's faith with the lack of it

in Israel (Matt 8:7–8; Luke 7:9). Matthew has linked the rebuke of the disciples by Jesus for their lacking even minimal faith—"as a grain of mustard seed"—with their failure to be able to heal the epileptic boy (Matt 17:14–20).

At times the healing activity of Jesus is to be followed up by observance of ritual cleansing, as in the Markan and Lukan stories of the cure of lepers (Mark 1:40–45; Luke 5:12–16; Matt 8:1–4; cf. Luke 17:15). More frequently, however, his healing work is seen as a violation of the sabbath prohibition against work, as in his healing the man with the withered hand (Mark 3:1–6; Matt 12:9–14; Luke 6:6–11), the cure of the woman with the spirit of infirmity (Luke 13:14), and of the man with dropsy (Luke 14:1–6). Jesus is depicted as giving priority to the restoration of human health over the observance of even so central and venerable a law of Israel as the avoidance of work on the Sabbath. In addition, a share in the healing benefits of Jesus is extended to those outside the boundaries of the covenant people. This factor is explicit in the healing of the daughter of the Syro-Phoenician woman (Mark 7:24–30; Matt 15:21–28) and is at least implied in the summary reference to Jesus' restoration of a deaf mute whom he met as he passed through gentile territory (Mark 7:31–37; Matt 15:29–31). It is also pointed up in Luke's version of Jesus' sermon in Nazareth, where Jesus points to the precedent set by Elijah and Elisha in performing healings for the benefit of gentiles (Luke 4:25–27).

The source of Jesus' power to heal is God, as is made explicit in Luke 5:17. In the Q version of the controversy about the source of Jesus' power to perform exorcisms, he asserts that it is by the Spirit, or "the finger of God" that he expels demons (Matt 12:28; Luke 11:20), just as Israel had been delivered from slavery in Egypt by God's finger (Exod 8:19). In response to the question from John the Baptist as to who Jesus is, he depicts his role as enabling the blind to see, the lame to walk, lepers to be cleansed, the deaf to hear, and the dead to be raised. All these descriptions of the healing of humanity derive from the words of the prophet Isaiah (29:18–19; 35:5–6; 61:1), who announces what God will do in behalf of his faithful people in preparation for the new age. The claim that Jesus is indeed God's agent to accomplish these divine purposes by God's power is directly announced in Luke's account of the sermon of Jesus at Nazareth, where, having referred to this healing-and-renewing-activity promise by God (Isa 61:1–2), he adds, "Today this scripture has been fulfilled in your hearing" (4:18–21). Matthew has his own version of this claim in behalf of Jesus as healer (15:30–31), where he describes those afflicted with these same ailments, notes that Jesus healed them, and concludes that the crowd which saw these wonders "glorified the God of Israel." It is not surprising, therefore, that the gospel tradition also reports that certain persons try to exploit the power of healing and exorcism which God has given to Jesus by the use of his name to achieve similar wonders (Mark 9:38–41; Luke 9:49–50). Jesus is seen to recognize the efficacy of his name and does not deny its use to others. Chief among those who are not merely permitted but actually charged to carry forward work in his name are, of course, the disciples, who are commissioned by him to perform on the model of his exorcisms and healings and who do so (Mark 6:6–13; Matt 9:35–10:11; Luke 9:1–6). In Luke's gospel, seventy others are also sent out, presumably to a similar ministry of healing and preaching among the gentiles (10:1–12). They, too, are to engage in exorcisms and healings in the name of Jesus, their effectiveness in which is attested by them on their return (vv 17–20).

In the gospel of John there are no accounts of exorcisms, and the healing stories are told in such a way as to point up their symbolic significance for faith. That point is made explicit in the concluding remark of John about Jesus' signs in John 20:30, 31: these accounts of Jesus' activities have been written down in order to persuade the reader that he is the Son of God, thereby enabling the faithful hearer to gain eternal life. There may be symbolic significance in the Synoptic Gospels' reporting the recovery of sight by blind Bartimaeus at the end of the account of Jesus' public activity and prior to his rejection by the authorities in Jerusalem (Mark 10:46–52; Matt 20:29–34; Luke 18:35–43). Thus Bartimaeus symbolizes those who are able to discern who Jesus is, in contrast to those who think they can see but are blind to the purpose of God, as in Jesus' reference to the blind guides of the blind (Matt 15:14; Luke 6:39). This point is made explicitly in the story of Jesus' healing the man born blind (John 9:1–41), where Jesus notes the inability of the Pharisees to see who Jesus is (vv 40–41). The issue of insight into Jesus' role as the agent of God and that insight as a major point of division between the followers of Jesus and the Jewish leaders are

described in John 9:22; there it is said that to confess Jesus as Messiah is the ground for expulsion of his followers from the synagogue. The inability of the leaders to see who Jesus is stands in sharp contrast with the discernment of the healed blind man—"Lord, I believe" (9:32)—and results in their subsequent rejection of his effort to explain to them Jesus' unique relationship with God as the one who brings the light of knowledge of God. Similarly, in John 4 the official's trust in the word of Jesus results not only in the healing of his son, but in the entry of the father and the entire household into the community of faith (4:53). John reminds his reader that this is "the second sign that Jesus did" and hence is of symbolic as well as of narrative importance. As a fitting climax to his account of the public career of Jesus, John describes in detail the circumstances of the death and restoration to life of Lazarus (11:1–44). In the course of the narration Jesus declares that he not only makes possible the resurrection, but that he *is* "the resurrection and the life" and that all who trust in him will never die (11:25–26). He invites his hearers to trust in him as God's agent, and later (12:37–50) he contrasts those who refuse to see in his "signs" the work of God in their midst (and who therefore do not share in the healing which God provides through him) with those who do trust and have therefore moved from darkness to light of the knowledge of God.

The passages quoted in John 9 from Isa 6:1, 10 also appear in a similar report of disbelief on the part of the Jewish leaders in Rome (Acts 28:27). Throughout the narratives of Acts there are reports much like those found in the Synoptic Gospels, only now it is the apostles through whom the healing power of God is manifest, as in the story of the lame man at the temple gate who was healed by Peter (Acts 3:1–10) and the account of Paul's healing the lame man at Lystra (Acts 14:8–10). As in the Synoptic tradition, an essential feature is that the man had sufficient faith to be healed (14:9). In the account of the healing of the father of Publius on the island of Malta, however, the only factor mentioned in the cure achieved is that Paul prayed and laid on his hands (Acts 28:7–8). The other cures which follow are noted with no details or accompanying features (Acts 28:9). In two crucial passages in Acts, there are explicit links between the healing activity of the apostles and that of Jesus: Acts 9:34 specifies that the healing of the paralytic Aeneas by Peter was the direct action of Jesus Christ; in Peter's description of the career of Jesus, he remarks that God's anointing of him with power and thus God's presence with him had been manifested in his good deeds and specifically in his "healing all that were oppressed of the devil" (Acts 10:38).

I. Healing Activity in the Pauline and Catholic Letters

In 1 Corinthians 12, where Paul is describing the charismatic gifts which the Spirit of God produces, he mentions the gifts of healing and the working of miracles (12:9–10, 29–30). He does not describe their occurring, nor does he indicate whether or not he shared in these gifts. They are, however, ranked by him in fourth place, after the roles of apostle, prophet, and teacher. Near the end of his hortatory treatise, the author of James asks his readers to confess their sins to one another and to pray for one another so "that you may be healed." Implicit in this exhortation is that sickness is related to sin, just as healing is linked with forgiveness, which as noted is also the case in the gospel tradition. What is wholly clear from this non-narrative NT evidence is that healing continues to have a significant role in the lives of those who see themselves as the people of God.

J. Medicine in the NT?

Some scholars have sought to explain certain features of the gospel miracle stories as evidence of medical or magical technique. Two of the features of the miracle stories that have been linked with one or the other of these techniques are the laying on of hands and the application of spittle or mud made from it to the affected part. A story found only in Mark (8:22–26) describes Jesus's restoring the sight of a blind man of Beth-saida by spitting on the man's eyes and laying on his hands. In John 9:6, Jesus is described as making mud from spittle and placing it on the eyes of the man born blind, which mud, when washed away, results in his gaining sight. There is no hint of conscious or even implicit medical or magical technique here, however; and both stories lead directly into the question of Jesus' role as the anointed one of God. The implication seems to be rather the removal of the unclean or sinful element which has caused the blindness. Similarly, Jairus' request to Jesus is to come lay his hands on the ailing daughter (Mark 7:32–33; Matt 15:23–31); but there is no suggestion that the source of healing resides in the technique of

touching. Rather, as Mark's version of the incident makes clear, the crucial factor is faith in the power transmitted through Jesus (Mark 7:36). In other gospel narratives Jesus is asked to lay hands on the sick (Mark 7:32–33; Matt 15:29–31), or he does so on his own initiative (Luke 13:13). Summary statements also note his healing through the laying on of hands (Matt 6:5; Luke 4:40). That this action is linked with the authority transmitted from God through Jesus is implied in the gospel accounts of the transfer of divine blessing to children through Jesus' laying on of hands (Mark 10:13; Matt 19:13–15; Luke 18:15). That the transmission of authority is the central factor in the laying on of hands is clearly the case in other NT writings, especially in Acts, where the imposition of hands by the apostles is essential for the assignment of responsibility (Acts 6:6), for conveying the Spirit to believers (Acts 8:17–19; 19:6), and for the assignment of Paul to the gentile mission (Acts 9:12–17; 13:3). A solemn warning in 1 Tim 5:22 concerns the hasty assigning of authority within the Church through the laying on of hands. In these accounts of the imposition of hands, there is neither magical nor medical technique but the symbolic transfer of power within the people of God.

K. Summary

The predominantly negative attitude toward physicians and medical technique in the Bible is, therefore, the reverse side of the conviction that it is God's intention and responsibility to care for the health of his people. This may be accomplished by direct action or through a human agent, whether through the prophets or Jesus or the apostles, and in a few texts, through physicians. In each case healing, which is essential to the fullness of human beings created in the image of God, is accomplished through God's action in behalf of members of the faithful community, communicated through a human agency or by direct performance. MEDITERRANEAN SEA

[Heb *yām* (יָם)]. An interior waterway linking together the continents Asia, Africa, and Europe. The term "Mediterranean" is derived from Latin *medius terra,* "midland," and in classical Roman literature was never associated with the sea. Biblical literature employs the NW Semitic term *yām* (Isa 24:15; Jer 46:18; Ezek 26:17–18; Jonah 1:11–13, 15; etc.). Akkadian probably borrowed the term as *yâmu* (Gordon *UT,* 19.1106), and the Egyptians definitely borrowed it as *ym* (Erman and Grapow, *WbÄS,* 78. The sense is still preserved in the place name al-Fayyum [Eg. *p€ y (W)m*] = "the sea"). It entered Coptic vernaculars as $^{s.}$ EIOM; $^{b.}$ IOM $^{a.f.}$ IAM (Spiegelberg 1921: 25).

Yām is not only a term for the sea, but also represents the sea god. It is on the shores of the Mediterranean that the famous literary theme of the battle between Baal and the sea god *Yām* originated. The motif was exported to the Akkadians, who incorporated it into their language and literature (Jacobsen 1968: 107–8). The people of Ugarit embellished the theme (Gordon, *UT,* Text 68), and traces of it are found in the Bible (Isa 27:1; 51:10; Job 7:12; 26:12; Pss 74:16–20; 89:9–10; 93:3–4). In a Mari text (ca. the 18th century B.C.), the Mediterranean Sea is known both as a real sea and the personification of a sea god. The text relates that *Iaḫdum-Lim* reaches the shores of *ti-a-am-tu,* the Mediterranean Sea. His thanksgiving offerings, however, are presented to Sumerian *A-a-ab-ba* (elsewhere written A.AB.BA), the Mediterranean Sea personified as a sea deity (Dossin 1955: 5–6). The use of two different terms for the Mediterranean Sea suggests the dual aspects of this particular sea, so often portrayed in biblical literature.

The Near East is situated geographically between two major bodies of water: the Mediterranean Sea and branches of the Indian Ocean. Empires of the ancient world prided themselves on dominating the lands and peoples who lived in between the seas. A common expression of the Babylonians was *iš-tu ti-a-am-ti e-li-ti a-di ti-a-am-ti ša-ap-li-ti* "from the upper sea unto the lower sea," i.e., from the Mediterranean Sea to the Indian Ocean. While the Babylonians described the seas from their geographic vantage point, the biblical scribes, from their perspective, portrayed the ideal borders of Israel as extending *miyyām ʿad yām*

i.e., from the Eastern to the Western Sea (Zech 9:11; Ps 72:8; cf. Amos 8:12). For Assyrian and Babylonian kings, the description was a reality, even if only for a short while; but for the biblical prophets it remained as a vision of the future.

The ancients were familiar with settlements all around the Mediterranean Sea. Thus an Assyrian king reports that tribute is paid by kings situated "in the midst of the sea." Ezekiel uses such a term when he prophesies calamity "in the midst of the seas" (Ezek 27:27). Sennacherib's annals record that the king of Sidon escaped into "the midst of the sea." This portends the beginning of the migration westward of Palestinians and Syrian natives afraid of the invading empires of the East. It also explains the biblical references to the return of the exiles from "the islands of the sea" (Isa 11:11). The aforementioned verse cites places designating East, North, and South. It is the islands of the sea which clearly refer to the west, thus indicating the islands in the Mediterranean.

The geographic map of the Mediterranean Sea is familiar to the biblical scribes. Even though not all the islands mentioned in the Bible are as yet definitively identified, the citations demonstrate acquaintance with locations both near and far. The Isle of Caphtor (Gen 10:14; Deut 2:23; Jer 47:4; Amos 9:7) refers, according to the Aramaic translation, to Cappadocia, while others maintain that it designates the island of Crete (Simons, *GTTOT*, No. 46, No. 194, No. 295; Gardiner 1968: 201–4). Similarly, the prophet suggests to his audience to visit the Isles of Kittim (Jer 2:10). The *Tg. Neb.* equates it with "Appulia," the Vg with "Italy" (Ezek 27:7), and Donner and Röllig (*KAI* 1: 32) with the Gk *Kition.* Italy is also given as the identification of Isles of Elishah by the *Tg. Neb.* (Ezek 27:7). The Targum refers to the Isles of *gôyîm* as "the Islands of Peoples" (Gen 10:5; Zeph 2:11), possibly a general expression pertaining to inhabitants of the islands of the Mediterranean.

The familiarity of the Bible with locations beyond the immediate shores of Syria-Palestine indicates involvement with sea activities, both commercial and military. The 2d millennium B.C.E. witnessed the Canaanites of Syria-Palestine as the thalassocrats of maritime activities. The 1st millennium B.C.E. saw a change in the composition of the leading maritime forces in the Mediterranean. The Sea Peoples migrated to the shores of the E Mediterranean (Sasson 1966: 137–38), and the Hebrews gained a foothold along the shore (Gordon 1963: 22, 31). See GREAT SEA.

Intense competition along the E Mediterranean shores resulted in a search for new and profitable maritime ventures. This was accomplished for the Israelite monarchy when the innovative kings, David and Solomon, were able to conclude a series of agreements with sea traders of the Mediterranean par excellence, the Phoenicians. The peak was reached when Solomon's fleet, manned primarily by Israelites and assisted by Phoenicians, launched one of the most famous ventures to exotic lands.

During the period of the great prophets, maritime activity declined and reached its lowest ebb; yet it would be impossible to explain the sudden rise in Jewish naval and commercial affairs in the postbiblical era if one were to assume that Jewish seamanship ceased completely during the prophetic era. As a matter of fact, recent archaeological excavations along the coast of Israel show considerable maritime activity of Israelites and Judeans during the First Commonwealth (Maisler 1950: 67–76, 124–40, 198–218; Raban 1983: 229–51; Yeivin 1960: 193–228).

During the Greco-Persian wars Herodotus reports that the largest share of naval ships were supplied and manned jointly by Jews and Phoenicians, thus alluding to an old partnership which may never have been dissolved (Hdt. 2.104; 3.5; 7.89; Jos. *Ant* 8.262; *AgAp* 1.22, 168).

When the Maccabean kings captured Joppa, the Tower of Strato (later Caesarea), and the rest of the harbor cities along the Mediterranean, the sea-oriented activities once again flourished (1 Macc 8:11; 2 Macc 12:3). This interest is reflected by the maritime symbolism found on various archaeological artifacts of the period, notably, Jewish coins (Kindler 1966: 15–20).

The Roman hegemony did not put an end to Jewish naval and commercial interests. Joppa continued to thrive, and King Herod I built a seaport in Caesarea (*Ant* 16.9; *JW* 5.21). This was the largest in the region, and it played a principal role in trade from the E to the W. The maritime enterprises of the period have been demonstrated by the underwater archaeological excavations of the Palestinian coast (Raban 1983: 140–43), as well as by the marine symbols, ships, and anchors struck on contemporary coins

(Meshorer 1967: 69, coins Nos. 56–60). The rebellion against the Romans (66–70 C.E.) eliminated the existence of a free Jewish fleet operating in the waters of the E Mediterranean (*JW* 3.419). The dimension of the calamity is not exaggerated by Josephus since it is suggested that three successive emperors celebrated the great victory by minting coins "Victoria Navalis" (Stieglitz 1975: 18–19; cf. Meshorer 1975: 38 No. 19).

During the NT era, the port cities were utilized not only for commercial purposes, but also for exporting the new religious concepts westward (Acts 9:36–49; 10:5–8). Preparation of Mediterranean society for Christianity depended heavily on the Jewish communities scattered around the Roman Empire (Acts 13:13–15, 14:1–2), the cosmopolitan seaport cities, and the well-traveled sea routes of the Mediterranean. The diffusion of Christianity, in large measure, can be attributed to the sailing of the apostles to various port cities of the Mediterranean, as described in the book of Acts.

Travel, however, was not possible throughout the year. The Rabbinic Sages recommended travel on the Mediterranean only from Pentecost until the Feast of Tabernacles. The hazardous period was known to be from the Feast of Tabernacles until Hanukkah, and even the large Alexandrian boats did not traverse the seas during this period (*Gen. Rab.* 6.5). Paul traveled the high seas during this dangerous time and nearly lost his life (Acts 27:7–44; 28:11).

The heritage of Western civilization along E Mediterranean shores was created not in a vacuum, but through the intermingling of the Mediterranean peoples, particularly the Greeks and Israelites. A catalyst for this interaction was the intense activity on the Mediterranean by the intrepid seafarers who took full advantage of its sea routes.

MEIR LUBETSKI

MEDIUM. See MAGIC.

MEGADIM, TEL (M.R. 145236). A site on the Levantine coast some 17 km S of Haifa and 2 km N of ʾAtlit. The site was only occasionally occupied from the EB to the Byzantine periods. It is perhaps to be identified with Kartah, i.e., "town," a name mentioned in Josh 21:34 and a frequent component of Phoenician place names. Its principal remains were uncovered in the well-preserved town of the Persian period.

A. The Bronze Age

The EB and MB periods are known only through unstratified finds; however, it appears that the EB settlement was considerably larger than the later ones. EB I (gray-burnished ware and hole-mouth jars) and EB II (platters and a seal impression) remains are common. After a long period of abandonment, the site was reoccupied in the MB. Another period of abandonment appears to separate the MB from LB periods. The LB city had strong overseas commercial ties, as implied by the abundant Cypriot pottery.

B. The Persian Period

Three Persian period strata were identified in the excavations, but the dating of the earliest (stratum I) is uncertain. After a destruction level, the most substantial stratum (stratum II) was unearthed, representing a well-preserved and well-planned town which flourished in the 5th century B.C. The town was laid out in a quadrangle, foreshadowing a system that became popular in the later Hellenistic period. The casemate fortification wall probably served primarily as protection against pirates. Greek and Cypriot ware testify to an intensive overseas trade. In the beginning of the 4th century B.C., the town was destroyed, possibly as a result of the invasions of the 29th Egyptian Dyn. or during the Persian reconquest of the country (ca. 380 B.C.). Shortly afterward, the site was resettled for a brief period (stratum I) before being destroyed, perhaps at the time of the Tennes rebellion (351 B.C.) or, at the latest, during the campaign of Alexander the Great (332 B.C.).

After the Persian period, the site seems to have fallen into obscurity. A large public building on the peak of the mound is all that is known from later periods, and may be the horse-changing station and caravansary known as Mutation Certa mentioned by the Bordeaux Pilgrim (ca. A.D. 330).

M. BROSHI

MEGIDDO (PLACE) [Heb *měgiddô* (מְגִדּוֹ)]. A city in the valley of Jezreel. While the king of

Megiddo is said to have been killed by the Israelites in their initial foray into Canaan (Josh 12:21) and Megiddo was allotted to the tribe of Manasseh (Josh 17:11), the Manassites were unable to accommodate the city (Judg 1:27). The site is mentioned in the Song of Deborah (Judg 5:19), but it is unclear whether the reference is as a geographic landmark or a statement implying occupation. Eventually the Israelites took control of the site, and it came under Solomon's administrative organization (1 Kgs 4:12). He later fortified it along with Jerusalem, Hazor, and Gezer (1 Kgs 9:15). Ahaziah was assassinated by Jehu and died at Megiddo (2 Kgs 9:27), and Josiah later was killed there when he met Neco (2 Kgs 23:29).

———

A. Site and Identification

The ancient city is represented by a major mound, Tel Megiddo (Hebrew), known also as Tell el-Mutesellim (Arabic "the tell of the governor"; M.R. 167221). The mound rises ca. 30 m above the surrounding plain and measures ca. 300 × 230 m, covering an area of 50 dunams. Including the slopes, the mound covers an area of 74 dunams. A lower terrace extending to the NE of the mound was also inhabited during various periods. The settlement drew its water from two springs, Ain el-Kubbi to the NE of the site and another spring at the bottom of the W slope.

Megiddo is located in the W part of the Jezreel valley, nearly at the foot of Mt. Carmel. It is positioned not far from where the brook of Naḥal Iron (Wâdī Ara) enters into the Jezreel valley. Along this brook passed the main highway (Via Maris) from Egypt to Syria; and the narrow Naḥal Iron is the best point where the route can be controlled, hence the special strategic importance of Megiddo in ancient (and modern) times. Thus, having ample sources of water and a fertile valley nearby, located along an international commercial highway, and being of unique strategic importance, Megiddo became one of the most important centers in the country.

The identification of ancient Megiddo with Lejjun, ca. 1.5 km S of the mound, was first proposed in A.D. 1322 by the Jewish writer Eshtori Haparchi in his book *Caphtor Waperach* and independently in 1838 by E. Robinson during his first visit to Palestine.

B. History of Explorations

The excavation of Megiddo was initiated by the German Society for the Study of Palestine. It was the first major German excavation project in the Holy Land, and a large part of the costs were defrayed by Kaiser Wilhelm II. G. Schumacher, an architect who had previously conducted a survey in the Golan, directed the excavations, which took place between 1903 and 1905. Schumacher (1908) surveyed the site and its vicinity, cut a 20-m-wide trench across the mound from N to S, cut a number of 3-to-5-m-wide trenches across the summit and the slopes, dug two monumental Iron Age buildings on the summit (the *Tempelburg* and the *Palast*), and studied tombs and other remains in the vicinity of the site. The finds were later analyzed by Watzinger (1929).

In 1925 the Chicago Oriental Institute resumed the excavations under the direction of J. H. Breasted. From its inception the project was planned on a large scale, aiming at a horizontal exposure of one layer of habitation after the other across the entire mound. See Fig. MEG.01. The neglect of details and of vertical relationships which are essential to understand the stratigraphy, as well as the production of superficial excavation reports, characterized the work. Many of the difficulties which later arose in the interpretation of the finds stem from these deficiencies. No attempt was made to correlate the work with the German finds; and as a result, the Oriental Institute's plans and reports ignore crucial architectural data uncovered by Schumacher.

Fisher (1929) was director from 1925 to 1927. He built an expedition house on the lower terrace NE of the mound, prepared a chute on the E slope for removing debris, and excavated an area to the E of the site where the debris could be dumped. On the summit he excavated the area at the E side, where Schumacher had uncovered the *Tempelburg*.

Guy (1931) was director from 1927 to 1934. He cleared an area farther to the E of the mound, where early remains and tombs of many periods were discovered (Engberg and Shipton 1934; Guy 1938). He uncovered the remains of the Israelite strata across the entire summit (areas A–E), including the city gate and the stable compounds (Lamon and Shipton 1939), and cleared the water system (Lamon 1935). Guy introduced the use of a camera attached to a balloon for taking aerial photographs of the excavations.

Loud directed the work from 1935 to 1939, when the project ended because of World War II. He concentrated his efforts in selected areas (AA–DD), where he penetrated lower strata. In area BB, a wide trench at the E side of the site, he dug down to virgin soil. The results of his work were inadequately published because of war conditions (Loud 1948; Shipton 1939).

Between 1960 and 1972, Yadin (1960, 1970, 1972) carried out small-scale excavations in the NE part of the site and near the "gallery" at the W side to clarify the stratigraphy of the earlier temples in area BB. In 1974 Eitan (1974) further studied Iron Age remains uncovered at the lower end of the E slope.

CHRONICAL TABLE

(Dates B.C. unless otherwise noted)

Periods and Dates	Strata	Special Data
PN B–EB I (6000–2950/2900)	XX–XIX	Stages VII–IV
EB II–IV (2950/2900–2200)	XVIII–XV	
EB IV (2200–2000)	XIV	Shafts Tombs
MB I (2000–1800)	XIII–XII	Egypt's Middle Kingdom
MB II–III (1800–1550)	XI–X	Egypt's Second Intermediate
LB I–III (1550–1130)	IX–VIIA	Egypt's New Kingdom
Iron IA–B (1130–1000)	VIB–VIA	
Iron IC (1000–930)	VB	David's Reign

	VA–IVB	Solomon's Reign
Iron IIA–B (930–734)	IVA	Divided Monarchy
Iron IIC (734–ca. 600)	III–II	Assyrian Rule
Babylonian–Persian (ca. 600–332)	I	Conquered by Allexander
Roman (31–A.D. 324)	New settlement at Lejjun	

C. Excavation Results

1. The Early Settlements. a. Neolithic. Stratum XX represents the beginning of settlement on bedrock uncovered in area BB. Remains of stone and brick walls, floors, pits, and fireplaces cut in the surface of the rock were reported. Toothed-flint sickle blades and pottery fragments of the Yarmūkian culture date the settlement to the Pottery Neolithic B period. Loud considered one cave (labeled stratum -XX) to be earlier in date, assigning it to the Pre-Pottery Neolithic period.

b. Chalcolithic and Early Bronze I. Remains of EB I were uncovered in Stages VII–IV in the area excavated E of the mound (Engberg and Shipton 1934), indicating that the EB I unfortified settlement extended to a large area E of the site. Two "apsidal" buildings—rectangular buildings with one rounded end—which are typical to that period, were uncovered in Stage IV. The ceramic repertoire is characterized by gray-burnished "Esdraelon ware" and "grain-wash" pottery. A group of cylinder seal impressions stamped on pottery vessels found in Stage IV show connections to Syria, Mesopotamia, and Egypt (Beck 1975).

Stratum XIX in area BB is represented by a temple compound extending on the E slope of the site. The temple was the first of a number of sanctuaries built in this general area until the Iron Age (Epstein 1973; Dunayevsky and Kempinski 1973). The shrine was a rectangular room, its entrance located in one of the long walls facing the E slope. A number of stone slabs extending along the center of the room and adjacent to the walls must have been bases for pillars or other objects. A rectangular mudbrick platform, apparently an altar, which was enlarged in a later phase, was built opposite the entrance. It is possible that a badly preserved room to the N of the shrine served as a second, similar shrine. A sloping courtyard surrounded by a curving wall extended in front of the building. A round installation assigned to stratum XVIII (No. 4034), beside which a unique, ceremonial copper spear was found, probably formed a cultic basin in the courtyard. Remains of two layers of stone pavement were found in the courtyard. On some of the stone slabs were incised figures of men and animals in hunting scenes and decorative patterns.

The ground plan of the temple resembles that of the Chalcolithic, Ghassulian sanctuary at En-Gedi. Typical Ghassulian pottery, notably cornets, and other finds, were found here (and not elsewhere in Megiddo). Early Bronze I pottery is also reported from this area. This situation can be explained in two ways. One possibility is that the temple originates in the Chalcolithic period. Similar to the En-Gedi sanctuary, it may have been an isolated shrine located on the slope not far from a spring and facing the valley to the E; but it could have also been located in a Ghassulian settlement which extends in the unexcavated parts of the site. A second possibility is that the temple belongs to the EB I settlement, while its resemblance to the En-Gedi sanctuary and the presence of Ghassulian finds indicate the contemporaneity of the Ghassulian and EB I cultures (Kempinski 1989).

c. Early Bronze II–III. These periods are covered by strata XVIII–XV in area BB. Attempts to elucidate the stratigraphy and chronology were made by Kenyon (1958), Thompson (1970), Dunayevsky and Kempinski (1973), Kempinski (1989), and Brandfon (1977).

A massive city wall was built at stratum XVIII. Built of stone, it was ca. 4–5 m wide and preserved ca. 4 m high. In stratum XVII it was widened, becoming ca. 8 m thick. A turn inward at the edge of area BB shows that it did not surround the entire site. Kenyon's suggestion (1958: 52*) that in its initial stage the wall was merely a retaining wall supporting the adjoining edifice built up the slope is very attractive. The city wall indicates that Megiddo became a fortified, but smaller, settlement in EB II.

Altar 4017 was built in stratum XVII on the summit, near the edge of the E slope where the stratum XIX temple once stood. It is a circular, stone-built structure, ca. 8 m in diameter and 1.5 m high, with a

flight of seven steps leading to its top. An enclosure wall surrounded it, and large amounts of bones and pottery were found within it. See Fig. MEG.02.

Three temples (4040, 5192, 5269) were added later near the altar. According to Loud they were all built in stratum XV dated to the EB–MB Intermediate period (= MB I or EB IV). However, it seems that Temple 4040 was built before the other two temples and that all of them date to the EB, when Megiddo was still a great urban center (Dunayevsky and Kempinski 1973).

All three temples have a uniform plan. Each temple consists of a rectangular cella entered through a porticoed porch. Two pillar bases were found in the center of each cella; and a platform, probably an altar, stood against the rear wall. A small side room was attached to each temple. The temples were probably dedicated to three different deities, and with the round altar they formed an impressive sacred area.

d. Early Bronze IV. During this period, settlement on the site continued but declined. Existence of a poor settlement is proven by contemporary pottery found in area BB, and it probably includes many of the badly preserved structures assigned to strata XIV and XIIIB in that area. The earlier Temple 4040 was reused. The cella was filled with rubble and a small cell, measuring ca. 5.5 × 4 m, was prepared in its center. A cultic niche, located above the former altar, was built in the wall of the cell, opposite its entrance.

A number of rock-cut tombs were uncovered SE of the site (Schumacher 1908: 168–73; Guy 1938). Many of them, used for multiple burials, are characterized by their plan and pottery: a horizontal entrance cut at the bottom of a vertical shaft opens into a rectangular chamber which has entrances to three smaller side chambers cut at a slightly higher level. The pottery, which appears in a number of places in N Israel, includes wheel-made, gray vessels, decorated with wavy white bands, and is connected to the "caliciform" pottery of N Syria. Amiran (1960) defined it as Family C and Dever (1980) as Family NC in their classifications of the period's pottery.

2. The Canaanite City. The beginning of the MB in the 20th century B.C. marks the rebuilding of Megiddo in stratum XIII as an urban, fortified center—a Canaanite city-state which lasted without interruption until the destruction of the stratum VIIA city at the end of the LB Age in the 12th century B.C. The entire period is characterized by the presence and interests of Egypt in Canaan and Syria, and is affected by changes in the impact of Egyptian influence. Domination of Megiddo naturally was a prerequisite for Egyptian hegemony in Canaan.

Extensive remains of the city were uncovered in Schumacher's main trench and in Loud's areas AA–DD. The stratigraphic sequence is confused because of the custom of constructing tombs within the city limits (typical of the MB) and the difficulty in assigning them to city levels, the continuous occupation of the site, and the near absence of massive destructions by fire. Attempts at elucidating the stratigraphy and the history of the city were made by Epstein (1965), Kenyon (1969), Müller (1970), Dunayevsky and Kempinski (1973), Kempinski (1989), Kassis (1973), Gerstenblith (1983: 23–28, 114), and Gonen (1987).

a. Middle Bronze Age. The MB I parallels the Middle Kingdom in Egypt, i.e., the rule of the 12th Dyn. and renewal of Egyptian interests in Canaan and Syria. It is not clear how strong was the Egyptian influence at Megiddo. Significantly, the Execration Texts do not mention Megiddo; and this fact has been interpreted as an indication of Egyptian domination. A broken, black, stone statuette of Thuthotep, a high Egyptian official in the 19th century B.C., was found with two broken, black, stone Egyptian statuettes embedded in the raised platform of stratum VIIB Temple 2048. The statues had probably stood in the earlier temple built on this spot; they were later broken when the temple was plundered, after which it was buried. The implications of this find for understanding the relationships with Egypt at the period of the Middle Kingdom are not clear (Wilson 1941). Strata XIII–XII are assigned to the MB I by some scholars (e.g., B. Mazar, Kempinski) but others (e.g., Dever, Gerstenblith, Davies) assign stratum XII to MB II.

During MB II–III, which parallel the Second Intermediate Period in Egypt, Egyptian impact on Megiddo weakened; and scarabs form the main expression of Egyptian influence (Tufnell 1973). Strata XI–X are usually assigned to this period.

The MB city is characterized by massive fortifications, uncovered in areas AA–CC in strata XIIIA–XI. In area AA the stratum XIII buttressed city wall and a city gate were uncovered. They were built of bricks

on stone foundations. A stepped approach, supported by a retaining wall, led to the gate. The wall, gatehouse, and retaining wall were supported on the outside by a limestone glacis. The gate chamber included outer and inner doorways, ca. 2 m wide, oriented 90° to one another. The stepped approach, the narrow doorways, and the indirect passage indicate that the gate was planned for use by pedestrians. In stratum XII the city wall to the W of the gate was thickened by the addition of a new wall. The city wall also extended above the ruined stratum XIII gatehouse. In stratum XI a new city wall, with buttresses built along its inner face and a glacis leaning against its outer face, was built. On the E side the uncovered wall segment ended in a tower which may have formed part of the city gate.

In areas BB and CC the continued lines of the strata XIII–XII walls found in area AA were identified. In area BB a buttressed wall, 1.5 m thick, built of bricks on stone foundations, was assigned to stratum XIIIA. In stratum XII a similar wall, but of superior construction, and a tower adjoined the outer facade of the earlier wall, thus more than doubling its width. The city wall was preserved here to a height of more than 3 m. This system of walls was also uncovered in area CC, where it included an inner double wall and outer wall supported by a glacis. According to Loud the city walls in area BB were freestanding structures. However, the faces of these well-preserved brick walls were unplastered (Loud 1948: figs. 197, 199–200) and obviously were not meant to withstand rains. The data thus indicate that these walls were part of the fortifications' substructure and probably belong to a single fortifications system. The brick walls must have been supported by a glacis on the outside and a constructional fill on the inside, which were removed by Loud. Kenyon (1969: 44) observed that the wall is stratigraphically later than stratum XIIIA, and it probably dates to stratum XII or stratum XI in area BB.

The existence of a glacis on the slope and supporting massive brick walls, which must have formed part of the same fortification system, was manifested in seven narrow trenches cut by Schumacher around the site (1908: 23–36).

An impressive building with thick stone walls was uncovered in strata XI–X in area BB, to the NW of the sacred area. It is located near Schumacher's *Nordburg*, uncovered in his main trench (1908: 37–66; Loud 1948: fig. 415); and both apparently constitute parts of the MB II–III royal acropolis of Megiddo, which had been built in the central part of the site.

Schumacher (1908: 13–23, 66–77) uncovered a unique stone structure, the *Mittelburg*, which adjoined the S side of the *Nordburg.* This structure, in which Schumacher discerned a number of phases, contained three unique stone tombs, apparently for the burial of princes and nobles. "Burial chamber I," measuring ca. 2.6 by 2.15 m, was entered through a vertical shaft leading to a horizontal corridor. It contained a skeleton lying on a bench with a variety of adornments and scarabs mounted in gold. Four more skeletons, probably of his family or entourage, and many burial presents were found on the floor. The largest tomb was found empty and hence was not considered by Schumacher as a tomb ("chamber f"). This hypogeum is 5.6 m long, 3.7 m wide, and 3.1 m high and was entered through a shaft. It is beautifully built. All the chambers in the *Mittelburg,* and chamber f and its doorway in particular, are vaulted by fine-stone rudimentary corbeling—an early example of this building technique. Chamber f has been compared to the corbeled burial chambers from Ugarit.

The sacred area, i.e., the place where Altar 4017 and Temple 4040 were built in the EB Age, continued to function. Loud uncovered remains of buildings of strata XIII–IX on both sides of the sacred area, but he did not recognize any contemporary structure in the sacred area itself. He assigned an area above Altar 4017 covered with standing stone steles to stratum XII and a series of superimposed rubble pavements, as well as a heap of stones which could have been fallen steles, to stratum IX. He assigned the new temple built here (No. 2048) to stratum VIII, to the LB Age. However, it seems that Temple 2048 should be assigned to stratum X and dated to the MB Age (Epstein 1965; Dunayevsky and Kempinski 1973).

Temple 2048 has three superimposed phases. See Fig. MEG.03. The earlier one was preserved at foundation level and no floors, doorways, or finds could be associated with it. It is a massive rectangular structure measuring 21.5 by 16.5 m and containing a single room with a niche opposite the entrance. Two towers flanked the entrance. The thick, rubble foundation walls possibly indicate that the edifice rose to a considerable height. Part of the tower to the left of the entrance was constructed with ashlar stones, and it

probably belongs to the superimposed LB structure. The temple resembles the large MB II temple at Shechem—both usually referred to as "tower temples" or "fortress temples."

Well-built domestic houses of this period were uncovered in areas AA and BB. The custom of intramural burial, inside and outside the houses, was common in Canaanite Megiddo. Many graves and stone-built tombs were found throughout the site and often it is not easy to assign them to the correct city level.

Typical to Megiddo at the end of MB III and the LB I is a fine group of decorated pottery known as "bichrome ware," thus named because its decoration, which consists of bands of red and black paint. Similar pottery is known from other sites in Canaan and Cyprus. Its origin was attributed at the time to Hurrian presence in Canaan (Epstein 1966). Recent neutron-activation analyses (Artzy, Perlman, and Asaro 1978), however, indicated that one group of this pottery originated in Cyprus, while another, distinctive group originated at Megiddo. Both groups seem to have been contemporaneously used at Megiddo (Wood 1982).

b. Late Bronze Age. The expulsion of the Hyksos from Egypt and the campaign of Ahmose to Canaan ca. 1550 B.C. mark the renewal of Egyptian influence in the country. This event is usually adopted for the beginning of the LB Age. In general, it is very difficult to correlate the archaeological evidence from Canaan with the Egyptian inscriptional evidence. However, it seems quite possible that many cities in the S and inland regions of the country had been devastated, but not those in the coastal area and in particular not Megiddo, where no data indicating a destruction at that time have been found (Weinstein 1981).

The Egyptian conquest of Megiddo apparently occurred in 1479 B.C. during the first Asian campaign of Thutmose III. The events in Megiddo were recorded in detail and can be reconstructed (*ANET,* 234–38; Davies 1986: 51–56). While Thutmose III and his army progressed N along the coastal plain and the main highway, armies of the Canaanite kings led by the king of Kadesh on the Orontes concentrated near Megiddo. They decided to confront the Egyptian army at the place where the pass leading through the narrow Naḥal Iron opens to the Jezreel valley. Thutmose III learned in advance of his opponents' plan and held a conference, in which his commanders suggested taking alternative routes to the N or S of Naḥal Iron. Thutmose III, however, decided to take the direct route, crossed Naḥal Iron, and took the Canaanite armies by surprise. The Egyptians won the battle which followed, but the Canaanites managed to reach the city. Thutmose III laid siege and succeeded in conquering Megiddo after seven months. The annals give detailed lists of booty taken by the Egyptians after the battle and the siege.

The battle of Megiddo established the Egyptian domination in Canaan and Megiddo. The conquest of the city has been taken as an archaeological turning point between strata IX and VIII, but Shea (1979) is right that the annals do not mention a destruction of the city, and remains of such a destruction were not discerned in the excavations.

Megiddo is not mentioned in the annals describing the campaigns of Amenhotep II (1427–1401 B.C.), probably because it was dominated by Egypt (*ANET,* 245–48). This is manifested by two contemporary sources. One of the Taanach Letters orders the local ruler to send provisions and soldiers to the Egyptian commander at Megiddo. Papyrus Hermitage 1116A, dated to the 19th or 20th year of Amenhotep II, records presentations by Egyptian officials of grain and beer to envoys of various Canaanite cities, including Megiddo (Weinstein 1981: 13).

Eight of the cuneiform letters found in el-Amarna were sent from Megiddo (Mercer 1939: Nos. 242–48, 365) and testify to its importance. They apparently date to the later part of Amenhotep III's reign (1391–1353 B.C.) or to the earlier part of Amenhotep IV's reign (1353–1335 B.C.). Six of the letters were sent by Biridiya, the ruler of Megiddo, whose name is not Semitic. The letters express his loyalty to Egypt. Some of them discuss Biridiya's struggle with Labaya, the ruler of Shechem, who apparently attempted to take Megiddo by force but failed. In one letter (No. 244), Biridiya appealed for a garrison of 100 Egyptian troops to prevent the fall of the city. Two letters (Nos. 248, 365) discuss cultivation of estates in Shunem by forced labor.

During the reigns of Seti I (1306–1290 B.C.) and Rameses II (1290–1224 B.C.), Megiddo must have been firmly held by Egypt. The last Egyptian document of the New Kingdom which mentions Megiddo is

papyrus Anastasi I, dating to the end of the 13th century B.C., in which Megiddo appears as a place name in a geographic description of Canaan.

By the beginning of the LB Age the palace was shifted from the center of the city to the N side; and four superimposed edifices built along the upper periphery of the site were uncovered in area AA in strata IX–VIIA. Particularly impressive is the stratum VIII palace. Its walls are ca. 2 m thick. A large court, 20 × 11 m, lay at its center, and another court to its W. Near them was found a large bathroom with a basin in its center and a floor covered with sea shells set in lime plaster. A hoard of ivory and gold objects was found beneath the floors in one of the rooms. The stratum VIIB palace, which uses the large court and bathroom of the previous palace, met its end by a severe destruction by fire.

A large city gate was built to the E of and near the palace in stratum IX (or even in stratum X) and was in use until the end of the stratum VIIA city. A wide roadway, paved with rubble and supported by a retaining wall, approached the gate. It was a monumental three-entry gatehouse, faced with ashlar stones. The floor of the gate passage was considerably raised in stratum VIIB. Significantly, the gatehouse does not have towers flanking the gate passage nor does it have deeply set foundations beneath the level of the floor as in other MB city gates around the country. This can be explained if it is assumed that the gate was constructed in a trench cut in the debris of the site or in the MB II glacis extending along its edge.

The absence of an LB city wall associated with the city gate, which is not even structurally connected to the back wall of the adjacent palace, has long puzzled scholars (Gonen 1987: 15–16). The above interpretation might help to furnish an explanation. It seems that the gate was incorporated in the MB fortifications surrounding the slopes of the site, which continued to function during the LB Age. These fortifications, crowned by the buildings located along the upper periphery of the site, probably formed the defense line of the city which faced Thutmose III's army in ca. 1479 B.C.

Another palatial complex was uncovered in strata VIII–VIIA in area DD to the E of the city gate. Excavation did not penetrate here beneath stratum VIII. Also, this edifice had a large rectangular court in its center.

Temple 2048 in area BB was rebuilt in stratum VIIB. It was based on the earlier foundations and had a similar plan. Only the back wall was thicker than that of the previous temple, and a raised platform replaced the cultic niche at the back of the cella. The temple was built of large ashlar stones. Two clay liver models and three bronze figurines of deities, one of them covered with gold, probably originated in the temple. The temple was destroyed by fire.

Many valuable objects were uncovered in the buildings and in the inter- and extramural burials. They include cylinder seals, bronze objects and figurines, faience vessels and amulets, alabaster vessels, gold objects, and gold jewelry. Of particular interest is a broken cuneiform tablet found by a shepherd after the termination of the excavations (Goetze and Levy 1959). It includes a section of the Epic of Gilgamesh and possibly derives from a scribal school at Megiddo.

c. End of the Canaanite City. Stratum VIIA represents a prosperous city. See Fig. CIT.04. The monumental structures in areas AA, BB, and DD indicate continuity of culture, although the palace and temple of stratum VIIB, and possibly larger parts of the city, were destroyed by fire. In area AA the three-entry city gate continued in use, and the palace was rebuilt. The palace was the largest of all the palaces successively constructed here. It was built around a central courtyard and was decorated with wall paintings, an indication of Egyptian influence. On its W side an annex, a three-chambered cellar, was added. Sealed by destruction debris in the cellar's back chamber, possibly the "treasury" of the palace, an assemblage of ivory objects and other precious items was found. In area BB the temple was rebuilt. Its walls were narrower than those in the earlier structures, and it now had a cultic niche built in its back wall as in the original building.

An ivory-model pen case bearing a cartouche of Rameses III found in the cache in the annex of the palace proves that stratum VIIA was not destroyed prior to the reign of that pharaoh (1182–1151 B.C.; low chronology of Wente and Van Siclen). A statue base of Rameses VI (1141–1133 B.C.; low chronology), was found buried in a pit in area CC. Originally the statue may have been placed in a temple, and it

indicates the continuation of Egyptian rule in Megiddo during Rameses VI's reign (J. H. Breasted in Loud 1948: 135–38). The destruction of stratum VIIA probably occurred shortly afterward, ca. 1130 B.C.

The carved ivories found in the annexed cellar of the palace included 382 items (Loud 1939), the richest assemblage of Bronze Age ivories found in the Near East. The assemblage forms an assortment of objects of many types and various styles (Kantor 1956; Barnett 1982: 25–28; Liebowitz 1987). It includes locally produced ivories in Canaanite style and imported items in Egyptian, Aegean, Assyrian, and Hittite style. Of special interest is the Hittite plaque (No. 44) showing the Hittite king standing above rows of demons and beneath a winged sun disc. The stratigraphic context and the Rameses III cartouche date this assemblage to the 12th century B.C. But many scholars, notably Frankfort and Kantor (1956), believe that it represents a collection of ivories produced over a long period of time, mainly during the 14th and 13th centuries. Dothan (1982: 70–72) and Yadin (Aharoni and Yadin 1977: 848–49) believe that this collection was originally kept in a similar "treasury" in the stratum VIIB palace and then transferred to the new one. In any case, the assemblage indicates the prosperity of Canaanite art and culture in the later part of the LB Age.

d. Strata VIB–A. Following the destruction of the Canaanite metropolis, a poor settlement (VIB) was built; and it was soon replaced by a larger and richer settlement (VIA). The pattern of settlement radically differs from that of stratum VIIA; and the temple, palace, and city gate were not rebuilt. The settlement met its end by a destruction by fire. A city wall was not found; the excavators believe that the later city gate of stratum VA–IVB originated in stratum VIA; but this supposition seems doubtful. The buildings of stratum VIA, mostly of domestic nature, were built of bricks on stone foundations. The sole structure of a public nature is building 2072 in area AA. The building is located at the edge of the site, measuring ca. 32 by 37 m; it has thick walls and probably carried a second floor.

Sealed beneath the destruction debris of that level were a great number of pottery vessels. They include "collared-rim storage jars" and Philistine pottery. Of particular interest is a painted jug from Building 2072 which shows a procession of animals and a lyre player; it is known as the "Orpheus jug," as the scene is apparently associated with an early version of the Orpheus legend (Mazar 1976).

Typical to that city level are metal objects, mostly of bronze. A group of jugs, bowls, strainers, axheads, and spearheads was found in a single locus (No. 1739) in area CC. Schumacher (1908: 84–87) found in his "4th level" a number of metal objects, including five bronze stands and iron blades, which should probably be assigned to stratum VIA. The bronzework found in stratum VIA indicates a strong tradition of metalwork, which either continues the Canaanite tradition of bronzework (Negbi 1974) or was introduced into the country by the Sea Peoples (Tubb 1988).

e. Historical Correlations of Strata VII–VI. The archaeological data should be correlated with three historical aspects: (1) the decline of the Canaanite city-states and the end of Egyptian rule in Canaan; (2) the settlement of the Sea Peoples; and (3) the settlement of the Israelite tribes.

The destruction by fire of stratum VIIB in the later part of the 13th century B.C. indicates a forceful interruption in the Egyptian rule which is not documented. Stratum VIIA and the statue base of Rameses VI prove, however, that the Canaanite city was later rebuilt in the same tradition and even prospered and that it lived under Egyptian suzerainty until ca. 1130 B.C. It seems that the destruction of the stratum VIIA city coincides with the end of Egyptian rule in Canaan, and the two events may well have been connected. The history of Megiddo in the 12th century B.C. is very similar to that of Canaanite Beth-shan and Lachish during that period. According to Ussishkin (1985: 224–26) the decline of the Canaanite cities and the end of the Egyptian rule mark the end of the LB in Palestine.

The Philistine pottery found in Megiddo can be taken as an expression of Philistine presence. However, many of the items are sherds and were not found in a clear stratigraphic context. Dothan (1982: 70–80) argues that the appearance of Philistine pottery in stratum VIIA is proof of Sea Peoples' presence in that city level. But it seems that A. Mazar (1985: 96–97) is right that Philistine pottery appeared here in stratum VI and not earlier. Alt (1953), B. Mazar (1976), and Yadin (1970: 93–95) believe that Megiddo of stratum VIA, as manifested in its culture, was an 11th-century central Canaanite-Philistine city that was conquered and destroyed by David.

The king of Megiddo is mentioned in Josh 12:21 in the list of kings defeated by Joshua. Josh 17:11–12 and Judg 1:27 tell that the Canaanites continued to live in Megiddo until their subjection at a later period by the tribe of Manasseh (also 1 Chr 7:29). Albright (1936) believed that the expression "at Taanach, by Megiddo waters" (Judg. 5:19) in the Song of Deborah refers to a time when Megiddo was not settled, and he assigned the poem and the events described in it to the period immediately following the destruction of the stratum VIIA city. Aharoni (1982), following a suggestion of Albright, who later withdrew it, argued that stratum VIIA was destroyed by the Israelites and that stratum VIB was a small Israelite settlement. This view is supported by the use of stone pillars in buildings of stratum VI—a typical feature in Israelite buildings—and by the presence of "collared-rim storage jars" which are usually associated with the Israelite settlement in Canaan (also Kempinski 1989: 78–82).

3. The Israelite City. a. Stratum VB. This level includes remains of domestic structures in various parts of the site, probably the remains of a small, unfortified settlement. Remains of one larger building, probably a trapezoidal fort surrounded by a casemate wall, were uncovered at the NE edge of the site (Wightman 1984: 132–36). This settlement is usually considered to be Israelite, dating to the time of David.

b. The Solomonic City. Megiddo was included, together with Taanach and Beth-shan, in the fifth administrative district of Solomon (1 Kgs 4:12) and apparently here was the residence of the district governor, Baana son of Ahilud. In 1 Kgs 9:15 Megiddo is mentioned together with Jerusalem, Hazor, and Gezer as a central city built by Solomon. It is clear that the text refers to the building of monumental structures the construction of which was financed by the levies imposed by the king. The remains of the Solomonic city level have been uncovered since excavations at Tel Megiddo began in 1903. Of special importance is Yadin's work (1960, 1970), which resulted in redating City Wall 325 and "Solomon's stables" to the 9th century B.C. Scholars widely differ on the stratigraphic, chronological, and functional interpretation of the remains. The summary below is based on Ussishkin's views, but the different opinions will be stressed in the discussion of each aspect.

Stratigraphically, the Solomonic city level includes all the structures which are immediately beneath the city wall (No. 325) of stratum IVA and associated structures and above the building remains of stratum VB (which in turn was built above the burned brick debris of stratum VI structures). These remains were originally assigned by the American excavators to different strata, V (later VA), IVB, and IV. Albright (1943: 29–30 n. 10) observed that the remains assigned to strata VA and IVB are in fact contemporary and belong to one city level, which he labeled stratum VA–IVB, dated to the reign of Solomon. This concept was primarily followed by Wright (1950: 59–60) and Yadin (1970, 1972; Aharoni and Yadin 1977) and is generally accepted today (see Ussishkin 1980; Davies 1986). Kenyon (1964) differs on many stratigraphic details and adopts lower dates. Aharoni (1972, 1982), followed by Herzog (1986: 93–108), basically accepted the stratigraphy but labeled this city level stratum VA; assuming that the superimposed city level, stratum IVA (his IVB), represents the Solomonic city, he dated stratum VA–IVB to the reign of David. Wightman (1985) recently analyzed afresh the stratigraphy of strata VI–III and pointed out that the domestic and public structures had a different history.

Stratum VA–IVB includes three palatial edifices, Nos. 1723, 6000, and 338, built at the S, N, and E sides of the site respectively. See Fig. MEG.04. They were positioned at the edge of the city, their facades facing its center; and their back walls reached the upper periphery of the site. All of them opened into spacious courtyards. A large building, No. 1482, believed to have had an administrative function, was built alongside the S palace compound, No. 1723. Large quarters of domestic buildings were uncovered along the E and N edges of the city. The N quarter also included a sanctuary (No. 2081).

The palatial buildings, the sanctuary, and the domestic structures built along the upper periphery of the site formed a line of defense around the city. According to Yadin this line of defense was a casemate city wall, best observed to the W of Palace 6000. The city gate was located, as in previous periods, in the N side of the city. It was the small, two-entry gatehouse, approached by a wide, lime-paved ramp (Loud 1948: 39–45). Stratigraphically it should be assigned to stratum VA–IVB as suggested by Loud (Ussishkin 1980; Herzog 1986: 93–108) rather than the so-called Solomonic four-entry gatehouse, which

is later in date and belongs to stratum IVA. In addition, a postern (gallery 629) was built at the W side above the spring. It was excavated and dated by the American expedition to the 12th century (Lamon 1935) but correctly assigned by Yadin to stratum VA–IVB.

Ashlar masonry, possibly quarried SE of the site (Shiloh and Horowitz 1975), was lavishly used in the construction of the palatial buildings, in their massive foundations and their superstructure. Proto-Ionic stone capitals, which were mounted on stone pilasters or freestanding pillars, decorated monumental entrances in these buildings (Lamon and Shipton 1939: 55–57; Ussishkin 1970). Unfortunately, these edifices were largely destroyed when the ashlars were stolen for secondary use in stratum IVA. The construction with ashlar masonry, which originated in Egypt, appeared for the first time in Canaan in the LB temple and city gate at Megiddo and was introduced on a large scale during the reign of Solomon. Its appearance in Megiddo fits the description of ashlar masonry used in the construction of Solomon's palace in Jerusalem (1 Kgs 7:9–12). The wide use of ashlars was part of the Phoenician influence which dominated Solomon's building activities.

Palace 6000 was uncovered by Yadin (1970: 73–77). It was a rectangular building, measuring ca. 28 by 21 m; and following its destruction by fire, most of its stones were stolen. It seems to have been a ceremonial palace built as a *bit-hilani,* that is, a type of a ceremonial palace characterized by a monumental porticoed entrance and a large central hall which was commonly used in N Syria during that period. Palace 1723 (Lamon and Shipton 1939: 11–24) was built in a spacious, lime-paved, square courtyard. The entrance to the courtyard was through monumental gate 1567, which was largely uncovered by Schumacher (1908: 91–104), who labeled it *der Palast.* The palace was square in plan, measuring ca. 23 by 23 m. It was mostly preserved at foundation level, and hence its aboveground plan is open to conjecture. It seems probable that the edifice contained a residential as well as a ceremonial section, the latter built as a *bit-hilani* (Ussishkin 1966). Hence Solomonic Megiddo apparently contained at least two *bit-hilani* palaces, as, for instance, in the acropolises of Tell Tayanat and Zincirli (ancient Sam'al) in N Syria, which date to that general period. A number of scholars, however, believe that only Palace 6000 was a *bit-hilani,* while Palace 1723 had a different plan (Yadin 1970: 95; Fritz 1983: 22–25; Kempinski 1989).

The third palatial edifice, Building 338, was built at the highest place in the city. The building was constructed on an aboveground foundation podium. It was first uncovered by Schumacher (1908: 110–24), who identified it as a sanctuary; associating it with the stratum II fortress, he defined it as a *Tempelburg.* It was further uncovered by Fisher (1929: 68–74), who identified it as a "temple of Astarte," and by Guy (1931: 30–37), who identified it as the residence of the commander of the E sector of the city and assigned it to stratum IV (i.e., stratum IVA). Finally, it was studied by Lamon and Shipton (1939: 47–59), who accepted Guy's interpretation, which is generally accepted today. However, it seems that Schumacher rightly identified Unit 340 at the S part of the edifice as a shrine (Ussishkin 1989). Two large steles found inside hint at a dual cult performed here. Model shrines and stone altars found by Fisher to the S of Building 338 (May 1935) probably belonged to this shrine. While Unit 340 and its forecourt served as a sanctuary, other parts of the edifice may have had a secular function. A wing of the building uncovered by Schumacher but ignored by the American excavators antedates the stratum IVA city wall; hence the edifice dates to stratum IVB.

Sanctuary 2081 was built, like the palaces, with its back wall extending along the upper periphery of the site (Loud 1948: 45–46). Two monolithic stones found standing in its center were probably cultic steles. A cache of cultic equipment was uncovered here. Several stones carved in the shape of an eighth segment of a sphere found nearby (Lamon and Shipton 1939: 24) probably indicate that a large horned altar erected of ashlar stones of the type uncovered in Tel Beer-sheba stood in the courtyard of the sanctuary.

Much pottery was uncovered in stratum VA–IVB. Typical to it are red-slipped, irregularly burnished vessels which start to spread in Palestine at that time. Their appearance in Tel Megiddo is a chronological pivot for dating the appearance of this class of pottery.

The end of stratum VA–IVB is not clear. Megiddo is mentioned in the list of cities conquered by Sheshonk I in his campaign in ca. 925 B.C., and Albright proposed that the Solomonic city was destroyed

by him. However, the data do not indicate an overall destruction of the stratum VA–IVB city. Only a number of structures, primarily Palace 6000 and Building 10, were destroyed by fire. The sporadic destruction could have been associated with the division of the united monarchy in ca. 930 B.C., or with Sheshonk I's campaign, or could have even occurred at a slightly later date.

However, it seems that the settlement continued to exist after 925 B.C. A fragment of a stone-carved stele of Sheshonk I was uncovered by Fisher (1929). It was estimated that the complete stele was ca. 3.3 m high and 1.5 m wide. It was probably erected not far from its find spot at the E side of the site, which was the highest point of the city at that time. Sheshonk I must have erected his stele in an existing, not in a desolate, city, with the intention of holding it in the future. The situation at Megiddo also indicates that Sheshonk I's campaign was meant to renew the Egyptian foothold in Canaan and to turn Megiddo into a major base for that purpose. But the Egyptian conquest was short-lived since a year later Sheshonk died and the new ambitious program was abandoned.

c. Stratum IVA. The stratum IVA city radically differs from that of the previous stratum VA–IVB city. See Fig. MEG.05. It seems that the change of character is an expression of a different function given to Megiddo as a result of the division of the monarchy. Once the kingdom had been divided, strategic needs must have changed; and thus Megiddo became a fortified stronghold instead of a civilian district center. The palatial compounds were no longer needed; and the walls of the edifices (except the shrine in Building 338 which was buried beforehand as an act of reverence) were dismantled, their stones taken for secondary use in the new buildings.

City Wall 325 surrounded the city. Because the wall was ca. 3.6 m thick, its two faces were built with insets and offsets. It was built of stone and did not have any foundations. The entrance to the city was through a complex city gate—the so called Solomonic gate (Lamon in Loud 1948: 46–57). A roadway led up to an outer, two-entry gatehouse. The latter opened to an open court; and behind it was built the inner, four-entry gatehouse which adjoined the city wall. The inner gatehouse rested on massive foundations, supported by a constructional fill, which were entirely exposed by the American excavators. The structure was built with ashlars removed from the stratum VA–IVB buildings. The gate complex is similar to the 10th–9th centuries B.C. gate complexes at Gezer, Lachish, and probably Tel Batash (ancient Timnah), and the inner gatehouse also to the four-entry city gates in Hazor and Ashdod. All these gates are based on a similar foundations structure and ground plan.

The construction date of the city gate is a controversial issue. Stratigraphically, the city gate adjoins City Wall 325 and is contemporary with it, as concluded by the original excavators (cf. Aharoni 1972; Ussishkin 1980; Herzog 1986: 93–108). Hence, the city gate belongs to stratum IVA and dates to the period of the divided monarchy. Yadin (1958, 1970, 1972, 1980) believed that the four-entry gatehouse originated in stratum VA–IVB and dates to the reign of Solomon. This dating is primarily based on the similarity in plan between this gate and the four-entry gates in Hazor and Gezer—all three cities being mentioned together in 1 Kgs 9:15 as built by Solomon. Yadin offered a new interpretation of the stratigraphy to explain how the gate is earlier than City Wall 325; he based his explanation on the assumption (which seems utterly impossible) that the foundation structure of the gatehouse is in fact part of the gate's original superstructure. Yadin's dating is currently followed by most scholars (e.g., Davies [1986: 85–92], W. G. Dever, V. Fritz, P. R. S. Moorey, and Y. Shiloh [1980]). Aharoni and Herzog, who believe that the city gate belongs stratigraphically to stratum IVA (labeled IVB by them), however, date this stratum to the reign of Solomon; and hence they consider the city gate to be Solomonic in date.

A massive water system was built to enable easier approach to the spring located at the bottom of the W slope (Lamon 1935). It was dated by the American excavators to the 12th century B.C. but redated by Yadin. The stratum VA–IVB "gallery" was now blocked and so was the approach to the spring from outside. A vertical shaft was dug from the surface of the mound through the accumulated debris and the natural rock and had stairs prepared along its sides. It ended in a horizontal tunnel cut in the rock and leading to the spring. In a later stage the horizontal tunnel was deepened, enabling the water to flow to the bottom of the vertical shaft.

Two complexes of stables for horses were uncovered (Lamon and Shipton 1939: 32–47). This interpretation of the structures was first given by Guy (1931: 37–48), who associated them with Solomon's "cities for chariots and cities for horsemen" (1 Kgs 9:19). Pritchard (1970) suggested that these structures were storehouses or barracks; he based his opinion on analysis of structural characteristics and on the complete absence of equestrian accoutrements. Aharoni (1982) and Herzog (1973), who discovered a similar structure in Tel Beer-sheba, interpreted these buildings as storehouses. Fritz (1977) considered them to be barracks, and Herr (1988) suggested that they served as marketplaces. Yadin (1976) and Holladay (1986) further argued that these are stables for horses, and this interpretation forms the basis for the discussion below.

The S complex contains five units of stabling built in a row. Each unit was rectangular, measuring ca. 21 by 11 m, and contained a central, lime-paved passage and two side, stone-paved aisles. Each aisle was separated from the passageway by a row of stone pillars alternating with stone mangers—all of which are ashlar stones stolen from the Solomonic edifices. The side aisles served as stalls for the horses, and each pillar and the neighboring manger marked the position of one horse. Many of the pillars had holes cut in their corners for tethering the horses. Each aisle could accommodate 15 horses; hence each unit contained 30 horses, and the entire complex 150 horses. The stables opened into a spacious, lime-paved, square courtyard, measuring ca. 55 by 55 m. The courtyard, built on sloping ground, was based on a massive artificial fill laid here to level the floor. Lamon and Shipton suggested that a unit of chariots was stationed in the S complex and that the courtyard was used for their training. One can assume that the unit contained 100 chariots—3 horses per chariot.

The N complex contained similar stabling units, but they were not built according to a uniform plan and were not grouped around a large courtyard. Hence riding horses were probably garrisoned there. Lamon and Shipton calculated that this complex contained 300 or 330 horses; hence 450 or 480 horses were garrisoned at Megiddo.

Large amounts of water and supplies had to be daily provided for these horses. Water could have been easily brought from the water system; a square brick installation found in the courtyard of the S complex was interpreted as a tank for water. A large storage pit (No. 1414) was uncovered midway between the two stable complexes and assigned to stratum III (Lamon and Shipton 1939: 66–68). Stratigraphically, it could have belonged to stratum IVA, and it seems quite possible that it served as a central silo for keeping provisions for the horses. The pit was at least 7 m deep (its upper edge may not have been preserved), and its diameter at the bottom is 7 m. The entire construction was of rubble, and the rough surface had not been plastered. A pair of winding stairs were added. Its present capacity is ca. 450 m^3. Remains of chaff and grains were found inside, and the excavators estimated that the pit contained a certain amount of chaff when it fell into disuse. Assuming, as calculated by Holladay (1986: 118), that each horse consumed ca. 9.6 liters of supply per day, the pit could have held supplies sufficient for feeding 300–330 horses for 130–150 days.

The city of stratum IVA must have been a garrison city, and it is noteworthy that residential quarters were not uncovered. Here Ahaziah, king of Judah, died when he fled, riding wounded in his chariot, before Jehu's men (2 Kgs 9:27). The stable complexes prove that Megiddo was a center for Israelite chariotry and cavalry units at the time of the divided monarchy. The written sources indicate the weight of these units in the Israelite army. Thus the Assyrian annals indicate the strength of Ahab's chariotry and cavalry in the battle of Qarqar in N Syria in 853 B.C., as well as in the 8th century B.C. (Dalley 1985).

Three exceptionally fine seals apparently belong to this city level. Schumacher (1908: 99–101) uncovered two seals near the gate to the Palace 1723 compound. The first is a jasper seal portraying a roaring lion and inscribed " (belonging) to Shema, servant of Jeroboam," obviously Jeroboam II, king of Israel. The second, carved of lapis lazuli, portrays a griffin and is inscribed " (belonging) to Asaph." The third seal, uncovered by Guy on the surface of the site (W. E. Staples in Guy 1931: 49–68), is cut of serpentine. It depicts a griffin and a locust and is inscribed "Haman."

d. Stratum III. In 734 B.C. Tiglath-pileser III campaigned in Philistia and probably already held Megiddo. In 732 B.C. he conquered the N parts of the kingdom of Israel and annexed them to Assyria.

Megiddo became the capital of the Assyrian province *Magiddu,* and stratum III probably dates to this period.

City Wall 325 continued in use in stratum III, but apparently a new city gate was constructed. See Fig. CIT.09. Remains of one or two gatehouses superimposed above the four-entry inner gatehouse were uncovered (Guy 1931: 24–27; Lamon and Shipton 1939: 74–83). The upper one was a two-entry gatehouse which belongs to stratum III. Beneath it were uncovered remains of a three-entry gatehouse. The excavators concluded that the three-entry gatehouse was never completed, as it was decided at the time of construction to alter the plans and erect a two-entry gatehouse instead. Yadin believed that the three-entry gatehouse was completed and used before being later replaced by the two-entry gatehouse. The outer gatehouse was also rebuilt when the rebuilding of the inner gatehouse was carried out.

To the W of the city gate two public buildings (Nos. 1052, 1369) were uncovered (Lamon and Shipton 1939: 69–74). They portray several Assyrian architectural elements, notably a central, rectangular courtyard. It is clear that these buildings functioned as Assyrian government administrative or residential centers.

Large areas of the city were uncovered, revealing residential quarters which apparently covered the entire top of the mound. The houses were arranged in blocks which were separated by evenly spaced and parallel streets.

e. Stratum II. This stratum dates to the 7th century B.C. It is characterized by residential quarters similar to those of stratum III. New domestic houses were now built along the same pattern of streets. Remains of buildings uncovered near the upper periphery of the site indicate that City Wall 325 had fallen into disuse in stratum II or stratum I sometime before the settlement came to an end.

A large structure built at the E edge of the site was uncovered by Schumacher (1908: 110–21) as part of the *Tempelburg,* and by Fisher, who identified it as a fortress (Lamon and Shipton 1939: 83–86). It measures ca. 69 by 48 m and has a large, central court. The stone walls, preserved at foundation level, are ca. 2.5 m thick. According to Lamon and Shipton the fortress was built above the disused City Wall 325; hence the fortress functioned when Megiddo was no longer a fortified city. But stratigraphically this conclusion is not proven since nowhere do the walls of the structure reach the line of the city wall and both of them could have been contemporary. The buried shrine of Building 338 was located in the courtyard of the fortress and rose higher than the surrounding chambers. Hence the structure could have hardly served as a fortress; its function is unclear; and its ground plan seems to be related to the buried shrine (Ussishkin 1989).

In 609 B.C. Pharaoh Neco reached Megiddo on his way to Carchemish to aid Assyria against the Babylonians. Josiah, king of Judah, traveled to Megiddo and was executed there by Neco (2 Kgs 23:29–30; 2 Chr 35:20–24). This event is usually understood as an attempt that failed by Josiah to challenge militarily the Egyptian pharaoh. It was further concluded that Josiah's expanded kingdom included Megiddo and that the stratum II fortress was built by Josiah or by the Egyptians (Malamat 1973). However, Na'aman (1989) is probably right that Josiah's kingdom was much smaller and that he was executed when he came to Megiddo to pay homage to the Egyptian overlord.

f. Stratum I. This stratum represents the last period of settlement on the mound, in the Babylonian and Persian periods, until the place was finally abandoned in the 4th century B.C. The abandonment of Megiddo could possibly be associated with Alexander the Great's conquest of Palestine in 322 B.C.

The remains of the Babylonian and Persian periods are relatively dull (Stern 1982: 5–8, 240). They include remains of many small houses, three long storerooms near the city gate, and a number of stone-built cist tombs.

The reference to Megiddo in Zech 12:11, mentioning "the mourning for Hadadrimmon in the plain of Megiddo," probably dates to the Persian or Hellenistic period. The mourning referred to could be a fertility ritual associated with the storm god Hadad-Rimmon. It indicates that Megiddo lay at that time in an area that was already little known to the Jews and regarded by them as alien and pagan (Davies 1986: 109).

4. The Later Periods. A Jewish village named Kefer ʿOtnay existed to the S of the site ca. A.D. 100. During the reign of Hadrian (A.D. 117–38), the Legio II Traiana was stationed here, and it was later replaced by the Legio VI Ferrata. Kefar ʿOtnay was renamed Legio, after the occupying force. Legio became the center of an administrative district; from this the Arab village of Lejjun in turn derived its name.

Schumacher (1908: 161–90) investigated extensive remains of the Roman and Muslim periods, including aqueducts, a theater, and tombs, as well as a possible site of a Roman camp, to the S of the site. Very interesting are two cremation burials, probably of soldiers of the VIth Legion, which were recently discovered (Tsuk 1988–89). Schumacher (1908: 151–53) also uncovered some late remains on the site, notably an Ottoman watchtower on the E side.

DAVID USSISHKIN

MEGIDDO, PLAIN OF (PLACE) [Heb *biq'at* (בִּקְעַת) *měgiddô (n)* (מְגִדּוֹן)]. The central

portion of the Jezreel valley, nearby the city of Megiddo (M.R. 167221), mentioned only twice in the OT (2 Chr 35:22; Zech 12:11). Although it was the scene of many battles, the only one referred to in the OT occurred in 609 B.C. By that time, Josiah, the king of Judah, had completed many of his celebrated religious reforms, and Judah was again becoming a political power. On the international scene the Assyrians were succumbing to their foes, but Neco of Egypt wished to go to their aid. His line of march crossed the Jezreel valley at Megiddo, and there Josiah challenged him. Josiah was mortally wounded by an archer before the battle had barely begun. The sudden death of this reforming king led to deep mourning among religious circles in Judah (2 Chr 35:24–25). It may be that Zechariah's enigmatic reference to mourning for Hadadrimmon in the plain of Megiddo is also in some way connected with this incident.

MELVIN HUNT

MEGIDDO, WATERS OF (PLACE) [Heb *mê mêgiddô* (מֵי מְגִדּוֹ)]. This term occurs only in Judg 5:19, as part of the description of the place where the Israelites under Deborah and Barak fought with the chariot forces of Sisera. Scholars have noted that the verse does not specifically refer to the city of Megiddo (M.R. 167221), although Taanach (M.R. 171214) is mentioned. Precise identification of the waters is complicated by the inclusion of Taanach, since none of the wadis in the region flow by both sites.

Albright (1936: 27) believed that the Wâdī el-Lejjun, which flows from the hills behind Megiddo, was the "waters of Megiddo." He also held that the lack of a specific reference to Megiddo in the verse implied that Megiddo was uninhabited at the time of the battle. As a result, Albright dated the battle of Deborah and Barak to the period between Megiddo VII and Megiddo VI. However, Aharoni (*LBHG,* 28) uses the same information to derive a drastically reordered course of events.

Simons (*GTTOT,* 290) pointed out that the Wâdī el-Lejjun is both too small and too far from Taanach to be acceptable as the waters of Megiddo. He suggested the Naḥal Kishon, mentioned in Judg 5:21 and which drains the whole Jezreel valley, should be considered as an alternative identification.

While this interpretation is feasible, the term is yet to be satisfactorily identified, although it is clear its location should be sought in the region between Taanach and Megiddo.

MELVIN HUNT

MEGILLOTH [Heb *ḥamēš* (חֲמֵשׁ) *mĕgillôt* (מְגִלּוֹת)]. The term "megilloth" means scrolls and is used to refer to the "five scrolls," Song of Songs, Ruth, Lamentations, Ecclesiastes (or Qoheleth), and Esther, which are gathered together as a collection within the Writings (Heb *kĕtûbîm*) in modern printed editions of the Hebrew Bible. This sequence is meant to reflect the order of the feasts in which they are read: Song of Songs at Passover, Ruth at Pentecost (Heb *šābuʿōt*), Lamentations on the Ninth of Ab (commemorating the destruction of the temple), Ecclesiastes at the Feast of Booths (Heb *sukkôt*), and Esther at Purim. That this is a rather late grouping of books is evident from looking at the order in which these books were placed in various canon lists and manuscripts. The Babylonian Talmud in *B. Bat.* 14b places the order of the Writings as: Ruth, Psalms, Job, Proverbs, Ecclesiastes, Song of Songs, Lamentations, Daniel, Esther, Ezra (including Nehemiah), and Chronicles. This probably reflects the perceived chronological order of the books, with only Chronicles being out of sequence. The order in many Sephardic mss as well as Codex Leningradensus (A.D. 1008), the ms underlying the popular *Biblia Hebraica* (from the 3d ed. on), is: Chronicles, Psalms, Job, Proverbs, Ruth, Song of Songs, Ecclesiastes, Lamentations, Esther, Daniel, and Ezra-Nehemiah. This is interesting, because it shows that the five megilloth were already being grouped together as a separate collection within the Writings, albeit within a chronological order, from Ruth (in the period of the judges) to Song of Songs and Ecclesiastes, which were widely regarded as being Solomonic, to Daniel, the Jewish statesman who prophesied during the Exile, to Ezra-Nehemiah, postexilic Jewish reformers. When the megilloth became associated with the five festivals of Judaism, it is only natural that that would affect the order in which they would be placed in Jewish Bibles.

H. ELDON CLEM

MEHETABEL (PERSON) [Heb *mĕhêṭabʿēl* (מְהֵיטַבְאֵל)]. The name of two persons in the Hebrew Bible. The name means "God is bestowing good."

1. The wife of Hadad (II), king of Edom, and also the daughter of Matred, daughter of Mezahab (Gen 36:39; 1 Chr 1:50). This is most probably a genuine Edomite name. The participle of the H-stem *mĕhêṭab* < **muhayṭib* preserves the h-preformative. The same is the case in ancient Aramaic and ancient North Arabian (cf., e.g., *yht*ʿ/**yuhaiṯi*ʿ, the name of an Arab tribal leader of the 7th century B.C.; Knauf 1985b: 6, n. 28). The root *yṭb,* however, is absent from Arabic. The name of Mehetabel's father, Maṭred, may also be Edomite. Names from *ṭrd* are attested for both Canaanite and Arabic (Knauf 1985a: 248). The second "daughter" need not to be changed into "son" if one assumes that Mezahab was the name of Mehetabel and Matred's town, village, or shire of origin, rather than the name of her grandfather (Weippert 1971: 436).

2. The grandfather or, more likely, the family of the prophet Shemaiah, son of Delaiah (Neh 6:10). Nehemiah rejected Shemaiah's oracle (Neh 6:12–14); Shemaiah had been paid to deliver this oracle by Tobiah, the Judean governor of the Persian province of Ammon and Nehemiah's adversary. Grammatically, the name Mehetabel suggests that his family may have been of Transjordanian origin. This could help to explain Tobiah's relationship to this particular prophet.

ERNST AXEL KNAUF

MEHIDA (PERSON) [Heb *mĕḥîdāʾ* (מְחִידָא)]. The name of a family of temple servants who returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian Exile. The name appears in Ezra 2:52 in the phrase "the sons of Mehida," where the temple servants are distinguished from the people of Israel, the priests, and the Levites. The parallel passage Neh 7:46–56 also lists "the sons of Mehida" (Neh 7:54), as does the later parallel 1 Esdr 5:32. The Greek versions show three different transliterations of this word: *maouda* (Ezra 2:52), *meida* (Neh 7:54), and *meedda* (1 Esdr 5:32). It is, however, rendered consistently in the English versions.

STEVEN R. SWANSON

MEHIR (PERSON) [Heb *mĕhîr* (מְהִיר)]. A descendant of Chelub in the genealogy of Judah (1 Chr 4:11). Nothing otherwise is known of him.

H. C. LO

MEHOLATHITE [Heb *mĕḥōlātî* (מְחֹלָתִי)]. A descriptive term indicating the place of origin of Adriel, the son-in-law of Saul son of Kish, and the first king of Israel (1 Sam 18:19; 2 Sam 21:8). According to the Masoretic vocalization, it is a gentilic form from the root *ḥwl*, meaning "to whirl," "dance." It is generally considered to be a reference to Adriel's association with the town of Abel-meholah in the W *ghor:* he is the one "from Meholah" (so Smith *Samuel* ICC, 172; Stoebe *Das erste Buch Samuelis* KAT, 345; Klein *1 Samuel* WBC, 189). However, an alternative explanation is possible based on a different vocalization of the consonantal text. The term could be a gentilic indicating Adriel's association with the Manassite clan of Mahlah: Adriel the Mahlathite. While the identification of a person by his town of origin or residence was a frequent biblical practice, other options included identification by patronymic, which would either be the name of one's father or one's clan affiliation (*PI* 1: 253), or by nationality. Examples of the last two options are conveniently provided by the list of David's mighty men in 2 Sam 23:8–39 and 1 Chr 11:20–47: Jeshbaal the Hachmonite; Ahiam the son of Sharar the Hararite; Helez the Paltite/Pelonite; Zalmon the Ahohite (cf. Eleazer son of Dodo son of Ahohi in 2 Sam 23:9); Bani the Gadite; Zelek the Ammonite; Gareb the Ithrite; and Uriah the Hittite. If the term is construed as a clan gentilic, it would no longer provide a firm association of Adriel with the town of Abel-meholah, since the clan could have occupied more than a single town.

DIANA V. EDELMAN

MEHRI LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

MEHUJAEL (PERSON) [Heb *mĕḥûyāʾēl* (מְחוּיָאֵל), *mĕḥîyāʾēl* (מְחִיָאֵל)]. Son of Irad and father of Methushael in the line of Cain (Gen 4:18); however, the two appearances of the name are spelled with a slight difference in the consonantal Hebrew text (a distinction preserved in the Targums). The Peshitta and the Vulgate follow the first spelling (cf. also Targum Neofiti). The best attestations of the LXX seem to follow the second spelling (*maiēl*). The Samaritan Pentateuch avoids the issue by omitting the disputed syllable (*myhʾl*). The fact that the Hebrew text was not harmonized attests to the care taken in preserving such differences, even when they exist side by side (Cassuto 1961: 232–33). Comparisons with the genealogy of Seth in Genesis 5 have related this name with that of Mahalalel (Wilson 1977: 161–62). The initial *mem* and the final *ʾalep* and *lamed* are three consonants (half of the possible six) which the names share. It is generally agreed that Mehujael is composed of two elements, the second of which is *ʾl*, "god;" but the first element is disputed (Westermann 1984: 328–29). On the one hand, Akk *maḫḫu,* "an ecstatic," has been suggested (Cassuto 1961: 232). On the other hand, West Semitic *mḥʾ,* "to smite," and a participial form of *ḥyh,* "to live," have also both been posited (Skinner *Genesis* ICC, 117, noting Philo and Jerome; Gabriel 1959: 414). These options would respectively render the names "ecstatic of God," "God has smitten," and "God gives life." The first two forms are unattested as bases of personal names; while the root, *ḥyh,* is attested in West Semitic names in virtually all periods (e.g., Eve, which may share a similar element).

RICHARD S. HESS

MEHUMAN (PERSON) [Heb *mĕhûmān* (מְהוּמָן)]. One of seven eunuchs, along with Biztha, Harbona, Bigtha, Abagtha, Zethar, and Carkas, of King Ahasuerus listed in Esth 1:10. The order of the names in this list may imply a ranking of importance among the seven. The specific office these eunuchs held is termed literally "the ones who minister before the king" (Heb *hamĕšārĕtîm ʾet pĕnê hammelek*) in Esth 1:10. It appears that they were chamberlains to the king and that their function was to wait upon Ahasuerus and to summon individuals before him when desired. They attempted to bring Queen Vashti from her banquet to the king's banquet (Esth 1:10–12), and perhaps they were also the ones sent to summon Haman to both of Esther's banquets with the king (Esth 5:5; 6:14). In addition, the episode in Esth 7:9–10, where Harbona informed the king of Haman's scheme to kill Mordecai, resulting in the king's ordering Haman's execution, may suggest that these particular eunuchs served also to look after the affairs of the king and to escort and execute condemned prisoners. Since they did not seem to have direct contact with the harem, most likely the term "eunuch" (Heb *sārîs*), with respect to their office, was only symbolic and should not be taken literally. Perhaps it would be better translated as "chamberlain," or "court official." It is known from ancient sources that the title "eunuch" could be applied to any number of court officials, from bureaucrats to military officers (Weidner 1956: 264–65). The fact that there were only seven who held this office may reflect Persian mythology, which saw the heavenly royal court of their high god as having seven ministers. Thus the earthly court of Ahasuerus was set up to imitate the divine model (Paton *Esther* ICC, 148).

The etymologies and ethnic origin of these seven names have been a topic of some debate. Some would like to view them as historical Persian names in order to affirm in part the historicity of the book of Esther. Others feel that the author of the book has invented them for his own purposes, and thus neither they nor the book should be considered historical (Moore *Esther* AB, 8–9). Most of these names do appear to be of Persian/Iranian origin; but their correct spelling is in doubt, making it difficult to

determine their exact etymology. The various Versions of the OT exhibit a variety of forms for each one of these seven names. Thus, for instance, Abagtha (Heb *ʾăbagtā*) is rendered as *abataza* by LXX^{bs}, as *zēbathatha* by LXX^{a}, as *achedes* by the OL, and as *ʾgbwt* by the Syriac version. What is even more confusing is that the Lucianic recension of the LXX omits all of these names entirely in Esth 1:10. See Moore for a complete listing of the variants for all the names (*Esther* AB, XLI–XLIV). Because of the Versions' overwhelming lack of support of the MT readings, many scholars have doubted the accuracy of the spellings in the Hebrew text and have attempted to reconstruct the original names by other means. In the past some have used a so-called preferred reading of the LXX as a basis for reconstructing an original name because it fit the phonetic makeup of a likely Persian cognate. Thus the consonants of Biztha (Heb *bizzětā*) were altered by some to read *mzdn* (= *mazdānā?*), following the reading of the LXX^{bs}, *mazan,* because it was phonetically equivalent to Pers *mazdānā,* "gift of (the god) Mazda." Likewise, Bigtha (Heb *bigtā*<) was read as *bgdt* (= *bagedāta?*), supposedly following a misreading of LXX^{a}, *bazēthatha,* to agree with Pers *bagadāta,* "given by god." And finally, Abagtha (Heb *ʾăbagtā*) as well suffered the same fate, being altered to *ʾbzt* (= *ʾabazatā?*), following the LXX, *abataza* (Paton *Esther* ICC, 67–68). Others argued that several of these names were slightly misspelled variants of other personal names in the book of Esther. Mehuman was viewed as a variant for Memucan (Heb *mĕmûkān*) (Esth 1:14); Bigtha as a different spelling for Bigthan (Heb *bigtān*) (Esth 2:21; 6:2); and Abagtha some felt was a gloss of the previous name, Bigtha, in the list of Esth 1:10 (Paton *Esther* ICC, 67–68). In addition Duchesne-Guillemin saw the two lists of names in Esth 1:10 and 1:14 as duplicates but in reverse order of each other. Therefore Mehuman, the first name in Esth 1:10, was the same name as Memucan, the last name in Esth 1:14, and so on (Duchesne-Guillemin 1953).

Against these older views more recent scholarship has argued that the MT tradition tends to preserve the correct phonetic consonantal spelling of foreign names quite faithfully. Linguistic studies in the various Persian dialects have progressed greatly in the past generation, and now more precise phonetic correlations can be made between Persian words and the Hebrew spelling of them (Millard 1977: 482–87). Thus most of the seven names in Esth 1:10 have been found to be phonetically equivalent to attested Persian words or actual Persian proper names. The following correlations have been made:

Mehuman: From the Aramaic passive participle form, *mĕhaymân,* from the root *ʾmn,* meaning "trusty" or "eunuch"; or from O Pers *vahumanah,* "intelligent."

Biztha: Possibly from Pers *besteh,* "bound," or "eunuch."

Harbona: From N Pers *kherbân,* "donkey driver."

Bigtha: Possibly from O Pers *bagadâ,* "gift of god."

Abagtha: From M Iranian *gabata,* "fortunate one."

Zethar: From M Pers *zaitar,* "conqueror."

Carkas: From Avestan *kahrkâsa,* "vulture."

If these identifications are correct, then with one possible exception all of these eunuchs may have actual Persian names. If so, they themselves may have come from different cultural backgrounds judging from the fact that their names find their origins in so many diverse dialects of Persian. This is exactly the state of affairs one would have found at Ahasuerus' court. Aramaic records from Persepolis dating from his reign have shown that there were many different Aryan nationalities represented at court (Millard 1977: 482–84). Therefore one might use the above evidence to argue in part that the author of Esther derived the story from a historical account or at least had knowledge of some Persian names and customs.

JOHN M. WIEBE

MEINIM. Inhabitants of the city-state of Maʿin. See MEUNIM.

MEIRON (M.R. 191265). The site of ancient Meiron, also spelled "Meron," is located just N of the Wâdī Meiron, approximately 1 km N of the nearest site, Khirbet Shemaʿ, in the modern *moshav* of the same name. The site embraces some 200 dunams (ca. 50 acres) and is one of the largest ancient settlements of the Upper Galilee region. It is not to be confused with the "waters of Merom" of Joshua 11:5, 7 or Mero or Meroth of Josephus (*JW* 2.573; 3.39). The latter (M.R. 199270) has been recently identified by a new excavation team as Khirbet Marus, a site which the excavators maintain constitutes the northernmost border of the Galilee (Ilan and Damati 1985). Meiron is to be equated rather with the Talmudic village associated with Simeon bar Yochai and the priestly clan of Jehoiarib (1 Chr 24:7). By medieval times Meiron becomes an important Jewish pilgrimage place and is associated with the Feast of Lag B'Omer, celebrated 33 days after Passover.

The only excavations undertaken at ancient Meiron were conducted from 1971 to 1972, 1974 to 1975, and in 1977 and were directed by E. M. Meyers. The results of those campaigns are published in the Meiron final report (Meyers, Strange, and Meyers 1981). The excavations focused primarily on soundings in the town itself though it was also possible to do some limited soundings alongside the synagogue on the acropolis. The major recovery of material came from the insulae in the Lower City and is dated to the Middle-Late Roman period, the heyday of the ancient settlement.

The chronological span of materials recovered from the excavations ranges from the Hellenistic to medieval times. The following table summarizes the main cultural phases of the site:

Stratum	Dates	Description
I	200–50 B.C.E. (Helenistic)	Scattered artifactual remains; only traces of structures.
II	50 B.C.E.–135 C.E. (Early Roman)	Limited architecture and related artifacts; small growing village.
III	135–250 C.E. (Middle Roman)	First major insula; village expanding
IV	250–363 C.E. (Late Roman)	Peak of village life; synagogue built; gradual abandonment at end of stratum.
V	363–750 C.E. (Byzantine-Arab)	Village largely abandoned; occasional artifacts dropped by visitors or squatters.
VI	750–1000 C.E. (Early Arab)	Reestablishment of village life on a smaller scale.
VIIa	1000–1300 C.E. (Late Arab)	Continuation of stable village life; emergence as a pilgrimage center.
VIIb	1300–1400 C.E. (Late Arab)	Village in decline

The typical basilican synagogue on the acropolis that had lain destroyed and bare since antiquity was dated by debris from within an annex to the late 3d century C.E. (stratum IV). It is the longest synagogue known from all ancient Palestine, 27.5 m long by 13.6 m wide. Three entrances mark the S end of the building, which is clearly oriented S toward Jerusalem. There are two rows of eight columns, each row running N-S. Heart-shaped columns are conjectured to have stood in the two N corners, and a gallery and clerestory roof are posited for the second story and above.

The Lower City excavations produced two large insulae preserved mainly in their stratum IV phase, one with a beautifully laid open courtyard of stone. A carpenter's shop and cooperage were among the major finds here. A ritual bathing complex was also identified in this area and dated to stratum III. It is quite clear that the first or ground floor of the complex was utilized for business or industry and that the second floor was reserved for living quarters.

On a terrace at a slightly higher elevation to the W, several large private dwellings were excavated. One was extremely well preserved. Because of their size and of the high quality of household goods discovered in them, they were called "patrician" homes by the excavators. A storage area (Room F) in one was found virtually undisturbed from antiquity, and its ceramic storage jars still contained quantities of

wheat, beans, and walnuts. The foodstuffs were purposefully charred, however, and preserved for religious reasons, possibly as a symbolic gift for the destroyed temple which someday might be rebuilt; these were stored by the pious and priestly (?) owner of the house.

A series of cisterns was excavated, which produced a large quantity of whole or restorable pottery. Rainwater was readily available because of Meiron's location high on the mountain slopes; and because of the abundant water supply in the spring to the S, the town apparently shared with Khirbet Shemaʿ its surplus.

Excavation of a small tomb complex produced quantities of restorable artifacts also. The mode of inhumation that was documented from the first century B.C.E. to the 4th century C.E. was secondary reburial or *ossilegium.* Although only fragments of stone ossuaries were found, many individuals were simply reinterred without a container for their skeletal remains. Study of the bones revealed a high degree of endogamy with a concomitant array of disease. Clearly the isolation of Upper Galilee is reflected in the study of human remains from Meiron.

The material culture recovered from ancient Meiron thus reveals a village that is both very much part of Roman life in ancient Palestine and at the same time separate from it. The coins show a special trade connection to the municipality of Tyre, but there are also connections with other major centers of trade and culture. The synagogue, which stands high on the slopes, clearly represents the crowning achievement of the members of the community, who achieved much of their financial success and independence from their cultivation of the olive tree and preparation of olive oil, the greatest natural resource of the upper Galilee.

ERIC M. MEYERS

MELATIAH (PERSON) [Heb *mĕlaṭĕyâ* (מְלַטְיָה)]. One of those who worked on the wall of Jerusalem following the return from Babylonian exile (Neh 3:7). Melatiah worked along with Jadon the Meronothite and is identified as a "Gibeonite." His name means "Yahweh has delivered." The "men of Gibeon" to whom the verse refers were probably workmen under the leadership of Melatiah (Brockington *Ezra, Nehemiah and Esther* Century Bible, 136). He was probably an official in Gibeon (Clines *Ezra, Nehemiah, Esther* NCBC, 153). Because the Hebrew word *kissēʾ* can be translated either as "authority" or "seat of authority" (BDB, 490), one might follow the sense of the RSV translation of Neh 3:7 concerning the work of these men: "under the jurisdiction of the governor of the province Beyond the River"; or that of Fensham (*Ezra and Nehemiah* NICOT, 169): "up to the quarters of the governor of Trans-Euphrates," which would mean that the governor had a part-time residence in Jerusalem (Fensham, 174).

MICHAEL L. RUFFIN

MELCHI (PERSON) [Gk *Melchi* (Μελχι)]. **1.** The father of Levi and son of Jannai according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:24). D omits the name, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. Apart from Luke 3:28, the name Melchi occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of seventeen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 500). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Melchi, in the first list, corresponds to Simeon, in the second list. With no major textual variants for Melchi and Simeon to support confusion of the two in the NT, Kuhn's theory has little plausibility. Kuhn further suggests (211) that Melchi, a name that rarely appears

in Jewish literature, was a popular shortening of the more widely used Heb *mlkyh.* Julius Africanus lists Melchi as the father of Heli, omitting Levi and Matthat. On this see MATTHAT; Hervey (1853: 137).

2. The father of Neri and son of Addi according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:28). D omits the name, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. Apart from Luke 3:24, the name Melchi appears nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of eighteen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* 501). Kuhn (1923: 214; see also Hervey 1853: 38–39, 92, 148–49) argues that Melchi, as well as several other names in this section, is a corruption, in particular here of Heb *mlkyrm* found in 1 Chr 3:18, on the basis that Gk *Nēri* and *Melchi* are derived from a single name: Heb *nrymlky* (meaning "my king is my light"), possibly making it into 1 Chronicles through the corrupted intermediate form *mlkynry* (Kuhn believes he can prove the change from Heb *nry* to *rm*). This proposal has not won widespread acceptance, especially since there is serious question whether the genealogy at this point is based on 1 Chronicles (Marshall 1978: 164; cf. Jeremias 1969: 295–96).

STANLEY E. PORTER

MELCHIAS (PERSON) [Gk *Melchias* (Μελχιας)]. See MALCHIJAH (PERSON).

MELCHIEL (PERSON) [Gk *Melchiēl* (Μελχιηλ)]. The father of Charmis, one of the elders of Bethuliah (Jdt 6:15). The name in Hebrew is Malkiel (Heb *malkî˒ēl*). It occurs in the OT three times (Gen 46:17; Num 26:45; 1 Chr 7:31), where the person name is a member of the tribe of Asher. It is unlikely that the author of the book of Judith intended the reader to make an identification with this figure; the name is part of what Noth terms a "secondary genealogy," a genealogy having no independent existence apart from the narrative (see *HPT*). The name is probably given to lend the story verisimilitude.

SIDNIE ANN WHITE

MELCHIZEDEK (PERSON) [Heb *malkî-ṣedeq* (מַלְכִּי־צֶדֶק)]. The meaning of the name is "King of Righteousness," which is stressed by its being written in Gen 14:18–20 and in Ps 110:4 in two parts joined by a *maqqēp,* as if it were a title rather than a personal name. He is described as king of Salem and priest of God Most High (*˒ēl ʿelyôn*).

A. Gen 14:18–20
B. Ps 110:4
C. In Qumran Literature
D. The Letter to the Hebrews
E. In Mainstream Judaism

A. Gen 14:18–20

Melchizedek met Abram as he returned from his victory over Chedorlaomer and his allies, brought out bread and wine, and blessed Abram in the name of God Most High, maker of heaven and earth; "and he [Abram] gave him [Melchizedek] a tenth of everything." The intention of this passage, which forms the climax of the chapter, is transparent. It affirms that the priesthood of the supreme God, the creator of the world, had existed in Jerusalem not since Solomon but from before Abram's arrival in the promised land; that the priest of God Most High was at the same time the king of the city; and that Abram, who by his victory over Chedorlaomer, the former overlord of the country between Dan and Elath, had inherited his rights to it, paid a tithe to Melchizedek, thus acknowledging his superiority. This reflects and legitimizes

the aspirations of the high priests of Jerusalem, who in the Persian period strove to be on a par with the secular governors of Judea, proclaimed the ideal of theocracy in the Priestly Code, and finally achieved secular power in the Hellenistic age.

Melchizedek's being the priest of God Most High (*ʾēl ʿelyôn*) does not necessarily point to the pre-Israelite, Canaanite character of both the priest and his cultus, as is often assumed (cf., e.g., *IDB* 2: 407–17; Speiser *Genesis* AB, 105, 109). It is true that in the late Phoenician theogony by Philo Herennius of Byblos the deity *Eliun* (explained in Greek as *Hypsistos*, "most high") appears as the oldest god, grandfather of Elos (*ʾēl*) and his brothers, and that in the much older Aramaic treaty from Sfire (mid-8th century B.C.), stele I:A:11, one finds *ʾl w ʿlyn* (*ʾēl* and *ʿelyōn*) among the divine witnesses of the treaty. But in both cases, El and Elyon are two distinct entities. The combined divine name *ʾēl ʿelyôn* is found in the OT (besides Gen 14:18–20; in Ps 78:35, cf. *ʾelōhîm ʿelyôn*, v 56); in 1 QapGen 21:20, where Abram built an altar in the oaks of Mamre and sacrificed on it to *ʾl ʿlywn;* and in 4 QPrNab, which uses *ʾl ʿlywn* throughout. In all of these passages God Most High is a synonym of Yahweh, as is the more common shorter epithet *ʿelyôn*, which is especially frequent in the Psalms. The assumption that the inclusion of *yhwh* before *ʾēl ʿelyôn* in Abram's reply to the king of Sodom, v 22, reflects a religious difference between the Hebrew Abram and the Canaanite Melchizedek (*IDB* 2:412; Speiser *Genesis* AB, 109) is disproved by its absence from LXX, Syr, and the Genesis Apocryphon (which follows very closely the text of Genesis 14); it should be considered a late editorial gloss.

B. Ps 110:4

It is impossible to ascertain whether the image of the priest-king Melchizedek was created by the author of Genesis 14, or was already current in certain Jewish circles. Whatever the case, it had undergone a great sublimation by the time of the composition of Psalm 110, which contains the only other mention of Melchizedek in the OT. The psalm celebrates the elevation of a man to the dignity of priest, ruler, and warlord, a man whose identity is revealed by the acrostic formed by the speech of Yahweh in vv 1–4: *šmʿn,* "Simeon" (Pfeiffer 1948: 630). The warlike atmosphere of the psalm points to Simon Maccabeus, who became high priest, general, and ruler of the Jews in 141 B.C. The crucial v 3 has been poorly transmitted in the MT, and its rendering by the RSV is a paraphrase rather than a translation (but its emendation of *hadrê-qōdeš* to *harĕrê-qōdeš* should be retained). In the following quotation, the suggested restoration of v 3 has been done with the aid of LXX and the analogy with Ps 2:7 (in another Hasmonean enthronement hymn, cf. Pfeiffer 1948: 628):

(3) With thee is the dignity in the day of thy power.
In the holy mountains, from the womb of Dawn,
like the Day Star I have begotten thee.
(4) Yahweh has sworn and will not repent:
"Thou art a priest forever
after the order of Melchizedek."

Thus Melchizedek is here not only the human archetype of the ideal priest-king of Jerusalem, but the eternal priest of Yahweh, a supernatural being engendered by Yahweh and comparable to the mythological figure of "Day Star, son of Dawn" (*hêlēl ben-šāḥar*) in Isa 14:12. Upon taking over the high priesthood and becoming a successor of Melchizedek, Simon Maccabeus is symbolically identified with him (cf. Ps 2:7: "Thou art my son, today I have begotten thee").

C. In Qumran Literature

Not only the official Hasmonean establishment, but also their bitter opponents, the Essenes of the Qumran community, gave Melchizedek a very high place in their heavenly hierarchy and eschatology. He is the central character in a fragmentary midrashic work (11QMelch) which interprets a number of verses from Isaiah, Leviticus, and other OT books dealing with remission of debts and liberation of slaves at the end of a jubilee cycle as referring to the last judgment and the final triumph of good over evil during the tenth jubilee of the Essene eschatological era. The faithful ones will be included in the lot of Melchizedek, and their transgressions will be forgiven. Melchizedek will be the judge both of the saints of God and of Belial and the wicked spirits of his lot. Assisted by all gods of righteousness, he will accomplish the utter

destruction of Belial. In support of this, the interpreter adduces Ps 82:1–2: "God (*ʾelōhîm*) stands in the divine council (*ʿadat-ʾēl*), in the midst of gods (*ʾelōhîm*) he holds judgment. How long will you judge unjustly and show partiality to the wicked? *selah.*" Psalm 82 is one of the "Elohistic psalms," in which an editor has systematically replaced the divine name *yhwh* by *ʾelōhîm*, "God." For the author of Psalm 82, the god who holds judgment amidst his council of lesser celestial beings is Yahweh himself. He accuses his subordinates (to whom he had delegated the everyday administration of the world) of having neglected their duty of social justice; and he threatens them, despite their being gods and sons of the Most High (*ʾelyôn*), that they "shall die like men, and fall like one of the princes" (vv 6–7). Under "one of the princes" (*śārîm*, a title used for angels of the highest rank) the author of Psalm 82 understood the Day Star of Isa 14:12. The psalm ends with an appeal to God (Yahweh) to take over personally the judgment of the earth and all its nations. But for the Essene interpreter, the replacement of *Yahweh* by *ʾElōhîm* in v 1 made it possible to understand it not as "God" but as "a god," i.e., an angel, and to identify him as Melchizedek, and the gods whom he judges, as the spirits of the lot of Belial. Thus Melchizedek plays here the role of one of the two supreme spirits created by God—the spirit of light, opposed to the spirit of darkness. The latter, as one learns from the very fragmentary text, "The Vision of Amram" (4Q*ʿ*Amram), has the epithet *mlky rš*ʿ "King of Iniquity" as the last (and only extant) of his three names. This would represent an antithesis to the name of Melchizedek (cf. Milik 1972b: 126–39; 1972a: 77–86). But the three names of the spirit of light in 4Q*ʿ*Amram have not been preserved; and in 11QMelch the evil adversary of Melchizedek is not called, symmetrically, *mlky rš*ʿ, but Belial.

It has been assumed that the Qumran sect identified Melchizedek with the archangel Michael (van der Woude 1965: 301 n. 1, 367–73; Milik 1972b: 125). A certain similarity between the roles of Melchizedek in 11QMelch and Michael in 1QM 17:5–8, as well as in Daniel, does exist; but, as recognized by de Jonge and van der Woude 1966: 305, "Michael and Melchizedek are, however, not identified explicitly in the Qumran texts at our disposal. This identification is only found in certain medieval Jewish texts." In 1QM 9:14–16, Michael is only one of the four archangels, not one of the two antagonistic supreme spirits of the world. The image of Michael as the heavenly high priest appears in the midrashic literature, i.e., considerably later, and is probably of secondary derivation. See Fitzmyer's (1967: 32) cautious approach to the question of Melchizedek's identification with Michael. It is strange that 11QMelch contains no hint whatever to Melchizedek's priesthood; but in the light of the Letter to the Hebrews, it is highly probable that the view of Melchizedek as the eternal priest (cf. Ps 110:4) was shared by the Essenes. See also MELCHIZEDEK (11QMelch).

D. The Letter to the Hebrews

The Epistle to the Hebrews was addressed to a group of Judeo-Christians of Essene background and aimed at overcoming their lingering attachment to the idea of an exclusively levitical priesthood. It exhorted them to recognize that Jesus was a priest despite his non-levitical ancestry. It used as a precedent the image of Melchizedek, which it supposed was familiar to its audience. Heb 5:6; 6:20; 7:17 apply to Christ the words of Ps 110:4, "Thou art a priest forever, after the order of Melchizedek." Heb 7:1–2a refer to Gen 14:17–22, in which Abra[ha]m gave a tenth part of everything to Melchizedek. Verses 2b–3 explain that Melchizedek "is first, by translation of his name, king of righteousness, and then he is also king of Salem, that is, king of peace. He is without father or mother or genealogy, and has neither beginning of days nor end of life, but resembling the Son of God he continues a priest forever." The fact that Abraham gave a tithe of his spoils to Melchizedek, continues the Letter (7:4–10), proves that Melchizedek was superior to Abraham and, by implication, to Abraham's descendant Levi, who, as it were, paid tithes through Abraham, "for he was still in the loins of his ancestor when Melchizedek met him." Melchizedek blessed Abraham; now "it is beyond dispute that the inferior is blessed by the superior." Moreover, "here tithes are received by mortal men; there by one of whom it is testified that he lives." The choice (in Ps 110:4) of the phrase "after the order of Melchizedek" rather than "after the order of Aaron" confirms Melchizedek's precedence over levitical priests (Heb 7:14). The Letter's notion of Melchizedek as a primeval, immortal being, coeternal with the Son of God, gave rise to various heterodox opinions in the early Christian Church; and there even arose a sect of Melchizedekians who regarded

Melchizedek as equal or superior to Christ; but by the 5th century A.D. the Church stopped such speculations and no longer occupied itself with the mysterious figure of Melchizedek.

E. In Mainstream Judaism

Philo Judaeus, in the earlier part of the 1st century A.D., and Josephus, in its latter part, were contemporaries of the last period of existence of the Qumran community. But their references to Melchizedek have nothing in common with the Essene view of him. According to Philo *Leg All* III 25–26 §§79–82, "Melchizedek, too, has God made both king of peace, for that is the meaning of *Salem,* and his own priest … a king peaceable and worthy of his [God's] own priesthood. For he is entitled "the righteous king," and a king is a thing at enmity with a despot [*tyrannos*], the one being the author of laws, the other of lawlessness." Josephus (*Ant* 1.10.2 §180) wrote that Abraham "was received by the king of Solyma, Melchizedek; the name means "righteous king," and such he was by common consent, inasmuch as for this reason he was moreover made priest of God; Solyma was in fact the place afterward called Hierosolyma." For both authors, Melchizedek was a righteous and worthy man, but only a man. Such was, apparently, the attitude of the Pharisees, who, being opposed to both the Hasmoneans and the Essenes, had no reason to share in their exaltation of Melchizedek. A late vestige of a higher status ascribed to Melchizedek is found in *b. Sukk.* 52b, in which R. Ḥānā bar Biznā, citing R. Simeon Ḥasidā, identified the "four craftsmen" of Zech 2:3 as the Messiah son of David, the Messiah son of Joseph, Elijah, and Melchizedek (thus in the Munich Codex; other manuscripts have *kōhēn ṣedeq,* "the Righteous Priest"). This seems to imply that Melchizedek was translated to heaven like Elijah and will reappear in the messianic era. In opposition to the Letter to the Hebrews, other rabbis identified Melchizedek with Shem, the son of Noah (who, according to the priestly chronology of Genesis, not only was still alive at the time of Abraham but even survived him by 25 years). This identification was taken up in *Tg. Neof.* and *Tg. Ps.-J.* According to R. Zechariah on the authority of R. Ishmael (*b. Ned.* 32b), God originally gave the priesthood to Shem-Melchizedek; but because the latter gave precedence in his blessing (Gen 14:19–20) to Abraham over God, the priesthood was withdrawn from him and given to the descendants of Abraham; and Ps 110:4 was interpreted "Thou [Abraham] art a priest forever because of the words of Melchizedek."

In the midrashic literature, Michael appears as the heavenly high priest who offers daily sacrifices. It is, however, questionable if this image goes back to the time of Qumran and reflects the identity of Michael with Melchizedek. It is rather another instance of transferring Melchizedek's functions to another character. Moreover, the whole idea may represent an elaboration of a passage in *b. Zebah.* 62a, concerning the rebuilding of the temple after the Babylonian exile: "But how did they know (the site of) the altar? Said R. Eleazar: They saw (in a vision) the altar built, and Michael the great prince offering upon it." Note that the archangel offered on an earthly, not a heavenly altar, and only in order to indicate its site to the restorers of the temple. As for the explicit identification of Michael with Melchizedek in two little known medieval esoteric works, outside the mainstream of kabbalistic literature (*Yalqūt ḥādāš* and *Midrāš hanne‹lām*), we are probably dealing with independent constructions of their authors.

MICHAEL C. ASTOUR

MELCHIZEDEK (11QMelch). In 1965 under the auspices of the Royal Dutch Academy of Sciences, A. S. van der Woude published 14 small fragments discovered in 1956 in Qumran Cave 11. That editio princeps of 11QMelch contained photographs, a transcription of the text, and a German translation. In 1966 van der Woude and M. de Jonge published a slightly altered transcription together with an English translation. The most significant improvements in the reading and restoration of the fragments have been published by Yadin (1965: 152–54), Fitzmyer (1967: 26–41), Carmignac (1970: 343–78), Milik (1972: 97–109), and especially Puech (1987: 488–507). Named initially after its chief character, Melchizedek, for its final edition in the series Discoveries in the Judaean Desert, 11QMelch has been provisionally designated as 11Q13.

On paleographic grounds van der Woude proposed (1965: 357) that the work should be dated to the first half of the 1st century C.E. Others have suggested the second half of the 1st century B.C.E. (Kobelski 1981: 3). 11QMelch is for the most part a single column of text of at least 25 lines; in its right-hand margin frag. 1 contains an insertion which belongs to the preceding column; frags. 2 and 7 provide the start of several lines of a third column. While Kobelski accepts Milik's placing of frag. 13, he argues (1981: 5, 23) that frags. 4, 5, 11, and 14 are not part of the main extant column; Puech (1987: 505–7) locates frags. 4, 5, 11, and 13 in col. 3. Milik (1972: 126) argues that while the manuscript itself is suitably dated at the turn of the era, because the "anointed one" (11QMelch 18–20) is probably the Teacher of Righteousness himself, the text was composed about 120 B.C.E. (also Puech 1987: 509–10).

Because the fragments include extracts from various biblical books, notably Lev 25:10–13; Ps 82:1–2; and Isa 52:7 and because in lines 12 and 17 the interpretation of the biblical texts is introduced with a formula including the word *pēšer,* 11QMelch is generically akin to the thematic exegetical documents from Qumran such as 4QFlorilegium and 4QCatena [a]: indeed 11QMelch 25 and 4QFlor 1:15–16 both cite Isa 8:11 as a supplementary text (cf. 1QSa 1:2–3; CD 8:16 = 19:29). It is better to understand 11QMelch as the interpretation of a series of biblical texts (Brooke 1985: 320–22), rather than as an elaborate exegesis based largely on one biblical text alone (Leviticus 25; cf. Fitzmyer 1967: 29; Isaiah 61; cf. Miller 1969: 467–69; and Sanders 1973: 374). It could be that this series of texts originally belonged together in some early Jewish liturgical setting, perhaps as readings for the Day of Atonement (11QMelch 7; Brooke 1985: 322–23). Within their present literary context it is likely that they belong to a much longer document of which 4Q180 and 181 are also copies (Milik 1972: 110–26).

This exegetical work is intricately constructed. The very piecing together of the fragments was facilitated by the systematic use of biblical texts in 11QMelch (van der Woude 1965: 355). On the basis of the various formulas used, it can be seen that the work offers interpretations for certain base texts (Lev 25:13; Ps 82:1–2; Isa 52:7); each interpretation includes supplementary texts (e.g., Deut 15:2; Isa 61:1) by allusion or direct citation. These supplementary texts are linked through catchword (*gĕzērâ šāwâ*) to the base text and sometimes to each other: e.g., Deut 15:2 (11QMelch 3–4) is linked to the base text of Lev 25:13 (11QMelch 2) through an analogous word use represented only in the LXX text type (Lev 25:13, *apheseōs;* Deut 15:2, *aphesis*); the allusions to Isa 61:1 are linked to the citation of Isa 52:7 through their common use of *bśr.* Also in the interpretations there are occasional short extracts from the base text.

The whole text is eschatological, concerning the "latter days" (*aḥarît hayyāmîm*). For the Sons of Light, Melchizedek will proclaim release and make expiation; for Belial and those of his lot, Melchizedek will exact the vengeance of the judgments of God. In this dualistic struggle, aspects of which reflect Iranian influence (Kobelski 1981: 84–98), Melchizedek acts as God's agent. All this will happen in the tenth and last jubilee period (11QMelch 7); this time scale for history echoes that of the Apocalypse of Weeks (*1 En.* 91:12–17; 93:1–10; 4QEn [g]) in which in the seventh part of the tenth week the eternal judgment is executed by the angels. This same judgment is declared to Michael by God in *1 En.* 10:12 (cf. Jude 6). This tradition justifies the conclusion of the majority of scholars that Melchizedek in 11QMelch is not a human but the archangel Michael in another guise with royal and high priestly characteristics (cf. Gen 14:18–20; Ps 110:4). In addition, Melchizedek is accompanied by the one who brings good news (*mbśr*),

the anointed one (*hmšyḥ*), who may be the Teacher of Righteousness, or the eschatological prophet (Kobelski 1981: 61–62), or the Davidic Messiah (Fitzmyer 1967: 30).

Although the name Melchizedek appears in full only in this Qumran text, 11QMelch shares certain features with other texts. Its angelology is matched particularly in the *Songs of the Sabbath Sacrifice* (4Q400, 403, 405), in which the angels are often designed as *ʾēl* or *ʾelôhîm*, as in Ps 82:1 (11QMelch 10) and in 1QM. 4QʿAmram^{b} and 4Q280 seem to refer to Melchizedek's chief opponent, Belial, under another name: *Melkirešaʿ*. The exegetical method and eschatological scheme are paralleled in other texts also.

The appearance of some key scriptural passages and the figure of Melchizedek himself have provoked an extensive scholarly literature on how 11QMelch may illuminate parts of the NT. Although some would deny any connection between this angelic Melchizedek and the priestly Melchizedek in Heb 5:5–10 and 7:1–7 (Horton 1976: 167–70), most scholars argue that the two texts preserve differing uses of the same Palestinian Jewish tradition. The debate in Heb 1:3–14 about the status of angels would seem to justify this; the same issue is also reflected in the use of Psalm 82 in John 10:34. The use of Isaiah 61 as a key text in Jesus' ministry (Luke 4:18–19; 6:20–21) implies that for Luke, Jesus was the eschatological liberator who fulfilled the role other Jewish traditions assigned to Michael or Melchizedek.

GEORGE J. BROOKE

MELCHIZEDEK (NHC IX,*1*). The first of three gnostic tractates contained in Nag Hammadi Codex IX (1,1–27,10), inscribed in Sahidic Coptic. It is the only one of the Nag Hammadi tractates in which the figure of Melchizedek appears, though Melchizedek is treated in such other gnostic texts as *Pistis Sophia* and the *Books of Jeu*.

Owing to the fragmentary condition of the ms, less than 50 percent of the text is recoverable, but enough is preserved to allow for judgments to be made on such questions as literary genre, essential content, and religious character. Its superscript title is partially preserved.

Melchizedek is an apocalypse containing revelations given by heavenly intermediaries to Melchizedek, "priest of God Most High," who communicates the revelations to a spiritual elite. It is a Christian writing which reflects in its background the influence of sectarian Jewish speculations on the figure of Melchizedek, but whose chief preoccupation is the relationship between Melchizedek and Jesus Christ. The NT Epistle to the Hebrews supplies the key to the solution of that problem (Gianotto 1984: 187–275).

Melchizedek consists of three main parts: (1) first revelation, 1, 1–14, 15; (2) a liturgical interlude, 14, 15–18, 11 (?); and (3) second revelation, 18, 11 (?)–27, 10.

The first revelation contains prophecies of the ministry, death, and resurrection of Jesus Christ and predictions of the coming of heretics who will deny the reality of Jesus' incarnation, death, and resurrection. Melchizedek himself has a role to play as well, for he is not only the recipient of the revelation, but also a participant in it, as a future high priest.

The antidocetic polemic in this section is a surprising component to find in a gnostic text. This feature could indicate a connection, in the editorial history of the text, with the "Melchizedekian" sect described by Epiphanius (*Haer.* 55). The Melchizedekians had a low christology and insisted on the true humanity of Christ.

The interlude features certain ritual actions undertaken by Melchizedek and the offering up of prayers addressed to members of the heavenly world. The names of these various beings (Barbelo, Harmozel, Oroiael, Daveithe, Eleleth, et al.) belong to the "Sethian gnostic" tradition represented by the *Apocryphon of John* and related texts (Sevrin 1986: 222–46).

The second set of revelations transports Melchizedek into the future again, this time as the crucified, resurrected, and triumphant savior himself. If this interpretation of the fragmentary text is correct, *Melchizedek* teaches the identity of Jesus Christ with the ancient priest Melchizedek; i.e., Jesus is Melchizedek redivivus. Melchizedek's role as a returning high priest and eschatological holy warrior is to be understood against the background of such Jewish apocalyptic material as 11QMelch, *2 Enoch,* and the Similitudes of *1 Enoch* (chaps. 37–71: Enoch as the future "Son of Man"). The identification of Jesus Christ with Melchizedek is apparently derived from an interpretation of Heb 7:3.

A number of features in *Melchizedek* cohere with the aforementioned Melchizedekian heresy described by Epiphanius. The identification of Jesus Christ with Melchizedek is an idea that appeared in some early Christian circles, especially in Egypt.

The gnostic features of the text may be accounted for on the hypothesis that an earlier non-gnostic apocalypse has undergone Sethian gnostic redaction and revision. (For another view see Schenke 1980.)

The original language of *Melchizedek* was Greek. The final redaction was probably completed in Egypt sometime in the 3d century, though parts of the tractate are probably earlier.

BIRGER A. PEARSON

MELEA (PERSON) [Gk *Melea* (Μελεα)]. The father of Eliakim and son of Menna, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:31). D omits Melea, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Melea occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of eighteen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 501). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Melea, in the second list, corresponds to Naggai, in the first list. With no major textual variants for Melea and Naggai to support confusion of the two, Kuhn's theory has little plausibility.

STANLEY E. PORTER

MELECH (PERSON) [Heb *melek* (מֶלֶךְ)]. Great-great-grandson of King Saul according to the genealogy in 1 Chr 8:35 and 9:41. The name is unique in the Hebrew Bible and in the epigraphic corpus;

this probably motivated various translators of the LXX to level the MT in line with more common names, such as Malchiel (see Gen 46:17) or Malluch (e.g., Ezra 10:29). The name "Melech" is probably a shortened form of names such as Malchiah, "YH (WH) is king." The abbreviated form *mlky* is attested in a preexilic bulla (Shiloh 1986: 29), and the element *mlk* is very common in biblical and extrabiblical names (Avigad 1986: 73, 82, 87, 105, 106; Shiloh 1986: 29; Tigay 1986: 77–78; Fowler *TPNAH*, 350). Although theoretically the element *mlk* could be connected with the divinity called Molech in the Hebrew Bible, most scholars associate the Israelite names with YHWH and understand *mlk* as a divine epithet (Heider 1985: 229–32; Tigay 1986: 77–78; Fowler, 50–52). However, it might not be accidental that a descendant of King Saul was named Melech (Heb *melek*) "king." The ideology that Saul and his descendants were the legitimate kings over Israel continued to flourish after the ascent of David (Flanagan 1982; Brettler 1989: 423–25), and the name "Melech" for a member of Saul's family might indicate continued hope of recapturing the royal throne. Names compounded with *melech* were used with other people connected to human kingship. The judge who attempted to hold sway over all Israel is named Abimelech (Judges 9), and the indirect ancestor of King David according to Ruth, in which most names are symbolic, is Elimelech (Ruth 1:2). The symbolic use of names with the element *melech* elsewhere thus suggests that Melech in 1 Chr 8:35 and 9:41 is connected to human rather than divine kingship. On the repetition of Saul's genealogy in 1 Chronicles 8 and 9, see AHAZ (PERSON).

MEM. The thirteenth letter of the Hebrew alphabet.

MEMMIUS, QUINTUS (PERSON) [Gk *Kointos Memmios* (Κοιντος Μεμμιος)]. Quintus Memmius, one of two Roman envoys to the Jews in 164 B.C.E. (2 Macc 11:34). This envoy is mentioned along with his colleague Titus Manius, and the Vulgate designates them as *legati Romanorum*, "Roman legates." See MANIUS, TITUS. Efforts to establish the historicity of these envoys have produced no certainty. The content of the letter sent to the Jews by the Romans was possible enough, in view of the policies of the Romans toward the territory of Syria. However, dates and names within the passage do not fit the known events, so that some think that the letters and the embassy to the Jews are fictitious.

BETTY JANE LILLIE

MEMPHIS (PLACE) [Heb *nōp* (נֹף), *mōp* (מֹף)]. Throughout most of Egyptian history, the principal residence and capital of the kings of Egypt, referred to in the oracles of several Hebrew prophets (Isa 19:13; Jer 2:16; 46:14, 19; Ezek 30:13; Hos 9:6). Apparently some of the Judeans who fled to Egypt during the Babylonian advance settled in Memphis (Jer 44:1). The site is identified with modern Mitrahineh, 13 miles S of Cairo on the W bank of the Nile.

The site was first settled by Menes, the traditional founder of the 1st Dyn. (Herodotus 2.99; see Kemp 1976), who ca. 3050 B.C. built a fortress there called the "White Fortress." Throughout the Old Kingdom (ca. 3050–2200 B.C.) the town was otherwise known as "the Residence" (Eg *ḥnw*), and here the ever-expanding bureaucracy and the administrative offices of the kingdom were centered. Because the early kings chose to build their pyramids in various sites within the area, a number of temporary "pyramid towns" sprang up to house the workers; these soon developed into faubourgs of Memphis, connected by a N-S canal (Goyon 1971). One of these, the pyramid town of Tety (ca. 2380–2350 B.C.), enjoyed continued prosperity during the 9th and the 10th dynasties (ca. 2180–2050 B.C.), when it became the metropolis of the entire district. Another town, built by Pepy I (ca. 2350–2315 B.C.), was called "Pepy is

Firm and Fair" (Eg *pepy-mn-nfr*); and from Middle Kingdom times on the city was known by an abbreviated form of this name, *mn-nfr* (cf. Gk *Menophreōs, Memphis*; Akk *Mi-im-pi*; as well as the two Heb forms).

From the earliest times, Ptah appears as the principal god of the town, and his temple (originally on the S side of the "White Fortress") gradually became the focal point of the city. Its name, *Ḥwt-k€ -ptḥ* ("*Ka* mansion of Ptah") was often used to designate the city itself and later, by extension, the entire country (cf. *Ai-ku-pi-ti-yo* in Linear B [Stieglitz 1976: 85]; *ḥkpt* in 2 Aqht V: 21, 31; and Gk *Aigyptos*, "Egypt"). Already in the Old Kingdom period copies of the royal annals were kept in Ptah's temple (Redford 1986). Ptah was essentially a creator god, celebrated for his creation by word of mouth (cf. *ANET*, 4–6), and, as a reflection of the political importance of his city, considered first divine king of Egypt (cf. Diod. 1.13.1–2). His consort was Sakhmet, the lioness-headed plague bearer, and his offspring Nefertuia, the Lotus. He was also associated with the sacred bull APIS, who occupied an ancillary shrine adjacent to Ptah's temenos; and the chthonic god Ta-tenen, personification of the emergent alluvium. The principal and oldest goddess at the site was Hathor, Mistress of the Southern Sycamore, whose temple stood S of the Ptah enclosure (Mahmud 1978). Three km to the W of the city, on the edge of the desert cliffs, stood the ever-growing necropolis of the city, Sakkara, which took its name from the mortuary deity, Sokan (Lauer 1976, 1977). Here all of the first six dynasties of Egyptian history, except the 4th, are represented by mastaba and pyramid fields.

The collapse of the Old Kingdom after 2200 B.C. robbed Memphis temporarily of its status as royal residence, and primacy was ceded first to Herakleopolis (9th–10th Dyn.) and then to Thebes (11th Dyn.). Even when the center of the kingdom gravitated N in the 12th Dyn., it was not to Memphis, but to the new capital of Itj-towy (modern Lisht, 32 km S of Mitrahineh). Nevertheless, the city of Memphis revived somewhat during the Middle Kingdom, when part of the site was covered by tombs (Lilyquist 1974); and the cultic establishment experienced a renewal. Memphis was captured by the Hyksos ca. 1660 B.C. and, according to Manetho, was used by them as a residence (see HYKSOS). Its liberation is not recorded in any surviving text, but by the time of the final assault on Avaris, it was firmly in Egyptian hands.

From the reign of Thutmose I (ca. 1526–1515 B.C.) to the early years of Rameses II (after 1300 B.C.), Memphis regained its distinction of being the favored royal residence; and even after the construction of the new capital Pi-Ramesse (ca. 1290 B.C.), it maintained a central role in the administration (Badawy 1948). It was the seat of the N vizier and his council, responsible for Middle and Lower Egypt; and it became customary to appoint the heir apparent to the post of *sm*-priest of Ptah in the city. Thutmose III resided in the city and used it as a base of military operations (*Urk* IV: 1282). Amenophis II added a suburb called Peru-nefer, Thutmose IV a chapel, and Amenophis III a shrine and a large mortuary temple (Petrie 1909–10). Although Akhenaten probably never set foot in Memphis, he had a sun temple constructed at the site (Löhr 1975). In his third year, Tutankhamen took up residence in Memphis, and from that point until Ramesside times the town experienced a rebirth. The necropolis during this period displayed well-built mastabas of the highest magnates of the realm, such as the generalissimo Horemheb, the treasurer Maya, the princess Tia, the general Amenenioue, etc. (Martin 1977, 1982, 1983, 1984). Sety I built a temple at Memphis and resided at the site. Khamwese, son of Rameses II and priest of Ptah, undertook at Memphis a restoration of temples and ancient cults, an activity which is reflected in the noticeable "antiquarianism" of the period (Redford, 1986). Rameses II's own contribution to Memphis consisted of the refurbishing and expansion of numerous standing structures and the building of the present Ptah temple (Jeffreys 1984). He also transferred the place of burial of the Apis bulls from the aboveground cemetery to a subterranean serapeum. His son, Merneptah, built a palace and temple to Ptah at the SE corner of the city; and Rameses III of the 20th Dyn. also built a temple at the site.

During the Third Intermediate Period (ca. 1070–711 B.C.) the direct influence of Memphis on the politics of the realm declined somewhat. Although kings continued to lavish public buildings on the site—Siamun constructing a temple and Sheshonk I a mortuary temple and an embalming house for Apis—Memphis became little more than an appendage of princes of the reigning house. It resisted the invasion of the Nubian Pi'ankhy (ca. 717 B.C.) and was besieged and sacked. It suffered a similar fate at

the hands of the Assyrians. Despite this decline, the tradition of Memphis' former importance survived in Palestine into the 8th century, judging from Isaiah's reference to it in a poetic parallelism that recognizes its princes (and those of Zoan) as "the cornerstones of (Egypt's) tribes" (19:13). At the same time, the tradition of its impressive necropolis seems to have been known to the prophet Hosea, who used that image to refer to the burial of the sinful Israelites (9:6).

The rulers of the 25th Dyn. restored Memphis to its former greatness and turned it into their residence, and the kings of the 26th Dyn. may also have resided there. Psamtek I (664–610 B.C.) enlarged the serapeum, HOPHRA contributed a palace on the N (Petrie 1909–10, II), and the Amasis Dynasty as a whole refurbished the Ptah Temple. Throughout the 7th and 6th centuries Memphis remained the political and cultic hub of Egypt, and as such it attracted the ire of Hebrew prophets in predictions which failed to materialize (cf. Jer 46:14–19; Ezek 30:13).

With the Egyptian Empire of the New Kingdom, Memphis had become the seat of a Canaanite community of merchants and mercenaries centered upon the temples of Ba‹al and Astarte (Helck 1966). During the final days of Judah, Memphis received exiles fleeing the advance of the Babylonians (Jer 44:1). In Herodotus' time this enclave was dubbed "the Camp of the Tyrians" (Hdt. 2.111); and by that time the foreign community comprised Syrians, Carians, and Greeks as well.

During the first Persian occupation (525–406 B.C.), Memphis served as the headquarters of the governor and a garrison post. Cambyses ran afoul of the local priesthood (Hdt. 3.37), but Darius I underwent a coronation there. The 30th Dyn. (380–343 B.C.) contributed greatly to the embellishment of the city and the necropolis.

The priesthood of Ptah had always occupied a high rank in the Egyptian clergy (Freier 1976). Leadership of Memphis and its community gravitated in the Late Period into the hands of the high priests of Ptah who could trace their ancestry to a remote period. These reserved the right to crown the king, to officiate at the rites of Apis, and to keep the offering lists and king lists (see Redford 1986); and during Ptolemaic times, they were a major link between the Greek administration in Alexandria and the native population (Quaegebeur 1971, 1980). The priesthood of Ptah had, over the centuries, gained a reputation for wisdom and scientific knowledge, being the authors of the "deism" of the Memphite Theology, and accurate assessors of climatic conditions in central Africa and the cause of the annual Nile flood (Diod. 1.40.1–2; cf. Lucr. *De rerum natura* 6.738).

Memphis was chosen as capital by Ptolemy I in 321 B.C. and initially received the burial of Alexander. Even after the transfer of the capital to Alexandria, Memphis remained the "royal city of the Egyptians" (Strabo 17.1.31), where kings were crowned and sometimes resided and where synods of the Egyptian priesthood were held (Crawford 1980).

Under Roman rule Memphis' decline was ensured. The governor visited it once a year on a circuit, to inspect the affairs of Upper Egypt. It might still attract royal visits (Suet. *Aug.*; Severus 18.1), but this was mainly due to the fame of Apis, whose worship outlived that of Ptah. With the edict of Theodosius (A.D. 395), its temples were shut and destroyed; and the site used as a quarry for later neighboring settlements.

DONALD B. REDFORD

MEMPHITE THEOLOGY. The name given to the text found on a stone dated to the reign of King Shabaka of the 25th Egyptian Dyn. (ca. 710 B.C.). The introduction of the text claims that it was a copy of a much earlier papyrus document which had been found partially destroyed; and because of its importance, Shabaka ordered that it be restored and inscribed on stone. This copy itself has also suffered badly over the centuries, with almost one-third of the text being obliterated as a result of the stone's having been used for milling.

The text has four main sections: the titles of King Shabaka, followed by a statement of the condition in which the original was found; the first part of the original document, which recounts Geb, the earth god's resolution of the conflict between Horus and Seth over the division of authority and territory after the death of Osiris; a long section which relates Ptah's creation of the cosmos, the gods, plants, crafts, towns, and "all good things"; and the final section, which contains a brief description of the rescue of Osiris' body by his sisters, Isis and Nephthys.

The text is of interest to Egyptologists because of its style, which has been interpreted either as a play (Sethe 1928) or as a treatise derived from dramatic performances of the myths which are alluded to in the text (Junker 1940, 1941). Although not mentioned in the Bible, this text has gained prominence because the method of Ptah's (Sandman-Holmberg 1946) creation has been compared to that ascribed to the god of Israel in the book of Genesis, that is, what has commonly been called "creation ex nihilo" (Finnestad 1976: 81).

The creation activities of Ptah are described as taking place through the agency of his heart and his tongue; the former being the seat of thought, while the latter represents the verbalization of the heart's thoughts. "Therefore, all work and all crafts are made, the activity of the hands, the motion of the legs and the movement of all limbs, according to this command which the heart developed and which comes forth on the tongue and creates the performance of everything" (Sethe 1928: 1n. 58).

Analysis of the grammar and orthography of the text, along with studies of the religious and historical allusions made in the text, led early commentators to date the original document to the Old Kingdom (ca. 2500 B.C.), when the city of Memphis and its patron god, Ptah, held positions of critical importance in Egypt's geopolitical environment. No matter what chronological or dating systems are used, such a provenance would place the origin of this text at a period which is substantially pre-Mosaic and therefore a challenge to the supposed uniqueness of the Genesis account.

Recently, the veracity of the text's introduction has been called into question (Junge 1973: 195). This analysis concludes that there was a deliberate archaizing of the text and that it was actually a piece of political propaganda authored in the 25th Dyn. This thesis is not without its supporters (*AEL* 3:5), while others, although unconvinced by the argumentation leading to a 25th Dyn. provenance, see the original text as dating to the high New Kingdom, perhaps to the reign of Rameses II (Schloegl 1980: 110).

While these technical matters remain topics of debate among Egyptologists, developments in other disciplines permit a better understanding of the salient feature of this text, creation through thought and word. This method was considered to be a highly sophisticated, almost metaphysical, description of creation which held a preeminent place within Western religious tradition because of its biblical roots.

Phenomenologists of religion have come to understand, however, that the actions of a creator god who uses thought and word are directly related to the incantations of a magician or the promulgations of a king. Indeed, specialists in comparative religion have found this type of creation story among many groups with strong magical or shamanistic traditions (Bergounioux and Goetz 1965: 69).

In this regard, one can cite hundreds of texts from the corpus of Egyptian mortuary literature as early as the Old Kingdom Pyramid Texts, where the creative power of the spoken word is a fundamental premise (Miosi 1982: 77). Far from being unique, then, Ptah's activities model a general and well-attested pattern of Egyptian thought which recognizes the creative power of the spoken word.

FRANK T. MIOSI

MEMUCAN (PERSON) [Heb *mĕmûkān* (מְמוּכָן)]. One of the seven chief counselors of Persian king Ahasuerus listed in Esth 1:14, 16, 21. These men are described as sages who held a prominent office next to the king which entailed advising him on matters of custom and law (Esth 1:13–14). Several classical authors make mention of such a group of seven chief judges or viziers who customarily decided questions affecting the conduct of Persian kings (Hdt. *Hist.* 1:107; 3:31, 34, 118; 7:19; Jos. *Ant* 11.31; X. *An.* 1.6.4; cf. Ezra 7:14; and 1 Chr 12:33; Paton *Esther* ICC, 153). In Esth 1:16–20 Memucan acts as the spokesman for this group when Ahasuerus seeks advice concerning what to do about his disobedient queen, Vashti. The seven sages advise that she is to be deposed and a successor sought, or else her example of disobedience will spread to every household in the realm resulting in great social upheaval when wives no longer obey their husbands. According to Clines this scene in the story should be seen as satire as the author describes the best minds of the kingdom formulating "a response which any self-respecting male chauvinist could easily dream up for himself" (*Ezra, Nehemiah, Esther* NCBC, 280). Memucan's name may be derived from Pers *memucāna,* "cloud," or *magavan,* meaning "a true member of the Magian tribe" (Paton *Esther* ICC 69; Gehman 1924: 325).

JOHN M. WIEBE

MENAHEM (PERSON) [Heb *mĕnaḥēm* (מְנַחֵם)]. A king of the N kingdom of Israel in the latter half of the 8th century B.C.E. (ca. 746–737). The name "Menahem" is a nominal form of the verb *nḥm,* "to comfort," and is related to the name "Nehemiah" (Heb *nĕḥemyâ*). It is a common West Semitic name and is found in the Jerusalem bullae collection, where it appears on bullae Nos. 100–4 (Avigad 1986: 74–75). It is found once in the Arad Letters (No. 72; *AI,* 96). Apart from the name, Menahem, the participial form of the verb is used in the Bible mostly in late literature such as the Psalms (Ps 69:21), the Wisdom books (Eccl 4:1; Job 16:2), the Latter Prophets (Nah 3:7; Isa 51:12), and the Writings (Lam 1:2, 9, 16, 17, 21). Here the term means "comforter." In 2 Sam 10:3 (= 1 Chr 19:3) the term assumes a diplomatic status.

His activities are recorded in 2 Kgs 15:13–22 and have no parallel in Chronicles. He was the son of Gadi and probably originated from Tirzah. A brief outline of the account of his reign in 2 Kgs 15:13–22 is as follows. Menahem killed Shallum ben Jabesh, a usurper to the throne who had assassinated Zechariah, the last king of the Jehudite dynasty. Menahem's reaction was swift since Shallum had reigned for only

one month in the capital city of Samaria. Menahem also had a role in the attack on Tiphsach, on the Euphrates river, and had shown the customary brutality of siege warfare of the time (v 16). At the invitation of Menahem, the Assyrian Tiglath-pileser III came to help Menahem retain his hold on his new kingdom; and the cost for this aid was one thousand talents of silver (vv 19–20). After payment Tiglath-pileser returned to Assyria; and sometime later Menahem died, presumably of natural causes, to be succeeded by his son, Pekahiah. Menahem reigned a total of 10 years in Samaria.

Although this outline appears to be straightforward, there are many critical historical and literary problems associated with this account, not all of which are capable of satisfactory solution.

The chronology of Israel and Judah in this period is extremely complicated; but although several adjustments have to be made in the reigns of kings before and after Menahem (Hobbs *2 Kings* WBC, 173–206), there is little reason to alter the length of Menahem's reign itself. Most historians allow it the 10 years allotted in the Bible, and its dates are usually given as 746–737 B.C.E.

Menahem's full name has generated some discussion. The reference to him as "son of Gadi" has led to speculation that he was originally from the E side of the Jordan, from the tribal area of Gad. It has been further suggested that there was political and military tension between the Transjordanians and Cisjordanians during the 8th century B.C.E. (Ishida 1977: 173–76). Shallum, it is to be noted, probably came from Jabesh in Gilead to lead an eastern revolt against the western king (Cogan and Tadmor *2 Kings* AB, 170). Further, the assassination of Pekahiah, Menahem's son, was carried out by Pekah and 50 men from Gilead (2 Kgs 15:25). However, the geographic conflict is probably overrated; and there are ulterior motives for its creation, namely, the accommodation of the chronology of Pekah's reign. Menahem himself was responsible for the death of Shallum, an easterner; and Pekah was a close military associate (Heb *šālîš*) of Pekahiah. It is also unlikely that the patronymic of Menahem, Gadi, refers to his place of origin. It is a perfectly normal name for a person.

The reference to Menahem's military adventures in Tiphsach (2 Kgs 15:16) has caused considerable debate. Tiphsach is identified with Thapsachah, an important trade center on the banks of the Euphrates (*LBHG,* 16); and, according to many, it is unlikely that Menahem became involved so far away from Samaria during his reign (Cogan and Tadmor, *2 Kings* AB, 171). Many interpreters therefore suggest that the reference to Tiphsach is a mistake and seek to emend the text in accordance with one tradition of the LXX which suggests Tappuah, a site much closer to home. The town is mentioned as being on the border between Ephraim and Manasseh (Josh 16:8) and is usually identified with modern Tell Sheikh Abu Zarad (M.R. 172168). However, this emendation also has its problems since an attack on Tappuah, by now a small town of Manasseh, is just as difficult to understand. What would be the circumstances of such an attack? What would be the purpose of such an attack on a small, unimportant community? The difficulties with Tiphsach on the Euphrates arise if the text in 2 Kgs 15:16 is taken as another in a sequence of events in the reign of Menahem. But this is far from clear. The Hebrew begins with an unusual particle *ʾāz,* followed by an imperfect form (*yakkeh*). The style has been recognized as archival (Montgomery 1934) and offers not so much a sequence of events as a selection of events. Preceding years had seen the decline of Aram-Damascus, the temporary revival of Hamath, then the domination of the northern Levant by the Assyrians. It would therefore be difficult indeed to envisage Menahem, as king, invading Assyrian-held territory, but it would not be difficult to envisage an earlier Menahem in his capacity as a general in Jeroboam's army fighting on the northern border of the newly created Israelite empire. His capture of Tiphsach would inevitably become part of his military reputation. This tradition of the role of the early Menahem is, in fact, preserved in Josephus (*Ant* 9.228). If Menahem had been a general in Jeroboam's army, this position would also explain his loyalty to the house of Jehu and the speed with which he came to avenge the blood of Jeroboam's son.

A third problem with the reign of Menahem is the nature of the payment to Tiglath-pileser III mentioned in 2 Kgs 15:19–21. The data associated with this matter are as follows. It is known from the biblical account that Tiglath-pileser III, king of Assyria from 744 to 727 B.C.E., sent a military force to Israel during Menahem's reign (2 Kgs 15:19–20). It is also known from Tiglath-pileser's own accounts that he invaded Israel (Akk *sa-me-ri-na-a*) and exacted considerable tribute from the country (*ANET,* 283–84;

LAR 1: 293; Cogan and Tadmor, *2 Kings* AB, 335–36). The problem consists of two issues. Are the two accounts reconcilable, i.e., does the biblical text speak of tribute payment? What is the date of Tiglath-pileser's invasion?

On the first matter it has been traditionally understood that Menahem paid Tiglath-pileser tribute and that he introduced a system of taxation of wealthy men (Heb *gibbôrêy haḥayīl*) to pay for the tribute. It is even suggested (*LBHG*, 370; McCarter *HDB*, 625) that the introduction of this taxation system was a major cause in the later downfall of Menahem, a suggestion, it must be noted, without historical foundation. The language of the account does not support this reading; and a better understanding is that Menahem paid Tiglath-pileser to send an army to help him firm up his hold on power in the north, presumably against those who might still support the aims of Shallum. The use of the term *gibbôr ḥayīl* (lit. "soldier") as a socio-economic designation is very unusual (Hobbs *2 Kings* WBC, 198–200). The payment was not a formal tribute, but payment for mercenary services. A parallel is found in Ahaz of Judah's appeal to the same king during the attack of Pekah and Rezin on Jerusalem (2 Kgs 16:5–9). Based on the payment, the expeditionary force sent should be calculated at approximately 75,000 men.

Three texts are cited from Assyrian sources in discussion of this incident. Two have long been known (*ANET*, 283–84; *LAR* 1: 293), and the third is a more recently discovered fragment (Levine 1972b). Unfortunately, the first text referring to Menahem (*ANET*, 283) is undated, although the reference to Hiram of Tyre would place it toward the end of Menahem's reign since Hiram succeeded to the throne of Tyre in ca. 738 B.C.E. But this text has the characteristics of a tribute payment from conquest, which is not the impression given in 2 Kgs 15:19–21. The reading of Menahem in the second text is not at all clear. That is unfortunate since the text is a comprehensive one and covers many years of the relationships between Assyria and Israel. The more recent text appears to be a reference to an exaction of tribute from Menahem at an earlier date since Hiram's predecessor, Tabal (Isa 7:6), is given as the king of Tyre. The order and dating of the annals of Tiglath-pileser III are extremely complicated problems with no sign of satisfactory resolution. What is certain is that Menahem's reign is to be seen against the background of the rapidly growing influence of Assyria in the west. Fifteen years after Menahem's death the northern nation of Israel had been destroyed. The literature referred to in the bibliography below will provide an entry into the subject of the complicated chronology of this period.

MENANDER, SYRIAC. See SYRIAC MENANDER.

MENELAUS (PERSON) [Gk *Menelaos* (Μενελαος)]. One of three brothers who belonged to the priestly order of Bilgah at the time of Antiochus IV Epiphanes (as indicated by an improved reading of 2 Macc 3:4). Menelaus thus belonged to an important family which was striving to promote its status among the Jewish ruling circle, and which consequently came into conflict with the high priest Onias III. At first Menelaus was associated with Jason, who had replaced his brother Onias III as high priest in Jerusalem; then, while on a mission to Antiochus IV Epiphanes, Menelaus undermined Jason's position and, with Antiochus' support, won the high priesthood for himself (172 B.C.E.).

This was considered illegal in the eyes of many Jews (2 Macc 4:25, 26), since Menelaus was not of the legitimate priestly (i.e., Zadokite) family to which Onias belonged. Menelaus' (probably elder) brother Simon had previously been appointed provost (RSV "captain") of the temple (2 Macc 4:23; 3:4, 11) and had also used his position to undermine Onias. The appointments of both Jason and Menelaus to their respective offices were irregular, since they took place while the officiating high priest was still alive and not according to primogeniture. (This is on the assumption that at that time the king did not appoint—

either de facto or de jure—the high priests to their offices.) After becoming high priest himself, Menelaus left his (probably younger) brother Lysimachus in charge in Jerusalem while he went to meet with Antiochus; there was a riot in Jerusalem, and Lysimachus was killed (2 Macc 4:29, 39–42). This accords well with a Talmudic reminiscence about a punishment inflicted on the order of Bilgah (*m. Sukkah* 8:8; *t. Sukkah* 4:28).

Jerusalem suffered many convulsions under Menelaus' tenure as high priest. The temple was robbed, a civil war broke out, and first Jason and then Antiochus IV invaded Jerusalem. Then came the infamous religious persecution (December 167 B.C.E.), the resulting Maccabean revolt, and about three years later the negotiations that brought an end to the persecutions. Menelaus is mentioned twice in those events. The first is in the letter of Antiochus IV to the Jews (2 Macc 11:27–33, vv 29 and 32). This letter seems to indicate that Menelaus left Jerusalem to meet the king (who was at that time in the upper satrapies, i.e., in Iran) and that it was Menelaus himself who negotiated the cancellation of the persecution, thereby maintaining his influence with the king, who lent support to his position in Judea. The second and last reference to Menelaus appears in conjunction with the beginning of Antiochus V's expedition to Judea (2 Macc 13:3–8). Since the temple compound itself at that time was under the control of Judas Maccabeus, Menelaus was eager to have Antiochus V return it to Menelaus' control. But when Lysias blamed Menelaus as "the cause of all the troubles," Menelaus was taken to Beroea and was executed according to the local custom: by suffocation in ashes.

Menelaus' career holds a central place in the various theories which propose explanations for the religious persecutions under Antiochus IV. Indeed, it seems that Menelaus had a crucial role in this event. The blame that Lysias casts on him as "the cause of all the troubles" cannot be dismissed, and his execution cannot be understood without it. The fact that 2 Maccabees treats this event from a highly theological perspective does not diminish the essential accuracy of the account.

If Lysias' accusation is correct, then Menelaus must have been involved in the religious persecution himself. Such accords well with the earlier career of Menelaus, especially his striving for power at all costs. Since his avenue to power included, among other things, the overthrow of the Jewish ancestral constitution, he was not deterred from its "logical" conclusion (the religious persecution) and its consequences. This policy was miscalculated and fell to pieces; because of the fierce "traditional Jewish" opposition under the leadership of the Maccabees, Menelaus attempted to change that policy. He seems to have been somewhat successful with Antiochus IV, but failed completely with Lysias, who rightly blamed him for his leading role in this political fiasco.

There was thus not necessarily any cultural religious ideology behind Menelaus' activities: he was mainly using "Hellenization" as a way to increase his own personal power and that of his supporters and probably to gain the support of Antiochus IV and key members of his entourage (especially Ptolemy son of Dorymenes?). For Menelaus, Hellenization was a means toward a personal end, not a cultural or ideological end in itself.

Josephus' accounts of Menelaus in *Antiquities* 12 (especially 239–40 and 383–85) and *Jewish War* (1.31ff.) contradict 2 Maccabees in various details. (Josephus tends to follow the account in 1 Maccabees, which does not mention Menelaus at all.) Most scholars consider Josephus an undependable source on this matter (Tcherikover 1959: 392–97).

URIEL RAPPAPORT

MENESTHEUS (PERSON) [Gk *Menestheōs* (Μενεσθεως)]. 2 Macc 4:4 and 21 refer to Apollonius, the son of Menestheus, who was governor of Coele-Syria and Phoenicia in the reign of the Seleucid Antiochus IV Epiphanes. This Apollonius supported the Tobiad Simon in his intrigues against the high priest Onias. Polybius (31.13.2–3) describes a certain Apollonius as a favored official in the reign of

Seleucus IV but who left the empire at the succession of Antiochus IV. This Apollonius had three sons, Apollonius, Meleager, and Menestheus, who supported the claim of Demetrius, the son of Seleucus IV, to the Syrian throne. Given the Greek custom of naming a son after the grandfather, it is possible that the Apollonius of Polybius is Apollonius, the son of Menestheus, of 2 Maccabees 4. Against this hypothesis is the opposition of the family to Antiochus IV and their preference for the line of Seleucus IV. However, the events in 2 Maccabees 4 could have preceded the sole rule of Antiochus IV after the murder of his co-regent Antiochus, the son of Seleucus (Mørkholm 1966: 41–50). The Apollonius and his family mentioned by Polybius need not have broken with Antiochus IV while he shared the throne with his nephew Antiochus from 175 to 170 B.C.E. (Goldstein *2 Maccabees* AB, 222). The identification of Apollonius as the son of Menestheus in 2 Maccabees 4 raises the question of the identity of the Syrian governor of Coele-Syria and Phoenicia of 2 Macc 3:5 who is described as Apollonius of Tarsus. If Apollonius, son of Menestheus, of 2 Maccabees 4 is the Apollonius in Polybius' narrative, the governor of 2 Macc 3:5 is a different Apollonius. If the son of Menestheus is not the Apollonius of Polybius, they could be the same person.

MICHAEL E. HARDWICK

MENI (DEITY) [Heb *mĕnî* (מְנִי)]. A god (or spirit) of destiny/fate; cf. the Heb verb *mānāh,* "number," "assign," "appoint." This deity is mentioned in Isa 65:11 as being worshipped, along with Gad (a god of fortune), by apostate Jews, probably in postexilic Judah. The RSV translates Heb *gad* as "Fortune" and *mĕnî* as "Destiny": "you … who set a table for Fortune and fill cups of mixed wine for Destiny." Most likely the setting of a table took place to venerate both deities, as also the filling of cups.

The name "Meni" has not been found with certainty in the pantheons of Assyria or Babylonia. Some scholars would identify Meni with Manu, apparently a deity worshipped in Asshur. On Achaemenid coins the name *ʿbdmnî* perhaps appears (it is a disputed reading), which may contain the name of the god: "Servant of Meni." A Greek-Latin inscription from an altar of Vaison in Provence (S France) reads in the Lat text *Belus Fortunae rector Menisque magister.* According to the Gk text *Belus* of the Lat text is Bel/Baal of Apamea (in Syria). Conceivably, then, *Fortunae* and *Menisque* also refer to Semitic divinities, respectively Gad and Meni.

Meni, (though) a male deity, probably is to be connected with the goddess *manât,* an idol (a large stone) worshipped by pre-Islamic Arabs. The Koran (Surah 53, 20) mentions her: "What think ye of Allat, and Al-Uzzah, and Manat, that other third goddess?" A word related to *manât,* the plural *mnwtw,* appears in the Nabatean inscriptions of Higr as a designation for a deity worshipped by the Nabateans; a corresponding word may be a divine name in South Arabian inscriptions.

There are various suggestions with regard to Meni in the scholarly literature, none of them proven. One is that the god, "Destiny"/"Fate," is a relatively late personification of the abstract "destiny," "fate." Evidence cited includes the Heb text of Isa 65:11, which provides *mĕnî* with the definite article (literally "for *the* Meni"; but note the lack of the *dāgeš forte* in the *mem*), possibly indicating that the Masoretes retained an awareness of an original "fate," "destiny." According to a second suggestion the worship of Meni in postexilic Judah is associated with the N migrations of the Nabatean Arabs and/or the Edomites. Another proposal sees Meni, paired with Gad ("Fortune," "Good Luck") in Isa 65:11, as a deity of bad fate/destiny. Very uncertain is the suggestion that, as Jewish tradition identified Gad with the planet Jupiter, and Arabic astrology regarded Jupiter as "the greater fortune," and Venus "the lesser fortune," Meni should be identified with Venus.

Isa 65:12 undoubtedly plays on the mention of Meni in v 11: the Lord (Yahweh) says that he will "destine" (Heb verb *mānāh*) the apostates "to the sword." The unfaithful, looking to Meni and not Yahweh as the controller of human destinies, will receive harsh judgment from the Lord. See GAD (DEITY).

WALTER A. MAIER III

MENNA (PERSON) [Gk *Menna* (Μενναα)]. The father of Melea and son of Mattatha according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:31). D omits Menna, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Menna occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of eighteen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 501). Kuhn (1923: 210–11) claims that in the original form of the genealogy Menna was not a name but a transliteration of Heb *mnnh,* meaning "from him," i.e., "descended from." Thus, according to Kuhn (208–9), the seemingly parallel lists of Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha) stem from the same original source, the first possibly preserved in a Hebrew context and the second in an Aramaic one. Kuhn's solution has not been accepted by commentators. A second explanation has been proposed by Jeremias (1969: 296 n. 97), who argues that Menna is "evidently a dittography" for Melea, and this stands for a single name. Even though Menna is omitted in A, Marshall points out (*Luke* NIGTC, 164) that omission of Menna would disrupt Luke's "numerical scheme."

MENORAH. See LAMPSTAND.

MENUHOTH [Heb *mĕnūḥôt* (מְנֻחוֹת)]. The name of half of the Manahathite tribe (1 Chr 2:52), which (according to 1 Chr 2:53 combined with v 54) inhabited Eshtaol. See MANAHATHITES. Most editors and commentators suggest correcting *ham-mĕnūhôt* (1 Chr 2:52) to **ham-mānaḥtî.* This correction is, however, unnecessary. Manahath/Manahathites can be derived from **manâḥ,* Heb *mānôaḥ.* See MANAHATH (PERSON). Menuhoth is a plural formation of the same name: **manâḥât* becomes **mĕnôḥôt* in Canaanite and finally, by dissimilation, *mĕnūḥôt* in Hebrew (as in *mĕgûrōt,* plural of *māgôr,* etc.). Tribal names ending in *-ât* (equals Canaanite *-ôt*) are very common among the recent Arab tribes; they are also attested in antiquity and usually occur with the definite article, as does Menuhoth. Among these names, feminine singular formations interchange freely with feminine plural formations (e.g., *jadarah* and *jadarât*; Knauf 1989: 65–66). The same linguistic mechanism holds true for Manahath and Menuhoth. Haroeh (Heb *ha-rō‹êh,* "the seer")—which 1 Chr 4:2 corrects to Reaiah (Heb *rĕ‹āyāh* "YHWH saw")—is the proper name of the Menuhoth half of the Manahathites; it occurs as a personal name in Safaitic (with and without the definite article; Harding 1971: 263, 612).

ERNST AXEL KNAUF

MEONOTHAI (PERSON) [Heb *mĕ‹ônōtay* (מְעוֹנֹתַי)]. According to the MT, Meonothai is the father of Ophrah (1 Chr 4:14). However, the Lucianic tradition of the Greek text of 1 Chr 4:13 indicates that Meonothai is also a son of Othniel, a brother of Hathath. Thus it is possible that the Hebrew text has suffered disturbance and the name "Meonothai" is lost by haplography from 1 Chr 4:13. The RSV translation follows the Lucianic reading.

H. C. LO

MEPHAATH (PLACE) [Heb *mêpa‹at* (מֵיפַעַת)]. A levitical town which belonged to the territory of Reuben (Josh 13:18; 21:37; cf. 1 Chr 6:64—Eng6:79). By the time of Jeremiah, it was part of the territory

of Moab and an object of one of his oracles (48:21). The Hebrew Bible mentions only that the town was on the tableland of Moab (Josh 13:21; Jer 48:21). Eusebius later mentioned that a Roman military outpost was stationed there (*Onomast.* 128.21). The *Notitia Dignitatum* records that auxiliary local troops promoted to the Roman cavalry were stationed in the camp at Mefaa.

Three sites in Jordan have been identified with Mephaath—Tell Jawah, Khirbet Nefaʿah, and Umm er-Rasas. The first, Tell Jawah (M.R. 239140), is 10 km S of Amman. It was probably a fortress city during the Iron Age. There are vestiges of a city wall, and terracing on the sides of the mound, and many cisterns outside of the wall at the base of the hill. It is curious that the cisterns were outside of the wall, particularly at a fortress city when defense and security would be primary objectives of the inhabitants. Archaeological surveys at Tell Jawah have gathered pottery from Iron Ages I and II, although EB III and Arabic sherds have also been found (Glueck 1934: 4).

The second, Khirbet Nefaʿah, is located about 1.5 km N of Jawah; Alt (1933: 28–29) and Simons (*GTTOT,* 18) identify it as Mephaath because of the similarity of the names. Musil (1907: 352) visited the site and argued that it was a suburb of Tell Jawah, which was surrounded by a powerful, reinforced wall. Khirbet Nefaʿah overlooked the famous King's Highway a short distance S of Amman. The road passed within a few hundred meters of the site which made both it and Tell Jawah strategically important.

No serious archaeological survey has been conducted at Khirbet Nefaʿah. Musil (1907: 352–53) stated that the site was Roman, although he had no ceramic evidence for this conclusion; Alt (1933: 28) maintained that the ceramics pointed to the Bronze Age. Iron II sherds were identified by Peterson (1977: 693), although he refused to argue for Iron II occupation on such scanty evidence.

The third suggested identification is Umm er-Rasas (M.R. 237101). Mephaath was identified with the ruins of Umm er-Rasas in 1986 when M. Piccirillo discovered a mosaic in the floor of the 8th-century Church of St. Stephen which referred to the site as Kastron Mefaa.

These ruins were visited for the first time in 1816 by Buckingham and were then surveyed by Palmer in 1870, followed by Tristram in 1872, and by Brünnow-Domaszewski in 1897. In 1898 Clermont-Ganneau published a Nabatean inscription found at Umm er-Rasas (*CIS* II 19), and in 1933 Glueck (1934: 39–40) collected only Nabatean, Byzantine, and Arabic sherds from the site.

The ruins, located 30 km SE of Medeba, halfway between the King's Highway and the Desert Road at the height of Dhiban, consist of a walled area inside a fortified camp; an area of roughly the same dimensions extends outside the N wall of the camp. About 1.5 km toward the N is a tower which stands ca. 15 m high.

The military nature is reflected by the name Kastron Mefaa (i.e., "the camp of Mefaa"), which is recorded in the mosaic of the Church of St. Stephen. It was apparently to this site that Eusebius referred in his *Onomasticon.*

MICHELE PICCIRILLO

MEPHIBOSHETH (PERSON) [Heb *mĕpîbōšet* (מְפִיבֹשֶׁת)]. The purported name of two members of the house of Saul. The literal meaning of the name in Hebrew, "from the mouth of shame" or "from the mouth of (the deity) Boshet," is problematic and appears to result from a religiously motivated alteration of the name to avoid pronouncing the name of the Canaanite deity Baal. The original form of the name was probably Mephibaal (Heb **mĕpîbaʿal*), meaning "from the mouth of Baal" or "from the mouth of the

Lord (Yhwh)." Although the standard LXX reading is *Memphibosthe,* the Lucianic recension and OL read *Memph (e)baal,* preserving the original form of the name. The element *bōšet* in the Masoretic form of the name means "shame," and was apparently substituted secondarily for the Yahwistic epithet *baʿal,* which fell into disfavor as it became the standard epithet for Yahweh's rival, the storm god. See ISH-BOSHETH.

1. A son of Saul by his concubine Rizpah (2 Sam 21:8). Together with his brother Armoni and five sons of Saul's daughter Merab, he was ritually executed in order to end a famine that persisted in the early years of David's joint reign over Israel and Judah.

2. Saul's grandson, the son of Jonathan (2 Sam 4:4). The name of Jonathan's son appears elsewhere (1 Chr 8:34; 9:40) as Merib-baal (*Meribaal*). It is reasonable to suggest that the name of Jonathan's son Merib-baal became partly confused with the similar name of his relative Mephibaal, the son of Rizpah. The similar shape of the Hebrew letters *reš* and *pe* might have contributed to the substitution of the consonants of Mephibaal (**mpybʿl*) for an original Merib-baal (**mrybʿl*) in early mss of the biblical text. Tradition carefully distinguishes between the two individuals in 2 Sam 21:7, 8.

According to the biblical account (2 Sam 4:4) Mephibosheth, son of Jonathan, was crippled from an accident in infancy. After the deaths of Saul and Jonathan he placed himself under the protection of David (2 Sam 9:6) and enjoyed special status in the royal household (2 Sam 9:10–11). He was implicated in treachery during the rebellion of Absalom (2 Sam 16:1–4; 19:24–25, 30) but was spared by David when the rest of the house of Saul was exterminated (21:7).

DIANA V. EDELMAN

MERAB (PERSON) [Heb *mērab* (מֵרַב)]. The eldest daughter of Saul, king of Israel (1 Sam 14:49) and wife of Adriel the Meholathite (1 Sam 18:19). Merab is introduced in a genealogical note concerning Saul (1 Sam 14:49–52). She is listed fourth in a series of five offspring (following her brothers—Jonathan, Ishvi, and Malchishua—and preceding her younger sister, Michal, v 49).

The account of Merab's marriage is found in 1 Sam 18:17–19. Saul promises Merab to David in exchange for David's support and military prowess. The narrator, however, interprets this as a ruse on Saul's part. Rather than risk raising his own hand against his rival, Saul plans to expose David to the hand of the Philistines (v 17). When this fails and the marriage date approaches, Saul instead arranges to have Merab marry Adriel the Meholathite (v 19).

Although 1 Sam 18:17–19 develops two previous ideas—the king's daughter given as a reward for bravery (17:25) and Saul's growing hostility toward David (18:6–16)—its position in the text is not without problem. The entire episode is missing from the LXX^B and Josephus (*Ant* 6.10.2) and is thought by many commentators to be secondary. Moreover, the issue is further complicated by 2 Sam 21:8 (MT), which identifies the wife of Adriel as "Michal" not "Merab." In all probability, however, 2 Sam 21:8 contains a scribal error and "Merab" should be read instead of "Michal."

LINDA S. SCHEARING

MERAIAH (PERSON) [Heb *mĕrāyâ* (מְרָיָה)]. The head of the priestly family of Seraiah in the time of the high priest Joiakim (Neh 12:12). Many have assumed that the name is a form related to Amariah (Heb *ʾămaryāh,* "Yahweh has said"). Whereas other LXX manuscripts have *Marea* or *Mar (a)ia* (equal to MT), the Lucianic recension reads *Amarias* for this name, reflecting Heb *ʾămaryāh* (Amariah). Amariah is a well-attested name in this period (Neh 10:4; 12:2, 13). The KB suggests that Meraiah is unrelated to Amariah and means "stubborn person" (cf. the Heb verb *mārāh* and the personal names *mĕrāyôt* and *miryām;* the proposed meaning of the name seems, however, somewhat improbable).

NORA A. WILLIAMS

MERAIOTH (PERSON) [Heb *mĕrāyôt* (מְרָיוֹת)]. **1.** An Aaronite priest, ancestor of the high priest Zadok (1 Chr 5:32–33; 6:37—Eng6:6–7, 52). Meraioth is also listed as an ancestor of Ezra in Ezra 7:3 and in 2 Esdr 1:2. The KJV, following Codex Alexandrinus, lists Meraioth as an ancestor of Ezra in 1 Esdr 8:1–2; the RSV, following Codex Vaticanus, omits Meraioth from the list. The list in Ezra 7 is probably the basis of the lists in 1 Esdras 8 and 2 Esdras 1.

2. The father of Zadok (1 Chr 9:11; Neh 11:11). The Chronicler twice represents Ahitub as the father of Meraioth, and Meraioth as the father of Zadok (1 Chr 9:11; Neh 11:11) in contradiction to the normal tradition of Ahitub as the father of Zadok (see, for example, 2 Sam 8:17; 1 Chr 5:34—Eng6:8; 1 Chr 18:16). J. R. Bartlet (1968: 4) explained this anomaly by suggesting that Meraioth was added as "an explanatory marginal note on Ahitub" and subsequently was entered into the list in the wrong place.

3. A priestly house in the postexilic period (Neh 12:15). This occurrence of Meraioth probably should be read as Meremoth with the MT of Neh 12:3 and the Lucianic recension of the LXX.

Bartlet, J. R. 1968. Zadok and His Successors at Jerusalem. *JTS* 19: 1–18.

TOM WAYNE WILLETT

MERARI (PERSON) [Heb *mĕrārî* (מְרָרִי)]. MERARITE. The etymology of Merari is uncertain. Evidently it is derived from a root *mrr*, which in Hebrew means "to be bitter." This would make a peculiar personal name; but it is probable (Kutler 1984; Ward 1980; Dietrich, Loretz, and Sanmartín 1973) that there is a particular usage, or even a distinct root, that refers to strength (for an opposing view see Pardee 1978). In Ugaritic the verb "to bless" is paralleled by a root containing *m* and *r* (*CTA* 15.2.14–20; 17.1.24–25, 35–37; 19.4.194–95), and there is a god named "Holy and *ʾAmrr*"; perhaps this is another usage of *mrr* referring to blessing or sanctification, which would also provide a suitable etymology for a personal name (cf. Loewenstamm *EncMiqr* 5: 475–77). If *ʾAmrr* is related to Merari, it is worth noting that the levitical name "Kohath" also appears in Ugaritic with a prosthetic *ʾalep* as *ʾAqht*. Gordon (*UT*, 438) compares the Old South Arabic name *Mrr*.

1. Levi's third son or the clan claiming descent from him. Merari is listed after Gershon and Kohath by the Priestly (P) source and by the Chronicler as Levi's third son (Gen 46:11; Exod 6:16; Num 3:17; 1 Chr 5:27—Eng6:1; 6:1—Eng6:16; 23:6); therefore the Merarites are the third major levitical clan according to the genealogists. In turn, Merari has two sons, Mahli and Mushi (Exod 6:19; Num 3:20, 33; 1 Chr 6:4—Eng6:19; 23:21; 24:26), implying that these were the principal Merarite families. According to 1 Chr 6:29–32—Eng6:44–47; 23:21; and 24:30, however, Mushi is the father of Mahli; therefore at a later period, at least in some circles, Mushi had become the more important. In Ezra 8:18–19 Mahli and Merari are coordinate; conceivably the Mushites had co-opted the more venerable name Merari. Cross (*CMHE*, 195–215) has proposed that the Mushites claimed descent from Moses and had a formative influence in biblical tradition. If this is true, the lowly status of Mushi in the biblical genealogies indicates either its decline or an effort on the part of Zadokite rivals to deny its importance.

According to P, the Merarites of the desert period number 6,200 males over the age of one month (Num 3:33–34), or 3,200 men between thirty and fifty (Num 4:42–45). Their leader is Zuriel the son of Abihail, and they camp on the N side of the tabernacle (Num 3:35). The family of Merari is entrusted by Moses with carrying the solid structure of the tabernacle—the planks, pillars, stands, etc. (Num 3:36–37; 4:31–32)—while the Gershonites bear the textile components (Num 3:25–26; 4:24–26) and the Kohathites the holy vessels (Num 3:31; 4:9). The latter are expected to transport the sacra by hand, but the Gershonites are allotted two carts (Num 7:7) and the Merarites four (Num 7:8), in proportion to the weight of their burdens. The two lesser levitical orders are supervised by Ithamar, Aaron's youngest son (Num 4:28, 33).

The list of levitical cities (Joshua 21; 1 Chr 6:39–66—Eng6:54–81) is probably based on 8th-century administrative records (Peterson 1977; Boling *Joshua* AB, 492–97). Assigned to Merari (Josh 21:34–40; 1 Chr 6:62–66—Eng6:77–81) are the following cities: Jokneam, Karta, Dimna (Rimmono in Chronicles),

Nahalal (Tabor in Chronicles) in Zebulon; Bezer, Jahza, Kedemoth, Mephaath in Reuben; Ramoth of Gilead, Mahanaim, Heshbon, and Jaazer in Gad.

The Chronicler enumerates Merarite personnel and clans of the reign of David (1 Chr 6:14, 29–32—Eng6:44–47; 23:21–23; 24:27–30; 26:10–11), but these data cannot be taken at face value, for some names are also attributed to the reign of Hezekiah; compare 1 Chr 6:5–6, 20–21, 29—Eng6:20–21, 35–36, 44 with 2 Chr 29:12. 1 Chr 15:17 makes Ethan the son of Kushaiah a contemporary of David; 1 Chr 6:29—Eng6:44 tells of Ethan the son of Kishi (= Kushaiah?) the son of Abdi, also coeval with David; 1 Chr 23:21 lists Kish as the son or descendant of Mahli in the 10th century; 1 Chr 24:27, 29 makes Kish and Ibri (read Abdi?) individuals or clans of David's day. 2 Chr 29:12, however, has one Kish the son of Abdi as minister under Hezekiah. The latter source is perhaps more trustworthy, since the Chronicler was seemingly well-informed about Hezekiah's reign, while ideology compelled him to ascribe the organization of the levitical clans to David. Nevertheless, if the Davidic material is retrojected, so might the Hezekian be. The same is true of Josiah's building supervisors Jahath and Obadiah, both of Merari (2 Chr 34:12). In other words, all these figures might merely represent postexilic families. Some of the information about early Merarites is more plausible, however. It may be, for example, that the Asaiah of 1 Chr 6:14 is the same individual who assists in the installation of the ark in 1 Chr 15:6. 1 Chr 26:10–11 speaks of the sons of the Davidic Merarite Hosa: Shimri, Hilkiah, Tebaliah, Zechariah, and nine anonymous sons. We have no reason either to doubt or trust these reports.

The Chronicler's interest in levitical clans reflects their prominence after the Exile. When Ezra tries to assemble Levites to serve in the Second Temple (Ezra 8:15–19), only the Mahlites and Merarites of Casiphia, led by Sherebiah, Hashabiah, and Isaiah are available. 1 Chr 9:14 lists other Merarite returnees, but the parallel text Neh 11:15 lacks reference to Merari.

2. The father of Judith (Jdt 8:1; 16:6—Eng v 7).

WILLIAM H. PROPP

MERARITES [Heb *mêrārî* (מֵרָרִי)]. A priestly family descended from Levi. The family is named after its ancestor Merari, who is listed as a son of Levi along with Gershom and Kohath. The family is further subdivided into two groups: Mahli and Mushi (Exod 6:19; Num 3:20). Generally the family is referred to as *bĕnê mêrārî* "descendants of Merari." Etymologically the name Merari may mean something like "strength" or "power" (Noth *IPN,* 225).

Information about the Merarites is largely found in the work of the exilic Priestly writer and the postexilic Chronicler. Details about family members include their genealogical status and their cultic function as assistants for the priests throughout Israel's history from Mosaic to postexilic times.

During the wilderness period, the Merarites shared with the other Levites the responsibility for guard duty around the tabernacle both during encampment and travel (Num 1:53; Milgrom 1970: 8–16, 62–63). They were to encamp on the north side of the tabernacle. The Merarites were also specifically responsible for dismantling, transporting, and erecting the basic structural components for the tabernacle and court (Num 1:47–53; 3:33–37; 4:29–33). They were assigned four wagons and eight oxen to carry these materials (Num 7:8). According to census reports there were 6,200 Merarite males at least a month old (Num 3:34) and 3,200 of these were aged from 30 to 50 and thus suited for service (Num 4:43–44).

Since the Levites were not allotted a portion of land along with the other tribes, they were given cities with their common land (Joshua 21). The Merarites received twelve cities from the tribes of Reuben, Gad, and Zebulun (Josh 21:7, 34–40).

Along with Aaronites and other Levites, some 220 Merarites under the direction of Asaiah assisted David in carrying the ark of God to Jerusalem (1 Chr 15:1–15). Ethan represented the Merarites as a temple musician and singer (1 Chr 15:17). Other descendants such as Hosah (1 Chr 26:10) were gatekeepers of the temple.

Kish and Azariah from the Merarite family assisted Hezekiah in his cleansing of the temple (2 Chr 29:12). Likewise Jahath and Obadiah as Merarites provided leadership for repairing and restoring the temple under the direction of King Josiah (2 Chr 34:12).

When Ezra was preparing to return to Jerusalem, he was able to recruit some of the Merarites to serve as temple servants (Ezra 8:18–19).

Many scholars think that the history of the priesthood was more complex than these reports concerning the Merarites suggest and raise doubts about their historicity. One genealogical problem is found in Num 26:57–58, which juxtaposes two different genealogies for the descendants of Levi, one of which includes the Merarites. Scholars have argued that Levites carried out more priestly functions at certain times of Israel's history than these texts suggest (*AncIsr* 2: 358–71).

There were many struggles for power among different priestly groups throughout Israel's history (Cross *CMHE,* 195–215; Hanson 1979: 209–79). Each of these groups was interested in legitimizing its own rights and prerogatives and opposing those of other groups. Since the Chronicler and the Priestly source were either written by priests or supported a certain group of priests, they obviously presented a somewhat one-sided picture. These factors make the critical reconstruction of the history of the Israelite priesthood very difficult.

The information concerning the Merarites is meant to encourage them to be satisfied with their subsidiary role to the Aaronites because their role was assigned by God, meant to be hereditary, and a number of their ancestors enthusiastically helped the priests carry out their duties. While this legitimizes the Merarites in their subsidiary position, it also necessarily discourages them from seeking other more prestigious priestly functions.

STEPHEN A. REED

MERATHAIM (PLACE) [Heb *mĕrātayim* (מְרָתַיִם)]. Derisive name for Babylon in Jer 50:21. It is presumed to be a wordplay on *marratum,* the Akkadian name for the marshy region in S Babylonia where the Tigris and Euphrates rivers converge at the Persian Gulf ("the sea of the Chaldeans," CAD M/1: 285 and Parpola 1970: 240–41). The Akkadian word is based on the meaning "bitter" as in salt water. The Hebrew base is *mārâ* "to be rebellious." Thus *mĕrātayim* is probably an artificial dual form suggesting " (land of) double rebellion" (Simons *GTTOT,* 451). This verse contains another wordplay in "Peqod" (Heb *pāqad* can mean "punish"). An important Aramean tribe in SE Babylonia was known as "Puqudu" in Akkadian texts. Together *mĕrātayim* and Peqod represent Babylonia in general.

MERED (PERSON) [Heb *mered* (מֶרֶד)]. Listed in the genealogy of Judah as son of Ezrah and the husband of Bithiah, the daughter of pharaoh (1 Chr 4:17).

H. C. Lo

MEREMOTH (PERSON) [Heb *mĕrēmôt* (מְרֵמוֹת)]. A personal name whose meaning is unknown (Rudolph *Esra und Nehemia* HAT, 84; Brockington *Ezra, Nehemiah, and Esther* NCBC, 104) although several explanations have been suggested. Noth (*IPN,* 39) believes the *ôt* ending, found in other names, to be hypocoristic. Odelain and Séguineau (1981: 260) view it as having Ugaritic origin—"Moth has blessed." Yamauchi (*ISBE* 3: 324) suggests the meaning "heights," presumably from Heb *rwm.* The name appears on ostraca found at Arad (*EncMiqr* 4: 473; Myers *1 and 2 Esdras* AB, 93). Bratcher (*HBD,* 627) is correct in noting uncertainty as to whether the occurrences of the name in the Hebrew Bible designate different people or are several references to one individual and/or his family.

1. The eighth-listed of the twelve sons of Bani in Ezra 10:36 (but not listed among the sixteen in 1 Esdr 9:34). Since Bani is previously mentioned (Ezra 10:29) in the list of those who had married foreign women (vv 18–44), alternative readings have been suggested. This Meremoth (LXX Vaticanus, Sinaiticus *Ieramōth,* Alexandrinus *Marimōth*) is included with the laity, not the priests (vv 18–22) or Levites (v 23), who "sent them (i.e., their foreign wives) away, women and children alike" (see Blenkinsopp *Ezra-Nehemiah* OTL, 196, 197 for this translation and corresponding treatment of the corrupt MT of v 44b).

2. One of the priests listed in Neh 10:6—Eng10:5 (LXX *Meramōth*) who were among those who sealed (LXX) the "firm covenant" (*ʾămānā*) made by the community (10:1—Eng9:38). It is believed the name represents a patronym rather than an individual (Blenkinsopp *Ezra-Nehemiah* OTL, 313; Brockington *Ezra, Nehemiah, and Esther* Century Bible, 104; Rudolph *Esra und Nehemia* HAT, 17 n. 2) and that the list (vv 3–9—Eng 2–8), which was derived from the list in Neh 12:12–21, is a part of that larger name list (vv 3–29—Eng 2–28) secondarily inserted here to convey wide support for Nehemiah's reforms (Blenkinsopp, 313, 335; see Williamson *Ezra, Nehemiah* WBC, 325–31, for a discussion of Nehemiah 10).

Meremoth appears in Neh 12:3 (vv 3b–7a, which include the name *Marimōth,* are absent from all major LXX codices except the corrected Codex Sinaiticus) as the ninth of twenty-two "heads of the priests and of their brothers" during the days of the high priest Jeshua (v 7). He is said to have accompanied Zerubbabel and Jeshua in the return from captivity (v 1). Both Williamson (359–60) and Blenkinsopp (335) believe this list (vv 1–7) also derives from that in 12:12–21 the patronymics of which here serve as personal names (Blenkinsopp, 334; see Brockington, 104, who believes this is here a family name). It is possible, according to Williamson (362), that the Meraioth in 12:15 and Meremoth were the same, the former spelling resulting from reading *y* and *w* for *m* (*WDB,* 609).

3. The son of Uriah. In Ezra 8:33 (LXX *Merimōth*) and 1 Esdr 8:61—Eng8:62 (*Marmōthi,* Alexandrinus *Marmathi*) he or his father (the appellative *hakōhēn* follows Uriah) is called "the priest." In Neh 3:4 (LXX *Ramōth* [Heb *(mĕ)rēmôt*?]) and 3:21 (LXX *Meramōth*) Uriah is referred to as "son of Hakkoz." This has led some, such as Jepsen (1954: 103), Kellermann (1968: 69), and Yamauchi (1980: 10), to conclude these are two different individuals. To the one was given the silver, gold, and vessels which those who returned with Ezra brought with them to Jerusalem (Ezra 8:31–34; 1 Esdr 8:60–63—Eng8:61–64). Gunneweg (*Esra* HAT, 157) even suggests that these individual personal names are secondary additions for the purpose of creating "narrative color" and that the four who received the valuables were originally nameless in the tradition. The other Meremoth, the grandson of Hakkoz, is listed (Neh 3:4) among those who helped to repair the wall around Jerusalem, being assigned, along with three other "groups" (Myers *Ezra-Nehemiah* AB, 114), to the section between the Fish Gate and the Jeshana Gate. He also helped to repair a "second measured portion from the opening of the house of Eliashib to the end of the house of Eliashib" (Neh 3:21).

For those who conclude that these occurrences of Meremoth refer to the same individual, i.e., that the Uriah of Ezra 8:33 is identical to the Uriah of Neh 3:4 and 21, an intriguing situation emerges. The descendants of Hakkoz were among those unable to locate, upon their return from captivity, their proper genealogical registration. They were excluded from the priesthood as unclean by the governor (= Nehemiah 1; Esdr 5:40) until their status was determined by consulting Urim and Thummim (Ezra 2:59–

63; Neh 7:61–65; 1 Esdr 5:36–40) or until the appearance of a high priest "clothed in manifestation and truth" (Gk 1 Esdr 5:40). Yet Meremoth, a descendant of Hakkoz, is functioning as a priest. Several attempts at solving this dilemma have been offered. Koch (1974: 191) believes Ezra, when he arrived in Jerusalem, recognized Meremoth as a priest but deposed him shortly afterward "by means of the Law he had brought with him." This argument tends to support the traditional order which has Ezra preceding Nehemiah. On the other hand, a "reverse order" is supported in other solutions. Bentzen (1931: 285) believed the high priest reinstated Meremoth as a priest, probably following the death of the governor Nehemiah, as a reward for his extra work on the high priest's house. Rudolph (HAT, 69) argued that Meremoth did not possess priestly legitimacy until Ezra's time. Rowley (1952: 159) believed the builder of a double portion of the wall during Nehemiah's time needed to be young and strong and therefore would precede the senior priestly official Ezra found as temple treasurer.

RODNEY H. SHEARER

MERENPTAH (PERSON). Twelfth son and successor of Rameses II. His name in Egyptian was "*B€ -n-r‹,* beloved of Amun, *Mr-n-pth,* pleased with Truth." Born to the queen Isit-nofret no later than his father's 20th year on the throne, and perhaps as early as his 5th (Harris and Wente 1980: 260–62), Merenptah (or Merneptah as he is commonly known) is earliest known as a king's scribe. Late in the second decade of his father's reign he may have participated in the attack on a N Syrian city, and later still in the war against Irem in Nubia. On the demise of his older brother Khamwese (whose daughter Isit-nofret he may have married), Merenptah became heir apparent and commander in chief of the army. Upon the death of his father in his 67th year of rule (June of either 1237 or 1223 B.C.), Merenptah succeeded to the throne as the fourth king of the 19th Dyn.

Merenptah continued to reside in the Pi-rameses residence his father had built in the delta (Gardiner 1918: 184, text no. 11), but he had other residences at Memphis and possibly Heliopolis. Sometime in his 2d year he went to Thebes "to see his father Amonrasonther"; and it was possibly at this time that he authorized the "great inventory" of all the temples of Egypt by the king's scribe and steward Yot. This assessment, intended to gauge the wealth of state and temple, issued in very little building, however; Merenptah was content to erect small monuments and to usurp others.

Merenptah preserved the N and S reaches of the empire intact (Redford 1986: 197 and n. 63), maintaining diplomatic ties with foreign principalities such as Ugarit; he even sent relief shipments of grain to his Hittite allies during a period of drought (Wainwright 1960). Sometime before the end of his 3d year a punitive campaign had taken place against the city of Gezer, which became the occasion for the king's epithet, "Subduer of Gezer," and was later to give rise to the "Fescennine" type verse which ends the famous "Israel" stele (*ANET,* 378). However, it remains a moot point whether Merenptah's forces actually came into contact with Israel on this occasion or whether Israel was simply included to round out a list of names representative of the inhabitants of the land (Engel 1979; Fecht 1983; Hornung 1983; Ahlström and Edelman 1985; Ahlström 1986: 37–40).

The major event in Merenptah's reign was the first Libyan invasion of Egypt, recorded in inscriptions from Karnak, Gurneh (*ANET,* 376–78), Kom el-Ahman, and Heliopolis. The Libyan tribes of the Labu and Meshwesh (Hdt. 4.191), long kept under surveillance during the reign of Rameses II (Habachi 1980), amalgamated their forces with certain sea-roving pirates from the Aegean—the Lukka (from Lycia), Shardanu (Sardonians from near Cyme), the Ekwesh (Koos?), the Teresh, and the Shekelesh—and descended on Egypt in Merenptah's 5th year. Merenptah received the news at the beginning of April and

launched his forces about a month later, engaging the invaders at Per-Yeru in the NW delta. The Libyans were repulsed with a loss of over 9,000 dead.

Through most of his reign Merenptah was in poor health, and already in his 7th year burial goods were being moved into his tomb. He died sometime after his 10th year. His mummy shows a bald old man, rather obese, who suffered from degenerative arthritis and also from arteriosclerosis in the thigh. He had lost many teeth, and the heads of the femurs showed signs of fracture (Harris and Weeks 1973: 157). His name survives, curiously, in the place name Mereptoah mentioned by Josephus (Priebatsch 1975).

DONALD B. REDFORD

MERES (PERSON) [Heb *meres* (מֶרֶס)]. One of the seven princes of Persia and Media who were the advisers of King Ahasueros (Esth 1:14). See CARSHENA. Although the presumption that the names of these counselors are Persian is reasonable (see the arguments of Millard 1977: 481–88, who counters the excessive caution of Moore [*Esther* AB, XLI–XLIV] regarding the reliability of the MT spellings), no name equivalent to this has thus far been found in the extant extrabiblical literature nor has a generally acceptable Persian etymology been suggested. The name, however, would appear to be a variant of the name Marsena (another of the seven advisers) without the patronymic suffix, for which see the discussion of Carshena by Millard (1977: 485). For suggested etymologies see Paton *Esther* ICC, 68; Gehman 1924: 324.

FREDERIC W. BUSH

MERIB-BAAL (PERSON) [Heb *mĕrîb-baʿal* (מְרִיב־בַּעַל)*; mĕrî-baʿal* (מְרִי־בַּעַל)]. The son of Jonathan, and grandson of Saul ben Kish. The Hebrew name is spelled *mĕrîb-baʿal* in 1 Chr 8:34 (2x), 9:40, but *mĕrî-baʿal* in its second occurrence in 9:40. The LXX reads *Meribaal* for both occurrences in 8:34 and *Maribaal* for both in 9:40; Syr reads *mrybʿl* in all cases. The rest of the references to this individual call him Mephibosheth. Unlike the other examples in which the epithet *baʿal,* "Lord," which originally was applied to Yahweh but later became associated primarily with his rival, the storm god, has been substituted with *bošet,* "shame," in this instance the first element of the name has also been altered. See ISH-BOSHETH. This unexpected development is best attributed to the partial confusion of Meribaal ben Jonathan with his relative Mephibaal ben Saul. See MEPHIBOSHETH.

The etymology of the name "Merib-baal" (or "Meribaal") is difficult to establish. Older opinions were noted by Noth (*IPN,* 143 n. 2); more recent speculation is discussed by Fowler (*TPNAH,* 61).

A. Meribaal from a Literary Perspective

Outside the genealogical notices, Meribaal is mentioned in five contexts in 2 Samuel. All are interrelated and are linked thematically with the sections in 1 Samuel involving Jonathan's covenant with David, further developing the motif of David's oath-bound love for Jonathan and his promise not to let the name of Jonathan be cut off from the house of David (1 Sam 20:16). In 2 Sam 4:4, after the report of

the death of Eshbaal, the last direct heir to the Saulide throne, it is reported that Jonathan had a young, crippled son who was hidden by his wet nurse after the news of the death of Saul and Jonathan at Gilboa. The comment serves to alert the audience to the continuing issue of the legitimate succession to the throne of Israel and anticipates the Meribaal scene in 2 Samuel 9.

After intervening passages sketch David's establishment of his rule over Israel and Judah, 2 Samuel 9 tells of David's inquiry about any surviving Saulides to whom he can show kindness for Jonathan's sake. Ziba, a (former) servant of the royal family, is summoned and reveals Meribaal's existence in Lidebir. David has him brought to the Jerusalemite court, returns to him the Saulide patrimonial estates, which are to be worked by Ziba's family, and makes him and his son Mica regular members at the royal table.

Meribaal is next mentioned in 2 Sam 16:1–4, when, in preparation for David's retreat from Jerusalem during Absalom's revolt, Ziba provides the king with provisions and claims that Meribaal has declared his intention to be restored by Israel to his rightful throne as a descendant of Saul. In response to the allegation of treason, David is said to have confiscated Meribaal's estates and granted them to Ziba. The issue of treason is taken up again in 2 Samuel 19, after David's defeat of Absalom and his return to Jerusalem. Now Meribaal presents himself to the king as he returns, swears his innocence and Ziba's deceit, and is granted half of his former family estate by David.

The final reference to Meribaal occurs in 2 Sam 21:7, in the account of the ritual execution of seven Saulides to end a three-year famine. It is specified that David spared Jonathan's son from becoming a victim on this occasion because of the oath he had made with Jonathan. Verse 8 names Meribaal's secondary namesake Mephibosheth (Mephibaal), the son of Saul and Rizpah, as one of the victims.

B. The Historical Meribaal

Most of the details concerning Meribaal's life remain uncertain. His status as Jonathan's son has been challenged; it has been argued that he was Saul and Rizpah's son who was secondarily identified as Jonathan's son in order to develop further the theme of the covenant between David and Jonathan (Veijola 1978). This proposal is based primarily upon the references to Meribaal as the "son of Saul" and to Saul as Meribaal's "father" in 2 Sam 9:7, 9, 10; 16:3; 19:24. However, because Meribaal is explicitly identified as Jonathan's son and Saul's grandson in his first appearance in 2 Sam 4:4, and subsequently in 2 Sam 9:6 and 21:7, it seems best to construe the references to Saul as his "father" in the looser sense of "forefather" (cf. Gen 17:4; 28:13; Josh 24:3; Isa 51:2). Since Saul was the founder of the royal Saulide dynasty, it would have been appropriate to designate him as the founding forefather and to speak of the patrimonial estates handed down from Kish and his forefathers as the estates of Saul (2 Sam 9:8), even though he was only removed from Meribaal by two generations.

Meribaal's status as the eldest son of the heir to the Saulide throne explains his secret removal to Lidebir, where he could grow up in political asylum under the tutelage of Saul's ally, Machir ben Ammiel, and be able to reclaim the family throne in the event of future usurpations. The decision to spirit away the toddler probably would have been made in the wake of the crowning of the youngest surviving son of Saul and Ahimaaz, Eshbaal, who was himself a minor, in a time of severe political turmoil and threat to the fledgling state of Israel. If the notice that Meribaal had an infant son Mica when he was returned to the Davidic court is historically reliable, it would seem that the secret of his being and whereabouts was able to be kept for some two or three decades—well into David's reign. His return appears to have taken place before Absalom's revolt. It is likely that he escaped death during the ritual execution of his seven relatives during the three-year famine that occurred in the early years of David's accession to the Saulide throne (2 Sam 21:1–11) only because David was not aware of his existence. The reference to his sparing because of David's covenant with Jonathan in v 7 is a later literary reinterpretation of the incident.

Meribaal's lameness seems certain, although the report that it was caused by his nurse's accidentally dropping him during flight might be secondary literary embellishment. It generally is assumed that his physical handicap would have prevented him from being made king. Ritual laws prohibited the use of any physically blemished animal as a sacrificial offering (Lev 1:3, 10; 3:1, 6; 4:22, 27, 32) and prohibited a physically disfigured descendant of Aaron from serving as a priest (Lev 21:16–23). No law explicitly

rejected a handicapped person from serving as God's earthly vice-regent, but by analogy, and because man was supposed to be made in God's image, it is likely that an heir-elect with a physical disability would have been passed over for another legitimate candidate for king. Even though Meribaal himself might not have posed a direct threat to David's claim to the throne because of his lameness, his son Mica would have been the next legitimate Saulide heir and a potential focus of rebellion. By making Meribaal and his young son mandatory members of the king's table at the Jerusalemite court, David could have kept them under constant surveillance and headed off any moves toward rebellion.

David's restoration of the Saulide estates to Meribaal has been interpreted against the background of the ANE practice of transferring patrimonial property without male heirs to the crown, or declaring it *bona vacantia.* Once Meribaal's existence was discovered and his repatriation accomplished, he had a legal right to the patrimonial estates of Saul and his forefathers. David was obligated by law to reconvert them from crown property to their former status as inalienable patrimonial land and return them to the family heir (Ben-Barak 1981). It seems that the characterization of David's return of the land as one of generosity stemming from his covenant with Jonathan is a later literary reinterpretation. David's subsequent confiscation and conversion of the Saulide patrimonial land to crown property in 2 Samuel 16 reflects the ancient punishment for treason (Ben-Barak 1981: 85).

DIANA V. EDELMAN

MERIBAH (PLACE) [Heb *měrîbâ* (מְרִיבָה)]. Literally "Strife," an oasis in the Sinai and the site of an Israelite rebellion. Also called Meribath-Kadesh in the Priestly (P) source (Num 20:13, 24; 27:14; Deut 32:51), and Ezekiel (47:19; 48:28), and possibly in Deut 33:2, if one emends the difficult *mrbbt qdš* to **mmrbt qdš.* Exod 17:7 and Deut 33:8 explicitly, and Ps 95:8 implicitly, equate Meribah with Massah ("Testing"), a place also mentioned in Deut 6:16; 9:22. It seems the two names arose out of the Israelite practice of using synonymous terms in parallelistic poetry, though some scholars see independent traditions (e.g., Cornill 1891: 20–34). Such names for springs were not unusual, since water holes were often scenes of contention (Gen 21:25; 26:14–22; Exod 2:17), and arbitration (Gen 21:27–32; 26:28–33), or judgment; note that in Gen 14:7 En-mishpat, the "Well of Judgment," is identified with the oasis Kadesh. Nevertheless, tradition ties the names Massah and Meribah to a specific rebellion of the Israelites during their desert wanderings.

The location of Meribah is uncertain, and it is possible that the place is imaginary. The Elohist (E) locates it at Horeb (Exod 17:6) near Rephidim (Exod 17:8), both of which are of unknown location, while P and Ezekiel equate Meribah and Kadesh, probably modern ʿEin Qudeirat (M.R. 096006). See KADESH-BARNEA. The traditions are equally vague as to what transpired there. Deut 33:8–11 says that the Levites were striven against and tested there, earning the priestly office in return for their renunciation of kinship ties. It seems in Ps 81:8—Eng v 7, however, that all Israel was tested at Meribah and that they failed through apostasy (vv 10–12—Eng vv 9–11); and Ps 95:8–11 similarly records that for the sin of testing Yahweh at Meribah Israel was punished with forty years in the desert. Exod 17:1–7 says that at Massah and Meribah the Israelites rebelled against Moses and tested Yahweh by requesting water, which the deity granted at Horeb when Moses struck the mountainside with his rod. Finally, Num 20:1–13 tells the strange story of the sins of Moses and Aaron at Meribah.

According to the received text of Num 20:1–13, while the Israelites are camped at Kadesh they discover, after Miriam's death, that there is not enough water. The people rebel against Moses and Aaron, expressing their regret at having left Egypt. Moses and Aaron go into the tabernacle for advice, and Moses is told to take a rod from the tabernacle and to speak to a crag, which will gush at his command. Instead, Moses castigates the people and hits the crag twice with the rod, thus producing water. For his fault both he and his brother are condemned to die in the desert.

This story, part of the murmuring tradition (see Coats 1968), raises many questions. Firstly, why is this story so similar to Exod 17:1–7, and how can Meribah be both at Horeb and at Kadesh? Of course, the Documentary Hypothesis, especially in its formulation by Friedman (1981: 77–119), solves this problem. The earlier text is Elohistic, while our passage is a Priestly rewrite designed to replace the older account but ironically included with it in the redaction of the Torah. Secondly, why is Moses punished for such a trivial sin and Aaron for no sin at all? This, too, can be answered readily, provided we do not expect the Bible to conform to our morality. At least in Moses' case, one could argue that the slightest deviation from divine command deserves severe censure; and, after all, the penalty is deferred. But Aaron's condemnation remains inexplicable. It is more helpful to view the story as a fabrication of the Priestly writer or his sources, which faced the problem of a tradition of Moses' and Aaron's deaths in Transjordan (Num 20:23–29; Deuteronomy 34). Such an unexpected tragedy might naturally have been explained as the result of a sin, yet one could hardly imagine the brothers having committed a serious crime. The result of this tension is the divine overreaction in the text. The Deuteronomic (D) source solves the problem of Moses' death in a similar way by blaming it vaguely upon the people (Deut 1:37). Since in P Aaron is a spotless figure while Moses is ambiguous, the latter is chosen to be the culprit, while the former is punished in defiance of all logic and justice.

Of course, for centuries scholars have sought other explanations of Moses' sin, and these are discussed at length by Margaliot (1971) and Milgrom (1983). Besides the surface interpretation that Moses should have addressed the crag instead of hitting it, some have supposed that his sin lay in his words, "Listen you rebels—are we to produce water for you from this crag?" (Num 20:10; cf. Ps 106:33), either in that he lost his temper (Maimonides, Ibn Ezra), doubted Yahweh's power (Gressmann 1913: 150; Lohfink 1970: 55), or claimed the ability to work wonders himself (Bekor Shor; Arden 1957: 52; Margaliot 1971: 387–88; Milgrom 1983: 257–58). Milgrom suggests that speaking at all was a crime, since it created the impression of a magical incantation. Many modern exegetes have supposed that Moses' true crime has been censored (e.g., Gray *Numbers* ICC, 258). But all these explanations violate the plain sense of the text that Moses erred in striking the crag instead of addressing it as he had been commanded.

It is true that some details of the story remain strange, and this has been the cause of much of the reluctance to see Moses' hitting the rock as his basic crime. For instance, we elsewhere do not hear of a rod of Moses kept in the tabernacle. In fact, Num 20:8, 9, 11 are the only references to Moses' rod in P, which elsewhere speaks of *Aaron's* rod, kept in the tabernacle (Num 17:25–26). Moreover, why is Moses commanded to take the rod if he is not supposed to use it? The best solution to these problems is to emend Num 20:11 from "with his rod" (cf. vv 8–9) to "with the rod," as in vv 8–9 and in agreement with the LXX. In P "*the* rod" could only be Aaron's, but it is easy to imagine a scribe altering **bmṭh* to *bmṭhw*, since in the redacted Torah Moses' rod is more prominent than Aaron's and is featured in the similar story of Exod 17:1–7. If the rod is Aaron's rather than Moses', its function in the story becomes clear. According to P, Aaron's rod was preserved in the tabernacle so that it could be displayed as a warning in times of rebellion against aaronite and levitical authority. Accordingly, Yahweh's command to take out the rod is not a mandate to strike the crag with it. That Aaron's rod is the instrument of the sin implicates him in the offense by sympathetic magic.

In short, P has taken a story glorifying Moses and his miraculous rod (Exod 17:1–7) and rewritten it to condemn Moses and demonstrate the power of Aaron's rod, even when improperly used. But why did he move the spring from the mountain of lawgiving (Exod 17:6) to Kadesh? Most likely the intent was to harmonize conflicting traditions about Meribah and Kadesh. In Deut 1:19–46 the Israelites rebel against Moses and Yahweh at Kadesh, and both the people and their leader are punished there with forty years of wandering and death in the desert. On the other hand, Ps 95:8–11 preserves a tradition that the forty years were decreed at Meribah. By equating Meribah and Kadesh, P reconciles these traditions. In P the death in the desert for the people is still associated with Kadesh (Num 13:26; 14:26–35), as is Moses' own death; but P accounts for the latter by rewriting Exod 17:1–7. P also brings his version of the Meribah story closer to that of Deut 33:8–11, which speaks of Yahweh's testing and striving against levitical priests, though in the older passage the test is passed. In Num 20:1–13 Moses fails the test of his faith in the

power of the word, rather than of the physical act; and so he falls, taking his innocent brother down with him.

WILLIAM H. PROPP

MERIBATH-KADESH (PLACE) [Heb *mĕrîbat* (מְרִיבַת) *qādēš* (קָדֵשׁ)]. Var. MERIBAH; KADESH. The location of a source of water in the Wilderness of Zin, where the Israelites "broke faith" with Yahweh (Deut 32:51). The incident in question is almost certainly the same one reported prosaically in Numbers 20, where, at Kadesh in the Wilderness of Zin (v 1), the people are portrayed arguing with Moses over the lack of water (vv 2–5); an abundance of water is eventually procured after Moses improperly strikes a rock twice with his rod (vv 10–13). Ostensibly, traditions about this argument (Heb *mĕrîbâ*) at Kadesh led to the variant form Meribath-Kadesh. This form was retained as late as the time of Ezekiel, who used it to refer to the southernmost boundary of the promised land in his idealized vision of the restored Israel (Ezek 47:19; 48:28). See also KADESH-BARNEA; MASSAH AND MERIBAH; MERIBAH.

MERNEPTAH (PERSON). See MERENPTAH (PERSON).

MERODACH (DEITY) [Heb *mĕrōdāk* (מְרֹדָךְ)]. See MARDUK (DEITY).

MERODACH-BALADAN (PERSON) [Heb *mĕrodak* (מְרֹדַךְ) *bal›ădān* (בַּלְאֲדָן)]. A sheikh of the important Chaldean tribe of Bīt-Yakin and a contemporary of King Hezekiah (2 Kgs 20:12; Isa 39:1). During a career that spanned nearly 60 years, Merodach-baladan (Akk *Marduk-apla-iddina*) brought Chaldean and Aramean tribes together in opposition to Assyrian expansion in S Babylonia. Unfortunately, most of the surviving sources for Merodach-baladan's career are Assyrian. Like the Verse Account of Nabonidus, they paint a picture of an "outsider" who not only seized power by force, but also took prisoners and removed divine images from their temples. In his own accounts, he claims to have been a descendant of Eriba-Marduk, a king responsible for expansion and consolidation in Babylonia before 760 B.C. Brinkman's observation, that Merodach-baladan was Eriba-Marduk's grandson, is probably correct (Brinkman 1964: 9). During the reign of Tiglath-pileser III (745–727 B.C.), he sent tribute to the Assyrian capital. However, after the accession of Sargon II (722–705 B.C.) he attempted, with Elamite assistance, to thwart Assyrian intervention in S Babylonian affairs by seizing power himself. Under his leadership, after 721 B.C., both Chaldean and Aramean tribes constituted a formidable threat to the stability of the Assyrian Empire not only in Babylonia, but in Elam, Arabia, and Judah as well.

Merodach-baladan's own contemporary Babylonian sources portray him as a king who carried out important royal duties. Like earlier monarchs, he watched over irrigation canals, bridges, and temples,

making sure they were kept in good repair. Furthermore, as Brinkman points out, there is no evidence that provincial administration was altered or impaired during his reign (Brinkman 1964: 17–18). While Assyrian inscriptions assert that the Babylonian economy suffered while he was in control, surviving contract tablets datable to the period 721–710 B.C. suggest a prosperity unequaled in virtually any previous period.

Merodach-baladan's name occurs in two places in the OT. In both instances (2 Kgs 20:12; Isa 39:1), he is said to have sent gifts to Hezekiah, king of Judah, upon hearing of his illness. Indeed, the annals of Sargon II and his successor, Sennacherib (705–681 B.C.) indicate that Merodach-baladan was quite active before and after Sennacherib attempted to take Jerusalem and force Judah to submit to his rule. During the period 710–705 B.C. the Chaldeans took advantage of both the marshy areas of S Babylonia, Assyrian preoccupation with other matters, and their opponent's military ineffectiveness to employ a defensive strategy. The result was that, while Sargon II was able to take several cities, including Dur-Yakin, Nippur, and Kish, Merodach-baladan was never captured, even though he sought and was denied protection in Elam. In 703 B.C. another revolt led to a certain Marduk-zakir-šumi's being elevated to kingship by the inhabitants of Babylonia. Merodach-baladan removed him within nine months while assembling support for himself from among Elamites and Arabs as well as Chaldeans and Arameans. Sennacherib subsequently marched on Babylon, captured Merodach-baladan's wife and his treasury, and attacked a number of towns associated with the Chaldeans in the S. In 700 B.C., despite yet another Chaldean uprising, Sennacherib drove his adversary out of Babylonia into Elam and placed his own son Assur-nadin-šumi on the Babylonian throne. Merodach-baladan did return briefly to his homeland of Bīt-Yakin before finding permanent refuge in Elam. He died in Elam a few years later.

MEROITIC LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

MEROM, WATERS OF (PLACE) [Heb *mê mērôm* (מֵרוֹם)]. The spring or water source associated with one of several Canaanite city-states. The area appears to have been the S Canaanite frontier of upper Galilee. It was at the "waters of Merom" that Jabin, the king of Hazor, assembled the combined Canaanite forces of N Palestine in an effort to stem the advance of the Israelites into Galilee (Josh 11:1–6). Joshua, always taking the offensive, apparently attacked the Canaanite forces at the "waters of Merom" from the relatively unoccupied forests (Aharoni *WHJP* 3: 118; and possibly the "forest of the gentiles" in Judg 4:16) of the southernmost highlands of upper Galilee. Apparently, the Israelites cut off the escape routes to the S from upper Galilee because the overthrown Canaanites escaped by the only available routes to the W (to Misrephoth, near Khirbet Musheirefeh [M.R. 161276] via Iqrit [H. Yoqrat; M.R. 176275] and Abdon [Tel ʿAvdon; M.R. 165272]), N (toward Sidon via Yattir and Kanah), and NE (to the Mizpeh valley via Taphnith and Beth-anath [Safed el-battikh, M.R. 190289]), as indicated in Josh 11:6–9 (Rainey 1984: 192–93). Joshua then turned back from his pursuit of the Canaanites and secured his advance into Galilee by destroying Hazor and by occupying (if not subjecting to forced labor) the city-states of those kings who fled the battle at the "waters of Merom" (Judges 1).

Many have accepted the identification of Merom with the village of Meiron (M.R. 191265) on the E slopes of Jebel Jarmaq (Abel *GP* 2: 385). While there is a similarity in names, the historical geography of the "waters of Merom" of Joshua and early Egyptian and Assyrian sources does not coincide with Meiron. Several seasons of excavations at Meiron have prompted Meyers to suggest that "Meiron, [is] not to be confused with Meron of Joshua 11:5, 7" (*EAEHL* 3: 856) and that "the Spring of Meiron, possibly to be identified as ʿEin Hatra, but surely not 'the waters of Merom' of Joshua 11:5, 7" (Meyers, Meyers, and

Strange 1974: 3). Historical and geographic evidence (available archaeological evidence is inconclusive) tends to support Aharoni's (*LBHG,* 220–26) and Rainey's identification of the waters of Merom with Tell el-Khureibeh (M.R. 190275), just over 3 km S of Mârûn er-Râs (M.R. 192278).

Merom is first mentioned (*m-r-m-i-m,* No. 85) in the campaign annals of Thutmose III (1504–1450 B.C.E.) as having been taken during one of his 16 campaigns in the Levant to control rebellion. Rameses II, after a doubtful encounter with the Hittites in 1286 B.C.E., conducted several additional campaigns to bolster his authority in Palestine (ca. 1282 B.C.E.) and lists Merom (*m-r-m*) with Beth-anath (to the N of Tell el-Khirbeh) and Kanah (*q-n,* to the NW of Tell el-Khirbeh) as having been defeated. Tiglath-pileser III (733/732 B.C.E.) of Assyria also claimed to have taken Merom (*ma-ru-un, ANET,* 283), a claim which again suggests that Merom held a strategic place in the control of Canaanite upper Galilee.

DALE C. LIID

MERONOTHITE [Heb *mērōnōtî* (מֵרֹנֹתִי)]. The gentilic identification of Jehdeiah, one of twelve stewards of royal property (specifically, the donkeys) appointed by David (1 Chr 27:30), and of Jadon who worked on the repair of the walls of Jerusalem in the time of Nehemiah. Nehemiah 3:7 states that one group of workers consisted of men of Gibeon and Mizpah, specifically mentioning Melatiah the Gibeonite and Jadon the Meronothite. This provides the only clue to the location of Meronoth, but its exact relationship to Mizpah is unclear (Williamson *Ezra, Nehemiah* WBC, 196–97).

RICHARD W. NYSSE

MEROZ (PLACE) [Heb *mērôz* (מֵרוֹז)]. A town mentioned only in Judg 5:23, in which the settlement and its inhabitants are cursed by an angel of the Lord for failing to aid the forces under Deborah and Barak in the fight against Sisera.

Several scholars have suggested locations for the town, despite the fact that the OT text gives few clues to the settlement's location. Abel (*GP* 2: 305) located Meroz at modern Kh. Marus (M.R. 199271), which is near Hazor. While Jabin of Hazor is mentioned in Judg 4:7 as the king whose army Sisera commanded, he is not mentioned in the Song of Deborah itself, and it is probable that the actual fighting took place in or near the Jezreel valley. For this reason, locating Meroz in the region of Hazor is questionable. There also seems to be no compelling reason to accept the suggestion that Meroz is a mistaken reading for either Merom (Josh 11:5) or Madon (Josh 12:19).

Alt (1940–41: 244) developed a theory that Meroz was a Canaanite settlement which had formed a treaty relationship with the new Israelite settlements. Alt suggested that the settlement remained neutral, unable either to fight with Sisera's forces or to break its pact with the Israelites. The curse was then necessary for the Israelites to abrogate the agreement, made in the name of the Lord, so the town could be punished. Yet in contrast to Jael the Kenite, who is praised in the next verse of the poem, and is clearly identified as a foreigner, Meroz and its people are not ethnically distinguished from the rest of the Israelites. Alt's interpretation of Meroz as a foreign ally of the Israelite towns, while imaginative, lacks support in the text.

Van Beek (*IDB* 3: 356) suggested that Meroz may be associated with the Shimron-meron (Josh 12:20), a large tell (M.R. 170234) on the NW edge of the Jezreel valley.

None of these identifications is convincing. Given the limited information provided by the verse, the exact location of Meroz has yet to be reliably determined.

MELVIN HUNT

MERRAN (PLACE) [Gk *Merran* (Μερραν)]. This name (only in Bar 3:23, linked there with Teman) designates an area known for its wisdom. The word probably is a corruption of the name Midian. (In Heb, the similarity between the *reš* and *dalet* could cause a mistake in reading the middle letter of this word.) The verse in Baruch witnesses to the long-standing tradition that the area SE of Judah/Judea was famed for wisdom (cf. Jer 49:7; Obad 8; Job 1:3; 2:11). At the time of the writing (1st century C.E.), Arab peoples ("the sons of Hagar" in the same line) lived in the district. The passage exhorts Israel to seek wisdom, inasmuch as all neighboring peoples did not find it. The KJV has Meran, the RSV and the NEB have Merran, while the NAB has Midian.

JOHN J. SCHMITT

MEṢAD ḤASHAVYAHU (M.R. 120146). The modern name of an ancient fortress dating to the end of the Israelite period, discovered on the Mediterranean coast approximately 1.7 km S of Yavneh-Yam. In 1960 the fortress was excavated by J. Naveh (1962b), and in 1986 a rescue excavation was carried out by R. Reich (1986). During the 1960 excavation, a 14-line Hebrew ostracon was discovered inside one of the guardrooms (Naveh 1960; 1964; Amusin and Heltzer 1964; Talmon 1964). It is the letter of an agricultural worker who complains that his garment was confiscated (the reasons are not specified). Pleading innocence, he entreats the military governor to intervene and see that the garment is returned to him. This inscription is of special value because it sheds light on a practice attested in the Bible (Exod 22:26–27; Amos 2:8). In addition, five other ostraca and a stone weight (44.82 grams) were found in the vicinity of the gate (Naveh 1962a). One was inscribed "weighed four [shekels of] silver," and on two others the number "4" was indicated by four vertical strokes. One of the ostraca mentions a person named "Ḥashavyahu ben-Ya[…]," and consequently the site has been given his name.

The remains of the fortress itself cover an area of 6 dunams. It is composed of two rectangles forming an L shape conforming to the natural contours of the *kurkar* hill on which it stood. The larger rectangle (4 dunams) contains a courtyard and rooms adjacent to the wall, while the smaller one consists of three rows of houses flanking two streets. The 3.3-m-thick fortress wall was built of bricks on a stone foundation with buttresses along its facade (projecting about 0.7 m from the wall). The gate complex, including the guardrooms and towers, was built of dressed *kurkar* stone. The excavations uncovered the S wing of the gate and the building adjacent to it. Six test pits were also dug within the fortress area, all revealing the same information: a floor and, beneath it, either the natural *kurkar* bedrock or the sand fill used to level the area prior to the construction of the fortress. All evidence indicates that the fortress existed only for a very short period.

The pottery found on the floors included the local ware common in the 7th century B.C. However, coarsely made bowls and jars of a type previously considered to be of Persian date were also found, suggesting that the site must have been occupied during the final decades of the 7th century B.C. Among the finds was Greek pottery originating from the E islands of Greece and Asia Minor (so-called "East Greek pottery"), including amphorae, cooking pots, lamps, and cups. Much of it was decorated in the Middle Wild Goat style dated ca. 630–600 B.C. On the basis of this pottery, Naveh (1962: 98–99) concluded that the site had been occupied by settlers of Greek origin (probably mercenaries) who preferred to use the pottery to which they were accustomed. In this connection, it is noteworthy that Herodotus (2.152, 154) reports that Pharaoh Psamtik I (664–610 B.C.) hired Greek and Carian mercenaries. It seems likely that other contemporaneous rulers likewise used Greek mercenaries, and that the soldiers stationed at the Meṣad Ḥashavyahu fortress were employed by Josiah of Judah.

Judean control of the site is reinforced by the facts that the ostraca are written in biblical Hebrew, that they mention people with distinctively Judean names (Ḥoshayahu, Obadyahu), and that one seems to allude to a biblical custom regarding garments taken in pledge. Thus, Josiah seems to have expanded his control not only to the N and S but also to the W (2 Chr 34:6). The fortress was apparently abandoned in 609 B.C., the year that Pharaoh Necho defeated Josiah at Megiddo.

MESALOTH (PLACE) [Gk *Messalōth* (Μεσσαλωθ)]. According to 1 Macc 9:2, the Syrian armies under Bacchides and Alcimus attacked Mesaloth in the Galilean town of Arbela located W of the Sea of Galilee (ca. 161 B.C.E.). The Gk *messalōth* (Codex Alexandrinus and the Latin; var. Gk *maisalōth* in Codices Sinaiticus and Vaticanus) appears to be derived from the Heb *mĕsillôt* ("roads" or "stairs"). The Heb *mĕsillôt* denotes an ascending road (LXX 2 Chr 9:11 translates the Heb *mĕsillôt* with the Gk *anabaseis*) or, as Abel suggested, caves (Abel 1961: 150). Indeed, Josephus' account of the events narrated in 1 Maccabees 9 notes that the besieged Jews of Arbela hid in caves (*Ant* 12.11.1 §421). Josephus also refers to the "village of the Cave of Arbela" located in the lower Galilee (*Life* 188). Josephus does not think Mesaloth is a place name but, rather, an ascent to a region with a number of caves. The translators of the LXX misunderstood the Hebrew original and treated Mesaloth as a place name rather than as caves or stairs ascending to the town of Arbela.

MICHAEL E. HARDWICK

MESHA (PERSON) [Heb *mêšāʿ* (מֵישָׁע)*; mêšāʾ* (מֵישָׁא)]. 1. A Moabite king who, in the 9th century B.C., led a successful revolt against his Israelite oppressors. To students of the Bible, Mesha is one of the best known non-Israelite kings, since he is the principal in a famous inscription, the Moabite Stone (or Mesha Inscription, hereafter MI), and he plays a leading role in an important biblical narrative, in 2 Kings 3. In fact, these two sources, the MI and 2 Kings 3, provide virtually all of the information that relates directly to Mesha. While these data are insufficient for the reconstruction of a detailed biography, the available evidence portrays a fascinating and capable character.

Mesha was the son of Kemosh-yat (ti), who "was king over Moab for thirty years" (MI, line 2) before Mesha succeeded him. It is probable that both father and son were Dibonites (line 2); Mesha gave much attention to the restoration of Dibon, his capital, after he liberated Moab from Israel (lines 3, 21–25).

While the Bible does not provide details concerning the subjugation of Moab to the Omride dynasty, the MI (lines 4–8) says that Omri and his son(s) held Moab in a tight grip for forty years. Indeed, the OT reports that Mesha, a "sheep breeder" (Heb *nōqēd;* cf. Amos 1:1 and the reference to sheep in the MI, line 31), "had to deliver annually to the king of Israel a hundred thousand lambs, and the wool of a hundred thousand rams" (2 Kgs 3:4). Given the importance of sheep in the region's modern economy, it can be assumed that such a tribute payment was well suited to ancient Moab, and there seems to be no compelling reason to attach a more exotic meaning to *nōqēd* in this instance (i.e., *nōqēd* is derived from the Akk verb, *naqādu,* "to probe," and indicates that Mesha was involved in augury). As king of Moab, Mesha was undoubtedly involved in animal husbandry, at an administrative level, and the exaction of heavy tribute—in the form of sheep and wool—was simply part of the Israelite overlordship.

After a generation-long period of oppression by Israel, Mesha launched an ambitious rebellion to reclaim the *mišōr.* There are a number of historical-chronological problems associated with this revolt, but the apparent contradictions between the MI and the OT have been resolved to the satisfaction of many scholars (cf. MESHA STELE for more discussion of these problems). If it is assumed that Mesha launched his revolt after the death of Ahab (2 Kgs 1:1; 3:5), it is possible that the Israelites were preoccupied with the Assyrian threat that followed the conflict with Shalmaneser III at Qarqar in 853 B.C. and did not retaliate against Mesha immediately. Like other ancient rulers who were subject to the authority of more powerful kings, Mesha took advantage of the temporary lapse in strength that often accompanied the transition from one king to another.

Jehoram, the final king of the Omride dynasty, did respond to Mesha's uprising. The events recorded in 2 Kgs 3:6–27 are not narrated in the MI, but the genre of the Moabite stele makes such an omission normal. Mesha's victory at Kir-hareseth was explained by the intervention of the god Chemosh (or Kemosh), which was thought to have resulted from the king's sacrifice of his son (2 Kgs 3:27).

Details of Mesha's revolt are provided in the MI. This dedicatory inscription was erected in Dibon ca. 830 B.C., after Israel's domination had been broken. The MI describes the political and military aspects of Mesha's most active years, an era that witnessed an extensive building program in the reclaimed towns of the Moabite tableland.

There is little doubt that Mesha's name meant something like "salvation" or "redeemer," though the exact etymology is uncertain. At least one scholar suggests that Mesha adopted the epithet "savior" only after he overthrew Israelite suzerainty. Such an explanation seems unnecessary, however, if the phenomenon of the *nomen-omen* is recalled: it is more likely that Mesha's parents gave their son a name that would befit the mission they hoped he could accomplish: liberate his people from Omride oppression. It is also possible that Mesha's name represented their belief in Chemosh as savior or basis of salvation. At any rate, the MI clearly emphasizes the salvific activities of Moab's chief deity (line 7). Thus, Mesha was appropriately named, and his political and military successes were attributed to the favor of Chemosh (lines 4–5, 9, etc.). Mesha's belief in divine intervention is reflected in the construction of a high place in Dibon (lines 3–4), the institution of *ḥerem* at Ataroth and Nebo (lines 10–18), and the existence of the MI itself.

GERALD L. MATTINGLY

2. One of the seven sons of Shaharaim, a Benjaminite, by his wife, Hodesh (1 Chr 8:9). Grohman (*IDB* 3: 418) points out that combination names, including Chemosh, the Moabite god, were common in Moab. Consequently, Corney (*IDB* 3: 357) has suggested that the name is an abbreviated form of "Chemosh is salvation." The name itself means "salvation" or "refuge." The Moabite connection of Mesha is highlighted in 1 Chr 8:8. Hodesh is said to have given birth to sons while living in Moab. This reference is clearly a hearkening back to earlier times when Moab was under Israelite control (Myers *1 Chronicles* AB, 60; Braun *1 Chronicles* WBC, 128). Mesha and his brothers are referred to as *roʾšē ʾābôt* or "heads of a family."

G. EDWIN HARMON

MESHA (PLACE) [Heb *mēšāʾ* (מֵשָׁא)]. One of the boundaries of the territory inhabited by the sons of Joktan (Gen 10:30), whose lands are described as extending "to Sephar, the hill country of the east." While most scholars have assumed a location somewhere in or near the Arabian peninsula, no firm identification has been made. Suggestions have included Mousa/Muza, a port mentioned by ancient authors (Ptolemy 8.22.6; Pliny *HN* 6.26) and probably located near Mokha on the E coast of the Red Sea about 100 miles N of Bab el-Mandeb, as well as Mesene, the Tigris delta area N of the Persian Gulf. Some scholars have equated the name with the Massa, a branch of the Ishmaelites (Gen 25:14) and posited a location somewhere in N Arabia. Employing additional evidence from Assyrian and Persian records, Cohen (*IDB* 3: 357) has proposed that Mesha, vocalized as Massa, be placed somewhere on a line between the head of the Gulf of Aqaba and the Persian Gulf. Because of the difficulty in locating Sephar, and without other evidence, all of these proposed identifications must remain conjecture.

GARY H. OLLER

MESHA STELE. Discovered at Dhiban in 1868 by a Protestant missionary traveling in Transjordan, the 35-line Mesha Inscription (hereafter MI, sometimes called the Moabite Stone) remains the longest-known royal inscription from the Iron Age discovered in the area of greater Palestine. As such, it has been examined repeatedly by scholars and is available in a number of modern translations *(ANET, DOTT).*

Formally, the MI is like other royal inscriptions of a dedicatory nature from the period. Mesha, king of Moab, recounts the favor of Moab's chief deity, Chemosh (Kemosh), in delivering Moab from the control of its neighbor, Israel. While the MI contains considerable historical detail, formal parallels suggest the

Moabite king was selective in arranging the sequence of events to serve his main purpose of honoring Chemosh. This purpose is indicated by lines 3–4 of the MI, where Mesha says that he erected the stele at the "high place" in Qarḥoh, which had been built to venerate Chemosh.

The date of the MI can be set with a 20–30-year variance. It must have been written either just before the Israelite king Ahab's death (ca. 853/852 B.C.) or a decade or so after his demise. The reference to Ahab is indicated by the reference in line 8 to Omri's "son," or perhaps "sons" (unfortunately, without some additional information, it is impossible to tell morphologically whether the word [*bnh*] is singular or plural). Ahab apparently died not long after the battle of Qarqar, in the spring of 853, when a coalition of states in S Syria/Palestine, of which Ahab was a leader, faced the encroaching Assyrians under Shalmaneser III. The date of the MI proposed here would agree with the consensus of paleography for a mid-9th century date, ca. 840–830 B.C.

There was little initially with which to compare the language of the MI other than classical Hebrew and some Phoenician texts. In the intervening years, however, a number of significant texts have been discovered which provide linguists with good comparative material (and tantalizing questions). The initial observation—that the Moabite language seemed similar to classical Hebrew—has been largely confirmed; nowadays, it appears Moabite had more similarities with Hebrew than with old Aramaic. It can be classified as a Northwest Semitic dialect close to Ammonite and Hebrew, though it does possess some Aramaic features (e.g., final *nun* [*n*] for the masculine plural absolute, final *hê* [*h*] for the third person pronominal suffixes). With the political and economic domination of Moab by Israel during parts of the 10th and 9th centuries, it is not surprising that Moabite would be similar to Hebrew or, since Ammonite would be Moabite's closest Transjordanian neighbor, that these two languages have a number of elements in common. At this stage of analysis several of the outstanding philological issues relate to the source of the remaining peculiarities of Moabite.

Although Israel is the only enemy of Moab and Chemosh mentioned in the MI, it seems likely that this results from the text's genre as a dedicatory inscription and its abbreviated style. Moabite relations with Israel were but a subset of the complicated and rapidly changing political landscape among states of this era and region. According to Assyrian annals, the Syro-Palestinian coalition that opposed Assyrian expansion was led by the kings of Israel, Damascus, and Hamath. Omri's son Ahab is specifically named in these extrabiblical texts. It is probable that these three states had worked out "parity" agreements among themselves, and the Phoenician ports and Arab caravans would have contributed to the strength of the coalition. Individually, these three would have had relations with smaller regional entities as their vassals, and Moab's subservience to Israel under the Omrides would fall under this latter category. Therefore, Moab's successful revolt is best understood as part of a breakdown of the larger coalition and the subsequent changing of certain vassal relationships.

The treatment of the Omride dynasty in 1–2 Kings concentrates on the kings' theological and moral failures, especially those of Ahab and his Phoenician queen, Jezebel. At best, the Assyrian threat is in the background of the biblical narrative. Warfare between Aram and Israel is noted during Ahab's last years (2 Kings 20, 22), however, a situation that would be repeated later (2 Kgs 10:32–33; 13:1–25). When one compares the biblical and Assyrian texts of the period, two problems stand out immediately. First, the Assyrian versions seem to presuppose that Israel and Aram were allies in the anti-Assyrian coalition. Second, there are different names given to the Aramean king in the two accounts. In the Assyrian version, he is called *Hadad-idri*, while the biblical account refers to him as Ben Hadad. 2 Kings refers to a revolt of Mesha after Ahab's death and to an abortive attempt by Ahab's son, Jehoram, with Judean and Edomite allies, to regain control of Moab by attacking the S Moabite plateau from the SW (2 Kgs 1:1; 3:1–27). In 2 Kings, therefore, nothing is said about the military campaigns in that part of Moab N of the Arnon, the subject matter of the MI.

Numerous historical analyses have been proffered to understand the MI in its context. Perhaps the best starting point for any reconstruction is the observation that the anti-Assyrian coalition fell apart and that the "ripple effects" of this dissolution are reflected vaiously in the MI and in 1–2 Kings. The MI recounts in selective fashion elements of the struggle in order to venerate Chemosh, while 1–2 Kings concentrates

on Israelite (and particularly Omride) failures and the Israelites' struggles with their Aramean neighbors. Moab's freedom and Chemosh's faithfulness were paramount issues for Mesha. Those who compiled 1–2 Kings wanted to show Israel's failure with historical examples, and the account of Jehoram's failure to regain control of Moab was only an illustration of the larger pattern. It is possible, therefore, to provide a plausible historical setting for the MI with several different sequences when comparing it with the Assyrian texts and 1–2 Kings. A first option can fit the events of the MI into the sequence of 1–2 Kings by assuming that just after the 853 battle with Shalmaneser III, the Israelite/Aramean alliance fell apart, Ahab was killed, Mesha revolted and took control of the N plateau, and Jehoram failed to reinstitute Israelite control in his S assault. A variation would have Jehoram's assault coming first after an initial Moabite revolt, followed by Mesha's successful reconquest of the N plateau as narrated in the MI. A second option would begin with the assumption that the Israelite/Aramean alliance was strong as long as Ahab lived, with the Aramean wars attributed to him in 1 Kings really belonging to Jehoram or members of the Jehu dynasty. But by 841, about 13 years later, the alliance had been broken, new dynasties had been established in Samaria (Jehu) and Damascus (Hazael), and the former vassal relationship between Moab and Israel had been broken by Mesha's successful revolt. Thus, the Assyrian policy of divide and conquer had been at least partially successful. A third option simply begins with the MI, without a concern to coordinate events with those narrated in 1–2 Kings, and with the understanding that line 8 requires the start of Mesha's revolt before Ahab dies (i.e., reading the term *bnh* as "his [Omri's] son").

Chemosh, the god of Moab, was well known in the ANE long before the time of Mesha. For example, the name in cognate form appears in the Ebla and Ugaritic texts of N Syria. Line 17 of the MI refers to ʿAshtar-Kemosh, a compound name that perhaps indicates a hypostatic union, with ʿAshtar representing the feminine element (cf. Ishtar and Ashtarte) and Kemosh the masculine. Others have identified ʿAshtar with the male deity, Attar, in the Ugaritic texts and among certain early Arab tribes.

The MI attributes a previous Moabite decline to Chemosh's "humbling" (line 5) of his land, and Moab's recovery under Mesha was viewed as a sign of Chemosh's deliverance. Mesha states that Chemosh spoke to him (line 14), likely through a prophetic or priestly oracle. On at least two occasions, Mesha ritually slaughtered Israelites and dragged trophies of war before Chemosh as a sign of thanksgiving (lines 11–18). One verb (*ḥrm*) used to describe the assault on Nebo puts the city under a ban, terminology which is like that used several times in the Hebrew Bible. In fact, the MI as a whole reads almost like a narrative from the Hebrew Bible. (For bibliography, see EPIGRAPHY, TRANSJORDANIAN.)

J. ANDREW DEARMAN
GERALD L. MATTINGLY

MESHACH (PERSON) [Heb *mêšak* (מֵישַׁךְ)]. A Babylonian surname given to Mishael (Dan 1:7).

See SHADRACH, MESHACH, ABEDNEGO.

MESHASH, KHIRBET EL- (M.R. 146069). A large, multiperiod site (also known as Tel Masos) located in the center of the Beersheba valley about 12 km E of Beersheba. The site was situated on the ancient intersection of the N–S route, between the Judean hills and the Arabah and Sinai, and the E–W route, between the coast and the Dead Sea and Moabite territory.

The site consists of three discrete settlement areas extending on both sides of the wadi Beersheba, built around a number of wells that even today serve as a major water supply for local bedouin (see EAEHL 3: 816). The small tell itelf, dating from the late Iron II period and including late Byzantine remains (see C. below), was already mapped by Conder and Kitchener in 1874, while Y. Aharoni, during intensive surveys in 1964 and 1967, discovered the other two nearby settlement areas: a MB enclosure across the wadi about 400 m S of the tell, and a large early Iron I village about 200 m NE of the tell (see A. and B. below). The site with its three settlement areas was excavated between 1972 and 1975 (Aharoni et al. 1975; Fritz and Kempinsky 1983).

A. The MB Enclosure

The salient feature of this settlement is a fortification rampart enclosing an area of over 4 acres. This rampart was only partly preserved, and a large part of the site had been washed away by the wadi; however, enough remained to indicate that this was the type of rampart typical of MB Palestinian cities. Two structures were exposed during the excavations, confirming that this was a two-phase settlement, the older structure being dismantled when the newer one was constructed. These two phases yielded homogeneous pottery dating to the 17th century B.C., and it is possible that this fortification represents an attempt by the MB coastal cities to control the route leading to the east.

B. The Early Iron Age Village

The most extensively excavated settlement was a large unfortified village extending about 200 m by 150 m. Covering approximately 15 acres, it constitutes the largest settlement of this period so far discovered. At several places beneath this early Iron Age settlement were found remnants of Chalcolithic cave occupation (subterranean dwellings). These dwellings are typical of the so-called Beer-sheba culture known throughout the Negeb. The collections of pottery and implements are meager, and the settlement seems to date sometime between 3600 and 3200 B.C.

The early Iron Age village was built above these Chalcolithic remains, and altogether three Iron I strata with a total of five phases can be distinguished:

stratum I —10th–11th centuries B.C.
stratum IIa —11th century B.C.
stratum IIb —11th–12th centuries B.C.
stratum IIIa —12th century B.C.
stratum IIIb —12th–13 centuries B.C.

The earliest phase (stratum IIIb) consists of floors, pits, and hearths, suggesting a "seminomadic" population dwelling temporarily in tents and huts. This population possibly may be identified with one of the waves of Israelite settlers who quietly penetrated into the Beersheba valley and took advantage of the occupation "gap" in the area at the time. Fritz (1981: 71) modifies this to suggest that these groups had already been living as seminomads within Canaan for several centuries, coexisting with the Canaanites until the disruptions of the LB/early Iron Age transition caused them to establish new settlements. Kempinsky (1978), however, sees the original nucleus of settlers as being composed of Canaanites who were joined by families from various N Negeb tribes (Simeonites, Kenites, Jerahmeelites, etc.); the two eventually integrated into one "ethnic" group (see also Ahlström 1984). The construction of actual permanent houses begins in stratum IIIa (mid-12th century B.C.).

In stratum II the site was more densely populated, with a large variety of different types of buildings. In addition to the dominant "four-room" house, there were "three-room" houses, broad-room houses, a courtyard house, and the so-called "Amarna house" (an Egyptian style of dwelling). Various other buildings had some sort of public function. Stratum I was badly eroded and seems to mark a certain decline. A large citadel structure in stratum I attests, perhaps, to the deteriorating security situation in the area around the time of David; the settlement was soon abandoned and its population transferred to other areas, perhaps to Tel Malḥata (M.R. 152069), 3.5 miles to the E.

The architectural diversity of this early Iron Age settlement (especially in stratum II) suggests that the population at that time (roughly the time of the Judges) was heterogeneous. Also militating against the usual tendency to regard this site as "Israelite" are both the notable absence of "collared rim" jars found at other early "Israelite" sites and the notable presence of pottery originating from the coastal areas of Canaan (Phoenician "bichrome ware," Philistine pottery, and also Midianite ware). A scarab that can be ascribed to the reign of Seti II (1204–1194 B.C.) was also found. This diverse assemblage shows the wide-ranging connections the village had in all directions, while the large quantity of bronze and copper implements indicate that copper processing played an important economic role.

C. The Iron II Tell

The third settlement area was the tell located about 200 m SW of the early Iron Age village. Dating to the 7th–6th centuries B.C., this settlement actually was little more than a small "fortress" (1.25 acres), probably connected in some way with the nearby population center at Tell Ira (M.R. 148071), 1.5 miles to

the NE. Thus, the site of Khirbet el-Meshash had been abandoned for 300 years prior to the construction of this settlement. At the center of the tell stood a large building, which existed throughout all four phases associated with the settlement. Its function—whether administrative and/or military—was probably related to the abundant water resources located nearby; indeed, no fortifications were uncovered, and the size and arrangement of rooms in this central building suggest that it may possibly have served as a caravansery for the nearby trade routes, although no firm conclusions can be drawn since excavations here are incomplete. The pottery included typical Judahite ware as well as typical East Jordan ware. The settlement was probably destroyed during the Edomite conquests at the beginning of the 6th century B.C.

A group of Nestorian monks in the late Byzantine period (7th century A.D.) built a small monastery on the N part of this tell, using the S part as a large courtyard, which was surrounded by a wall. The entrance into the building led from this courtyard into a small hall, from which the central courtyard (with surrounding rooms) was accessible. A chapel was incorporated into the building; the apsis was rectangular, a unique feature among Nestorian churches, but characteristic of Syrian ones. The altar mensa (or table) was discovered out of place in a room next to the chapel. North of the chapel was found a crypt containing seven graves. Each grave contained two or three skeletons, all of which faced east. No furnishings were found, but the rubble inside the graves included pieces of plaster with fragments of inscriptions in the Syriac script written by Nestorians in the 8th century A.D., and other inscriptions incised in stone (also in Syriac) were found throughout the building. The monastery apparently did not last long, and it was destroyed violently and suddenly in the first half of the 8th century A.D.

D. Identification of the Site

Despite the long list of Negeb cities in Josh 15:21–32 and the lists of Shishak, the ancient name of Kh. el-Meshash has not yet been ascertained. Some scholars, following Aharoni (Aharoni et al. 1975), identify it with Hormah, mentioned in the inheritance of Simeon (Exod 21:4; Josh 19:4). But this inheritance list was probably compiled during the time of the monarchy, when (with the brief exception of the last few decades of the 7th century B.C.) Kh. el-Meshash was deserted. For the same reason, Crüsemann's identification of the site with Ziklag (1973: 222–24) is questionable. Naʾaman (1980: 146) suggested that the site should be identified with Baalath (Baalath-Beer in Josh 19:8), but this seems arbitrary. Fritz (Fritz and Kempinsky 1983: 235–38), noting that one would expect the name of the early Iron Age town to be mentioned in 1 Sam 30:27–31 (a passage dated by him to around the end of the 11th century B.C.), considers Siphmoth and Racal to be possible candidates, although at present the question of identification must remain open.

MESHECH (PERSON) [Heb *mešek* (מֶשֶׁךְ)]. Meshech is one of the seven sons of Japheth, Noah's son, according to the Table of Nations in Gen 10:2 and the parallel genealogy in 1 Chr 1:5. The latter genealogy also lists another person with the same name as a son of Shem (1:17). In the Table of Nations (Gen 10:23) there is no second listing for Meshech, but there is a Mash, son of Aram, in the parallel position to 1 Chr 1:17. This could be a scribal error in which the last Hebrew letter of Meshech was dropped (so LXX). Mash could also be an entirely different entity. See MASH. Whatever the case

regarding the name in Genesis, the Chronicles genealogy indicates two ethnically distinct groups, one of Semitic and one of non-Semitic descent.

Most references to Meshech in the OT are to the non-Semitic peoples. Five times in Ezekiel they are associated with Tubal. In Ezek 27:13, Meshech and Tubal, along with Javan (Greece), traded slaves and bronze with Tyre, the capital of Phoenicia. They must therefore have had some skill in metallurgy, since Tyre itself served as a source for metalworking skills (1 Kgs 7:13–14). In an oracle against Egypt (Ezek 32:17–32), numerous nations are to join destroyed Egypt in her entombment. Included among these northern nations are Assyria and Elam, northeast of Egypt; Edom and Sidon, nearer to hand on the north; and Meshech and Tubal farther north (32:26). The latter are characterized by this Israelite prophet of the Exile as uncircumcised (i.e., barbaric) terrorists.

In two eschatological passages, Meshech and Tubal are ruled by Gog of the land of Magog (Ezek 38:2, 3; 39:1). Gog opposes Israel, even going as far as staging a military assault on God's people (Ezek 38:14–16; 39:2). God, however, will oppose him and his armies in his power. Ultimately God will bring their destruction and death (Ezek 38:18–23; 39:3–6).

The last remaining biblical mention of Meshech is in the context of a lament. The psalmist bewails his habitation in Meshech and in the tents of Kedar (120:5). These people do not desire peace as the psalmist himself does. Kedar refers to a people in the Syro-Arabian desert area. The psalm text suggests a nomadic group, since they are associated with tents. This could be a reference to the descendants of the Semitic Meshech (1 Chr 1:17), since this locale is populated mostly by Semites. Another interpretation of the reference is to see both Kedar and Meshech as archetypical barbaric locations far removed from Yahweh and his land. Thus, it is not the location of the specific sites mentioned in the psalm which is of primary importance; rather, the writer is concerned about the great separation from Israel.

Akkadian sources from as early as Tiglath-pileser I (ca. 1100 B.C.; Parpola 1970: 252–53) mention Meshech, or the *muškaya* from the land of *mušku.* These people paid tribute to Assurnasirpal II (ca. 882 B.C.) from their capital in E Asia Minor (*GARI* 2: 123). This tribute included goods of bronze (see Ezek 27:13 noted earlier). At the end of the 8th century B.C., the king of Meshech was Mita, the famous Midas whose touch, according to legend, would turn everything to gold. In a letter to Sargon II dated ca. 709 B.C., Midas, ruler of the "land of Muski," seeks a peaceful relationship with the Assyrians.

Both Herodotus (7.78) and Josephus (*Ant* 1.124) place Meshech (Moschoi) in E Asia Minor. The latter locates these people in the area later known as Cappadocia (see *MBA* map no. 172). Herodotus (1.14) equates them with the Phrygians somewhat farther W in Asia Minor (see *MBA* map no. 172). These people migrated from E Europe into Asia during the 12th century B.C. (*CAH*^{3} 2: 417–18; Yamauchi 1982: 27). Some of the people of Meshech seem to have moved even farther east, around the Black Sea. There people referred to as Moschi and Tibarani were still found into the Persian period (*CAH*^{3} 2: 420–21). All of these references apparently relate to the non-Semitic Meshech. None clearly allude to a Meshech of Semitic stock.

DAVID W. BAKER

MESHELEMIAH (PERSON) [Heb *mĕšelemyâ* (מְשֶׁלֶמְיָה)*; mĕšelemyāhû* (מְשֶׁלֶמְיָהוּ)]. A

levitical gatekeeper, descendant of Kore (1 Chr 26:1), head of one of the major families of gatekeepers who served in the sanctuary in the days of David (cf. vv 2–3, 9). As Williamson (*1 and 2 Chronicles* NCBC, 169–70) points out, the present list in vv 1–11 divides the gatekeepers into three families: Meshelemiah, Obed-edom, and Hosah; but only two of these (Meshelemiah and Hosah) are firmly anchored with levitical genealogies. Thus, once again, the status of Obed-edom is somewhat uncertain in the traditions reflected in the Chronicler's work. (See the discussion in JEDUTHUN concerning the analogous situation found in 1 Chronicles 15–16.

Although vv 2–3 of 1 Chronicles 26 provide a list of seven sons of Meshelemiah in careful order (with the firstborn named Zechariah), we are later told in v 9 that the total of Meshelemiah's "sons and brethren" were some 18 "able men." Inasmuch as v 14 of the same chapter makes reference to a certain Shelemiah (Heb *šelemyāhû*), a gatekeeper also with a son named Zechariah (here described as a "shrewd counselor"), it seems quite certain that this Shelemiah is to be identified with the Meshelemiah of vv 1–9 ("Shelemiah" apparently representing a shortened form of the name). Williamson (1979: 253–54) is probably right to suggest that vv 12–18 of this chapter represent a later addition inasmuch as the reference to Obed-edom in v 15 is not intrusive here (in contrast to vv 4–8, as discussed above), and we would not expect two different spellings ("Meshelemiah" and "Shelemiah") for the name of one individual within the same passage.

The only other reference to Meshelemiah found in the Hebrew Bible is in 1 Chr 9:21. Here, his son Zechariah again is said to have played a prominent role among the gatekeepers established in office by David (the latter oddly linked to "Samuel the seer" in v 22; indeed, we are told in v 20 that Phinehas, son of Eleazar, had ruled over the ancestors of the same levitical gatekeepers in times past [cf. Williamson *1 and 2 Chronicles* NCBC, 90–91; Braun *1 Chronicles* WBC, 136–37]). The so-called "Chronicler" is far more concerned with emphasizing the levitical origins of the various cultic functionaries of the postexilic period than he is with chronological exactitude. See KORE. Curiously, in 1 Chr 9:17–19 (contrast v 31), levitical gatekeeper(s) named Shallum are described in terms very reminiscent of Meshelemiah (son of Kore son of [Ebi]asaph, chief of the gatekeepers, stationed on the east side; cf. 1 Chr 26:1–2, 12–14), leading to the conclusion that in 1 Chronicles 9 Meshelemiah and (at least) the Shallum of v 19 probably represent two variant names for the same individual (cf. Williamson 1979: 254; the Shallum of v 17 is probably postexilic).

In summary, Meshelemiah, Shelemiah, and Shallum seem to represent three different names for the same person; in each is to be found the Heb root *šlm*, "to be complete, sound." Dahlberg (*IDB* 3: 358) is probably correct in translating Meshelemiah as "Yah[weh] is recompense" or the like (also cf. *IPN*, 19, 31, 145, for pertinent Akkadian parallels).

WILLIAM H. BARNES

MESHEZABEL (PERSON) [Heb *mĕšêzab·ēl* (מְשֵׁיזַבְאֵל)]. 1. The grandfather of Meshullam, who was entrusted with the repair of more than one section of the walls of Jerusalem and its gates (Neh 3:4, 30; see Myers *Ezra-Nehemiah* AB, 114; Brockington *Ezra, Nehemiah and Esther* Century Bible, 135). Meaning "God is deliverer" or "God is delivering," the name is unusual in that it is based upon a participle that was introduced into Hebrew from Akkadian, through Aramaic. The presence of the participle is evidence of the impact of Aramaic upon Hebrew during the postexilic period (Brockington, 135).

2. A leader of the people and a signatory to the covenant established by Ezra (Neh 10:21).

3. The father of Pethahiah, an ambassador charged with representing Jewish concerns in the Persian court (Neh 11:24; see Myers, 189).

FREDERICK W. SCHMIDT

MESHILLEMOTH (PERSON) [Heb *măšillēmôt* (מַשְׁלֵמוֹת)]. 1. An Ephraimite whose son, Berechiah, was a leader among the people. Along with several others, Berechiah protested the forced enslavement of captured Judahites and supported the prophet Oded in calling for amnesty for those Judahites captured in Pekah's war against Ahaz (2 Chr 28:12). This story supplements the information conveyed in 2 Kgs 16:5 and Isaiah 7–8, where we simply learn that, although Pekah and Rezin laid siege to Jerusalem, they could not defeat Ahaz. According to 2 Chr 28:5–15, however, the conquest could have been completed (esp. vv 5–6, 10) except for the last-minute intervention of the Assyrians. One or both of

the stories may reflect a theological bias, and it is difficult to determine the exact extent of Judah's defeat at the hands of Israel and Syria.

2. A priest who is listed in the genealogy of Amashsai in Neh 11:13. He is likely to be identified with the Meshillemith of 1 Chr 9:12, who similarly is listed in the genealogy of Maasai. In both cases Meshillemoth/Meshillemith is reckoned as the son of Immer, the eponym of one of the major priestly phratries in the postexilic period who, according to 1 Chr 24:14, had been granted the sixteenth priestly course by David. The family of Immer and the families of Jedaiah (the family of the priest Jeshua), Pashhur, and Harim appear to have made up the major priestly phratries in the early postexilic period (Ezra 2:36–39; Neh 7:39–42). The lists suffer from general confusion, however, because the same name often appears in several places in such genealogies due to recurring preference for certain names within families. In addition, the lists were compiled as much for social and religious purposes as to provide historical information. Compare the similar names Meshulemeth, Meshelemiah, and especially Meshullam, all related to the notion that "God has/is paid back."

ROD R. HUTTON

MESHOBAB (PERSON) [Heb *mĕšôbāb* (מְשׁוֹבָב)]. Descendant of Simeon (1 Chr 4:34), described as one of the "princes in their families" (1 Chr 4:38). The name probably means "returned" or "delivered." In the LXX the name appears as *Mosobab*, while in the Vg it appears as *Masobab*. Understanding neither Meshobab nor Jamlech (the name that immediately follows) as proper names, Lucian translates it as "having returned, he ruled." The name Meshobab, along with the names of the other Simeonite princes, is not found in any of the genealogies assigned to this patriarch. (Compare the Peshitta, where 1 Chr 4:34–41 contains no personal names.) Nevertheless, in view of 1 Chr 4:42, Meshobab and the others were probably part of the tribe of Simeon (Williamson *Chronicles* NCBC, 62).

CRAIG A. EVANS

MESHULLAM (PERSON) [Heb *mĕšullām* (מְשֻׁלָּם)]. A personal name in the Hebrew Bible which grammatically corresponds to the *Pu·al* participle of the verbal root *šlm* and probably means "one recompensed (by Yahweh?)."

1. A son of Azaliah and the grandfather of Shaphan the scribe (2 Kgs 22:3), the latter having served in Josiah's bureaucracy around 621 B.C. Nothing is known of Meshullam's circumstances in life. Because his grandson served as a member of Josiah's bureaucracy, it is reasonable to speculate that Meshullam, too, might have served a previous king, perhaps Manasseh or conceivably even Hezekiah.

2. One of the sons of Zerubbabel (1 Chr 3:19). This fact situates Meshullam in the 6th century B.C. If he was born late in that century and if Ezra's mission to Jerusalem is dated to 458 B.C., it is conceivable that he could be the same Meshullam whose name occurs in Ezra 8:16 (see no. 10 below). If this is the case, he would have been in his 50s or 60s during Ezra's time.

3. A member of the tribe of Gad who settled in Bashan (1 Chr 5:13). The part of the list in which Meshullam's name occurs finds no parallel in other Gadite lists (cf. Gen 46:16; Num 26:15–18).

4. A son of Elpaal and a member of the tribe of Benjamin (1 Chr 8:17). His name occurs in a Benjaminite genealogical list that comprises all of chap. 8, which serves here to introduce the story of Saul's death in 1 Chronicles 9.

5. A Benjaminite and the father of Shallu (1 Chr 9:7). The latter's name appears in a list of the first exiles to return to Jerusalem. A variation of the list occurs in Neh 11:7, where again Meshullam is listed as the father of Sallu (= Shallu). The two lists do not contain the same names after the reference to Meshullam, which demonstrates that neither depends on the other. The two lists pose a problem of chronology: whereas 1 Chr 9:7 portrays Meshullam as the father of one of the first exiles to return to Jerusalem, Neh 11:7 portrays him as the father of one living in Jerusalem during the time of the rebuilding of the wall. The lists therefore deal with two different periods of time. The reference to Shallu/Sallu and to Jerusalem as his abode indicates that the Meshullam mentioned in both lists is the same. Yet, which of the lists is historically correct is difficult if not impossible to determine.

6. A Benjaminite and son of Shephatiah (1 Chr 9:8). The name here occurs in a list of the first of the exiles to return to Jerusalem. It is missing from the parallel list in Neh 9:7–11. In 1 Chr 9:9, Meshullam was the leader of his family.

7. The grandfather of Azariah and the son of Zadok (1 Chr 9:11). A parallel list occurs in Neh 11:1, 11 (see no. 5 above). Azariah was one of the first of the exiles to return to Jerusalem. Because Meshullam was the grandfather of a returning exile, it is highly likely that he lived in the late 7th century B.C. and witnessed the fall of Jerusalem in the early 6th century. This, of course, depends on whether or not the list in 1 Chronicles 9 is historically correct. The name Zadok here does not refer to the priest of the same name who was contemporaneous with Solomon.

8. The grandfather of Massai (1 Chr 9:12). Massai, a priest, was one of the first exiles to return to Jerusalem. As Massai's grandfather, Meshullam could have been a witness to the fall of Jerusalem in 587/586 B.C.

9. An overseer who served in the task of repairing the temple under Josiah in the 7th century B.C. (2 Chr 34:12). Meshullam is referred to as one of the sons of the Kohathites, a levitical family of some historic importance in the traditions of the Hebrew Bible. See KOHATH.

10. One of the leading men whom Ezra sent to Iddo of Casiphia to obtain Levite ministers for the temple (Ezra 8:16). A parallel version of this incident is found in 1 Esdr 8:41–46, where Meshullam is mentioned in v 43. On the one hand, it is conceivable that this Meshullam was the son of Zerubbabel (see no. 2 above); on the other hand, he might be identified with the Meshullam of Ezra 10:15, 29 (cf. 1 Esdr 9:14, 30). If the latter identification is upheld, we learn that he opposed the enforced divorcing of non-Israelite wives as mandated by Ezra.

11. A son of Berechiah and one who helped repair Jerusalem's fortifications (Neh 3:4, 30). Neh 6:18 relates that Johanan, son of Tobiah, took Meshullam's daughter as wife. Because Meshullam obviously supported Nehemiah's efforts to rebuild Jerusalem's walls, the notice of his daughter's marriage to the son of one who opposed Nehemiah is interesting. One possible effect intended by the notice of the union of Meshullam and Tobiah's families is to underscore the latter's failure to use his Judean relations to undermine the repairs.

12. A son of Besodeiah who helped repair a gate called Jeshanah in the Jerusalem wall (Neh 3:6). What Jeshanah (Heb *yĕšānâ*) means is not clear, and English translations do not agree on how to translate it ("old gate," RSV; "new city gate," NAB). Jeshanah was also a town toward which the gate faced; hence, perhaps, its name. See JESHANAH.

13. One of the men who stood next to Ezra as the latter read the Torah before the people (Neh 8:4). Such a position indicates one of important social rank, perhaps a priest (see no. 14 below). The parallel list in 1 Esdr 9:43–44 does not mention Meshullam. He is also missing from the Neh 8:4 passage in LXX^{B}. A patronym is not given here, which opens up the possibility of an identification with the Meshullam of Ezra 8:16 (see no. 10 above).

14. One of the priests who set his seal on a covenant to observe the Torah in Nehemiah's time (Neh 10:7). Because no patronym is given, it is conceivable that he is to be identified with one or more of the other occurrences of Meshullam in Nehemiah. If the date of Ezra's return to Jerusalem is 458 B.C. and not 398 B.C., an identification is possible with either no. 11, 12, or 13 above. In this case, persons who worked on the wall under Nehemiah could easily have been witnesses to Ezra's ministry.

15. One of the heads of the people who set his seal on the covenant ratified in Jerusalem after the Exile (Neh 10:20). As in no. 14 above, a patronym is not given. If the identifications suggested in no. 14 above are not valid, it is possible that they might be valid for this Meshullam.

16. One of the chiefs of a priestly family during the time of Joiakim (Neh 12:13). He is noted specifically as being a head of the house of Ezra, the latter not to be identified with the Ezra who returned to Jerusalem in the 7th year of Artaxerxes (Ezra 7:7; cf. Neh 12:1). The reference to Joiakim in Neh 12:12 likely locates Meshullam in the early 5th century B.C.

17. The chief of a priestly family of Ginnethon in the days of Joiakim (Neh 12:16). Ginnethon was one of the priests who returned to Jerusalem with Zerubbabel. As in no. 16 above, the reference to Joiakim locates Meshullam in the early 5th century B.C.

18. A gatekeeper during the days of the high priest Joiakim (Neh 12:25). Neh 12:26 also places him in the time of Nehemiah and Ezra. It is not clear whether the Chronicler intends the names Joiakim, Nehemiah, and Ezra to be read diachronically or synchronically. If the latter, the statement cannot be correct, because Eliashib was the high priest during the time of Nehemiah. If the former is intended, then one must consider that the span of time is quite considerable. Here Ezra's name follows Nehemiah's in contrast to the present order of the events as described in the books of Ezra-Nehemiah. It is possible, however, that the Chronicler intends the "days of Nehemiah the governor and of Ezra the scribe" to be seen in some degree as coincidental. In that case, the Chronicler views Ezra's mission to Jerusalem as preceding Nehemiah's in spite of the priority of Nehemiah's name in 12:26. This is the only way that Nehemiah and Ezra's ministries could have overlapped. Therefore, that Meshullam could have been a gatekeeper during the time of Joiakim as well as Nehemiah and Ezra is, if not probable, at least conceivable.

19. A participant who celebrated the rebuilding of Jerusalem's wall in a liturgical procession (Neh 12:33). He is designated as a prince of Judah. Conceivably, an identification is possible with no. 15 above. In neither case is a patronym given, and both cases indicate positions of leadership or influence in society. If Ezra's mission to Jerusalem is dated to 458 B.C., a possible identification with no. 13 above can be suggested. A prince of Judah might well be accorded the privilege of standing on the podium next to a reader of the Torah.

JAMES M. KENNEDY

MESHULLEMETH (PERSON) [Heb *mĕšullemet* (מְשֻׁלֶּמֶת)]. Mother of Amon, king of Judah (2 Kgs 21:19). Meshullemeth's name appears in the regnal formula of her son in 2 Kings, but it is missing from the parellel account in 2 Chr 33:21. She is the daughter of Haruz of Jotbah and the first of five queen mothers for whom both the father's name and place of origin are given (cf. also JEDIDAH, HAMUTAL, ZEBIDAH, and NEHUSHTA).

The site of Meshullemeth's hometown, Jotbah, is uncertain. Usually identified as either *at-Taba* (M.R. 139878) N of Aqaba or Yodefat (M.R. 176248) in Galilee, its location is often interpreted as being politically significant. If Meshullemeth came from Galilee, then her marriage may reflect an attempt by Judah to secure N support (Cogan and Tadmor, *2 Kings* 275). If Meshullemeth came from the far S, it is possible she was of Arab or Edomite origin (Montgomery, *Kings* ICC, 521; Gray, *1–2 Kings* OTL, 711). Her marriage might represent a strengthening of diplomatic ties between Judah and Arabia or Edom. In either case, Meshullemeth would be of non-Judean origin and her marriage diplomatically important. But who arranged her marriage, Hezekiah or Manasseh? Traditionally, it is assumed that Meshullemeth's marriage to Manasseh was part of Hezekiah's international policies. This assumption is challenged by Wilcoxen. Translating the term "son" as "grandson," Wildoxen suggests that Amon was the *grandson* of Manasseh. Meshullemeth would then be Manasseh's daughter-in-law instead of his wife (Wilcoxen 1977: 155–56). If this is so, then Meshullemeth's marriage (possibly to the son Manasseh sacrificed) was arranged by Manasseh and represents an intriguing glimpse into his diplomatic activities. See also QUEEN.

LINDA S. SCHEARING

MESOPOTAMIA (PLACE). A Greek word which means " (land) in the midst of the river(s)" and in modern times has come to be interpreted as "the (land) between the (two) rivers," the two rivers being the Tigris and the Euphrates. In the English versions of the Bible the word "Mesopotamia" is used as a

translation of words which are clearly different in meaning from the modern understanding of the word "Mesopotamia."

The word "Mesopotamia" in the English versions of the OT renders the Hebrew word *ʾăram nahărayim,* while in the NT passages it is the same word in Greek—Mesopotamia. The English renditions for the OT are based on the LXX translation, which also uses the Greek word Mesopotamia for the Hebrew. The Aramaic Targums, however, use the expression *Di al perat,* which literally means "that which is upon the Euphrates." Thus, the Targumic versions suggest a geographical location in the region of the Upper Euphrates.

The biblical passages where the English versions use the word "Mesopotamia" seem to confirm this geographical location. In Genesis 24, it is narrated that a servant of Abraham went to the city of Nahor in Mesopotamia to find a wife for Isaac. In Deut 23:5—Eng23:4, there is reference to Balaam of Mesopotamia. In Judg 3:7–11, we read that the Lord delivered the Children of Israel into servitude under CUSHAN-RISHATHAIM, king of Mesopotamia. In 1 Chr 19:6–9, we are told that the Ammonites hired chariots from Aram-Maacah and from Zobah of Mesopotamia in their war with King David. The term Mesopotamia occurs twice in the book of Acts. In Acts 2, "residents of Mesopotamia" are included in the list of peoples of various lands who "were all filled with the Holy Spirit and began to speak in other tongues." Finally, in Acts 7:2, Stephen declares that God appeared to Abraham in Mesopotamia. From most of the above references it is clear that the geographical location of "Mesopotamia" was not the entire region between the Tigris and the Euphrates but only the area of the Upper Euphrates river in Syria.

There has been considerable debate among modern scholars as to the exact meaning of the Heb *ʾăram nahărayim.* The first element (*ʾăram*) designates what we call Syria and etymologically is related to the ethnic term Aramean. The meaning of the second element (*nahărayim*) is more difficult to determine, but it has been argued by many scholars that this is not a dual meaning, "two rivers," but rather a locative meaning, "riverine land"; that is, "land within the bend of the (Euphrates) river."

As stated at the beginning of this article, the word "Mesopotamia" is modern usage designates the region farther east than that in the Bible and includes all of the territory between the Tigris and Euphrates rivers right down to the Persian Gulf. Formal recognition of this meaning for the word came with British military presence in the region at the time of the breakup of the Ottoman Empire. For the history of ancient Mesopotamia in this larger sense, see MESOPOTAMIA, HISTORY OF.

A. KIRK GRAYSON

MESOPOTAMIA, HISTORY OF. In part because the Tigris and Euphrates rivers were homeland to some of the greatest political and military powers in antiquity, much of Mesopotamian history is linked with that of the Bible. This entry, which consists of five separate articles, surveys the history of ancient Mesopotamia. The first article covers the chronology of ancient Mesopotamia. The following two cover the prehistory of Mesopotamia and the 3d millennium B.C. The fourth and fifth articles, respectively, treat the history and culture of Assyria and Babylonia.

MESOPOTAMIAN CHRONOLOGY

The historical reconstruction of the past revolves around a comprehensive knowledge of absolute time and the sequence of known events. Unlike the situation in the modern world, wherein a reasonably accurate digital watch is worn on many a wrist, and where exactly datable events or reasonably precise schedules are commonplace, past processes and events cannot be dated so concisely. As a general rule, dating becomes progressively more complex the further back in time one goes. Whereas ancient historians certainly aspired to know the approximate date that a Babylonian king died or the exact years that an Egyptian pharaoh ruled, written records seldom preserved a king's name or described some "exactly" datable occurrence such as a coronation or a decisive battle. When such information does not exist, dating can only be *relative,* never *absolute* ("exact"). Relative dates are usually based on stratified, and thus sequential, archaeological materials: stone tools, metal tools and artifacts, pottery, figurines, and so on. The premise is that material found in the lowest part of an archaeological excavation, which is sequentially earlier than material accumulated above it, is also *relatively* earlier in time.

D. Conclusion

_____

A. Prehistory

Relative dating is the rule for much of the prehistoric era. Throughout most of the time span that human beings have roamed the earth, they lived as migrant bands that hunted and collected food and other necessities. Their tools were made primarily of stone, less often of other perishable materials such as wood. The long period of time in which rudimentary developments may be traced in stone tool technology is known as the Paleolithic ("Old Stone") Age (about 600,000–15,000 B.C.). The basic hunting-gathering economy—occasionally supplemented by selective use of certain plants and animals—prevailed in the Near East until about 10,000 B.C., when more sustained efforts at plant domestication and animal rearing significantly altered the course of human cultural history.

Changing human needs and the beginnings of food production required a different tool kit; the era from about 9000 to 3000 B.C. has thus been termed the Neolithic ("New Stone") Age. The first permanent settlements appear in the archaeological record at almost the same time. A sedentary way of life supported chiefly by food production, together with the changes it wrought—population growth, the accumulation of goods, loss of mobility—had major consequences for subsequent cultural stages in the ANE. The people who dwelt in those early sedentary communities did not depend exclusively on agriculture, but rather on a mixed-spectrum economy that included hunting and collecting, the herding of goats and sheep, fishing, and the cultivation of wheat and barley. Some sedentary villages were established prior to any sort of successful, sustained domestication: the walled community at Jericho between about 8000 and 7000 B.C., for example, subsisted chiefly on hunting and the intensive gathering of wild grains.

It is difficult to speak authoritatively on the reasons for sedentarization from our remote 10,000-year perspective: archaeologists have offered climatic, environmental, demographic, and technological explanations. Investigations of sedentarization, plant and animal domestication, urbanization, and other Near Eastern cultural developments before the historical period (before the advent of writing around 3000 B.C.) depend entirely on material evidence: bones, seeds, pottery, implements, weapons, art, and architecture.

Absolute dates from certain of these prehistoric materials are based on radiocarbon determinations—precise physical measurements of the decay state of carbon isotope ratios which allow determination of when a particular carbon-containing material (charcoal, bone, shell, etc.) stopped growing (i.e., died). It is thereby possible to assign to the specific archaeological level from which the radiocarbon-analyzed material was recovered an approximate absolute date (approximate because the computation must allow for a statistical counting error—plus or minus a number of years—that can be quite high). Dendrochronological ("tree-ring") calibration of radiocarbon-derived dates suggests that they deviate increasingly from actual calendar dates: from a 200-year error around 1000 B.C. up to a 900-year error around 5000 B.C. Although calibration curves are designed to transform a radiocarbon age or measurement into an actual calendar date, the limits of these curves currently do not extend earlier than the 6th millennium B.C.

B. The Historical Era: 3d –1st Millennia B.C.

By the end of the 4th millennium B.C., certain social elements in prehistoric Mesopotamia adopted writing (cuneiform), chiefly to keep records for their burgeoning economies. In nearby N Syria, by the mid-3d millennium B.C., scribes at Ebla had also begun to use Mesopotamia's cuneiform script to keep

track of their wide-ranging economic affairs. With the advent of writing, the prehistoric period of the Near East increasingly becomes elucidated by an ethnohistoric, documentary record. The use of writing prompted remarkable, sociocultural innovations in 3d-millennium B.C. Mesopotamia and Syria. The scribal profession in Mesopotamia—where writing became something of an art—assumed unique importance by the teaching of the skills of communication in the cuneiform script, which served as the medium for the transmission and preservation of economic, legal, literary, and religious information, and for the maintenance of Mesopotamian culture.

For the historical era, there exist long lists of actual year names, king lists, historical chronicles, building inscriptions, and other written records—often based on or mentioning astronomical observations—that allow *absolute* dating. Yet it must be borne in mind that, for much of Mesopotamian history, accurate dates B.C. are hard to come by; sources often seem to contradict one another. More recent dates are almost always more accurate and have a lower margin of error.

C. Sources for Mesopotamian Chronology and History

1. Overview. Named after an annually appointed official, the Assyrian *limmu* ("eponym") lists make it possible to date events quite precisely back to 910 B.C. Earlier Assyrian *limmu* lists and Babylonian king lists allow us to date particular events or more general epochs during the 2d millennium B.C. within a margin of about ten years. Attempts at absolute dating in the surrounding regions (Syria-Palestine, Anatolia, Cyprus and the Aegean, Iran) require synchronization with episodes in Mesopotamia (or Egypt), where more secure chronologies have been established.

Observations of the planetary movements of Venus, possible only once in a 56- or 64-year cycle, have been recorded on the Babylonian "Venus Tablets." Although these tablets provide astronomical dates for the period prior to 1450 B.C., unfortunately they offer a series of possible dates rather than an agreed-upon single date: scholars still dispute which of three possible cycles these "Venus Tablets" refer to. Consequently, historians of the ANE must choose between three separate chronologies for 2d-millennium B.C. Babylonia: the high (the astronomical evidence presented by Huber is compelling), the middle, or the low (the low chronology finds few supporters). Although Babylonia's internal and relative chronology has been established reasonably well on the basis of year names, relative events are difficult to pinpoint in a secure, absolute dating system. Whereas the middle chronology is the most widely accepted and frequently used, in fact it provides only a compromise solution to a very complex problem. The relative sequence of events, nonetheless, offers a useful framework for the assessment of sociohistorical and sociocultural development and change.

Relative dating is well established from the 16th century B.C. back to the 24th century B.C. (the reign of Sargon and the Akkadian Dynasty). Two "historical" gaps of unknown duration occur during these 800 years, the earlier being about 2200 B.C., the latter about 1600 B.C. Although various cuneiform documents record the succession of kings and the length of their reigns, specific incidents and even entire eras remain unanchored in *absolute* time. Before 2400 B.C. in Mesopotamia, only approximate dates are possible: time estimations are derived from purely archaeological evidence, from paleographic data (the evolution of the cuneiform script in its earliest stages), and by all-too-few radiocarbon dates.

The chronology of Mesopotamia and that of much of the remainder of the ANE (especially Syria-Palestine) has been linked extensively to Egyptian *absolute* dating. During the historic period (post–3000 B.C.), written sources for dating in Egypt are similar to those found in Mesopotamia: king lists, royal annals, and biographic treatises. A "History of Egypt," written in Greek during the 3d century B.C. by an Egyptian priest (Manetho), was almost certainly compiled from some of the same lists that present-day historians use to reconstruct ancient Egyptian chronology. Although absolute dating in the earlier time periods, as in Mesopotamia, inspires less confidence, overall the period from about 330 B.C. back to 945 B.C. is reliably dated on the basis of astronomical observations, synchronisms, and the historically well dated reigns of certain pharaohs.

For the period from about 1550 to 1050 B.C., both a high and a low chronology have been postulated on the basis of astronomical observations of the Sothic star (Eg *Sepedet*, our Sirius). Noting the precise moment that this star appeared was critically important to the ancient Egyptians because it demarcated the

start of their agricultural year: the annual rise of the river Nile (from melting snows in the Ethiopian and African highlands far to the south) more or less coincided with the heliacal (predawn) rising of Sothis on the horizon. Three chronologies result from the disagreement among Egyptologists over the location where these ancient observations took place. Either it occurred in the north, near Memphis (high chronology), in the south, near Thebes (middle chronology), or even farther south, at Elephantine (low chronology). Even if this dispute could be settled, the internal dating of some pharaohs' reigns is complicated by the possibility of coregencies (and thus overlaps in different reigns). Nonetheless, the margin of error for the period 1550–1050 B.C. is only a matter of 10–30 years, much less than the 120-year discrepancy in Mesopotamia.

Sesostris III, who ruled during the 19th century B.C., has a Sothic date recorded for his reign. Working backward from Sesostris, however, dating becomes increasingly uncertain because no further "fixed" points (like a Sothic date) are available to which one could attach a well-known, relatively dated sequence of events. As in Mesopotamia, archaeology, paleography, and artistic style provide at best a broad range of possibilities. Important refinements in radiocarbon-based dates for Egypt are limited chiefly to the 3d millennium B.C.

2. The 3d Millennium B.C. Mesopotamian history is divided into periods characterized by significant changes in society, economy, politics, and culture. The course of Mesopotamian history, although characterized by a recurrent trend toward local rule, was punctuated repeatedly by political systems of great organizational complexity that aimed for extensive dominion throughout the Near East. Local rule is best exemplified by Mesopotamia's most resilient sociopolitical institution: the city-state. Political control by individual city-states typified the Sumerian dynasties of the early 3d millennium B.C.

These first recorded dynasties were ruling families in various cities that passed political power from one generation to the next. As a result, the time span from about 2900 to 2350 B.C. is known as the Early Dynastic (ED) period. The chronology of this period is based primarily on archaeological data derived from excavations in the Diyala region, which can be employed only rarely to illuminate known political events. Although writing increasingly fulfilled economic, ideological, and administrative needs, archaeological excavation has provided only a limited corpus of textual evidence, and material data therefore remain central to historical interpretation. Nonetheless, such archaeological and documentary sources as exist portray ED Mesopotamian culture more clearly than that of any prehistoric period.

The main written sources for the Early Dynastic period are the following: (1) numerous cuneiform tablets from the cities of Ur, Lagash, Kish, and Shurrupak; (2) an important collection of literary tablets from Tell Abu Salabikh; and (3) detailed royal inscriptions from Lagash. The Sumerian King List, composed early in the 2d millennium B.C., offers an important outline of the political history of Sumer and Akkad from prehistoric times; it becomes increasingly plausible as it approaches the period of its compilation. Despite its value for reconstructing Mesopotamian history, the King List is misleading in that it treats overlapping and contemporaneous city-state dynasties as successive. The remote past was difficult to render accurately, even for the conscientious chroniclers of the Sumerian King List.

With the advent of the Akkadian and Ur III dynasties during the latter half of the 3d millennium B.C., the Mesopotamian political structure shifted from localized city-state rule to territorial, nation-state rule. Dominance by the temple or city-state gave way to national monarchy, and territorial expansion became the operative goal. The task of controlling more extensive areas required administrative innovation, and here the Akkadian achievement was considerable. The Akkadians replaced the Sumerian system of diversified, local autonomy with a centralized state focused upon the king and his court at Akkad.

Different ideological and economic traditions governed the two peoples: the Sumerians' long tradition of temple and communal ownership was replaced by both royal and private ownership of land. Yet ethnic antagonism was purposefully minimized, and the Akkadians adopted the Sumerian cuneiform script to write their own Semitic language, newly dominant in Mesopotamia. Akkadians and Sumerians were two different peoples who spoke two different languages, but the prevailing culture was neither Sumerian nor Akkadian; it was overwhelmingly Mesopotamian.

In the style of most Sumerian kings, the dynastic rulers of Akkad commemorated their exploits in dedicatory inscriptions lodged at the temple of Enlil at Nippur. Although the originals still elude us, they were copied meticulously by devoted scribes: the tablets that survive are our main source for the history of the Akkadian era. These dedicatory inscriptions are supplemented by literary texts (e.g., "The Curse of Agade") and by later written documents, including the Sumerian King List. The epic tales of Sargon and his grandson Naram-Sin—the best known rulers of the Akkadian period—were written much later and mix fact with fiction. Archaeological evidence for this period is still sparse and leaves a decisive gap in our knowledge: the location of Agade—the capital city of Sargon and his successors—is still far from certain.

According to the Sumerian King List, after the fall of Akkad the city-state of Ur established dominion over Mesopotamia for the third time; consequently, its kings are known as the Ur III dynasty. Political stability returned to Mesopotamia, and in its wake followed the revival of Sumerian art, literature, and law (the so-called Sumerian Renaissance). Primary written sources for this period are abundant. Economic documents from administrative centers like Umma (near Lagash) and Puzrish-Dagan (near Nippur) number in the tens of thousands. In contrast to the scant archaeological evidence of the Akkadian period, the extensive construction projects of the Ur III rulers may be witnessed in most major Mesopotamian cities of the late 3d millennium B.C.

Although Sumerian again became the official language of the land, the concept of a Sumerian versus an Akkadian cultural identity is irrelevant. Traditional Sumerian literature was preserved, and hymns glorifying the ruler in the act of addressing the gods were composed. But the grandeur of the Sargonic state had become integrated into a broader Mesopotamian worldview, and Ur III kings adopted the titles of the Akkadian kings. Ur-Nammu, founder of the Ur III dynasty, claimed the title "King of Sumer and Akkad," and thus officially acknowledged Mesopotamia's composite origins: Sumerian and Akkadian culture were fused into one Mesopotamian civilization.

3. The 2d Millennium B.C. The term Mesopotamia refers not only to the culture of the Tigris-Euphrates region but also to the geographic region demarcated by the two rivers. During the 2d millennium B.C., Mesopotamia became divided into two historically important geopolitical regions: Babylonia and Assyria. Because the city of Babylon only became a significant political force early in the 2d millennium B.C., the geographic term Babylonia should not be used to refer to earlier time periods. For the 2d and 1st millennia B.C., the N and NE sectors of "Mesopotamia" may also be referred to as Assyria, the S sector as Babylonia. The two parts are divided by the Gebel Ḥamrīn ("Red Mountain"), a low-lying mountain ridge that extends southeastward from the Assyrian capital city of Ashur to the Diyala River basin.

Historical sources multiply greatly during the 2d millennium B.C. Thousands of cuneiform tablets have been excavated in Babylonia, N Syria, and Anatolia (Turkey). King lists from Isin, Larsa, Ashur, and Babylon, and lists of date formulae—whereupon each year of a king's reign was given a name—provide synchronisms as well as a useful chronological framework. From Babylon and Ashur in Mesopotamia, Mari and Alalakh in Syria, and Kanesh and Ḫattusha in Anatolia come international treaties, letters, accounts, contracts, and legal documents that illuminate the period between 1900 and 1600 B.C. like few others in ANE history. For the period of Kassite rule in Babylonia (about 1600–1200 B.C.), source materials become scarce; fewer than a thousand tablets have been published, although thousands more exist in museum collections.

The widespread, albeit insecure, political coalitions forged by Shamshi-Adad of Assyria (ca. 1813–1781) and Ḫammurapi of Babylonia (ca. 1792–1750) resulted in two extensive and partly contemporaneous territorial states. Emulating the Akkadian and Ur III dynasties, these two rulers sought to acquire territory and to secure the constant flow of vital raw materials into the bountiful but resource-barren alluvial plain of Mesopotamia. This re-emergence of forcefully unified nation-states in Assyria and Babylonia may be attributed chiefly to the great military and administrative capabilities and the charismatic qualities of Shamshi-Adad and Ḫammurapi. Although both rulers failed to establish an enduring national state, the political power and cultural tradition in ancient Mesopotamia henceforth

centered on these two polities. Even the later Kassites, who built their own fortress-city near Babylon, maintained the latter as their political, commercial, and religious center.

Historical and cultural developments in neighboring Syria-Palestine between 2000 and 1500 B.C. have been reconstructed largely through reference to Babylonian or Egyptian documentary sources; cuneiform texts from Mari, Ugarit, or Alalakh illuminate events chiefly in N Syria. During these centuries, Amorite influence and domination expanded throughout the Levant and extended into the Egyptian Delta. Although other political crosscurrents dashed hopes of overall unity, individual Levantine city-states prospered as international trading contacts blossomed. The coastal position and port cities of the Levant (e.g., Ugarit, Byblos, Tyre) helped to make that area the commercial crossroads of the ANE by about 1500 B.C. Although the area also became a military battleground for its more powerful neighbors, local political control in Syria-Palestine was enriched by lucrative international trade. The most important cultural contribution of the area in the mid-2d millennium B.C. was the creation of an alphabet—a writing system that would replace the more complex and unwieldy Mesopotamian cuneiform and Egyptian hieroglyphic systems, and eventually be adopted the world over.

The fluctuating political fortunes of myriad Near Eastern states between about 1500 and 1200 B.C. can only be understood in an international context. Cuneiform letters found at Amarna in Egypt are international diplomatic documents, and similar texts sprang up at sites all over ancient W Asia. For the first time, and with lasting consequences, Egypt shared this international stage with the powerful states of Babylonia and Assyria and the Hittite kingdom in Anatolia. Whereas Cyprus and the Bronze Age cultures of the Aegean (the Minoans and Mycenaeans) played key roles in international trade within the E Mediterranean system, the scarcity of detailed and comprehensive written sources from those quarters means that their political and economic relationship to Near Eastern states can only be established archaeologically.

The complex interaction and shifting balance of power among all of these LB Age states and kingdoms impinged significantly upon the Levant. The positive impact of international trade and politics on the Levantine city-states, however, was balanced and ultimately offset by internal social change and population dynamics. These international and local events are highlighted by the above-mentioned Amarna Letters, one of the most significant finds of cuneiform tablets ever made. Discovered in 1887 at Akhenaten's capital in Middle Egypt, the Amarna Letters provide unparalleled insight into international diplomacy and commercial contact during the 14th century B.C. With few exceptions, the tablets may be dated to the reigns of Amenophis III or IV (Akhenaten). Forty-two of the approximately 380 tablets retrieved were letters exchanged between the pharaoh and the kings of Babylonia, Assyria, Mitanni (the Hurrians), Hittite Anatolia, Arzawa (a small state in Anatolia), and Cyprus.

Several Amarna documents list lavish gifts exchanged between royal courts. Envoys were entrusted with delicate political and diplomatic missions as well as the safe conduct of great riches. The immense variety and quantity of goods, and the frequency of such exchanges, suggest that what is described was not just the exchange of royal gifts but the basic mechanism of trade between Egypt and its neighbors: messengers were merchants as well as ambassadors. Despite strong foreign influence in the Levant at this time, the Amarna Letters and other cuneiform sources convey the impression that local dynasts effectively governed most Syro-Palestinian city-states. The Amarna Letters—the single most important source for interpreting internal politics during the mid-2d millennium B.C.—imply that the Syrian state of Amurru formed a successful, independent political movement based on popular support.

The Amarna archives also describe an omnipresent, socially restive group of people who spread throughout the Near East during the 2d millennium B.C.: the *Ḫapiru.* The fact that one could "become a Ḫapiru "—as the Amarna Letters state frequently—implies a lack of kinship or political ties; indeed, the *Ḫapiru* seem to include groups of differing ethnic composition, expatriate fugitives from various city-states and tribal communities. Some *Ḫapiru* served as mercenaries; others formed independent communal or semitribal organizations on the borders of settled areas, often in the hill and forest country of Syria-Palestine. Subject to no legal authority, the *Ḫapiru* endured on the outskirts of urban centers, where they maintained a fragile independence. The historical relationship between the social term *Ḫapiru* and the

ethnic term "Hebrew" finds several defenders. Although the *Ḫapiru* were too broad and mixed a social group to be considered direct ancestors of the Hebrews, it is not improbable that some Hebrews were to be found among the *Ḫapiru.* Both were people without a homeland, members of an inferior class often feared and held in contempt by sedentary populations.

By the end of the LB Age (13th–12th centuries B.C.), a sequence of population movements, invasions, and destructions altered forever the essentially cooperative international relations that had been enjoyed by major and minor political states alike throughout much of the 2d millennium B.C. A combination of demographic, economic, climatic, and military factors accounts for the subsequent disorder throughout the Mediterranean.

4. The 1st Millennium B.C. Under the Assyrian kings of the first millennium B.C. and their Persian successors, the Mesopotamian trend toward organizational complexity and territorial expansion reached its peak. Local rule by city-states or more extensive rule by territorial states gave way to a highly centralized direct rule by empire. Starting around 1300 B.C. in Mesopotamia, the annals of the Assyrian kings—often regarded as proper historiographic documents—record basic geographic and tactical information about military campaigns. These annals also assign and criticize motives, appraise political events and individuals, and generalize about foreign peoples and lands.

Source materials for the 1st millennium B.C. are extensive; the annals of the Assyrian rulers and other royal inscriptions (Assyrian and Babylonian); hymns and paeans of praise (archives from Nineveh, Ashur, Kalhu, and Babylon); the *limmu* lists (already mentioned), which identify the regnal years of most Neo-Assyrian kings and occasionally refer to a campaign or a disaster that occurred during a particular year; dedicatory inscriptions of both Assyrian and Babylonian potentates, which praise the deeds and achievements of kings and gods alike; Babylonian chronicles that detail episodes (battles, treaties, deaths in the royal family) in a variation on the annalistic theme. Several Old Persian (cuneiform) inscriptions (some monumental in form) document selected events from the reigns of several Achaemenid rulers in Persia. The (mostly unpublished) astronomical diaries of Babylonia record—on a daily basis—death, plagues, and other calamities, exclusively as an appendix to the observation of planetary movements.

During the reign of the early Chaldean ("Neo-Babylonian") king Nabonassar (747–734 B.C.), certain events began to be recorded precisely and astronomical observations were noted accurately. The Greeks would later recognize Nabonassar's rule as pivotal in the development of science: the Gk word *Chaldean* came to mean "astronomer." An astronomical series of omens (entitled MUL.APIN—dated about 700 B.C. but based on earlier material) records the movements of the moon and planets. Although this series and other early efforts of Babylonian astronomy were somewhat superficial, after about 700 B.C. systematic stellar observations generated data that were calculated accurately enough to predict solstices, equinoxes, eclipses, and other planetary phenomena.

Chaldean astronomers also sorted out an elaborate, mathematical time-keeping system based on the number 60 (sexagesimal); ultimately this led to the division of hours and minutes still in use today. Because each Babylonian month began with the sighting of the new (crescent) moon, astronomers had to be able to predict this event accurately. Astronomers in the 3d and 2d centuries B.C., therefore, composed ephemerides that calculated and predicted new moons, eclipses, and other planetary and lunar movements. The rules for such calculations were outlined in accompanying documents called "procedure texts." Modern astronomers rank the methods developed by their Babylonian precursors to calculate the movements of the moon among the highest achievements of ancient science. It must be added that religious motives were predominant in Babylonian astronomy: the heavens were mapped and the ephemerides composed in order to elicit divine intentions.

The appearances of astrological omens based on astronomical observations date from the very beginning of the 2d millennium B.C., and were later grouped in series (e.g., *Enūma Anu Enlil*). The earliest-known systematic astronomical observations (of the planet Venus) date from the Old Babylonian (OB) period (18th–17th centuries B.C.). Intended to serve as a basis for omens, these "Venus Tablets" (discussed earlier) were not highly accurate but maintain a significant role in determining the chronology of the 2d millennium B.C. By the 7th century B.C., more accurate astronomical observations led to the

development of a fairly precise calendar. Because the Babylonian month was lunar, each year comprised only 354 days; approximately every third year an extra month had to be inserted to bring the lunar calendar into line with the solar year. By the reign of the Chaldean king Nabu-Naṣir (757 B.C.), a regular, mathematically derived intercalation of seven months every nineteen years had been established. Known as the Metonic Cycle, this calendar served as the basis of the later Jewish and Christian religious calendars.

While the aims of the astronomers were religious, their methods were genuinely scientific, and their computations became instrumental in the invention of horoscopic astrology and the zodiac. At first, astrological omens were interpreted only with reference to the future of the country and its ruler. Horoscopic astrology, however, necessitated some technique whereby celestial phenomena could be related to individuals; that technique was the zodiac. By the 5th century B.C., the zodiacal belt had been divided into twelve zodiacal signs of 30 degrees each, a reformulation inspired by the schematic division of the year into twelve 30-day months (used in the 7th-century B.C. mul.apin text). Although Hellenistic Greeks were once credited with developing horoscopic astrology, the earliest-known Greek horoscope is dated 62 B.C.; the first-known Babylonian example was cast for a child born 29 April, 410 B.C., and at least four other examples are known from the 3d century B.C.

The division of the hour into minutes originated in Babylonia, but the division of the day into hours reflects both Babylonian and Egyptian influences. The Egyptians divided the period from sunrise to sunset into twelve parts, unequal because the length of the "hours" depended on the season of the year. Babylonian days consisted of twelve "double hours," each of which contained sixty "double minutes." Babylonian astronomers ultimately divided the entire day and night into six parts of equal and constant length for computational and observational purposes. Hellenistic astronomers adopted this subdivision of day and night into equal parts, and further divided the twelve double hours into twenty-four units. This division was comparable to that of the Egyptians, except that each unit now had equal length; and so the twenty-four-hour day came into being.

D. Conclusion

The science of astronomy directly influenced astrology, certain mathematical computations, and even the subdivision of the hour and day. Astronomy is Babylonia's most direct legacy and the only branch of ancient science to have survived the collapse of the Roman Empire.

The people of ancient Mesopotamia exhibited little sense of history as it is understood today. Royal annals and king lists served to glorify rulers or to legitimize their rule; year-dates were bureaucratic records, nothing more. Only by linking such "historical" records to more "neutral" events—e.g., the observance and registry of certain planets—is it possible to provide absolute B.C. calendar dates.

The attempt to synchronize specific happenings in diverse areas—especially in Syria-Palestine or Cyprus where finds of written records are quite limited—is a complex and arduous task that demands a high level of competence in diverse fields (archaeology, Assyriology, and astronomy, to mention but a few). Given such a situation, historians of the ANE can only offer what seems to be a plausible reconstruction of events, founded on detailed research into a variety of cultural materials. The resultant historical scenarios are tentative and will have to be readjusted and rewritten as more archaeological and documentary evidence accumulates.

A. BERNARD KNAPP

PREHISTORY OF MESOPOTAMIA

Southwest Asia must necessarily have been traversed by early people moving between Africa, Europe, and the Far East. To date, the earliest archaeological site with evidence of economic and social organization is that at ʿUbeidiyah in the valley of the Jordan river. When the site was occupied (about 800,000 years ago), the region was a humid steppe with a range of large herbivores. In the successive levels of this site were found varying proportions of chipped stone tools such as scrapers, utilized flakes, choppers, and rough bifaces, perhaps indicating variations in foraging activities (Bar-Yosef 1989). Occasional surface finds of such tools in the Tigris-Euphrates region indicate that such sites must also exist there (Smith 1986).

A. The First Mesopotamians: The Paleolithic Foragers

It is only for the last glacial age, less than 100,000 years ago, that there is even a fragmentary archaeological record for foraging peoples in the valleys of the Zagros mountains bordering the

Mesopotamian lowlands. The Middle Paleolithic Mousterian technologies, used until about 40,000 years ago, were based on amorphous stone flakes and produced expedient tools whose shape was apparently dictated by relatively simple handles and repeated resharpening. The people who used these technologies successfully hunted wild goats, cattle, and red deer (Hole and Flannery 1967).

Though the succeeding Upper Paleolithic peoples used a technology based on prismatic blades struck from carefully prepared cores and produced a range of standardized tools, there is no evidence that Upper Paleolithic peoples were more successful as hunters. Though we have bone tools from the earlier Baradostian assemblages (dating about 40,000 to 20,000 years ago) and both these and grinding stones from the later Zarzian assemblages (dating about 20,000 to 11,000 years ago), the Zagros sites have yielded no direct evidence of the more elaborated clothing or increased use of plant foods reported from other areas. Similarly, there is little evidence of social or ritual organization. This dearth is surely a result of the lack of recent fieldwork on Paleolithic sites in Mesopotamia (Smith 1986).

B. The First Villagers and the First Steps Toward Animal Domestication

By the end of the glacial period, the Zagros and Taurus foothills had not only the wild ancestors of goats, sheep, cattle, and pig but also stands of wild barley and einkorn wheat, which grew amidst the oak and pistachio forests as they proliferated in the warmer and more humid early postglacial climate (H. E. Wright 1976). It seems unlikely that the final Paleolithic peoples, those who used the microblade Zarzian technologies, would ignore such resources, but the evidence is slim. Our earliest evidence of extensive plant use is from village sites well south of the foothills along the Middle Euphrates of what is now Syria.

Here, at the sites of Mureybit and Abu Hureya, dating during the 10th millennium B.C. (Moore 1979), were seasonal settlements of perhaps 40 houses, at first oval but later with rectangular rooms, with associated grain-parching ovens and grain-storage facilities. The exploited grain was an einkorn wheat (*Triticum monococcum*), which retained the ability of wild plants to freely disperse seed (Flannery 1973); but the quantities of sickles present on the sites indicate that grain, whether wild or maintained by human cultivation, was systematically harvested. All animal bones discarded in these villages, however, were from hunted wild forms.

The first indications of the human manipulation of wild animals are sheep bones from the Zagros mountain cave of Shanidar. This site is outside of the normal range of sheep, and had been used for millennia by goat hunters. The herding of sheep in no way different from wild sheep (*Ovis aries*) at Shanidar is dated to the 10th millennium B.C. (Perkins 1964). Dating to the mid-9th millennium, and also located in the high Zagros, Ganj Darreh was a small hamlet of rectangular houses with evidence of the herding of goats little different from wild goats (*Capra hircus*) in the form of young goat bones (and even tracks imprinted in mud surfaces) and stocks of dung (Smith 1978).

We do not yet know exactly when and under what conditions the early experiments with grains and animals were combined to form a mutually reinforcing system of plant and animal domestication (Hole 1984), but there is evidence of this about 8500 B.C. (7500 b.c.) at sites such as Ali Kosh in the S Zagros foothills (Flannery 1969) and Cayonu in the Taurus foothills (Braidwood et al. 1981). All of these earliest villages in greater Mesopotamia are marked by small house complexes with a few rooms showing little variation from house to house. This pattern, coupled with the occurrence of burials in which only a few ornaments and personal items are found with some adults, implies that the first farmers had relatively egalitarian social patterns. The occasional occurrence of rare materials such as obsidian, turquoise, sea shells, and cold-hammered native copper in various sites far from their sources indicates that these scattered communitities were connected by reciprocal exchanges of gifts (Renfrew and Dixon 1976).

C. Developed Village Societies of the 8th Millennium B.C.

Whatever the social patterns of the first sedentary villages of the Near East, it has long been clear that by about 8000 B.C. (7000 B.C.), at least in the Levant and Anatolia, settlement systems indicate social differentiation. In contrast to the smaller village communities were larger communities such as Tell es-Sultan (Jericho) in the Jordan valley and Cayonu in the Taurus foothills near the Tigris' headwaters. By the end of the millennium, even larger sites such as ʿAin Ghazal in the hills of Transjordan (Rollefson and Simmons 1987) and Çatal Hüyük in central Anatolia (Mellaart 1967; Todd 1976) had emerged. These

larger settlements have evidence of community labor in public construction; diverse production activities, including indications that some people specialized in craft production; seemingly larger quantities of discarded exotic goods gained in exchange; and much evidence of shrines and social ritual activity. So far as one can tell, however, there was neither differentiation in household wealth beyond what is expected from personal achievement nor indications of the inheritance of social status in the mortuary evidence from these sites.

D. The Impact of Irrigation on the Tigris-Euphrates Floodplain

A transformation in food production is manifest in the middle reaches of the Tigris and Euphrates valleys shortly after 7000 B.C. (6000 B.C.). Dry farming—the cultivation of wheat (*Triticum sp.*), barley (*Hordeum sp.*), and pulses with the naturally available resources of rainfall and soils and the herding of goats (*Capra sp.*), sheep (*Ovis sp.*), and, in favored areas, pigs (*Sus sp.*) and cows (*Bos sp.*)—had been pushed beyond the limits of dependable rainfall, as indicated by the massive storage facilities of sites such as Umm Dabaghiyah in the Jazirah of Iraq, south of the 250-mm isohyet (Kirkbride 1973). In a few settlements east and south of the Jazirah along the middle reaches of the Euphrates and the Tigris, communities of the Samarran culture, we find direct evidence of irrigation farming. Forms of barley and bread wheat, which are better suited to the water-rich situation provided by irrigation, and larger seeded versions of oil-rich flax, thought to be produced only with irrigation, are attested at a number of sites. A small canal has been sectioned near the Samarran and post-Samarran village of Chogha Mami (Oates and Oates 1976). Evidence of the keeping of cows regularly occurs with that of the still-predominant sheep and goats in Samarran faunal assemblages, a practice effective only in the harsh summer heat of Mesopotamia if the cows have shade trees, which must also be irrigated. Cows could have been used to plow soils, though this is not directly attested before 4500 B.C., and they could have been used to increase supplies of milk products, a change suggested by the diversification of large open bowls, but also not directly attested (Flannery 1969). Whether the use of bread wheat (*Triticum aestivum)* and milk products also implies the use of domesticated microorganisms to produce such foods as yogurt, cheeses, and beer is another possibility which has not yet been demonstrated. However, the documented changes alone indicate that food production had been fundamentally transformed, establishing patterns of diet which would predominate until rice, chickens, and water buffalo were introduced around the 1st millennium B.C.

Such changes in production might lead some to predict that the changes would result in the development of managerial roles and social inequality. There were definite changes in community organization, though not as many as one might expect. Most striking is the appearance of larger houses with a central hall, flanking which were a number of domestic apartments, workrooms, and storerooms (Roaf 1985). Certainly, the nuclear-family units of the early villages were being replaced by extended-family units, with a larger work force better suited to the tasks of small-scale irrigation (Flannery 1972). There is, however, no indication that any of these houses was significantly larger or more substantial than others in the community until the post-Samarran period. The one substantial mortuary series, that from Tell es-Sewwan, has almost exclusively the interments of children with marked variations in contributed objects (el-Wailly and Behnam 1965). However, this evidence can be interpreted in several ways. In sum, though the new food-production economy seems to have had an impact on family organization, there is no definite evidence that the egalitarian social patterns of early village society had been replaced by patterns of rank inequality.

Samarran agricultural and community patterns became established in both alluvial S Mesopotamia, an area where only irrigation agriculture and marsh or river collecting are possible, and SW Iran, where dry farming also can be practiced. Whether this was a result of the budding off and migration eastward of communities from the Samarran heartland or the diffusion of production practices to extant communities is still being debated. In contrast, in N Mesopotamia, though the Samarran communities had an impact on patterns of craft and style, there is no evidence of changes from early village patterns of plant and animal use or of small houses, and we have no reason to believe that farming or social organization changed greatly in the north.

E. The First Hierarchical Societies of the Early 6th Millennium B.C.

Societies which symbolized a modest degree of social inequality, with evidence of hierarchy at both the community and regional levels, are widely attested by about 5700 B.C. (5000 B.C.). Two distinct cultural spheres marked by different styles of display ceramics—broadly termed "Halaf" in N Mesopotamia and "Hajji Muhammed" in S Mesopotamia—can be characterized. If the delayed effects of irrigation on management, wealth, and social control were important in the emergence of hierarchy, we would expect such patterns of inequality to be more developed in S Mesopotamia. Though the evidence is poorer for the far south, we can assess this expectation.

Halaf ceramic styles had spread from the Mediterranean to the Diyala valley, at the edge of S Mesopotamia, by the early 6th millennium. Communities with these ceramics are also found in the Taurus and Zagros mountains, even on the shores of Lake Van. In the core region of the N Mesopotamian steppes, Halafian settlement systems are characterized by a few more elaborate centers and many undistinguished villages and camps. The documentation of modern fieldwork by British, Dutch, Iraqi, Soviet, and U.S. teams, when fully published, will enhance our knowledge of these systems. At present, the new work appears to reinforce the conclusions of Watson (1983) that the centers had shrines, differentiated residences, and associated workshops and that some families in these centers made greater use of both exotic materials, such as obsidian, and the products of Halafian specialists, such as finely crafted and decorated ceramics and stone ornaments. In contrast, the villages and camps had only modest residences and storage structures and limited access to display goods. Quantitative data on the by-products of food production have been published primarily for these smaller settlements, and thus it is difficult to assess questions of differential access to foodstuffs, though we do know that there was much variation in the basic patterns of dry farming, with hunting more important in some communities, pig husbandry more important in others, and so on. The evidence of funerals and other mortuary activity in the Halaf heartland remains limited, but at least some burials of adults and children appear to have had burial programs with redundant symbolic markers, suggesting that the more important families in the centers were ascribed their higher rank. Studies of settlement patterns indicate that the settlement clusters with their single level of emergent hierarchy were small (Oates 1980), with populations of 500 or more.

Hajji Muhammed styles mark display ceramics, typically the same larger open bowls important in Halaf assemblages, in several local systems in S Iraq and SW Iran, as well as in littorine settlements along the shores of the Persian Gulf. Though less well known than that of Halaf settlements, there is evidence of centers with both elaborate and modest architecture (Lloyd and Safar 1981) in contrast to smaller villages (Stronach 1961); and there is evidence that the elaborately decorated bowls were made in specialized shops and used more commonly by the occupants of the elaborate central buildings than by villagers (Wright 1981: 323–25). Limited faunal samples indicate that irrigation agriculture was complemented by cattle husbandry, hunting, and fishing, but quantitative information is limited. There is no mortuary information.

In brief, our present knowledge of the early 6th-millennium communities in lowland Mesopotamia suggests that similar social patterns were dependent upon very different patterns of food production. The social requisites for cooperation and the political potential for coercion inherent in irrigation were perhaps minor in the very small canal systems used in S Mesopotamia until after the rise of the first states. What, then, might explain the development of simple regional hierarchies and, perhaps, elementary ascriptive rank? One possibility, discussed years ago by Adams (1966: 48–50), is certainly conformable with such new evidence as is available from both the N and the S spheres. This is the differentiation in the bases of family wealth that arises from the stable productivity created even by small-scale irrigation, as well as from the reproductive potential of cattle herds and the bounty produced by organized marsh exploitation. Some families would thus have a heritable capacity to sustain dependents, give gifts, and acquire wives. Another possibility, regional rather than local in import, are the temptations for raiding raised by the increasing social differences between herders and cultivators that agricultural diversification would encourage (Lees and Bates 1974), and the related need for the formation of alliances between community leaders. This could, in turn, explain the broad distribution of ceramic styles associated with centers. Such

propositions can only be evaluated with data from regional sequences that cover post-Samarran and early Halaf developments of the late 7th millennium, and such data are not yet available.

F. Developed Hierarchical Societies of the 5th Millennium B.C.

By 4600 B.C. (3800 B.C.), the lowlands of the Tigris-Euphrates drainage were occupied by communities participating in two new stylistic traditions, but within both of these spheres there were societies which appear to have differed in hierarchical complexity. Throughout the Tigris and Euphrates valleys, strictly speaking, and extending to the Syrian littoral of the Mediterranean, communities decorated their ceramics, and no doubt other goods, in the bold geometric style termed "ʿUbaid." In the Karun drainage and throughout the S Zagros and adjacent Iranian plateau, communities utilized the finely drafted and more naturalistic late "Susiana" styles. Local styles were used in the N Zagros and adjacent Anatolian and Iranian plateaus.

In SE Mesopotamia—what is now S Iraq and SW Iran—communities participating in both ʿUbaid and Susiana style spheres developed large centers, covering more than 10 hectares, with raised central areas or containing shrines, large residences, and storage facilities; modest residences are found around the raised areas. Surrounding these were smaller village- and hamlet-sized settlements whose access to the main center was mediated by smaller centers. Settlement sizes indicate that up to 12,000 people may have been united under a single center. In at least the latest of the Susiana societies (Wright 1986: 326–31), the evidence indicates that only one tenth of the seals, those with relatively complex designs, were used to authorize the closure of more than half of the stored goods. If the sealing and storage evidence argues for tribute collection by regional authorities, the occurrence of lesser quantities of centrally made fine ceramics at smaller settlements indicates the distribution of prestigious goods to local figures. Both these ceramics and some public architecture share some of the design iconography of the complex seals, probably a manifestation of an ideology of rank (ibid.), which would justify the collection of tribute for the benefit of a segregated elite. The evidence argues for something more than rank differences with local kin groups. These societies may have had emergent nobilities with two and sometimes three levels of control hierarchy. While the same kind of settlement differences occur among later ʿUbaid communities in S Iraq (Wright 1981: 325–26), we lack the evidence of seals and sealings, there is no more complex elite iconography, and the extant mortuary evidence shows little differentiation. It is possible that hierarchy has a different ideational context along the lower Euphrates than on the plains of SW Iran. However, it is also possible that the disturbed conditions that preceded state emergence began earlier in the Mesopotamian heartland, and that formations comparable to those of the late Susiana chiefdoms will be documented when more is known about the earlier ʿUbaid period.

In contrast to these complex social formations in the south, the N plains of Mesopotamia and the valleys of the Zagros show little evidence of large centers and elaborate settlement hierarchies. This may be a result of the masking of the major centers under the debris of later urban centers, since optimal settlement locations at river crossings and the like do not change on the steppes, as they do on the lower alluvium. At present, we have much evidence of small hamlets and villages with undifferentiated housing, some of larger rural residences with storage facilities, some of possible small centers with little differentiation of housing and burials and a single shrine group. If these represent relatively dispersed and simple social formations, how did they come to interact with S Mesopotamians and adopt nearly identical ʿUbaid decorative styles? It would not be surprising if our understanding of N Mesopotamia during the 5th millennium were to radically alter with future regional studies.

G. The First States of the 4th Millennium B.C.

The record of cuneiform texts shows that petty dynasts, sustained in war by armies and in peace by scribes, ruled many of the cities of Mesopotamia by the middle of the 3d millennium B.C. (Nissen 1988: 125–58). However, the archaeological record indicates that societies of similar or even greater scale and complexity existed a millennium before, relatively early in the Uruk or Protoliterate period, even though recording systems rich enough to record the nuances of dynastic control did not yet exist. By about 3500 B.C., the city of Uruk on a branch of the lower Euphrates covered about 250 hectares, implying a population of 25,000 to 50,000 people (Nissen 1988). A regular distribution of large towns, small towns,

and smaller rural settlements covered much of the irrigable southeastern alluvial plain (Adams 1981: 52–93; Johnson 1975; H. T. Wright 1986: 329–335) and the rain-watered NW steppes. Smaller towns were established in foothill valleys and along routes into the Taurus and Zagros mountains (Johnson 1987; H. T. Wright 1987). Throughout the Uruk cultural sphere, similar kinds of plain, standardized craft goods were produced, and buildings were built according to the same architectural standards. Administrators used similar kinds of tokens to record quantities of items (Schmandt-Bessarat 1979) and identical seals to authorize the storage of goods. Few scholars working on this period doubt that there were Uruk "states," that is, societies with specialized and internally differentiated political systems capable of forcing the obedience of citizens. However, changing governmental structures and the extent to which Mesopotamia was unified or divided up into regional or local polities at any point in time are not yet known.

Unfortunately, archaeologists can say very little about the transition from ʿUbaid to Uruk societies. We do have evidence that the early 4th millennium was a period of conflict, population decline, and social movement, which conforms to various models of state development, but the evidence is very fragmentary. The end of the Uruk period, however, has been the object of much recent research (Finkbeiner and Röllig, eds. 1986). It is clear that post-Uruk inhabitants in the heartland of the lower alluvium carried on the technological, economic, and social patterns of Uruk times in a cultural phase termed "Jemdet Nasr," including a development of the protoliterate recording system to express not merely counts and lists but also words in a form of the Sumerian language. However, in S and SW Iran, the inhabitants participated in a different local cultural phase, termed "Banesh," developing a local urban economic and social formation using a very different "Proto-Elamite" writing system, perhaps expressing a form of the Elamite language (Sumner 1974; Alden 1982). Other culturally different groups appear in villages and towns in the N Zagros and the steppes of N Mesopotamia. The mythohistoric texts suggest that this period of cultural divergence was also one of interregional warfare, a prolegomenon to the complex political events of the 3d millennium B.C. (Adams 1966: 80–86, 122–30, 137–43; Nissen 1988: 127–97).

H. T. WRIGHT

MESOPOTAMIA IN THE THIRD MILLENNIUM B.C.

An account of the early history of Mesopotamia must unavoidably begin with a reference, however brief, to the prehistoric age. By the middle of the 4th millennium B.C., the people known as Sumerians (probably indigenous to the area) developed a highly advanced and successful culture in the lower section of the Mesopotamian alluvium. This culture was dubbed "Uruk" after the name of their largest and most important city. Best known for such epoch-making achievements as urbanism and the invention of writing, the Uruk people also succeeded in establishing a network of commercial enclaves in the neighboring territories, including the upper section of the alluvium, the Susiana plain in Khustistan, the Diyala region, N Syria, most of Upper Mesopotamia, sections of Anatolia, and perhaps even the Nile Delta (Algaze 1986: 30–86; Postgate 1986; Sürenhagen 1986). The degree of influence these enclaves exercised over the periphery was uneven, ranging from outright colonization, as was clearly the case in the upper section of the alluvium, the Diyala region, and the Susiana, to cooperative ventures with the local population, as may have been the case in Upper Mesopotamia and Anatolia. In terms of its impact, however, this expansion affected the periphery fairly uniformly, greatly accelerating the state-formation processes throughout the whole area.

The Uruk expansion came to an end during the last phase of the Uruk IV period or at the beginning of the Uruk III (= Jemdet Nasr) period, at the very latest (ca. 3100). At that time, the enclave network completely collapsed and the S influence waned in the periphery. Concomitant with this development was the reassertion of indigenous traditions throughout that area and the emergence there of local power structures.

As a result of these momentous changes, there developed, sometime during the Early Dynastic I period (ca. 2900–2750), a completely new power structure on the Mesopotamian alluvium. In this new picture, which was to remain largely unchanged for over a millennium, the Sumerian influence was confined primarily to the lower section of the alluvium—the historic land of Sumer or S Babylonia. The upper section of the alluvium—the land of Akkad or N Babylonia, extending N of Nippur as far as modern Baghdad—became the home of the Semitic Akkadians. Although the Semites (but not necessarily Akkadians) may already have lived in N Babylonia for centuries, coexisting peacefully with the Sumerian settlers, it was probably only in the Early Dynastic (ED) I period that this region, like other peripheral territories impacted by the Uruk expansion, saw the development of a native political and economic system. Significantly, this system was largely independent of and markedly different from the structures existing at that time in S Babylonia. The differences in the organization of the S and N proved very

enduring, and it will not be an exaggeration to say that the subsequent history of Babylonia, down to at least 1500 B.C., was shaped to a large extent by the contrasting nature of the two systems. It is necessary, therefore, to draw at this point a brief sketch of both systems, with an implicit understanding that what is offered is a simplified, ideal model; the real picture involved much shading and overlapping, especially in the middle area of the alluvium where the S and N influences met.

The key characteristic feature of the S system was the institution of city-states. Although it is clear that the origin of the city-state must have been exceedingly ancient, certainly going back to the Uruk period, the lack of pertinent information makes it impossible to tell exactly how this institution came about.

In its classic form, the southern city-state was a clearly demarcated territorial unit, comprising a major city, the state's capital, and the surrounding countryside, with its towns and villages. The city-states bordered contiguously on one another, and there was little, if any, neutral space between them.

According to the official ideology, the city-state was the private property of an extended divine family. The main god, the head of the family, was the de facto proprietor of the whole state. At the same time, he—together with his spouse and children—owned as his exclusive domain the capital city and its surroundings. Junior deities owned smaller domains, centered upon towns and villages.

The divine families of all the city-states were united into one very large extended family, with Enlil, god of Nippur, occupying the position of the *paterfamilias.* Because of his rank, Enlil exercised lordship over the whole S. In this role, he served as an arbitrator in conflicts, especially border disputes, between individual city-states.

The single most important point about the city-state ideology is that the S was viewed as a closed political system, with the assumed existence of permanent, divinely sanctioned borders between the individual city-states. Obviously, this tenet made any form of territorial expansion within the system exceedingly difficult, rendering any notion of unification theoretically unthinkable.

The rule over the city-state was exercised by an official called an *énsi*, whose office combined both secular and religious duties. The *énsi* functioned as an earthly representative of the city-god, with their relationship being comparable to that existing between the steward of an estate and its absentee owner. In theory, the *énsi* was selected by the god from among the whole citizenry of the city-state, and he had to be divinely reappointed each year.

The society was envisaged as a single temple community, with all its members standing in the same subservient relationship toward the god. Class and social distinctions were comparatively unimportant, with the stratification being based on wealth rather than on origin. These features, and the fact that the level of social mobility was surprisingly high, gave the south a distinctly egalitarian character. Very significantly, chattel slavery was virtually unknown.

For its economy, the city-state depended on the decentralized system of self-sufficient temple households, which controlled most of the state's resources, most notably nearly all of its agricultural land. Private ownership of land was insignificant and seems to have been confined to orchards. In fact, the private sector as a whole was weak and poorly developed.

Turning now to the organization of N Babylonia, we note at the outset that until quite recently the growth of civilization in that region was viewed basically as a process of aculturation by which the seminomadic population of the north was brought into the orbit of the superior Sumerian civilization. Hence the view, still common in the literature, of the north as an extension, somewhat belated in its development, of the south. Today, however, owing primarily to the discovery of the Ebla archives, N Babylonia emerges as a phenomenon in its own right, whose development was contemporaneous with and largely independent of that of its S neighbor (Gelb 1981: 52–73). Moreover, it becomes clear that this development was part of a much larger picture which also involved N Syria, the Diyala region, and perhaps even Upper Mesopotamia. This dramatic change of perspective forces us to consider that, as far as its society and economy were concerned, N Babylonia gravitated primarily to the W, and that it was there, rather than in the S, that one should look for the origins of its institutions.

To begin with the question of the N government, the most striking fact is that the N seems never to have developed a system of independent city-states even remotely comparable to that of the S. On the contrary,

there are strong reasons to believe that during the ED II and III periods (ca. 2750–2300) N Babylonia formed, for most of the time, a single territorial state, whose gravity point usually remained at Kish. The qualification "usually" that was just applied to the role of Kish is necessary, for we know that the political landscape of the N involved two other major powers, Mari and Akshak, which actively competed with Kish for the control of N Babylonia. And, if we can trust the testimony of the "Sumerian King List" (henceforth SKL), on at least two occasions first Mari and then Akshak actually achieved ascendancy over Kish (Jacobsen 1939: 103–7).

The reason why the N followed this particular path of development finds explanation in the distinctive character of its kingship, which was strong, authoritarian, and predominantly secular. As such, it sharply contrasted with the S kingship, which, as noted earlier, was generally weak and had an unmistakable religious character.

Although the N kingship may have had its ultimate roots in tribal reality (Moorey 1978: 165), its more immediate source probably was a city-based oligarchy, of the type known from Ebla and Mari. It is characteristic that, while extended families were a conspicuous feature of the N social landscape, tribes were not, thus attesting to the antiquity and strength of urbanism in that region.

As compared with the S society, the N one appears to have been more rigidly stratified. In particular, there is convincing linguistic evidence that the institutions of chattel slavery and villeinage had been part of the N reality long before they appeared in the S.

The contrast with the S continued in the sphere of economy, for there, too, the N displayed some marked differences. Most significant, the temple domain, so characteristic of the S economy, seems to have been of only marginal importance in the N, with the dominant economic institutions there being the palace and the private household. The considerable role of the private sector in the N is in fact striking, and must justly be considered one of the characteristic features of its economy.

The N system just described appears to have become operative sometime during the ED I period. To roughly this time one should also date the founding of the Kishite kingdom. Based on such evidence as the fact that SKL names Kish as the first dynasty after the flood (Jacobsen 1939: 77–85), and on the historical tradition describing the struggles of Uruk with the Kishite kings En-mebaragesi and Agga (Jacobsen 1957: 116–18), one can conclude that Kish exercised considerable influence in the S during the ED II period, and perhaps even during ED IIIb (ca. 2750–2600). The case of the Kishite king Mesilim, who, two or three generations before Ur-Nanshe of Lagash (ca. 2500), arbitrated a territorial dispute between Lagash and Umma (Cooper 1983b: 22), suggests that at times Kish even succeeded in establishing suzerainty over the S.

The immediate effect of this early Kishite domination apparently was that it brought the S into direct contact with N institutions, leading eventually to important systemic changes in the S society. As a result, S institutions, most notably the kingship, became stronger and thus better suited to compete with the N. Moreover, it was probably in response to the Kishite challenge that the concept of S unity acquired its full formulation. Whether or not this concept ever materialized in any formal arrangement, such as a league or an amphictyony (Jacobsen 1957: 106), it provided the S with a considerable measure of balance and internal security, thereby making it more resistant to outside threat.

However, while the short-term result of the N influence was to strengthen the original S structures, its long-term effect was destabilizing, for it familiarized the S with a model of kingship that was too attractive an alternative not to be tried at home. Thus, once the Kishite threat had been checked, there inevitably began attempts in the S at assuming ascendancy over neighboring states. First at Ur, then in Lagash, several rulers made important inroads toward accomplishing that objective. Some of them even assumed the prestigious title of *lugal Kiš,* "king of Kish." Much disputed by scholars (Maeda 1981), this title appears to have been, at least in the S, devoid of geographical connotations; if we are correct, in its S application *lugal Kiš* was a generic term which served to describe a particular form of kingship; namely, the autocratic and hegemonistic form of rule that the southerners associated with the Kishite kingdom.

The attempts at hegemony grew progressively bolder, by the ED IIIb period (ca. 2500–2300) crystallizing in the drive toward unification. By that time, the center of power had shifted to Uruk (under

the Second Dynasty of Uruk), which assumed the ascendancy over Ur and was then able to claim a limited supremacy over the S (Cooper 1983b: 33–34). Such was apparently the intent of the title *lugal kalam-ma*, "king of the land," which was used by the Uruk ruler En-shakushana and, slightly later, by Lugal-zagesi. At the same time, however, these kings were careful to stress that their territorial claims were confined to the states of Uruk and Ur, and that, in that position, they held two separate kingships. This underscoring of the separate character of the kingships of Uruk and Ur is highly significant, for it attests to the enduring strength of the city-state ideology. In this light, Uruk's hegemony could not have amounted to much more than a position of primacy within the existing power picture.

Uruk's rise to supremacy culminated with the reign of Lugal-zagesi (ca. 2325–2300). Stemming, apparently, from Umma, Lugal-zagesi succeeded, either by force or through a dynastic arrangement, in establishing himself at Uruk and Ur (Cooper 1983b: 33–36). He then added Lagash to his possessions and, by securing for himself the recognition of the Nippur priesthood, became the first S ruler to achieve an effective hegemony over the whole S. Despite Lugal-zagesi's claim of having spread his influence all the way to the Mediterranean, his rule hardly extended beyond the strict confines of S Babylonia. It is also unlikely that he ever succeeded in turning his possessions into a uniform, centralized state, or that he even harbored such ambitions. Given the existing ideological constraints, such a step would clearly have been too radical for a southerner to contemplate. Psychologically, however, Lugal-zagesi's achievement constituted a dramatic break with the past and irrevocably changed the course of S history.

As it happened, the person who managed to capitalize on this achievement was, not surprisingly, a northerner. His name was Sargon, and he seems to have hailed from the obscure town of Akkade. If we can trust later semilegendary traditions, Sargon began his career very modestly, serving as a cupbearer at the court of Ur-Zababa, a ruler of Kish (Cooper and Heimpel 1983). Having found himself in control of N Babylonia, which he apparently achieved by deposing Ur-Zababa, Sargon could not have failed to recognize the unique opportunity that the precedent of Lugal-zagesi's state had created in the S. What followed is well known: Sargon marched S and, by defeating the S coalition led by Lugal-zagesi, brought about the unification of Babylonia (ca. 2300).

Momentous as this event had been, its immediate effects for Babylonia, at least in the areas of government and economy, were quite limited. During the reigns of Sargon and his two successors, Rimush and Man-ishtushu, the organization of the south remained virtually unchanged, with the city-states, now turned into provinces, retaining much of their former independence, both political and economic.

Rather than being devoted to administrative and economic reforms, the efforts of the early Sargonic rulers were primarily spent on the task of territorial expansion. The scale of that expansion was staggering, not to be duplicated until the times of the Neo-Assyrian Empire. Already under Sargon, Akkade's possessions included W Iran, N Syria, most of N Mesopotamia, and probably even Cappadocia. The reign of Rimush saw the extension of the Akkadian influence to SE Iran, while the campaigns of Man-ishtushu brought the might of Akkade even farther E, to the coast of Arabia. Though motivated primarily by economic reasons, these exploits had also an unmistakable heroic dimension, which suggests that less materialistic factors may have also been at work (Westenholz 1979: 108). In reading the inscriptions left by Sargon and his successors, one cannot fail to sense the pioneer spirit that accompanied the endeavors of these rulers: their elation over going where no one had gone before, the excitement of discovering the unknown.

Apart from the records of their military exploits and the accounts of their extensive building activities in and outside of Babylonia, information on the first three Sargonic rulers is scarce and mostly of an anecdotal nature. Sargon is credited with a reign of 56 years, but most of it probably belonged to the period before his conquest of S Babylonia. Among his domestic achievements, especially significant was the installation of his daughter En-heduana as the priestess of the moon-god Nanna at Ur (Hallo and Van Dijk 1968: 1–11), a tradition that was to be followed by Babylonian rulers down to Rim-Sin and revived by Nabonidus. The reigns of Sargon's sons, Rimush and Man-ishtushu, are reported to have lasted a total of 24 years. Since Rimush was allegedly the younger of the two, he may have been brought to power by a

palace revolution. Rimush's reign was noted for the repeated uprisings in the S, which he crushed with unusual brutality (Foster 1982b: 47–50), and for his struggles with the E land of Marhashi for the control of Iran (Steinkeller 1982: 256–57). Rimush seems to have perished in another palace revolution, behind which there may have been the hand of his older brother Man-ishtushu. The events of Man-ishtushu's reign are even less well known, his chief claim to fame being the amphibious expedition he sent to the land of Makkan on the coast of Oman.

All in all, the reigns of Sargon and his two sons constituted the formative stage of the Sargonic empire. During that period, the empire acquired its physical shape, but little if any effort was made to turn it into an articulated system. These early Sargonic kings also failed to develop a comprehensive imperial policy. In this, they were largely prevented by the continuing opposition of the S city-states, which had only reluctantly accepted the rule of Akkade, revolting against it at every opportunity.

The task of creating such a policy and of consolidating the empire fell to Naram-Sin, Man-ishtushu's son. Naram-Sin's reign (36[?] years) began on an inauspicious note, for his accession was greeted by a general rebellion (Grayson and Sollberger 1976; Jacobsen 1978–79). The rebellion was originally confined to Kish, but it quickly spread to other N cities and then to the S, eventually enveloping the whole empire. Having fought "nine battles in one year," Naram-Sin, almost miraculously, emerged victorious from that ordeal, defeating the rebels and restoring the empire to its former borders.

It was, without doubt, this experience that convinced him of the pressing need to strengthen the fabric of the empire. This objective, however, was largely dependent on the prior resolution of the S question. Naram-Sin's response to that dilemma, suggested possibly by the Egyptian kingship, was to elevate himself to the divine plane (Al-Fouadi 1976; Farber 1983). By becoming a god, he placed himself above all the Sumerian *énsi*s, thereby providing some justification for the contradictory position of his kingship within the S ideological picture.

It is characteristic that the deification of Naram-Sin was carried out strictly within the framework of the city-state ideology. Since all gods possessed earthly domains, the divine Naram-Sin needed one too. And for Naram-Sin the choice of domain was obvious: he became the god of Akkade, by then the capital of the empire. As we learn from one of his inscriptions, this was accomplished by the unanimous decision of the great gods, in response to the request made by Akkade's population.

All that this solution accomplished, however, was to transfer the problem from the human to the divine level: in the new scheme, it was now the god of Akkade who had become a contradiction, for the importance he assumed far outstripped his standing in the pantheon.

Unavoidably, this put Naram-Sin in direct conflict with the head of the pantheon, Enlil, and his city, Nippur. Although it is most unlikely that Naram-Sin had deliberately challenged the authority of Enlil, as preserved in later tradition (Cooper 1983a), the very rise of Akkade to the status of an imperial capital could not but negatively affect Nippur's fortunes, hence giving rise there to anti-Sargonic feelings. While not presenting an immediate threat, these sentiments grew in strength during the reign of Naram-Sin's successor, eventually contributing to the demise of the Sargonic empire.

But the deification was only one element of Naram-Sin's reforms. Equally momentous was the introduction of a uniform administration for the whole empire. Its basis was an extensive system of provinces which were put under the care of royal appointees. Almost as a rule these were outsiders, either kinsmen of the king or members of his retinue. To strengthen the defenses of the empire, a chain of border garrisons was created, and an efficient system of communications, linking Akkade with all parts of the empire, was put in place. The operation of this new administration was greatly facilitated by the systematization of accounting procedures, with Akkadian replacing Sumerian as the language of government.

In the economic sphere, the greatest innovation of Naram-Sin's reign was the creation of a new category of land, the crown land, which was granted to the military and to other types of royal dependents in exchange for services (Foster 1982a: 109–13). Although this type of holding may have existed in the N even earlier, its appearance in the S was a complete novelty. Another N influence that made itself felt in the S during this period was the rapid spread of private property and of independent economic activity

more generally. Though the S provinces were required to make regular contributions to the central government, there is little evidence of the state's direct involvement in the management of their economies.

During Naram-Sin's reign, the Sargonic empire reached the zenith of its power and influence, becoming a paradigmatic model that was to be emulated by future Mesopotamian rulers. It seemed that the sun would never set on Akkade, its quays overflowing with exotic products and materials, its streets teeming with foreigners. The arts and literature flourished, achieving unprecedented heights of artistic expression.

Under Shar-kali-sharri, Naram-Sin's son and successor, Akkade's fortunes began to decline, and by the time his reign of 25 years was over, the Sargonic empire was reduced to a small territory around the city of Akkade, perhaps extending into the Diyala region. Information on the events of Shar-kali-sharri's reign is exceedingly sketchy. In one of his year-formulas, Shar-kali-sharri claims a victory over the E lands of Elam and Zahara; since the battle was fought at Akshak, near the confluence of the Diyala with the Tigris, this probably was a defensive operation. Other year-formulas mention an expedition against the Amorites in the mountains of Basar (modern Jebel Bishri) and the capture of a Gutian king by the name of Sarlag, in all probability identical with Sarlagab, the 4th Gutian ruler according to SKL (Jacobsen 1939: 118–19). The mention of the Gutians is particularly ominous, since those foreign people were soon to profoundly affect the course of Mesopotamian history. The home of the Gutians was in the Zagros, roughly within the triangle marked by the modern cities of Kermanshah, Al Sulamaniyah, and Kirkuk that comprised the ancient lands of Harshi, Hu'urti, and Karhar. The Gutians themselves made their first appearance in Babylonia during the reign of Shar-kali-sharri or perhaps already under his predecessor, acting, as we learn from economic records, in the roles of mercenaries and seasonal workers. The correspondence of one Ishkun-Dagan, which dates to the time of Shar-kali-sharri, vividly depicts the bands of Gutians roaming the countryside and playing havoc with rural life (Oppenheim 1967: 71–72), and thus offers the earliest evidence of organized Gutian forays into Babylonia.

It appears that following Shar-kali-sharri's death there ensued a period of general anarchy, for at this point SKL asks dramatically: "Who was king? Who was not king?" It then listed four pretenders, with a combined reign of three years (Jacobsen 1939: 112–15). It was probably sometime during that period that the Gutians mounted what the later tradition wants us to believe was a full-scale invasion (more likely, a series of loosely coordinated excursions), succeeding eventually in establishing themselves as a dominant power in Babylonia.

The last nominal rulers of the Akkade dynasty were Dudu and his son Shu-Durul, whose combined reigns lasted 36 years. Although both Dudu and Shu-Durul are documented in historical records, practically nothing is known of their respective reigns. Since the name of the son invokes the river Diyala (ancient Durul), they probably had come from and possibly were in possession of the Diyala region. A dedication to the god Nergal of Apiʾak, made by the father, suggests that their influence may have extended to lower N Babylonia.

Following the Akkade dynasty, SKL lists in succession the Fourth Dynasty of Uruk (30 years) and the Gutian dynasty. It appears virtually certain that these two dynasties were contemporaneous, and that the reigns of the aforementioned Dudu and Shu-Durul likewise belonged to that same period. While the later historical tradition assigns to the Gutian dynasty a century or more, and identifies twenty-one or twenty-three Gutian rulers, modern research has shown that the period between the end of Shar-kali-sharri's reign and the accession of Ur-Namma, to which the Guti "domination" belongs, lasted no longer than 50 years (RLA 3: 713–14). Also to be revised is the traditional view which identifies the Guti as the sole cause of the collapse of the Sargonic empire. While the Guti invasions undoubtedly played a major, perhaps even the decisive role in that development, various other contributory factors, such as the systemic weaknesses of the empire and the pressures exerted by other foreign newcomers, especially the Hurrians and the Amorites, must have been equally important. Such a conclusion is consistent with the surviving archaeological record, which offers no evidence of a widespread destruction in Babylonia, particularly in the S, that could be attributed to the Gutian invasions.

As can be gleaned from the contemporary historical and economic records, the Gutian influence was limited primarily to N Babylonia and perhaps to some sections of the Diyala region. But, since these were precisely the territories where the realm of Dudu and Shu-Durul is to be sought, it is unlikely that even there the Gutian control could have been complete. With the exception of the northernmost states, such as Umma, Adab, and Uru-sagrig, which seem to have recognized some degree of Gutian rule, the south enjoyed full independence. Thus Ur and Uruk were governed by a local dynasty (Fourth Dynasty of Uruk), while Lagash experienced a period of great prosperity under the dynasty of Ur-Bau. This shows that, in the S at least, the result of the Guti invasions was the return to the traditional decentralized pattern, with the concurrent revival of the institution of the city-state.

It was in the S that, some 30 years after Shar-kali-sharri's death, the concept of a united Babylonia was again revived. The impulse came from Uruk, at that time ruled by Utu-hegal (2119–2113), the founder and the sole ruler of the Fifth Dynasty of Uruk. By defeating and taking prisoner a Gutian king named Tiriqan, an accomplishment described in considerable detail in one of Utu-hegal's inscriptions (Römer 1985), Utu-hegal put an effective end to the Gutian presence in the S. This, in turn, enabled him to claim, and probably actually to achieve, a limited hegemony over S Babylonia. In that role Utu-hegal arbitrated a border dispute between Ur and Lagash, settling it in favor of the Lagash ruler, possibly the famous Gudea. During his brief reign (seven years, six months, and fifteen days according to SKL), Utu-hegal also succeeded in putting Ur under his direct rule, installing there his own governor.

Although we can be certain that Utu-hegal had aspired to extend his influence over N Babylonia as well, those plans never materialized. Utu-hegal seems to have been prevented from doing this by the appearance on the scene of another ambitious individual, Puzur-Inshushinak, who, roughly around the time of Utu-hegal's accession, had come to power at Susa. Having consolidated his hold over the Susiana, Puzur-Inshushinak mounted a major campaign in the Zagros, conquering and sacking the lands of Kimash and Hu'urti (Scheil 1913: 7–16). Since these two lands almost certainly formed part of the Gutian homeland, their conquest at the hands of Puzur-Inshushinak could not but profoundly affect the political and military position of the Gutians in Babylonia. One cannot help but suspect that the Zagros conquests of Puzur-Inshushinak stood in some causal relationship with the aforementioned conflict between Utu-hegal and Tiriqan. Although the nature of that relationship and the underlying chronology remain unknown, it is clear that the combined effect of both events was the collapse of the Gutian power in N Babylonia.

The party to profit most directly from this development was Puzur-Inshushinak. As we can gather from the prologue to "Ur-Namma's Code" (Yildiz 1981) and from a recently published Isin inscription of Ur-Namma (Wilcke 1987: 108–11), sometime during the reign of Utu-hegal or shortly thereafter, Puzur-Inshushinak invaded the Diyala region. From there he moved into N Babylonia, capturing several major cities, among them Akshak, Marda, and Kazallu. In this way N Babylonia fell prey to another foreigner, sinking into a period of Elamite occupation or, as the ancient text puts it, "Anshanite slavery."

The task of reunification was continued by Ur-Namma (2112–2095 B.C.), the founder of the Third Dynasty of Ur. Ur-Namma, who possibly was a close relation (either a son or a brother) of Utu-hegal, began his career as Utu-hegal's governor of Ur. Following Utu-hegal's death, Ur-Namma took Uruk, either by force or simply through succession, eventually succeeding in imposing his rule over most of the S, most importantly, over Nippur, the religious capital of Sumer (Hallo 1966: 136–39). The notable exception here was Lagash, the largest and richest of the S city-states, which remained independent under the illustrious rulership of Gudea and his successors, well into the second half of Ur-Namma's reign (Steinkeller 1988b).

Shortly after assuming power and making Ur his capital, Ur-Namma embarked on an ambitious program of economic reconstruction. In an effort to revive the agriculture, Ur-Namma conducted extensive canal work in the area of Ur and farther S. This work improved and expanded the system of waterways, and thus also made possible the restoration of trade contacts with the gulf emporia of Tilmun and Makkan. Massive building projects were then carried out throughout the land, particularly at Ur and Nippur. The largest and most conspicuous of them was the temple complex of Nanna and Ningal at Ur,

with its still-surviving ziggurat or monumental stepped tower. These architectural feats were paralleled by the equally outstanding achievements in the arts and literature. Ur-Namma may have also been responsible for the promulgation of the first "code" of laws, unless, as suggested recently (Kramer 1983; Steinkeller 1987: 21 n. 10), the author of that "code" was actually Shulgi, Ur-Namma's son.

The reign of Ur-Namma was notably peaceful and devoid of expansionist military activity. But this seems to have been due more to necessity than to design, for the simple reason that any attempt at territorial expansion, either toward the N or E, was impossible as long as the Elamites occupied N Babylonia. Eventually, however, Ur-Namma's position became sufficiently strong to enable him to challenge the Elamites (Wilcke 1987: 108–11). The result of that challenge was apparently a complete success: Puzur-Inshushinak had been soundly defeated, the trade routes had been reopened, and N Babylonia was free at last.

In spite of that victory, it remains uncertain whether Ur-Namma did in fact succeed in imposing his rule over N Babylonia. The evidence here is contradictory: on the one hand, we have the cadasters of Ur-Namma granting land rights to various N Babylonian cities, which implies his firm control over that region; on the other hand, there is a total absence of Ur-Namma's inscriptions from N Babylonia. The answer may be that Ur-Namma's success was only temporary, with the N again slipping away from his control, either back to the Elamites or perhaps even to the Gutians, for there are reasons to believe that, late in his reign, Ur-Namma fought the Gutians, perhaps even meeting death in that conflict (Kramer 1967).

While Ur-Namma should rightly be considered the founder of the Ur III state, its true builder was Shulgi, Ur-Namma's son and successor (2094–2047). The beginning of Shulgi's extremely long reign (48 years) seems to have been devoted to the task of reasserting and securing Ur's hold over N Babylonia. This objective was probably accomplished by Shulgi's fifth year as ruler, when he captured Der (modern Badrah), an immensely important strategic point controlling the main route to Elam. With this action any vestiges of Elamite influence that may have remained in the N were finally removed.

Roughly around his seventeenth regnal year, Shulgi launched a massive program of political, administrative, and economic reforms, which transformed Babylonia into a highly centralized bureaucratic state (Steinkeller 1987). Those reforms were carried out within a surprisingly short period of time, thus suggesting the existence of a single grand master plan, whose author, we have all reason to believe, was Shulgi himself.

One of Shulgi's first tasks was the creation of a unified administrative system for both the S and the N. This resulted in the division of Babylonia into over twenty provinces, which, in terms of their number and territorial extent, corresponded very closely to the former city-states. The provinces were administered by governors (*énsi*), who were royal appointees and could in theory be removed from office or transferred to other posts at the king's pleasure. In practice, however, the office of the governor tended to be hereditary, especially in the latter part of the period. As a rule, the governors were selected from among the local population, in an effort to placate the local elites and to win their support for the concept of a unified Babylonia.

Apart from the governor, each province also had a district military commander, or general (*šagina*). Unlike the governors, the generals were predominantly outsiders, very often foreigners, who earned their positions through their service to the king. Many of them were related to the royal family, either by birth or through marriage.

In this dual mode of administration, the office of the general was clearly intended to counterbalance the position of the governor and to serve as a check on his powers, a type of institutional arrangement not unknown in the Orient, both in ancient and more recent times.

In the economic sphere, the most important of the Ur III innovations was the reorganization of the system of temple households. While preserving the fiction of divine domains, Shulgi put the temple households under the control of the provincial governors, thereby turning them and all their possessions into the de facto property of the crown. The surplus revenues of temple households, which in the past stayed in the provinces, were now sent to the king's coffers.

Reviving a policy first implemented by Naram-Sin, Shulgi also established throughout Babylonia a fund of royal land, which was distributed as allotments among various categories of royal dependents in exchange for services. This type of holding remained under the exclusive control of the provincial generals and other officials directly subordinate to the king.

Alongside these institutional changes, there came about various ideological transformations, the most momentous of which was the deification of Shulgi. In deifying himself, Shulgi undoubtedly drew on the example of Naram-Sin, but, learning from the latter's experience, he accomplished it in a much more politic and sophisticated way. First of all, in his new divine form he refrained from associating himself with any particular city-state, becoming instead a vague and inoffensive *dingir kalam-ma,* "god of the land," an echo of the pre-Sargonic title *lugal kalam-ma,* "king of the land." Moreover, he cleverly claimed familial links with the divine families of all the S city-states, thereby legitimizing his claim to their individual kingships. As a consequence, the successors of Shulgi were obliged to undergo separate investitures in each of the S capitals.

In contrast to the Sargonic period, whose dominant trend had been the spread of N influences to the S, the Ur III period witnessed a revival of S traditions and a conscious attempt to transplant the institution of the city-state to N Babylonia. This imposition of the S model on the N was clearly meant to create an ideological framework that would permit the king to claim the exclusive control over all the resources of the state, be they temple-owned or private. In that state, the entire population, from the royal family down to the serfs, was conceived of as a single pyramidal body of the king's dependents. Not surprisingly, the economic system thus obtained allowed virtually no room for any independent activity.

The revival of S traditions, apparent in the organization of the Ur III government and economy, manifested itself even more markedly in the cultural sphere. Thus, Sumerian was reinstated as the language of administration, and Babylonia saw an unprecedented flourishing of Sumerian letters. It was in consideration of these, as well as of similar developments in the fields of arts and architecture, that modern scholarship coined the term "Sumerian Renaissance" to describe, not without justification, the character of that period.

About the same time that Shulgi's program of domestic reforms began, the Ur III state entered into a period of rapid territorial expansion, mainly to the E of the Tigris and in SW Iran. The conquered territories, which formed a large belt extending southeastward from the left bank of the Tigris and running parallel to the Zagros range as far as the Persian Gulf, were incorporated into the Ur III state and organized into provinces (Steinkeller 1987: 30–37). These peripheral provinces, closely resembling the Roman *limes,* served primarily a defensive purpose, offering, in the W, a check against the Amorites, and securing, in the E, Ur's access to the Iranian plateau. The periphery was organized very much like the core provinces, with the difference being that all its land and other resources were apparently considered the property of the crown.

It is characteristic that, in marked contrast to the Sargonic dynasty, the Ur administration showed no apparent interest in a westward expansion. But this may have been due, at least partly, to the menacing presence of the Amorites in the Jezireh and along the middle course of the Euphrates.

This notwithstanding, the result of the Ur conquests was a virtual empire; though considerably smaller than the Sargonic one, it was better organized and showed a much higher level of internal cohesion.

Responding to the challenge presented by the possession of this vast and ecologically diversified area, Shulgi instituted a purposeful policy of regional specialization, with each major region concentrating on the production of different staples and goods. Such a policy, in turn, called for the presence of efficient redistributive mechanisms. In the core provinces, that need was met by the so-called *bala* institution, a central redistributive system which imposed on each province, depending on its size and economic capabilities, specific types of contributions and services (Hallo 1960; Steinkeller 1987: 27–30). The collection and redistribution of these contributions was done through the medium of centrally located establishments, the best known among them being Puzrish-Dagan near Nippur, devoted to livestock and animal products. The peripheral provinces were required to make similar contributions, such as the *gún*

ma-da "tax of the (peripheral) territories," which was delivered to the same collecting centers (Steinkeller 1987: 30–36).

The operation of this highly intricate system was facilitated, and indeed made possible, by the creation of an enormous bureaucratic apparatus and by such technical changes as the normalization of accounting procedures and the reorganization of the mensural and calendric systems.

At the head of that bureaucratic edifice stood the chancellor (*sukal-maḫ*), the highest official of the land after the king, who possessed full authority in matters relating to civil administration, the army, foreign relations, and the conduct of law. Under him was a host of governors, generals, and innumerable other officials, a surprising number of whom were relatives of the king. In fact, it is not an exaggeration to say that virtually everyone who mattered in Ur III times (excluding the governors of the core provinces) was in one way or another related to the royal family; and because of this, the Ur III state was truly a family affair, very much like present-day Saudi Arabia with its House of Saud. Quite striking in this connection was the active role in government of the king's wives, sisters, and daughters, the best known example being the queen Abi-simti (Steinkeller 1981; Michałowski 1982).

In its contacts with the outside world the Ur III state retained a strikingly benevolent posture, its rulers displaying remarkably little of what may be called imperial ambition, so characteristic of their Sargonic predecessors. As noted before, their foreign conquests had a limited scope and were primarily motivated by defensive objectives. Foreign relations were regulated by an elaborate system of diplomatic arrangements, which involved dynastic marriages, vassal treaties, and frequent exchanges of ambassadors and goodwill gifts.

The political and economic system just described was put fully in place during Shulgi's reign. The reigns of his three successors—Amar-Sin (9 years), Shu-Sin (9 years), and Ibbi-Sin (24 or 25 years)—saw no substantial changes in that system, merely an effort to preserve it or, more to the truth, to save it from disintegration.

On the surface, the reign of Amar-Sin (2046–2038), Shulgi's son, was a period of peace and great prosperity, though there are indications that cracks were already beginning to appear in Shulgi's brilliant creation. In Babylonia, we can see particularistic aspirations reemerging for the first time, while in the periphery the loyalty of its inhabitants increasingly needed to be reinforced by punitive actions. Beyond the periphery, the vassal states of Ur remained in constant turmoil, seeking full independence. As a solution, these were eventually brought under the direct rule of Ur; but by so doing, the empire, partly against its own will, was drawn deeper and deeper into the foreign territory, only exchanging old enemies for new and more distant ones.

These processes greatly accelerated during the reign of Shu-Sin (2037–2029), Amar-Sin's brother. A major contributory factor was the growing power of the seminomadic Amorites, or Mardu as they were known to the Sumerians (Buccellati 1966; Wilcke 1969–70). Coming from their ancestral home in Syria, the Amorites began arriving in Babylonia during the Sargonic period or perhaps even much earlier. These early arrivals quickly adopted Babylonian ways and were already fully assimilated by the time Ur-Namma founded the Dynasty of Ur. They were followed by other Amorite tribes, which, descending from the amorphous "Land of the Mardu," situated somewhere in the Jezireh, continued to infiltrate Babylonia via the Diyala region and along the lower course of the Tigris, the same traditional route that had been used by their ancestors and probably by the early Akkadians before them. By the time of Shu-Sin, the punitive expeditions that had been periodically sent to the "Land of Mardu" and the system of defensive settlements created by Shulgi apparently proved insufficient to stem their progress, thus necessitating the building of a new line of fortifications, called the "Wall of Mardu," which ran from the Tigris, roughly in the area of Baghdad, deep into the Diyala region.

The main threat facing the empire, however, was in Iran. About that time, the previously disunited Iranian principalities, known collectively as the "Shimashkian lands," rejected their vassal status, forming a loose federation under the leadership of Zabshali (Stolper 1982: 45–54; Steinkeller 1988a). In response, Shu-Sin marched to Zabshali, a distant land in NW Iran, inflicting a defeat on the Shimashkian lands and pacifying them.

But this action had little effect; on the contrary, it probably only contributed to the intensification of unificatory processes in Iran, in turn destabilizing the periphery and demoralizing the core provinces of the Ur III state. During the last year of Shu-Sin's reign, the contributions of the periphery effectively stopped, ceasing completely during the second year of the reign of Ibbi-Sin, Shu-Sin's son and the last ruler of Ur (2028–2004). The loss of the periphery area and its contributions led to the total collapse of the redistributive system. This apparently happened during Ibbi-Sin's fifth year, when the collecting centers were dismantled and their vast officialdom was evacuated to the safety of Ur.

Even more ominously, in the Babylonian heartland the provinces of Umma and Lagash slipped away from the control of Ur (in the fifth and sixth years respectively, of Ibbi-Sin's reign), depriving the Ur III state of its main grain-producing area, and thereby spelling out disaster for its overspecialized economy.

Ibbi-Sin tried desperately to save the situation. In a last-ditch effort to reassert Ur's control over the periphery, he sent military expeditions against Simurrum in the N and against Huhnuri, the "lock of Anshan," in the E. Recognizing the threat presented by the growing power of the Shimashkian federation as well, he gave his daughter in marriage to the ruler of Zabshali.

Whatever tangible result these actions may have accomplished was nullified by the events taking place in Babylonia (Jacobsen 1953; Wilcke 1974). There, one province after another assumed independence, with their rulers, Ibbi-Sin's former underlings, taking Ibbi-Sin's titles and even claiming divinity. One of them, Ishbi-Erra, established himself in Isin, and when instructed by Ibbi-Sin to purchase grain for the starving capital at any price, he succeeded in obtaining for himself extraordinary powers which made him virtually independent. Not satisfied with this, he went on conquering the neighboring provinces. Once in control of Nippur, he raised claims to the Babylonian kingship, all this time retaining the pretense of being Ibbi-Sin's ally.

Ibbi-Sin was prevented from dealing effectively with Ishbi-Erra by the situation on the E front. By that time the leadership over the Shimashkian federation had passed from Zabshali to Anshan. Having consolidated his power in Iran, the ruler of Anshan, named Kindattu, made diplomatic overtures toward Ishbi-Erra, apparently in the hope of drawing him into an alliance against Ibbi-Sin (Stolper 1982: 47–48).

Although Ishbi-Erra may have lent a sympathetic ear to Kindattu's entreaties, perhaps even encouraging him in his plans, it is unlikely that he joined forces with the Elamites. Rather, he just sat and waited, still pretending to be on Ibbi-Sin's side. Finally, the armies of Kindattu descended on Ur, sacked it, and carried the hapless Ibbi-Sin off to Anshan. Their progress farther N was stopped by Ishbi-Erra, who was joined in that undertaking, as the sign of changing times, by an Amorite coalition. Two years later, Ishbi-Erra succeeded in expelling the Elamites from Ur. By bringing Ur under his control, he finally legitimized his claims to the Babylonian kingship. But Ur was never to be its seat again, that distinction having been conferred on the city of Isin, which was to enjoy it for the next century or so.

HISTORY AND CULTURE OF ASSYRIA

The term Assyria is both a geographical and a political designation. Geographically speaking it is the N part of Mesopotamia. The geographic center of Assyria, commonly called the Assyrian heartland, is actually a triangle formed by the Kurdish mountains to the N, the Tigris river to the W, and the Upper Zab river to the E flowing into the Tigris at the southernmost tip. The four great cities of Assyria—Asshur, Nineveh, Arbela, and Calah—were all within this triangle or very near it. In historical times, the peoples residing in the Assyrian heartland expanded their influence well beyond this central region to include what one might call greater Assyria. The S extreme of this larger territory was the narrowest point between the Tigris and Euphrates rivers, approximately in the region of modern Baghdad. The E limit was the foothills of the Zagros mountains. The N limit was the Kurdish mountains, and the W limit was the Syrian desert. In modern political terms the Assyrian heartland is entirely within the boundaries of the modern republic of Iraq, while greater Assyria expands into the S extreme of Turkey and the E extreme of Syria.

A. Geography

1. Physical Features and Climate. The highest mountains in Assyria are the Kurdish and Zagros mountains, which have a maximum height of 3,600 m. The Assyrian heartland itself consists of gently undulating hills. West of the Tigris is a semidesert area called the Jezirah, stretching as far as the Euphrates river. The Tigris is the main river in Assyria, with its tributaries the Upper and Lower Zabs and the Shatt el-adheim. All of these rivers are swift-flowing and treacherous. Rafts and boats can be used on the Tigris S of Mosul, but even then the trip is quite dangerous.

It has been said that Assyria has one of the most pleasant climates in the world. The summers are warm but not excessively hot, the winters are cool but not excessively cold, and the springs and autumns are long and moderate. In contrast to Babylonia, rainfall in Assyria is regular and sufficient to produce luxuriant vegetation. In fact the E–W line separating the N area of regular rainfall from the S area of sporadic rainfall lies just S of the city of Asshur. There is evidence of a microclimatic change about 1200 B.C. in the central part of the Fertile Crescent, including Assyria; for some reason rainfall was reduced for several years, causing poorer crops and famine with severe economic and political results. It is also evident that extensive soil erosion took place over several millennia because of the cutting down of timber for burning and building. It is probable that in the 2d millennium B.C. there were still large forests teeming with vegetation and wild animals, and that in general the soil was richer and more productive than it is now.

2. Natural Resources, Agriculture, and Animal Husbandry. The major natural resources of Assyria were soil and water, which supported agriculture and animal husbandry. It was possible for people to live almost anywhere in Assyria, thanks to the regular rainfall, and it was not necessary for them to cluster along the waterways as they did in Babylonia. Thus, in the historic period, much of the Assyrian heartland was populated by people carrying on agriculture and animal husbandry, and this soon spread to large parts of the Jezirah as the population of Assyria grew. The rivers produced abundant fish, while grape vines

grew on the hillsides. Mosul marble, a relatively soft stone, was quarried for building and monumental sculptures, but the main building materials were clay bricks and bitumen found on the Euphrates in the vicinity of the modern city of Hit. There were and still are abundant salt flats in the Jezirah.

The bases of Assyrian economy were agriculture and animal husbandry. The two types of economy existed in a symbiotic relationship, with part of the land being used for pasture while the remainder was used for crop production. Barley was the staple grain, although other grains such as wheat were also grown. The barley was used to make bread and beer, while wine was produced from grapes. Sesame oil was used to flavor the bread. Green vegetables were not common, but spices such as mustard were known; and of course there was salt. The most popular vegetables were onions, garlic, and leeks. Fruits such as apples, grapes, and nuts were a normal part of the diet.

The most common animals bred were sheep and goats, which provided the material for textiles. Goat's milk was very popular and was used both for the milk itself and for cheesemaking. Pigs, cows, and various fowls such as ducks and chickens were commonly raised. None of these animals were slaughtered on a regular basis for their meat, the eating of meat being reserved for festive occasions. Oxen were used as draft animals, and donkeys and mules were used for transporting goods. The breeding of horses became common only in the middle of the 2d millennium, and the horse was a military animal used for drawing chariots and cavalry.

3. Trade, Communication, and Transportation. Trade was a vital part of the Assyrian economy from prehistoric times because of the lack of major natural resources. Moreover, Assyria was geographically located on the crossroads of extensive E–W and N–S trade routes. The city of Asshur was particularly important from this point of view, since it was the obvious crossing point for caravans traveling E–W in the foothills of the Zagros mountains. See ASSHUR (PLACE). In contrast to Babylonia, the rivers of Assyria were not particularly important for transportation since they were so treacherously swift. Thus, caravans and armies were forced to move by land, but on routes parallel to the rivers in order to have ready access to water for themselves and their beasts. Most roads were no doubt in terrible condition, full of ruts and potholes, but there were royal roads used by the king's messengers which were kept in a good state of repair. As to speed of travel, it is known that a caravan or military expedition could travel at the rate of approximately 25 km a day. This rate of course varied considerably, depending upon the terrain. For swift communication, the Assyrians established a system of relay posts where fresh horses were kept at the ready 24 hours a day. In this way the king could keep in touch with the most extreme parts of his empire and relay his orders with dispatch.

B. Sources

1. Written Sources. Assyrian royal inscriptions hold pride of place among the sources for Assyrian history, both because of the vast amount of information they supply and because they were the first cuneiform documents to be deciphered and studied in the 19th century of our era. (See *GARI*; *LAR*). This does not mean, however, that Assyrian royal inscriptions can be used uncritically; quite the contrary. They are royal boasts or propaganda, and the information they present was selected and arranged to enhance the image of the sovereign. The kind of information selected concerned the military, hunting, and building activities of the monarch which were considered to be the proper functions of an Assyrian king. The military narratives came to be lengthier as the centuries passed and also to be arranged more and more in an annalistic format, that is year by year with dates. The successes of the Assyrian armies were recorded in gory detail, but no mention was ever made of an Assyrian defeat or setback, despite the fact that it is well known from other documents that such humiliating events did take place. Thus, a historian using Assyrian royal inscriptions to reconstruct the events of a reign must be very careful and critical.

Fortunately, many letters from and to Assyrian kings have been recovered (see Parpola 1970; 1987). These letters provide considerable detail about what actually went on in the Assyrian court, in the provincial centers, and on the battlefield. Here we read of the king seeking and receiving advice from his senior administrators and debating major decisions. Numerous Assyrian contracts are preserved from almost all periods of Assyrian history (see Postgate, 1976). These consist of various kinds of legal records, such as marriage contracts, divorce contracts, adoption contracts, loans, and conveyances. The

contracts provide considerable insight not only into the legal structure of Assyria but also into the socioeconomic situation. Large numbers of Assyrian administrative records have also been preserved from almost all periods of Assyrian history. These include such documents as lists of food and wine rations for court personnel, offerings given to temples, and wages paid to laborers.

There are other kinds of written sources from Assyria which appear from time to time. For example, there are a few treaties between Assyria and its neighbors, mainly from the 7th century B.C. There are also some prognostic texts from the same century which are records of the king's request for guidance from the diviners on major state decisions. These documents, which are unfortunately very badly preserved, provide some very interesting insights into the decision-making process in the Assyrian palace.

The later indigenous written sources for Assyrian history include a variety of documents written at various times for various reasons. Chief among these are the chronographic texts, king lists, and chronicles about Assyrian history (see TCS 5). We have several of these documents, and they are invaluable in that they provide the chronology and the coherent narrative of the political history of Assyria into which the numerous details from the other sources can be fitted. By far the most important document in this group is the Assyrian King List, which provides the filiation and length of reign of each king going back to the time when the kings were really no more than tribal chieftains. Among Assyrian chronicles, by far the most important is the Synchronistic History. This is a concise narration of relations between Assyria and Babylonia from the first half of the 15th century B.C. to about 800 B.C. Although it provides much useful information, it is unfortunately a very biased document since its purpose was to prove that whenever there had been conflict between Assyria and Babylonia, Babylonia was always in the wrong and lost. Speaking of Babylonia, the Babylonian Chronicle series (see the following article) is an important source of information on Assyrian history from the middle of the 8th century to the fall of the Assyrian empire at the end of the 7th century B.C. Miscellaneous texts such as laws, decrees, and epics also provide information on many facets of Assyrian civilization.

From the point of view of the historian it is unfortunate that beginning about 800 B.C. the Akkadian language, which had been spoken in Assyria since its beginning, was replaced gradually by the Aramaic language. It is unfortunate because while Akkadian was written on imperishable material such as clay and stone, Aramaic was written on papyrus and parchment, materials which are perishable in the Assyrian climate. From a variety of references, it is well known that Aramaic records were kept in Assyria beginning about 800 B.C., and that this recordkeeping in Aramaic became more common as time went on. This documentation is now entirely lost.

Until the middle of the 19th century of our era when cuneiform was deciphered, our only sources of information for Assyrian history were the Bible and classical authors. Since the decipherment of cuneiform documents, these sources now play a very minor role except for a few periods in Neo-Assyrian history when the Bible in particular provides insights unavailable from Assyrian documents. Among the classical sources, the chronology of Claudius Ptolemaeus is of interest in comparison with native Assyrian chronological lists. There are also legends preserved by such authors as Herodotus and Ktesias about Assyrian individuals such as Semiramis and Ahiqar.

2. Archaeological Sources. The ancient Assyrian cities of Nineveh, Calah, and Dur-Sharrukin were the earliest sites to be excavated by 19th-century archaeological pioneers. Among the finds were stone reliefs which lined the entrance and audience chambers of the Assyrian palaces. On these stone slabs were found inscribed cuneiform texts, together with scenes portraying the events narrated in the texts. The floor plans that have been uncovered are not by themselves very informative, but when they are related to the descriptions of buildings in texts one begins to understand the form and function of the various rooms in the palaces and temples. Archaeological excavation continues in Assyria to this day. Excavations are still being carried on at the major cities of Asshur, Calah, and Nineveh, as well as at provincial centers such as those along the Upper Habur river. These expeditions continue to add to our documentation on the history of Assyrian civilization and to fill in gaps.

C. Chronology

The chronology of Mesopotamia is structured on Assyrian chronology; in turn, the chronology of the entire Near East, including Anatolia, Syria-Palestine, and Egypt, is based upon synchronisms with Mesopotamian chronology. The reason for this is the fortunate fact that an astronomical observation provides a fixed date in Assyrian history. This date is the morning of June 15, 763 B.C., when an eclipse of the sun took place. This event is recorded in Assyrian documents which are dated according to a relative Assyrian chronology. Thus, working from the date 763 backward and forward one can establish absolute dates in Assyrian history for the entire 1st millennium. The sources which provide this reliable relative chronology in Assyrian history are the eponym lists and the king lists. The Assyrians named each calendar year after an official called an eponym or *limmu.* Lists of these eponyms were compiled in chronological order, and complete lists of them have been preserved for the entire 1st millennium. Legal documents, and frequently annals, were dated according to these eponyms. Thus, the astronomical observation which provided the absolute date of 763 for one of these eponyms automatically provided absolute dates for the entire list of eponyms and for every event dated by eponyms.

The second half of the 2d millennium B.C. (ca. 1500–1000 B.C.) is a rather different situation with regard to chronology. No complete list of eponym names has been preserved for this period. Thus, although we have the names of numerous eponyms, it is very difficult to establish their relative order; and this in turn makes it very difficult to establish an absolute chronology. The Assyrian King List is of little assistance in solving this problem other than establishing a general relative chronology. Thus, all the dates for the second half of the 2d millennium B.C. in Assyria may be out by approximately a decade either way. For example, a date of 1365 B.C. may in fact be as high as 1375 or as low as 1355 B.C.

Before 1500 B.C. the chronology of Assyria is even more confused. While there are some eponym lists they are very fragmentary, and the list of Assyrian kings is very suspect with regard to the accuracy of the numbers and the sequence of rulers. Synchronisms with Babylonian rulers and events are of little help here, since Babylonian chronology for this period is also very uncertain. What is desperately needed is (1) a fixed astronomical date and (2) a complete list of Assyrian eponyms for the entire period. Therefore, dates in Assyrian history before approximately 1500 B.C. may vary about sixty-four years either way.

In Assyria, the year in which a king died or vacated the throne was regarded as his last full regnal year by native historians. Although the new king took the throne immediately, this was regarded merely as his accession year, and for chronological purposes it was zero. The following year, his first full year on the throne, was recorded as his "first" year. Since the Assyrian year began in the spring (with the month Nisan), it spanned portions of two modern Western years, and to be absolutely precise one should normally cite Assyrian dates according to our calendar as overlapping, for example 759/758 B.C. Modern historians of Assyria, however, generally avoid doing this because it is rather pedantic.

D. Political History

1. Early Cities. The beginnings of Assyria go back to the 3d millennium B.C. and to a few autonomous city-states in the Assyrian heartland. Assyria as a political entity did not exist at this early stage; it was a development of the mid-2d millennium B.C. Instead, one finds by about 2500 B.C. a few independent city-states, chief among which were Asshur, Nineveh, and probably Arbela. Little is known of the history of any of these cities in this period, with the exception of Asshur. Arbela has never been excavated, since the modern city is right on top of the ancient tell. Nineveh, which has been excavated a number of times by various expeditions, has still not yielded very much documentary evidence for this early phase. Nevertheless, later allusions show that it probably was as old as the city of Asshur. For example, Shamshi-Adad I refers to the work of the Old Akkadian king Manishtushu (ca. 2300 B.C.) at Nineveh. This shows that the empire of the Old Akkadian monarchs extended as far N as Nineveh and, more importantly, that Nineveh was already a significant city in the region at that time.

Much more information is available on the history of the city of Asshur during the second half of the 3d millennium B.C. This city, like Nineveh, was also under the control of Manishtushu, since an inscription was found at Asshur of "a servant of" Manishtushu, presumably a governor under the Old Akkadian (OAkk) king. The lack of datable inscribed material before the OAkk period suggests that Asshur remained independent of S political and cultural influence until this time, but once this control was

established it continued, or was at least renewed, in subsequent periods. Thus, we know that Asshur was under the political control of the Ur III dynasty, at least during the reign of Amar-Sin (ca. 2046–2038 B.C.), since we have from Asshur an inscription of that king's governor.

Asshur regained independence sometime after the reign of Amar-Sin. In fact, the rulers of Asshur soon turned the tables on the S culture of Babylonia. One such ruler, Ilushuma, carried out a raid on Babylonia, attacking such major cities as Ur and Nippur. It was simply a plundering expedition, and no attempt was made to establish continuous control. The subsequent rulers of the city Asshur during the remainder of this period concentrated upon construction work in the city itself. In particular, a great deal of effort and materials was devoted to the improvement of the temple of the god Asshur. It was a period of political stability and economic prosperity and a time when the Old Assyrian merchant colony flourished in Cappadocia.

2. Old Assyrian Merchant Colony. Thanks to an accidental discovery of a large archive of cuneiform documents in Anatolia, important information has come to light regarding the economy of the city-state of Asshur during its earliest history (Veenhof 1972; Larsen 1976). The archive was discovered at the modern site of Kültepe, which in ancient times was called Kanish. From this archive it has been learned that the city-state of Asshur had established a number of merchant colonies in Anatolia in order to promote trade. The archive from Kanish consists of thousands of cuneiform tablets, the vast majority of which are concerned with economic matters. There are contracts, administrative documents, and commercial letters. Unfortunately, the counterparts of this correspondence and related economic recording have not been found at Asshur itself. Possibly future discoveries will unveil this documentation. Since virtually no records are preserved from Asshur itself for this time, without the discovery of the archive it would have been assumed that the city was of very minor significance. Now we realize it was of major importance to international trade around the turn of the 2d millennium.

The Kanish colony was concerned mainly with trade in tin, which was an essential element, together with copper, to make bronze. Since this is the period commonly called the "Bronze Age," the significance of this trade need not be emphasized. The colony flourished for about 150 years (ca. 1900–1750 B.C.) and was a real colony, for the merchants were citizens of the city-state of Asshur living temporarily in Anatolia. They mixed with the natives in order to promote trade, but otherwise the colony remained an independent and relatively isolated establishment. The relationship was mutually beneficial, and thus little is heard of conflict between the Anatolian natives and the foreigners from Asshur. A rough modern analogy might be the European trading compounds in the Chinese city of Shanghai in the 19th century of our era.

3. Shamshi-Adad I and His Time. The early cities in the Assyrian heartland, and in particular the city-state of Asshur, were jolted out of their economic prosperity by the Amorite invasion. The Amorites were Semitic-speaking people from the Syro-Arabian desert who penetrated Mesopotamia about the beginning of the 2d millennium B.C. In the first two centuries of this millennium they established a number of dynasties at various city-states in Assyria, as well as in Syria and Babylonia. The invasions, which went on for many generations, caused considerable chaos and much fighting not only between the former inhabitants and the invaders but also between the various city-states.

The Amorite people were divided into many tribes, each led by a powerful chieftain. Among the most powerful was the tribe which produced Shamshi-Adad I (ca. 1813–1781 B.C.), one of the most colorful figures in early Assyrian history. Although clearly of nomadic ancestry, as one learns from scattered references in contemporary and later texts, Shamshi-Adad went to great pains, once he had gained control of the major part of Assyria, to have himself recognized as a legitimate ruler of the city-state of Asshur and in direct descent from the ancient rulers there. Thus, the Assyrian King List incorporates the Amorite ancestors of Shamshi-Adad as early rulers of Asshur, although obviously they were nomadic chieftains living in the desert. As to the early career of Shamshi-Adad himself, it is known that he traveled S into Babylonia, where he spent some time. He was obviously impressed by Babylonian culture and learned a great deal from it, since later in his career he encouraged the Babylonization of Assyrian culture, including Assyrian religion.

Eventually Shamshi-Adad went N up the Tigris, leading a group of warriors, and captured Ekallatum. After three years he then went farther N and attacked and captured the city-state of Asshur. He devoted himself to major construction work at the city. In particular, he concentrated upon the temple of Asshur, a god whom he regarded as equivalent to the Sumero-Babylonian deity Enlil. This is an indication of one of his attempts to encourage Babylonian culture.

If it were not for a chance discovery of a large archive of cuneiform documents at the city-state of Mari (see MARI) on the middle Euphrates, this is about all we would know about Shamshi-Adad I. But what a limited view this would be, for Shamshi-Adad, as we now know from the Mari archives, went on to greater things. When Yahdun-Lim, the king of Mari, was assassinated, possibly with the connivance of Shamshi-Adad's agents, Shamshi-Adad captured Mari and appointed his younger son, Yasmaḫ-Adad, as governor of Mari. At the same time, he appointed his eldest son, Ishme-Dagan, as governor of Ekallatum. Leaving these territories under his sons' control, Shamshi-Adad then proceeded farther W into Syria. He captured the city of Shubat-Enlil and made it his residence and capital. All this produced a N Mesopotamian power unprecedented in strength and extent. In effect, Shamshi-Adad controlled all of the region N of modern Baghdad, W of the upper Tigris, E of the middle Euphrates, and W into central Syria. The governing of such an extensive territory was by no means easy, not only because it had never been under central authority before but also because there were many Amorite tribes wandering about the region. Shamshi-Adad and his two sons had their work cut out for them trying to maintain stability and prosperity.

Despite Shamshi-Adad's own ability, one of his great frustrations was that his younger son, Yasmaḫ-Adad, was quite incapable. Yasmaḫ-Adad hated the battlefield as much as he hated the administrative office. He much preferred to spend his time in the harem, as we learn from letters of Shamshi-Adad rebuking him for not doing his job. Frequently in these letters Shamshi-Adad holds up his eldest son, Ishme-Dagan, as an example to be emulated. In one letter he says, "While your brother is victoriously campaigning you lie about down there among the women." Eventually Shamshi-Adad was forced to appoint advisers to his son who kept him informed separately of what was going on.

Despite the incompetence of Yasmaḫ-Adad, the remaining years of Shamshi-Adad were prosperous and relatively stable. When he died, however, about 1781 B.C., the fortunes of N Mesopotamia changed dramatically. Hammurapi of Babylon marched N and in the space of a few years captured first Mari and then Asshur. See History and Culture of Babylonia below. The history of the Assyrian region after Hammurapi's time is lost in obscurity. Barbarian tribes from the Zagros threatened Asshur and the other city-states, and a new people called the Hurrians invaded from the E and eventually controlled the region.

4. Hurrians and the Kingdom of Mitanni. After the death of Shamshi-Adad I in the 18th century, very little is known about the region of Assyria and about the city-states, such as Asshur and Nineveh, until the 14th century B.C. The reason for this lack of information was the chaos brought about by the mass migration of new peoples into N Mesopotamia. Chief among these were the peoples which founded the kingdom of Mitanni. This kingdom was centered on the Habur river, but in its heyday its influence spread as far W as the Taurus mountains and as far E as Assyria. Indeed, for a time it seems to have controlled the city-states of Nineveh and Asshur.

Unfortunately, very little information is available about the kingdom of Mitanni. Its capital, Washshukanni, has still not been located, and therefore the state archives of the kings of Mitanni have not been discovered. What little we know of this kingdom and its history we glean from foreign sources: Assyrian, Babylonian, Hittite, and Egyptian. As meager as this information is, it does allow us to realize that Mitanni was one of the greatest powers in the ancient world in the middle of the 2d millennium B.C. Its kings dealt as equals with the Egyptian pharaohs and Hittite monarchs.

Since Mitanni was such a great power, and controlled Assyria for a time, it is important to consider this kingdom and its civilization in any discussion of Assyrian history. Indeed, the two ethnic elements evident in the Mitanni kingdom, Hurrians and Indo-Europeans, also had a major impact on the region of Assyria and thus require detailed consideration. The term Indo-European refers basically to a large family of languages, among which are modern English, French, and German. Ancient languages included within

this group are Latin, Greek, Hittite, and Sanskrit. The Hurrian language, on the other hand, has not been identified with any known family of languages. Certainly it is neither Indo-European nor Semitic. The Hurrians themselves entered Mesopotamia by way of the Caucasus from the steppes of central Asia. Evidence of their presence in Mesopotamia, which is supplied from personal names, goes back at least as far as the Third Dynasty of Ur (ca. 2000 B.C.). At this early date, they were in the east Tigris region, and for the next few centuries there is no evidence they spread beyond this area. Toward the middle of the 2d millennium, however, they began to move out, and eventually Hurrians were spread over most of the Fertile Crescent, their presence being evident in Assyria, Syria, Anatolia, and Palestine. In Assyria, the site which provides most of our evidence for a strong Hurrian presence is Nuzi.

As stated above, there are both Indo-European and Hurrian elements in the ethnic makeup of Mitanni, and the major and almost sole source of this information is personal names. The most common personal names of people of Mitanni are in the Hurrian language, but there are some names which are Indo-European. These latter names have one of two characteristics; either they are compounded with the name of an Indo-European deity known in Sanskrit (such as Indra, Vayu, Svar, Soma, etc.) or they are concerned with horses and horse racing, for it is a well-known phenomenon that early Indo-European culture was closely associated with horses and horse breeding. Thus, we find people of Mitanni with names in an Indo-European language with such meanings as "possessing great horses" and "he who had won seven prizes (at the horseraces)." A further piece of evidence for Indo-European presence in Mitanni is a horse-breeding manual, the original of which came from Mitanni but which is known only from a copy found at the Hittite capital of Hattusa. The text is written in the Hittite language, but some of the technical terms are in fact in an Indo-European language which is not Hittite. It is commonly assumed that this is the same language known at Mitanni. A final major piece of evidence is the name of a social class at Mitanni, which is "Maryannu." This is an Indo-European word meaning "young man, warrior." All of this evidence indicates not only that there were Hurrian and Indo-European elements in the kingdom of Mitanni but also that the Hurrian element was by far the most common. It is going too far, however, to conclude from this that the Indo-Europeans were the ruling class at Mitanni. Such a conclusion, which has been put forward by a few scholars, is unjustified by the present state of our evidence. Rather, we weem to be dealing with a society which is essentially Hurrian but which has at some time come into contact with Indo-Europeans and learned from them not only some of their language but also their horse-breeding techniques.

The people of Mitanni are responsible for introducing the use of the horse in warfare into the Fertile Crescent. They used it to draw a light two-wheeled chariot, which immediately gave them the upper hand in warfare. Soon, however, other peoples such as the Hittites and Assyrians learned how to use horses and light two-wheeled chariots in the same manner. But until they did so, Mitanni was one of the most powerful political and military forces in the Fertile Crescent.

5. The Rise of Assyria (ca. 1741–1274 B.C.). a. Eclipse (ca. 1741–1364 B.C.). Until the 14th century B.C., the term "Assyria" could be used only in a geographic sense, but in that period we see the first appearance of a state called Assyria. For a brief time under Shamshi-Adad I in the 18th century B.C., the various small city-states in the heartland of Assyria were linked together under one political authority, but the name Assyria was not applied to this entity. With the death of Shamshi-Adad I and the accession of his son Ishme-Dagan I (ca. 1780–1741), this very fragile unity disintegrated. For some centuries the various city-states continued to be independent of one another, and some at least eventually fell under the political control of the kingdom of Mitanni, as outlined in the previous section.

The eclipse in the history of the region called Assyria lasted for almost four centuries. As incredible as it may seem, virtually no documents and no information about the entire area are available for this long period of time. The only document which gives us any idea of the events of the period is the Assyrian King List, but for the period under discussion the succinct information in this list can only apply to the city-state of Asshur. Nothing is known of events at the other major cities of the region. The Assyrian King List assigns a reign of forty-one years to Ishme-Dagan I (ca. 1780–1741 B.C.), the son and successor of Shamshi-Adad I. After the entry for this king, the list continues with a number of names and eventually

informs us that a new royal line was founded by Adasi, who is referred to as "the son of a nobody" (i.e., he was a usurper). After Adasi and until the end of the period we are calling the eclipse, some contemporary inscriptions begin to appear at the city-state of Asshur, and gradually light is shed upon events there.

b. Ashur-uballiṭ I (ca. 1363–1328 B.C.). The long reign of Ashur-uballiṭ I marks the first appearance of Assyria as a political entity and the beginning of this nation's rise to become one of the great powers in the ANE. This is the period called the Amarna Age and Ashur-uballiṭ I played a significant role in this era, together with the leaders of the Hittites and of other major states in the Fertile Crescent—Egypt, Mitanni, and Babylonia. Ashur-uballiṭ I is the first Assyrian ruler to call himself "king of Assyria," previous rulers at the city-state of Asshur having called themselves only "vice-regent of the god Asshur." Native Assyrian tradition regarded the reign of Ashur-uballiṭ I as the beginning of Assyrian power.

Unfortunately, few details are known about the reign of Ashur-uballiṭ I. It is apparent that he controlled a unified and strong state, that he was recognized internationally as a great ruler, and that he actually controlled the Babylonian state for a significant period of his reign. On the international scene, two letters from Ashur-uballiṭ I were found at the Egyptian capital of Amarna. These letters were addressed to the Egyptian pharaoh, and in them the Assyrian addressed the Egyptian king as an equal and referred to establishing good relations, which obviously included trade and some kind of political cooperation.

Turning to his relations with Babylonia to the S, more details are available. According to our information, the daughter of Ashur-uballiṭ I was married to the Babylonian king, and their son, that is the grandson of Ashur-uballiṭ I, eventually came to rule over Babylonia. It is clear that Ashur-uballiṭ I supported and influenced his grandson on the Babylonian throne. When there was a rebellion in Babylonia, the grandson was killed and replaced by a native usurper. Ashur-uballiṭ I invaded Babylonia to avenge his kin, deposed the usurper, and put a king of his own choice on the Babylonian throne. Although no further information is available, it seems obvious that the Assyrian continued to exercise considerable control over Babylonian affairs during his lifetime.

c. Prelude to Greatness (ca. 1327–1274 B.C.). The stability that Ashur-uballiṭ I had brought about was to be an important foundation upon which his son, Enlil-narari, and his two grandsons, Arik-din-ili and Adad-narari I, could build the beginning of an empire. Altogether, these three reigns cover just over half a century. It was a period during which they struggled to maintain and expand the boundaries of Assyria, but it was also a period during which they finally lost control over Babylonia. In fact, the most significant achievement of the period on the part of Assyria was the expansion to the W into the territory controlled by the kingdom of Mitanni. The successes on this front brought wealth and confidence to the Assyrians and prepared the way for the establishment of a real empire.

Assyria's loss of Babylonia was due to the strength of that nation under its greatest king during the Kassite Period, Kurigalzu. On the other hand, the success of Assyria against Mitanni during this period was achieved, at least in part, because the Hittites were pressing very hard against the kingdom of Mitanni at the opposite end, on the W boundary of Mitanni. It was Adad-narari I who successfully carried out two major campaigns against Mitanni and began the process which would eventually incorporate half of Mitanni as part of the Assyrian empire.

6. The Middle Assyrian Empire 1 (ca. 1273–1207 B.C.). The continuing rise in the fortunes and power of the state of Assyria narrated in the previous section culminated in the establishment of the first Assyrian empire, commonly called the Middle Assyrian Empire to distinguish it from the Late Assyrian or Neo-Assyrian Empire. The Middle Assyrian Empire can be divided chronologically into two periods, and it is the first part which is our concern here. This covers the reigns of two kings, Shalmaneser I (ca. 1273–1244) and Tukulti-Ninurta I (ca. 1243–1207 B.C.). These two were the son and grandson, respectively, of Adad-narari I, and they built upon the stable and influential kingdom which they inherited to make of Assyria one of the most powerful nations in the ANE in the 2d millennium. Fortunately for us, a relatively large amount of documentation is available for the period so that we can see the evolution of this process in some detail.

The military campaigns of Shalmaneser I were conducted to the E, N, and W. He left Babylonia alone. The most important achievement of the campaigns of Shalmaneser I was the complete conquest of E Mitanni and the annexation of this region as an Assyrian territory. The way had already been cleared for these campaigns by Adad-narari I. Nevertheless, Adad-narari I had no real control over the region and the task was a formidable one, made more so because Mitanni was allied with the Hittites and the Arameans against Assyria. In his royal inscriptions, Shalmaneser I boasts that he defeated all three parties, namely the Hittites, the Arameans, and the army of Mitanni, and that ultimately he made E Mitanni a province in the Assyrian empire. Other sources for the period bear out the essential truth of his claims.

In the descriptions of the campaigns by Shalmaneser I, we first encounter the gory details of Assyrian conduct in warfare for which these people would become famous. For example, in a narrative regarding a campaign against the king of Mitanni, Shalmaneser I boasts that after slaughtering tens of thousands of the troops of Mitanni he blinded no less than 14,400 Mitannians whom he had taken alive as prisoners.

Tukulti-Ninurta I, the son and successor of Shalmaneser I, conducted campaigns similar to his father's. In addition, he campaigned against Babylonia and added this area to his kingdom for at least a short period of time. Indeed, the campaign against Babylonia by Tukulti-Ninurta I was the most momentous event of his time. By this period we have a little more information about Babylonia, and it is clear that the state was very weak. It had a tenuous alliance with the Hittites, one which was difficult to maintain because all communications had to pass through Assyria. There are three descriptions of the Babylonian campaign of Tukulti-Ninurta I: one in the royal inscriptions of Tukulti-Ninurta I, a second in a historical epic about Tukulti-Ninurta I, and a third in a fragmentary account in a Babylonian chronicle. By far the most detailed version is found in the historical epic. This poetic narrative is, however, Assyrian and highly biased in favor of Tukulti-Ninurta I. Nevertheless, it is known from other sources that Kashtiliash, the Kassite king of Babylonia, was defeated and slain. The city of Babylon itself was plundered and its walls torn down as punishment. The statue of the god Marduk was carried off to Assyria. Certainly it is a fact that Tukulti-Ninurta I captured Babylon and controlled Babylonia for at least a brief period of time.

The significance of the other campaigns of Tukulti-Ninurta I which led him to the N, NE, and W of Assyria is eclipsed by the great victory over Babylonia. Nevertheless, these other campaigns were of importance. In particular, he was able to fend off an attempt by the Hittites to expand into E Mitanni, a region which had been incorporated into Assyria by Shalmaneser I. The narrative of the defeat of the Hittites by Tukulti-Ninurta I is of special interest to biblical students, since it contains the first recorded example of the deportation of peoples by the Assyrians. Such a procedure would be used much later against the Israelites, as narrated in the Bible. In the case of Tukulti-Ninurta I, a large group of the conquered Hittites were transported from Syria to labor camps in Assyria. By this practice, the Assyrians not only eliminated a troublesome element on their borders but also gained a significant increase in their labor force.

Tukulti-Ninurta I stands out as the most successful and ambitious Assyrian ruler for many centuries, but eventually he was surrounded and assassinated in his own palace. For many years after the assassination the fortunes of Assyria were in decline, and control over her territories slackened. Significantly, Babylonia took the opportunity during this weak period to break away and appoint its own king.

It is necessary to concentrate upon the military achievements of the Assyrian rulers, since these were the most important achievements of this militaristic state. Nevertheless, both Shalmaneser I and Tukulti-Ninurta I devoted much time and energy to building operations in the cities of Asshur and Nineveh. In addition, Tukulti-Ninurta I founded an entirely new city, Kar-Tukulti-Ninurta, which means "Quay of Tukulti-Ninurta." This new city was on the opposite bank of the Tigris from Asshur and a little N of that ancient city. At Kar-Tukulti-Ninurta, the king built a splendid palace, several temples, and a ziggurat, and he cut a channel for a canal to provide water for the gardens and the inhabitants. The entire city was surrounded by a wall. Here, Tukulti-Ninurta I took up residence, and it is in this palace that he was assassinated. In founding an entirely new capital, Tukulti-Ninurta I set an example for a few kings of the Late Assyrian Empire who would similarly found new cities.

As to other cultural activities of the period, there is some information. In particular the conquest of Babylonia, which involved carrying off Babylonian documents and people to Assyria, brought considerable cultural influence from Babylonia into Assyria. This is a process which had begun as early as the reign of Ashur-uballiṭ I, but the act of Tukulti-Ninurta I gave it great impetus. Thus, in literature and religion we now find significant Babylonian influence in Assyria.

7. The Middle Assyrian Empire 2 (ca. 1132–1076 B.C.). The assassination of Tukulti-Ninurta I began a temporary decline in the power of Assyria, a decline which lasted for about three quarters of a century and coincided with the fall of the Kassite dynasty in Babylonia. A major internal factor that contributed to this decline was dissatisfaction with the reign of Tukulti-Ninurta, which culminated in his assassination. External factors were the movements of new peoples into the Fertile Crescent that had a major impact not only upon Assyria but upon other important powers in the area as well. The most significant people involved were an ethnic group called by the Assyrians the Mushku and by classical authors the Phrygians. These people, among others, moved into Anatolia and brought about the collapse of the Hittite empire, and many Hittites fled to Syria for refuge. This brought them into direct conflict with Assyrian interests. With this, Assyrian expansion westward halted, but in fact Assyria now had to retreat in face of the pressure of various peoples on its W frontier. Another group of people who were beginning to apply pressure on Assyria's W flank were the Arameans, about whom more will be said later. During this brief period of decline, Assyria seems to have fallen briefly under Babylonian control.

Eventually Assyria, like a sleeping giant, reawakened under the leadership of Ashur-resha-ishi I. Before describing his reign, however, a major revolution in the art of warfare must be noted. It is about this time that iron became more common. The use of iron for weapons and armor marked a major change in the conduct of warfare. Its significance is at least as great as the introduction of the light horse-drawn chariot by the Indo-Europeans about the middle of the 2d millennium.

The accession of Ashur-resha-ishi I (ca. 1132–1115 B.C.) marks the beginning of the revival of Assyria's fortunes. By far the most important achievement of this king was the restoration of internal stability to the Assyrian state. He regained authority over all of the Assyrian heartland and restored peace and prosperity to the region. He newly defined or recaptured the borders and strengthened them by rebuilding old fortresses or erecting new ones.

It was the good fortune of Tiglath-pileser I (ca. 1114–1076 B.C.) to inherit a kingdom which was now internally stable, prosperous, and secure on its frontiers. See TIGLATH-PILESER (PERSON). Building upon this foundation this king, one of the greatest in Assyrian history, had the ambition and ability to create an empire. Under his leadership Assyria expanded in all possible directions, so that when he died Assyrian influence extended from the Mediterranean sea in the W to Babylon in the SE.

No sooner had Tiglath-pileser I ascended the throne than one of Assyria's most dangerous enemies, the Mushku, attacked. The Assyrian king responded immediately with a counterattack, and thus began many years of Assyrian campaigning to the W against the Mushku. The persistent campaigning not only stopped the Mushku but pushed them back westwards, and Tiglath-pileser I boasts of returning with rich booty from the plundered Mushku. These W campaigns also brought him into contact with the Arameans. Various Aramean tribes had formed coalitions in Syria, and in their own way they were as formidable an enemy to Assyria as the Mushku. A major confrontation between Assyria and the Aramean coalition took place at Jebel Bishri in central Syria. Assyria won the day, and for a time the tide of Aramean incursions was stemmed. The W campaigns of Tiglath-pileser I were by far the most important military activities of his reign, bringing under Assyrian influence all of Syria as far W as the Mediterranean sea and S Anatolia as far as the Taurus range.

Despite the major significance of the W frontier, however, one must not underestimate the importance of Tiglath-pileser I's campaign into Babylonia. The Assyrian and Babylonian armies fought on at least two occasions on the Lower Zab river, and eventually Assyria defeated the Babylonian army. The Assyrians then proceeded S into the Babylonian plain and captured major Babylonian cities, including Babylon and Sippar. No mention is made of S Babylonian cities in our Assyrian sources, however, and therefore we may assume that Tiglath-pileser I did not gain control there.

The benefit of these numerous and successful campaigns was that Assyria now enjoyed great prosperity, and this factor, together with the internal stability, fostered major cultural developments. Significant building operations were undertaken in the various cities of Assyria. In the legal sphere, scribes carefully compiled two sets of laws, one a collection of palace edicts of various kings as far back as Ashur-uballiṭ I and the second a collection of laws mainly concerned with the status of women in the Assyrian state (see *ANET,* 180–88). Babylonian influence is evident in a number of these cultural developments.

8. The Arameans. A discussion of the Arameans provides a suitable bridge between the 2d and 1st millennia in Assyrian history, for these people first appeared toward the end of the 2d millennium and played a major role in the ANE in the 1st millennium. The Arameans make up the third major invasion of the Fertile Crescent by Semitic-speaking nomads, the first being that by the Akkadians and the second that by the Amorites. A fourth invasion by the Arabs would come a little later. In highlighting these four major invasions, one must also note that gradual infiltration by Semitic-speaking nomads from the Syrian desert was going on all the time. Aramaic, the language of the Arameans, eventually became the language of the Assyrians and Babylonians, thus replacing Akkadian. Indeed, Aramaic by the middle of the 1st millennium was the international language of the entire ANE.

The name "Arameans" covers a large number of tribal groups, among which were a people called the Ahlamaeans. In fact, the Ahlamaeans are the earliest attested group of Arameans. The earliest datable reference to Arameans or Ahlamaeans appears in documents of the 14th century B.C. from Egypt (Amarna), Syria (Ugarit), Assyria, and Babylonia. In Amarna, the reference appears in a badly preserved letter, the context of which is not clear. At Ugarit, the name Aramean appears as a tribal identification for an individual, as a personal name, and as a topographical name. In Assyria, there is a statement in a royal inscription of Adad-narari I that his father, Arik-din-ili (ca. 1317–1306 B.C.), conquered the Ahlamaeans. In Babylonia, there is a letter of the late 14th century B.C. from Dur-Kurigalzu in which a tribe called Hirana, known from later sources to be an Aramean tribe, is mentioned.

After the 14th century B.C. references to Ahlamaeans and Arameans become more frequent, and it is evident that they were spreading widely throughout the Fertile Crescent. For example, in the 13th century B.C., a Babylonian king, Kadashman-Enlil II, complained to the Hittite king, Hattushilish III, that he had not been able to correspond with him because of the hostile Arameans. This statement indicates that large groups of Arameans were already well established in Syria along the upper Euphrates, a fact borne out by later historical evidence. It should also be remembered that the Arameans together with the Hittites fought on the side of Mitanni against Shalmaneser I.

It has already been noted that the decline in fortunes of Assyria after the death of Tukulti-Ninurta I was due in part to pressure from the Arameans on the W frontier of Assyria. Later, Ashur-resha-ishi I boasted that he had conquered them in the desert. As noted in the preceding section, Tiglath-pileser I defeated an Aramean coalition at Jebel-Bishri about 1100 B.C. The successor of Tiglath-pileser I, Ashur-bel-kala, recorded in the so-called Broken Obelisk a number of raids on Aramean groups in the 11th century B.C. in Syria. Further evidence from the late 11th century B.C. appears in the Bible, where we read of David's wars against the Aramean kingdom of Damascus. It was in fact the unified kingdom in Palestine established by Saul and continued by David that effectively prevented the Arameans from gaining control over Palestine. Similarly, the Mushku or Phrygians prevented the Arameans from pushing into Anatolia. These two factors then deflected the main thrust of the Aramean incursion so that it went SE into Mesopotamia.

Assyria lost considerable territory to this invading group, and there is some evidence that the Assyrians may have actually had to abandon their major cities for a brief period to the Arameans. The Babylonians suffered at least as much if not more from the Aramean attack. Our fragmentary sources indicate the confusion and chaos caused by the flood of Aramean warlike tribes into the Babylonian plain. In the 1st millennium, Arameans were present in two forms. First, there were a number of Aramean kingdoms in Syria that were the targets of Assyrian campaigns for centuries to come. Second, there were Arameans within Assyria itself, and their numbers gradually increased as time went by. This in turn had a major cultural impact upon Assyrian civilization.

By the 8th century B.C. the Aramaic language was widely written and understood in Assyria. Although only a few Aramaic documents have actually been recovered from this period because of the perishability of papyrus and parchment upon which they were written, there is ample evidence for the widespread use of the Aramaic language. There are Assyrian reliefs on which are portrayed scribes recording booty on scrolls, and these would only be used for the Aramaic language. There are references in Assyrian texts to the "Aramaic Scribe," and there is mention in Akkadian letters of correspondence being carried on in Aramaic between the Assyrian king and his officials. Even the Akkadian language itself was influenced by Aramaic both in the lexicon and in the syntax. By the 7th century B.C., there were senior Assyrian officials bearing Aramaic names and speaking Aramaic. For example, the rabshakeh of Sennacherib at the siege of Jerusalem, as narrated in the Bible, could speak Aramaic as well as Hebrew (2 Kgs 18:19–35). See RABSHAKEH.

The reason for this major Aramaic presence was the increasing number of Arameans living in Assyria from the 9th century on. Many of these were brought by Assyrian kings as captives to work on building projects at Assyrian capitals, the most ambitious of which was that of Ashurnasirpal II at Calah. Even after the fall of Assyria in 612 B.C., Aramaic both as a language and as a culture continued to have a major presence in the Babylonian empire and later in the Persian empire.

9. Assyria Revives (1075–884 B.C.). The title "Assyria Revives" refers to the fact that after the death of Tiglath-pileser I in 1076 B.C. the fortunes and power of Assyria once again declined, and little is heard of this state until the accession of Ashur-dan II in 934 B.C., more than a hundred years later. The reasons for the decline were the lack of systematic administration for the vast territory which Tiglath-pileser I had conquered and the tremendous pressure applied by the Arameans during this period. By the turn of the millennium, Assyria was hard pressed on all fronts: to the S in Babylonia and to the W in Syria were the Arameans; to the N and E were the peoples of the Nairi lands. The situation improved, however, near the beginning of the 1st millennium when three successive kings brought about internal stability and launched military campaigns to regain lost Assyrian territory.

a. Ashur-dan II (934–912 B.C.). From this reign one may date the beginning of the Neo-Assyrian Empire. Ashur-dan II restored internal stability to the Assyrian state, and this enabled him to be the first king for over a century to conduct regular military campaigns abroad. The chief targets of these military expeditions were the Arameans and the recapture of territory which they had wrested from the Assyrians. In the tradition established by the MA monarchs, Ashur-dan II concerned himself with building activity. The city of Asshur had been neglected for over a century, and now the king commissioned construction work on the fortifications surrounding the city and palace.

b. Adad-narari II (911–891 B.C.). Adad-narari II continued the work of his father, Ashur-dan II, and campaigned even more extensively. In addition to pushing back the Arameans, Adad-narari II led expeditions against Babylonia and the Nairi lands. On these campaigns the Assyrian army marched as far W as the Balih river, as far S as the middle Euphrates, as far N as Lake Van, and as far E as the central Zagros mountains. The Arameans continued to be the central concern of the foreign policy of the Assyrians, however, as evidenced by the fact that no fewer than eight campaigns were conducted against them. The offensive against the Arameans was so successful that eventually Adad-narari II was able to lead his troops on an expedition through territory formerly controlled by them without meeting any opposition. On the contrary, as he traveled through the region, the local Aramean chieftains came to him voluntarily with tribute. This campaign was a "show of strength" campaign, a new feature of Assyrian strategy which would be imitated by subsequent kings. Another innovation is that in addition to building Assyrian garrisons on the frontier, Adad-narari also established storage depots at strategic points throughout his newly acquired territory for the supply of his army on campaign. In subsequent reigns, these storage depots would be developed into administrative centers, thus marking the beginning of a provincial system. Adad-narari continued the work of his father in reconstructing the fortifications and buildings at the city of Asshur.

c. Tukulti-Ninurta II (890–884 B.C.). With the reign of Tukulti-Ninurta II, a short period of consolidation began. Tukulti-Ninurta II set himself the task of organizing the nation and empire in a much

more systematic manner. A good illustration of this new policy, and also of the extent of Assyrian control, is provided by a royal inscription of this king in which is described in detail a "show of strength" campaign conducted in approximately the same region in which Adad-narari II had led such a campaign. Like his father, he met no resistance on this campaign; as the Assyrian army approached, local rulers came to it and voluntarily offered provisions and tribute.

An innovation in the reports of Tukulti-Ninurta's campaigns is that reasons are given for these offensive actions, the reasons being reports of hostile acts on the part of the people who became the target of the campaigns. In other words, each offensive action by the Assyrians is justified by the claim that the people of the target area had initiated hostilities.

Tukulti-Ninurta II was more ambitious in his building projects, carrying out construction not only at Asshur but also at Nineveh. Little is known of his work at Nineveh, but at Asshur he continued to improve the fortifications and to restore the temples and palace.

10. The Calah Kings (883–824 B.C.). There are two peaks in the greatness of the Neo-Assyrian Empire, the first being the one which can be called that of the Calah kings, and the second being that of the Sargonid kings (see below). In between these peaks is a low point in Assyrian might. The name "Calah Kings" derives from the new capital created by the first of these kings, Ashurnasirpal II. This king, together with his son and successor, Shalmaneser III, not only created this new capital but also brought under Assyrian control an unprecedented extent of territory and wealth.

a. Ashurnasirpal II (883–859 B.C.). Ashurnasirpal II is the epitome of the ideal Assyrian king. As a fitting symbol of his exceptional might and accomplishments, he made a reality of the principle, which had been developing for some time, that the Assyrian king should campaign every year of his reign. It is known that he led at least fourteen major expeditions during his twenty-five years on the throne, and there were probably several other campaigns for which we have no information as yet.

To the east, in the area of the Upper Diyala in the Zagros mountains, Ashurnasirpal led three campaigns. The main target was a coalition of tribes headed by a certain Nur-Adad. In anticipation of the Assyrian invasion, Nur-Adad walled up a major pass in the mountains, but the Assyrian army broke through this wall and penetrated deep into Nur-Adad's territory, looting and destroying towns as they proceeded. When Ashurnasirpal was satisfied with the extent of his conquests and sated with the booty he had captured, he forced large numbers of conquered peoples to return to Calah to perform forced labor on the building projects there. To affirm his control over the Zagros area, he established a garrison and supply depot deep in the mountains.

In the N, NE, and NW, Ashurnasirpal launched a number of campaigns directed primarily against the lands of Nairu and Urartu. Toward the end of a series of campaigns in these areas which involved considerable looting and destruction, he appointed a governor over the district. The result of the extensive campaigning and of the administrative measures which Ashurnasirpal took in these areas was that for the remainder of his reign the people in these districts remained reasonably submissive and voluntarily sent tribute and workers to perform service in Assyria.

The campaigns stretched over most of the reign of Ashurnasirpal II and were interspersed by at least four campaigns to the W. The first major target was the tribe called Bit-Adini, which was settled in and around the city of that name on the Balih river. The city was captured and plundered and became a jumping-off point for Ashurnasirpal's campaigns further westward. Eventually the Assyrian army proceeded farther, and upon reaching the upper Euphrates received tribute without battle from the king of Carchemish. At a later date the Assyrians crossed the upper Euphrates and received tribute from various states W of the Euphrates. When Ashurnasirpal reached the Mediterranean sea, he performed the ancient ritual of washing his weapons in the water. The Phoenician cities of Tyre, Sidon, Byblos, and Arvad sent presents to the Assyrian conqueror. On his return he brought back cedar timber, for which Lebanon was famous, to use in his building projects at Calah.

The last direction of the campaigns was to the S along the Habur and middle Euphrates rivers. These areas had been carefully controlled by Assyria since the time of Adad-narari II, but the preoccupation of Ashurnasirpal II with campaigns in other directions inspired some peoples on the Habur and middle

Euphrates to renounce vassalship. They were encouraged to do this by Bit-Adini to the W and Babylonia to the S. There were three separate attempts to throw off Assyrian control, and in each case Ashurnasirpal responded with lightning speed. As soon as word reached him of the rebellions, he reversed the march of his troops and fell upon the rebels unexpectedly. The guilty cities were plundered and burnt to the ground, and their leaders were horribly mutilated before being murdered. The result of these atrocities was that Ashurnasirpal had no further trouble along the Habur and middle Euphrates for the rest of his reign.

There were major innovations in administrative matters during this reign. In this period we find the first signs of a provincial administration. Ashurnasirpal II developed the idea of garrisons and supply depots in far-flung regions to the point that these became real administrative centers with governors. Moreover, it is clear from his inscriptions that he expected tribute to be contributed regularly and voluntarily. These are basic items in a properly organized provincial administration.

One of the most significant achievements of Ashurnasirpal was the construction of a new major Assyrian city, Calah. Until Ashurnasirpal chose Calah as his capital, it had only been a small village. At this modest site he erected enormous fortifications, a huge palace, and numerous temples, the chief of which together with its ziggurat was dedicated to the god Ninurta. This enormous task was carried out by the large numbers of captive peoples forced to come to Assyria for the purpose. At the completion of the erection of this magnificent city, Ashurnasirpal staged a banquet to which thousands of dignitaries, both native and foreign, were invited. This was a fitting tribute and conclusion to the reign of one of the mightiest Assyrian kings.

b. Shalmaneser III (858–824 B.C.). Shalmaneser III campaigned and constructed as vigorously and extensively as his father, Ashurnasirpal, and thereby added much territory and glory to Assyria. The most important areas in which he expanded were to the N and W, where his most formidable foes were, respectively, the kingdom of Urartu and the Damascus coalition.

Let us deal with the W campaigns and the Damascus coalition first. The resistance Assyria encountered centered around two coalitions, one in the N which included Carchemish and one in the S with its headquarters at Damascus. Shalmaneser III had considerable success in suppressing the N coalition and established a number of administrative centers in the region. But the S coalition was another story. This "Damascus coalition" included troops from a variety of nations, including Israel under its king Ahab. The major confrontation between the Assyrians and the Damascus coalition took place at the battle of Qarqar on the Orontes in 853 B.C. Unfortunately, the only detailed account we have of the battle is Assyrian, and according to this Shalmaneser won the day. This may have been true; however, the Damascus coalition was by no means destroyed at Qarqar. It continued to resist Assyrian advances in subsequent years. The Assyrians continued to pound away at these S states along the Mediterranean, and eventually the Damascus coalition disintegrated and the Assyrians laid siege to the city of Damascus itself. Shalmaneser was unable, as he tacitly admitted, to take Damascus, but he proceeded farther S and erected a stele on Mt. Carmel to mark the S extent of his expedition. He received tribute from Tyre and Sidon and from Jehu, the king of Israel.

Turning to the N and the kingdom of Urartu, Shalmaneser again campaigned much throughout his reign. The kingdom of Urartu was young and vigorous, and its territory spread like an umbrella over Assyria's N borders from Lake Urmia in the E to the source of the Euphrates in the W. By far the most important and impressive campaign against Urartu was that of 856 B.C., in which the Assyrian army swept right across Urartu from W to E. In the process the Urartian army was defeated, and numerous major cities were captured and destroyed. Urartian encroachment upon Assyrian frontiers was thereby checked, and a good deal of wealth and supplies, particularly horses, was won. In comparison to the W and N campaigns, Shalmaneser's two campaigns into Babylonia were relatively minor and were in response to an appeal for help by the legitimate king of Babylonia against his rebellious brother.

The construction activities of Shalmaneser were much more diversified than his father's, which had been concerned almost exclusively with Calah. At Calah, Shalmaneser completed, renovated, or expanded several buildings begun by his father. Most importantly he erected Fort Shalmaneser, the most extensive

military emplacement ever excavated in W Asia, on the outskirts of Calah. At Asshur he restored the fortifications and some of the temples. He also did some work at Nineveh.

Toward the end of his life Shalmaneser let his control over the state loosen. In particular, he entrusted the leadership of military campaigns to one of his chief officers, Dayyan-Ashur, who was the tartan (field marshal) of the Assyrian army. The king no doubt did this because he was old and perhaps even ill, but the result was that a rebellion broke out when the monarch's control had relaxed; also, he had sons who were anxious to take over the state. Details of the rebellion are unknown, but out of the chaos emerged Shamshi-Adad V, one of his sons, as king. There is no information about the fate of Shalmaneser III; he may have died a natural death, or he may have been assassinated.

11. Assyria and Urartu (823–745 B.C.). For almost a century after the death of Shalmaneser III in 824 B.C., Assyrian history was dominated by the aggressive actions of the kingdom of Urartu, and for a time Urartu replaced Assyria as the dominant power in the area. While Assyria was preoccupied with defending itself against Urartu, peoples on its other frontiers, in particular the Babylonians, took advantage of Assyria's weakened position. Similarly, the Arameans and other peoples in the W renounced Assyrian vassalship and either declared themselves independent or allied themselves to Urartu. This period marks the low point in the history of the Neo-Assyrian Empire.

a. Shamshi-Adad V (823–811 B.C.). Shamshi-Adad V, although the son and successor of Shalmaneser III, was no match for his father. He gained the throne through mysterious circumstances resulting from the long rebellion at the end of the reign of Shalmaneser III, and instability and conflict continued to be characteristics of his reign.

First and foremost, Shamshi-Adad had to concern himself with the N frontier where it appears Urartu had encroached upon Assyrian holdings and was seriously threatening to invade Assyria itself. Shamshi-Adad boasted that he made three campaigns in this region. Despite his claim that these campaigns covered vast territories, the lack of precise details strongly suggest that these were little more than quick raids intended to intimidate Urartian aggression and at the same time to capture horses to build up the strength of the badly weakened Assyrian army. Once the internal troubles of Assyria had been settled and the N frontier reasonably secured, the Assyrian king launched four campaigns into Babylonia. Unfortunately, we have only Assyrian sources for these events, and they inevitably speak of the campaigns as major Assyrian successes. We are told that Shamshi-Adad gained control of all of Babylonia, that he imposed tribute upon the Babylonians, and that he forced upon them an agreement on the boundary between the two states.

Given the troubled nature of the times, it is not surprising that Shamshi-Adad had very little opportunity for building activity. He began the construction of a palace at Nineveh, which his son completed, and at the city of Asshur he did some repairs to the temple of Asshur. It is possible that he built a palace at Calah, but this is uncertain. Shamshi-Adad was buried at Asshur, and his inscribed sarcophagus was recovered by modern excavators.

b. Adad-narari III (810–783 B.C.). The empire which Adad-narari inherited from his father, Shamshi-Adad, was clearly in decline, and his entire reign was devoted to futile attempts to restore the fortunes of Assyria. A fascinating aspect of Adad-narari III's reign is that his mother, Semiramis, became a legendary figure, and tales about her have been preserved in later writings among the Arameans, Greeks, and Persians. Clearly she exercised considerable influence during her son's career, at least at the beginning, and this unusual fact of a woman playing a major role in Assyrian affairs of state caught the imagination of poets and writers.

Since Shamshi-Adad V had neglected the W frontier, it is not surprising that the first part of the reign of his son was concerned with military campaigns in that direction. Some states which had rebelled were once again brought under Assyrian authority, but the most significant achievement was the siege and capture of Damascus. Adad-narari's record of this event includes the statement that among the various cities which now paid tribute to Assyria was Samaria under King Joash.

Adad-narari continued Shamshi-Adad's policy of campaigning into Babylonia. The primary aim of these campaigns seems to have been the subjection of the Chaldeans, a group of West Semitic–speaking

peoples settled in S Babylonia. At the same time, Adad-narari reasserted Assyrian authority over Babylonia, and he brought back captives to perform forced labor and imposed taxes and a boundary agreement upon the Babylonians.

The successes of the campaigns of Adad-narari III were superficial and when we look below the surface we see serious weaknesses. It is known from various steles discovered in scattered parts of Syria that a number of powerful individuals who paid lip service to the Assyrian king actually controlled extensive territories as virtually independent rulers. Adad-narari not only allowed this to occur but actually also encouraged it by granting land and privileges to these men.

Despite the weakness of the times, Adad-narari was able to carry out a number of building projects at Calah, Fort Shalmaneser, and Nineveh. Culturally, the most significant feature of the reign was the increasing influence of Babylonian religion on Assyria. The most important part of this phenomenon was the prominence given to the Babylonian god Nabu in Assyria during Adad-narari III's reign.

c. The Interval (782–745 B.C.). This period, which I have called the "Interval," is the lowest point in the power of Assyria during the time of the Neo-Assyrian Empire. Theoretically, there were three Assyrian kings during this time who had control, but practically the Assyrian empire was now totally fragmented into a number of virtually independent states ruled by former Assyrian governors. It is during this time that the kingdom of Urartu rose to its greatest power, and despite the attempts of the Assyrian kings as well as the independent governors to defend Assyrian territory, Urartu gradually expanded. At the end of the Interval, Urartu had complete control of all of the territory N of the Assyrian heartland stretching from the Iranian plateau in the E to N Syria and the Mediterranean in the W. Assyria was on the verge of extinction when Tiglath-pileser III came to the throne.

12. The Late Assyrian Empire (744–612 B.C.). The Late Assyrian Empire is frequently called the Sargonid Age, because all but the first two kings, Tiglath-pileser III and Shalmaneser V, were descendants of Sargon II. This age is the greatest and final flowering of Assyrian imperial power in the ANE.

a. Tiglath-pileser III (744–727 B.C.). Tiglath-pileser III was probably a usurper but a man of exceptional ability, since he quickly regained all the territory that Assyria had lost in the Interval. As we saw in the preceding section, Assyria was on the verge of losing its very independence to the kingdom of Urartu when Tiglath-pileser III came to the throne. But this king was able not only to drive Urartu out of territories previously claimed by Assyria but also to invade Urartu itself. Since Urartu had previously expanded into Syria in the W, Tiglath-pileser III in particular led a number of campaigns in that region against such states as Arpad. His defeat of these states, many of which had been allied against him, brought voluntary submission and tribute from the more S cities of Damascus, Hamath, Byblos, Tyre, and Samaria. After Tiglath-pileser had invaded Urartu and defeated its army, he was eventually able to concentrate more exclusively on the Mediterranean states. In 734 Tiglath-pileser led his army through Syria and Phoenicia to S Palestine, where he captured Gaza. He created an Assyrian trading center there and made Gaza a vassal of Assyria. This trading center was to facilitate economic communications between Assyria and Egypt. In the following years, various states in Syria and Palestine rebelled against Assyria, but they paid the penalty by being savagely attacked by the Assyrian army and incorporated as vassal states into the Assyrian empire. This was the fate of Damascus and Israel. See also TIGLATH-PILESER.

The other major military concern of Tiglath-pileser was Babylonia. By this time relations between Babylonia and Assyria had become very complicated. In contrast to the attitude of earlier Assyrian kings of the 8th century B.C., Tiglath-pileser's policy toward Babylonia initially had been to allow it to remain independent so long as it was friendly toward Assyria. To fulfill this aim he led a campaign early in his reign into Babylonia to secure the position of the Babylonian king, Nabu-nasir, with whom he seems to have had a treaty. The Assyrians then left Babylonia in peace until there was a rebellion against the son and successor of Nabu-nasir. The rebellion was led by a Chaldean called Mukin-zer, and the suppression of this rebellion caused Tiglath-pileser considerable time and energy. Once he had suppressed the rebellion, Tiglath-pileser, angry about the time he had wasted on this problem, ascended the Babylonian

throne himself. Thus we have for the first time in Neo-Assyrian history a unified state of Assyria and Babylonia under one king. Not all residents of Babylonia were happy with this arrangement, however, and one dissident, a Chaldean called MERODACH-BALADAN, resisted Assyrian control during this and subsequent reigns.

Under Tiglath-pileser, a major reorganization and improvement of the army and the provincial administration was undertaken. Another feature of his reign was the massive deportation of peoples from rebellious areas, a policy which would be pursued regularly in subsequent times. Very few building projects were undertaken by this king, and that is not surprising given the time and energy he devoted to military and administrative measures. The main monument which he left was a new palace at Calah.

b. Shalmaneser V (726–722 B.C.) and Sargon II (721–705 B.C.). The reign of SHALMANESER V was very short and would hardly merit any mention except for the fact that it was almost certainly this king who conquered Samaria. Modern historians have debated for years whether Shalmaneser V or Sargon II actually achieved this, but the evidence is strongly in favor of Shalmaneser V. The exact dates of the siege, which lasted for two to three years according to the Bible, is uncertain, but the fall itself probably took place in 722 B.C. After the capture of Samaria, its inhabitants were transported to Assyria, and this operation took place mainly during the subsequent reign of Sargon II. Shalmaneser's reign was brought to an end by a revolution in which he was killed and a man called Sargon seized the throne by force.

This man, who became Sargon II, was probably not in the direct line of succession; in other words, he was a usurper. Be that as it may, he was a worthy successor of Tiglath-pileser III and emulated that sovereign by intensive campaigning during which he not only regained territory lost during the reign of Shalmaneser V but also added new regions to the empire. Sargon has actually left us an account of the events which led to his accession to the throne. The document, called the Asshur Charter, claims that Shalmaneser V wrongfully imposed corvée on the city of Asshur, with the result that the citizens of Asshur rebelled against him and put Sargon on the throne in his place. Sargon rewarded Asshur by eliminating the wrongful impositions and granting the citizens special privileges. The rebels on the other hand were punished, and 6,300 of them were deported to live in Hamath in Syria.

Assyria's internal difficulties during this time gave her vassal states in the W an excellent opportunity to rebel. Among the rebel states were Damascus, Arpad, and Samaria. As soon as Sargon had stabilized his control in Syria, he led an expedition to the W where he met the combined rebel forces at Qarqar in 720 B.C. Assyria's forces won a victory and then marched S to reconquer Gaza and defeat an Egyptian army on the border of Egypt. Sargon now carried out massive punitive operations, which included the deportation of large numbers of people to Assyria. He also established an Assyrian garrison on the Egyptian frontier. Philistia, in particular, received the attention of the Assyrian monarch, who, after a few years, was able to subdue completely the various Philistine cities, including Ashdod. Within the W territory claimed by Sargon was the island of Cyprus, a new addition to Assyrian influence.

To the NW, Sargon's campaigns were concerned with two major enemies, the Mushku or Phrygians led by Mita (the Midas of classical authors) and the Urartians under Rusa I and later Argisti II. The war between Sargon and Mita resulted in some slight territorial gain for Assyria, but the major achievement was eventual peace on this frontier. The Assyrian offensive against Urartu took place not only on the NW frontier but also on the N and NE frontiers. Frequently other peoples, including the Manneans and the Medes, allied themselves with Urartu against Assyria. To further complicate matters another people, the Cimmerians, were now well established in the area and actively hostile to both the Assyrians and the Urartians. As a result of Sargon's numerous campaigns, Urartian power gradually declined and Assyria gained the upper hand.

On the Babylonian frontier the most serious problem which Sargon had to deal with was Merodach-baladan, a Chaldean. Merodach-baladan seized the Babylonian throne during the confusion surrounding the accession of Sargon II in Assyria and remained there for the first twelve years of Sargon's rule in Assyria (721–710 B.C.). Eventually Sargon was able to dislodge Merodach-baladan in 710, and the

Chaldean fled to hide in Elam. Sargon now entered Babylon in triumph and was crowned king of Babylonia.

Sargon II was one of those few Assyrian kings who built an entirely new capital. In this case the new city was Dur-Sharrukin, "Fort Sargon," just a few kilometers N of Nineveh. The central building of the new metropolis was the palace, but there was also a magnificent temple and ziggurat, and the entire complex was surrounded by an enormous wall. A beautiful park and numerous temples were also part of the city. People were transported from all regions to populate the new city.

c. Sennacherib (704–681 B.C.). With the reign of SENNACHERIB, the son and successor of Sargon II, the apogee of the Neo-Assyrian Empire was readied. Jerusalem, the capital of the kingdom of Judah under Hezekiah, became the focal point of Sennacherib's policy toward the W, for not only did Jerusalem refuse submission to the Assyrians but it also allied itself with the Egyptians and Ethiopians against Sennacherib. There is considerable controversy among modern scholars about the details of the military activities of Sennacherib in Palestine. The central question is whether there was more than one campaign against this region, and the biblical narratives are difficult to reconcile with what Sennacherib says in his royal inscriptions. Despite this controversy, some facts are clear. First, an Assyrian army defeated an allied Egypto-Ethiopian army at a place called Eltekeh in Palestine; this army had come to the aid of Hezekiah. Sennacherib then laid siege to Jerusalem. The city was not taken by force; instead, Hezekiah presented Sennacherib with rich tribute. However, other cities in Judah were not so fortunate. Many of them were captured, looted, and destroyed, chief among these being Lachish. An Ethiopian army moved into Palestine to deal with the Assyrian threat. The two armies—the Ethiopian and the Assyrian—camped opposite one another, and during the night before the battle was to take place, a mysterious event occurred. According to the Bible, the angel of the Lord descended upon the Assyrian camp and slaughtered all of the troops (2 Kgs 18:13–19:36). Varying versions of this strange tale are found in Josephus (*Ant* 10.1.4–5) and Herodotus (2.141), and probably the truth will never be known. The fact is, however, that the Assyrian army on this occasion withdrew in confusion and disgrace.

Turning to Babylonia, we are confronted with one of the most intriguing and enigmatic phenomena in Sennacherib's reign. Babylonian resistance to Assyria centered around the figure of the Chaldean Merodach-baladan, and when he died the resistance was continued by his son. Babylonian opposition to Assyrian rule found support among the Elamites, who provided troops. Merodach-baladan was very ambitious and wily in his endeavors to keep Babylonia independent of Assyria. He gained allies throughout the Assyrian empire, these allies including Hezekiah of Judah (2 Kgs 20:12–19). Sennacherib eventually drove Merodach-baladan out of Babylon and chased him into the S marshes, where Merodach-baladan found refuge by crossing over to the Elamite shore. Sennacherib then turned his attention to Babylon. After fierce fighting Babylon was captured by the Assyrians, and Sennacherib, according to his royal inscriptions, utterly destroyed the city, killing or driving out all of its inhabitants. This act, which took place in 689 B.C., marks the lowest point in Babylonian history for centuries.

A number of architectural and cultural projects are to be dated to this reign. Sennacherib chose Nineveh as his capital and set about a major urban renewal of this ancient city. He constructed a totally new palace complex, complete with park and artificial irrigation. He cut a swath right through the center of the city as a processional way leading from the bridge across the Tigris to his palace, and he erected enormous fortifications with gates and towers around the considerably larger city. His building projects at the city of Asshur were part of his attempt to reform Assyrian religion, the chief purpose being the subordination of the Babylonian god Marduk to the Assyrian god Asshur. This included the erection outside the city walls of a temple of the New Year (Akitu) which was decorated with images and inscriptions depicting the myth of Asshur (not Marduk) conquering the dragon Tiamat. Other evidence of the attempt to downgrade Marduk's position is provided by a fragmentary text which seems to describe a trial in which Marduk is judged to be inferior to Asshur.

The reign of Sennacherib ended in violence. There is much mystery and confusion about the actual events, but from native sources as well as from the Bible it is clear that Sennacherib was assassinated by

one or more of his own sons. Out of the confusion arose Esarhaddon, a younger son of Sennacherib, to become king.

d. Esarhaddon (680–669 B.C.). ESARHADDON, a son of Sennacherib, is by far the most unusual of all Assyrian kings in that he was clearly more interested in cultural, and in particular religious, matters than in military achievements. Despite this predilection, however, it was during his short reign that Assyria first conquered Egypt. The view that Esarhaddon was less interested in military than in cultural matters is borne out by all of the written documents which have come down to us—royal inscriptions, letters, and oracle requests. These oracle requests were a fortunate discovery. They are records of inquiries by the king to the gods of divination, Shamash and Adad, through the diviners for guidance on state decisions.

By far the most important military aim of Esarhaddon was the conquest of Egypt, a goal which no doubt his father Sennacherib had fostered. This endeavor led the Assyrian armies down into Palestine and Phoenicia. While Egypt was penetrated more than once, the only really successful invasion took place in 671 B.C., when the Assyrian and Egyptian armies fought three separate pitched battles. The Assyrians were victorious and conquered the capital, Memphis. Governors were appointed and tribute collected for Assyria. But control over Egypt was very superficial, and on a subsequent campaign, aimed at trying to subdue the Egyptians more effectively, Esarhaddon died en route to Egypt. With the exception of two Phoenician states, Sidon and Tyre, the lands of Palestine and Phoenicia remained reasonably submissive to Assyria during the reign of Esarhaddon. Sidon was effectively subdued, but despite a lengthy siege Tyre was never taken; that achievement remained for Alexander the Great many centuries later.

In contrast to Sennacherib's policy toward Babylonia, Esarhaddon's policy was to appease the Babylonians through a rebuilding program and good government. The central portion of Esarhaddon's building program in Babylonia was the reconstruction of Babylon and in particular the rebuilding of the temple of Marduk.

All of Esarhaddon's building endeavors were quite diverse. At Nineveh he extended the large barracks originally built by his father, Sennacherib and built or restored a park and several temples. At Asshur he did considerable work on the temple of Asshur. Curiously, there are royal inscriptions in which the reconstruction of the Asshur temple at Asshur and of the Marduk temple at Babylon are described side by side. Calah and Arbela also were included in the major reconstruction programs of Esarhaddon.

Another interesting phenomenon was the role of Esarhaddon's mother, Naqi›a (an Aramaic name; her Assyrian name was "Zakutu"). During the reign of her son, Naqi›a exercised unprecedented authority and behaved like a sovereign in many ways, building a palace at Nineveh and even writing royal inscriptions. Reports on cultic and military matters were addressed to her, and a sculptor was commissioned to create a statue of her. At the death of her son, she continued to exercise authority during the early reign of her grandson, Ashurbanipal, before her own death.

Esarhaddon was very concerned over the succession, and he laid careful plans. In 672 B.C., the king assembled representatives from all parts of the empire and made them swear by the gods to respect his wishes with regard to the succession. The nature of the succession was totally new: Ashurbanipal was appointed heir to the throne in Assyria, while Shamash-shuma-ukin, his brother, was appointed heir to the throne in Babylonia. This was the first time the two states had been split between two Assyrian monarchs, and whatever good reasons Esarhaddon had for this decision, inevitably it led to civil war.

e. Ashurbanipal and the Fall of Assyria (668–612 B.C.). Superficially, Assyria seemed to be at the height of its power with the accession of Ashurbanipal, but in actuality decline had already set in. The first real military concern of Ashurbanipal was Egypt. Esarhaddon had begun the penetration of Egypt, but Ashurbanipal had to lead further campaigns there in an attempt to subdue that nation. In 667 B.C. he recaptured Memphis, which had thrown out the Assyrian garrison. The guilty Egyptians were punished and new governors appointed. A few years later, Memphis once again rebelled with the support of the Ethiopians. Ashurbanipal sent a second expedition to Egypt, which not only recaptured Memphis but gained the city of Thebes (ca. 663 B.C.) as well. This was the height of Assyria's penetration of Egypt.

After this time, as Assyria's attention was distracted elsewhere, Egypt fell away from Assyrian control and eventually became independent.

The most serious military problem which Ashurbanipal had to face was Babylonia and its ally Elam. The unusual division of the succession between Assyria and Babylonia with Shamash-shuma-ukin, the brother of Ashurbanipal, being appointed king of Babylonia inevitably led to civil war. This broke out in 652 B.C. and came to an end four years later in 648. The struggle between the two brothers was bitter, and the sufferers were the Babylonians themselves, for most of the conflict took place on Babylonian territory. Despite the help of allies such as the Elamites and Arabs, Shamash-shuma-ukin finally lost. The ultimate disaster was a two-year siege of the city of Babylon during which the citizens suffered terrible hardship and famine.

The fall of Babylon meant that Ashurbanipal could concentrate on Babylon's ally, Elam. He led a series of successful and devastating raids into Elam, looting the countryside and sacking and destroying the cities. Finally, the capital of Elam, Susa, was captured and destroyed. Elam was by this deed effectively annihilated as a nation, but ironically for Assyria and Babylonia this made room for the influx of the Persians, who would eventually conquer Mesopotamia.

The building projects of Ashurbanipal were quite extensive. The untimely death of Esarhaddon had left a number of building enterprises unfinished, and these Ashurbanipal undertook to complete. Nineveh continued to be the place of the chief royal residence, and among the various works Ashurbanipal constructed there was the spectacular N palace, on the mound now called Kuyunjik. This, the last great Assyrian palace, was magnificent and included an extensive terrace, a large park with exotic trees, plants, and animals, and numerous rooms lined with enormous stone reliefs depicting the victories of Ashurbanipal. Many of these reliefs can be seen today in the British Museum in London. Ashurbanipal also carried out work on the barracks at Nineveh, as well as other palaces and temples. In addition, he did some work at Asshur, Arbela, and Calah and took upon himself the responsibility of finishing Esarhaddon's restoration program at Babylon.

The favorite recreation of an Assyrian king was hunting, and much information is available about the hunting activities of Ashurbanipal, both in written sources and in stone reliefs. In these, we find that the lion was the favorite prey of the king. The Assyrian hunted lions both in their habitats along the Balih river in Syria and in the marshes to the S of Babylonia. In addition, he had lions captured alive and brought to a large park in Assyria, where he could hunt them at his leisure. Such a hunt had a religious connotation and at the end of the chase, a ritual was performed, which ended with the king pouring a libation over the lions' corpses, as depicted in stone reliefs.

Ashurbanipal, unlike many of his predecessors, was intensely interested in cultural pursuits. This interest went back to his early education, for he boasted that he was not only taught how to ride horses, drive chariots, throw the spear, and shoot the arrow, but also how to read and write. No other Assyrian king has made this latter boast, and it is generally assumed that most Assyrian kings were illiterate. Ashurbanipal's ability in letters led him to be involved actively in the acquisition of large numbers of cuneiform tablets for his libraries at Nineveh. Much of this library has been recovered in modern times and is our major source for both Assyrian and Babylonian culture. For this, we owe Ashurbanipal a great debt.

The latter part of the reign of Ashurbanipal is shrouded in darkness, and he was succeeded by a series of insignificant kings. Assyria was already in decline by this time. The Babylonians, allied with the Medes, marched into Assyrian territory and eventually penetrated the Assyrian heartland itself. The city of Asshur fell in 614 B.C. Then, the Babylonians and Medes concentrated on the capital, Nineveh, which fell after a three-month siege in 612 B.C. Although a remnant of the Assyrian dynasty continued to attempt to rule from Harran for a few years after this disaster, the Assyrian empire had come to an end.

The reasons for the fall of Assyria are multiple and intertwined. One must date the beginning of the fall to the civil war between Assyria and Babylonia, which broke out in 652 B.C. Assyria never recovered from that conflict, although to all appearances it was the victor. Militarily, it was left weak and a prime target for major enemies on its horizons such as the Cimmerians, Medes, Manneans, and Babylonians.

While these external factors were important reasons for the fall of Assyria, there were internal weaknesses as well. The Assyrian provincial administrative system was still a very primitive one. If chance had allowed the Assyrians more time, perhaps they would have developed a more effective system; the Achaemenid Persians did, and their provincial administrative system was based upon that of the Assyrians. Another internal factor was that Assyria had an absolute monarch. There are advantages and disadvantages to such a political system. As long as the character and personality of the absolute monarch was strong, the state was strong, but as soon as a weak man came to the throne disaster ensued. Ashurbanipal was clearly a very strong character, but he was succeeded by a series of weak individuals who lost control over the state.

In conclusion, one must observe that the "fall of Assyria" was really a transfer of power to the Babylonians, who under Nabopolassar and later Nebuchadnezzar II simply took over the Assyrian empire and continued to run it in the Assyrian manner. The Assyrians as a people continued to live in the region but had become subjects of the Babylonian monarchs. See the following article.

E. The Army

Assyria was a militaristic state, and the entire organization of the nation was centered around the army and warfare. It was this specialized concentration which over the centuries made Assyria the supreme political power in the ANE. Most of what we know of the Assyrian army comes from the Sargonid period; that is, the time of the Late Neo-Assyrian empire. Given the nature of our sources, there are no precise figures on the size of the Assyrian army, although by the Sargonid period it must have numbered several hundreds of thousands of troops. This vast resource of manpower would, however, be called up only for a major campaign. There was a very strict hierarchy in the organization of the army, and this hierarchy very closely paralleled the civil administration. The king was the supreme commander of the army, and immediately under him was the "field marshall" (Akk *tartan*). See TARTAN. The army was divided into units of various sizes and types, but the basic division was the "company" (*kiṣru*), which consisted of 50 men under a "captain" (*rab kiṣri* or *rab ḫanše*). The company, in turn, was broken down into files of 10 men. An officer carried a mace as the symbol of his authority.

The Assyrian army consisted mainly of infantrymen, but there were also smaller, more specialized units of chariotry, cavalry, and engineers. The infantrymen were equipped with spears, bows, slings, daggers, swords, maces, and battle-axes, and they defended themselves with various types of shields. The archers were a specialized group within the infantry. Each archer was equipped with his own quiver of arrows and a bow which was as tall as himself. Archers worked in groups of three, consisting of the archer himself, a spearman to protect him, and another man bearing an enormous shield to protect all three.

The light horse-drawn chariot was first introduced to the Fertile Crescent in the middle of the 2d millennium by the Indo-Europeans. It quickly became an integral part of the Assyrian army. Over the subsequent centuries, its form and efficiency was gradually improved, although the basic type of chariot remained the same, being a two-wheeled, open-backed vehicle drawn by one or more horses. In the 9th century B.C., each vehicle had a driver and an archer. Later, one or two shield bearers were added for the defense of the driver and archer. The bow used by the chariot's archer was much smaller than that used by the infantry archer.

Cavalries were not introduced in the Near East until the 1st millennium, but their introduction added considerable mobility to the Assyrian army. The cavalryman and the charioteer were the elite of the Assyrian army. Each cavalryman was equipped with a small bow and a short sword. In the 9th century B.C., he was usually accompanied by a second mounted man with a shield, who protected the archer and held his horse's reins when he was shooting. After the 9th century, this companion disappeared.

Apart from the standing army, which had been established by Tiglath-pileser III in the late 8th century B.C., all troops were raised under a special institution called the *ilku*, through which they were required to perform military service each year for a limited period of time. But as time went on, the *ilku* proved inadequate to provide the number of troops required, and toward the latter days of the Assyrian empire foreign troops and mercenaries were included in the ranks of the Assyrian army. Assyrians proper were spread around the empire as much as possible, since they were the most loyal, and they constituted the

chariotry and cavalry divisions. The infantry consisted largely of foreigners and mercenaries, the foreigners being Arameans and at least some of the mercenaries being Greeks.

By the Sargonid period there were three basic kinds of soldiers: the permanent professional, the man fulfilling his *ilku* obligation, and the extraordinary soldier called up for a specific campaign. The raising of Assyrian troops was the primary responsibility of the captains, and each captain had a certain number of villages under his control. The captain, in turn, was responsible to the provincial governor.

As for military strategy, there is little evidence of any major coherent system in the 2d millennium B.C. But by the 9th century with the reign of Ashurnasirpal II, the conduct of Assyrian warfare had become a relatively well organized matter. By this time it is clear that there was a grand plan behind the organization of the campaigns. Ashurnasirpal II, Shalmaneser III, and their successors carefully considered long-range policy before launching a series of campaigns. An Assyrian campaign normally started in the spring, as soon as the winter rains had stopped. The core of the army gathered at an appointed starting point, which was not necessarily the capital. Here, the monarch inspected the troops, and the priests and diviners performed the necessary religious rituals. As the army marched off it was preceded by the standards, accompanied by the priests, the diviners, and the king with his personal bodyguard. After these came, in the following order, the chariotry, the cavalry, the infantry, and the impedimenta. Further levies of troops would be picked up at gathering points in the regions of the empire through which the army marched on its way to the frontier. The army carried with it some food supplies when it started its march, and these supplies, mainly barley, were issued in daily rations. Essentially, however, the Assyrian army lived off the land through which it marched. At the successful conclusion of the campaign, the hostages and booty were paraded through the streets of the Assyrian capital. The king was driven in state in his ceremonial chariot, with the conquered princes and nobles plodding in chains behind him.

Assyrian military strategy involved pitched battles, siege warfare, and psychological warfare. In pitched battles, the fighting was usually performed hand to hand by the infantry under cover of the archers, chariotry, and cavalry. Special tactics used on occasion were midnight attacks, damming rivers to flood the enemy camp, and taking a position to cut the enemy off from its water supply. The main goal in all battles was the capture or death of the enemy leader, and the fulfillment of this was the immediate signal of victory.

The Assyrians were particularly adept at siege warfare, and they developed highly specialized siege techniques. These techniques were adopted by later imperial armies, including those of the Romans. But siege warfare was a prolonged and costly business, and even pitched battles consumed much time, manpower, and equipment. Thus, the Assyrians often tried psychological warfare first, using various methods to try and persuade the people of a target area to surrender without resistance. One such method was to surround a city and then send one or more high-ranking Assyrian officers to stand near the walls and harangue the inhabitants. These officers, who spoke the local language, presented arguments to the besieged people about why they should disobey their leaders and open the gates peacefully to the Assyrians. They were promised lenient treatment if they did so. A good example of this tactic is recorded in 2 Kgs 18:16–37, where it is narrated that Sennacherib sent his RABSHAKEH to the walls of Jerusalem to persuade the inhabitants to overthrow Hezekiah and surrender Jerusalem to the Assyrians.

If such psychological tactics failed, Assyria's methods changed dramatically. One or more groups or cities were singled out for a major onslaught, be it pitched battle or siege, and once they were defeated the people were horribly mutilated and slaughtered while their houses and towns were burnt to the ground. Victims were selected, their skins were flayed, and the mutilated corpses were hung on stakes surrounding the city. News of such horrible acts spread quickly throughout the region, and commonly the people submitted to the Assyrian army without further resistance. This "calculated frightfulness" or psychological warfare of the Assyrian army won it a notorious reputation in the Bible and in subsequent histories. Whatever moral judgement one might pronounce on such tactics, the practice was extremely effective; and one must remember that it was selective. Only strategic targets were singled out for this treatment, and there was a specific purpose behind it.

Another tactic which the Assyrians employed, and which also gave them a notorious reputation in ancient history, was the deportation of people. Populations of a given region were uprooted and moved to areas completely foreign to them, where they could no longer cause trouble. The reason for the deportation was to put down rebellious elements within the empire and at the same time to provide labor for major building projects or to develop uncultivated land in order to supply food for the increasing populations of the Assyrian cities.

The Assyrian army was the most successful army developed in the ancient world in pre-Persian times. One flaw did develop in the Assyrian fighting army, however, and that was the increasing use of foreign troops. But given the other major factors which led to the fall of Assyria, as outlined above, this flaw was probably a minor factor in the collapse of the Assyrian empire.

F. Hunting

The favorite recreation of the Assyrian monarch was hunting. This sport had the advantage of keeping him and his entourage in top physical condition during the lull between campaigns. Hunting as an Assyrian sport is attested already in the Middle Assyrian period. By the time of the Neo-Assyrian Empire, it had developed into a national institution similar in many respects to the annual campaign. Notable examples of this were the lion hunts of Ashurbanipal, which even had religious significance. They were attended by great ceremony and watched by the general populace. The gods Ninurta and Palil were the patron deities of the hunt.

The favorite hunting grounds of the Assyrian kings were the forests which once covered Syria between the Habur and upper Euphrates rivers. The larger the animal, the more valued it was as a prey. The Assyrians boasted most about killing or capturing such enormous beasts as elephants, lions, wild bulls, and panthers, which in antiquity were abundant in Syria. Lions were also found in the marshes in S Babylonia, where they were hunted by Ashurbanipal. Besides killing beasts, the Assyrians sometimes captured them alive and brought them back to populate game parks in Assyrian capitals. They hunted animals in a variety of ways. Sometimes they simply chased them with chariots, but at other times they stalked them on foot. It was a common tactic for the king and his entourage to lie in ambush in hollows in the ground while the king's men stampeded the animals toward them by battue. It is sad to record that the uncontrolled slaughter of animals in Syria, together with the uncontrolled cutting of timber in the region, led to the extinction of all large beasts and the destruction of the forests.

G. Libraries

Despite the fact that Assyria was a militaristic state and that the favorite recreation of Assyrian monarchs was hunting, the Assyrians had great respect for culture, and Assyrian libraries were major institutions in antiquity. These libraries were founded in Middle Assyrian times and contained largely Babylonian texts, for the Assyrians recognized that the Babylonians had special talent in literature and learning. The Assyrians themselves had scribes, of course, who occasionally wrote literary works, but such works were scarce and usually showed much Babylonian influence. The very idea of a library was in fact imported into Assyria from Babylonia. The assiduous collection of Babylonian written works probably began with the sack of Babylon by Tukulti-Ninurta I (ca. 1243–1207 B.C.).

In subsequent centuries, when Assyria was powerful, the kings set themselves the task of continuing and expanding such libraries. It eventually became a passion, and a good example of this is the last great Assyrian king, Ashurbanipal. This monarch sent out agents throughout Babylonia to collect, as he states in a letter:

> "… every last tablet in their establishments and all the tablets which are in Ezida. Gather together the entirety of … (a long list of text types) and send them to me … If you see any tablet which I have not mentioned and it is appropriate for my palace … send it to me!"

By the Neo-Assyrian period, libraries existed in all major Assyrian cities and probably in many of the minor cities as well. Nabû was the patron deity of the libraries, since he was the god of the scribal craft. The libraries, at least in the temples, therefore were called Ezidas after the name of Nabû's shrine at Borsippa. The libraries consisted of collections of literary and related works inscribed in cuneiform on clay tablets. The tablets were arranged in several rows on clay shelves, as we know from a Babylonian

library recently discovered at Sippar. Tablets containing catalogues of the works stored in the libraries were maintained, and some of these have been preserved. The library collections consisted of compositions of various types, including what we would call literary, learned, and religious works. In form, these library tablets are easily distinguishable from everyday documents by the extra care with which the scribes wrote them and the better quality of clay used.

As stated earlier, libraries existed in all major Assyrian cities as well as in most minor cities. In practice, archaeologists have so far recovered evidence of such libraries at Asshur, Nineveh, Calah, and the provincial city of Huzirina (= Sultantepe) on the Balih river. By far the most important and largest library so far recovered is that of Ashurbanipal at Nineveh. Because of the unscientific method by which these tablets were recovered, it is impossible to give an accurate estimate of the number of works this library once contained. It must have had at least 1,500 tablets, but how much higher one should push this figure is very uncertain.

While one generally thinks of the Assyrians as crude, military warriors, the Assyrian libraries are an example of the great cultural interest of the Assyrians. It is thanks to the Assyrian libraries that so much is known not only of Assyrian culture but also of Babylonian and Sumerian civilization.

H. The State

Politically, the Assyrian state was an absolute monarchy. The form of the Assyrian state and its kingship was essentially a native development, although there was some influence from Babylonia. By far the most important part of the concept of monarchy in Assyria was the link between the Assyrian king and the god Asshur. The Assyrian king was the representative of the god Asshur on earth and acted under his authority. In contrast to periods in Sumerian and Babylonian history when the king was regarded as a god, the Assyrian king was never deified. He was always regarded as a human being, albeit the supreme human being on earth.

The Assyrian king had absolute control over the state, but there were three checks to his absolute power: religion, legal precedent, and the attitude of his nobility. The monarch, as representative of the god Asshur on earth, had to respect religious practice, and this involved regular participation in religious rituals. With regard to legal precedent, the king had to respect the traditional rights of individuals, such as property ownership, and of groups or institutions, such as tax exemptions granted to privileged cities. As to the third check to his authority, the attitude of the nobility, the Assyrian king's position depended very much upon the support of the upper classes. On the few occasions in Assyrian history when the Assyrian king offended the nobility, the results were disastrous for the king. Apart from these three factors, the king had supreme power in Assyria.

The Assyrian king was the sole legislator in the state, and his "law-making" consisted of making royal decrees. There was not even an assembly in which his decrees might be discussed, although he did seek advice from his chief officials and sanction from the gods by means of omens. In the judicial sphere, the king was the supreme judge in the state, and legal disputes which could not be decided at a lower level eventually came to his attention. The Assyrian king was the commander in chief of the army and frequently led the army in person on campaign. As for religion, as already mentioned he was the representative of the god Asshur on earth. This involved his position as high priest of the god Asshur and required his presence frequently at major state religious festivals. In the economic sphere, in theory the Assyrian monarch owned all of the land in Assyria, and all commercial transactions, both domestic and foreign, were subject to his control and taxation.

In practice, the Assyrian king was isolated in his palace and harem from the Assyrian populace. Our sources allow us only glimpses of court life, but we can piece together from these a fuller picture by analogy with later oriental courts, in particular the Ottoman court at Istanbul, which was an indirect successor of the Assyrian court. A major institution in the Assyrian court was the harem, which consisted of a number of wives, concubines, serving maids, and eunuch guards. There was a strict order of precedence within the harem, with the queen mother at the top. Immediately under her in authority was the chief wife of the reigning king, her status being determined by the fact that she was the first wife to give the king a male offspring. Princes normally spent their early years in the harem. There was much

rivalry and jealousy within the Assyrian harem, and since the heir to the throne spent his early years there, harem plots to overthrow the king were not uncommon.

Male primogeniture was the rule of succession in Assyria. As soon as the eldest son of the king had reached a certain age, he left the harem and was officially appointed crown prince in a special ceremony. At the end of the ceremony, he entered the "House of Succession" (*bīt redūti*). Here, he was surrounded by a court similar to his father's, and he had his own personal bodyguard. In the "House of Succession," he received rigorous training and education as preparation for his eventual succession to the throne. Ashurbanipal gives us some information about this training, which may or may not have been typical. Ashurbanipal says that he learned to ride, to shoot, to read, and to write. At the end of this training, the crown prince was assigned an official position in the Assyrian administration. In the Sargonid period at least, this involved the prince becoming the king's representative at home, with full royal authority while his father was on military exercises. Since nothing is said about the crown prince being trained in administration while in the House of Succession, it is apparent that he learned this skill "on the job."

The Assyrian state was run by a bureaucracy which had a very rigid hierarchy. One might picture the hierarchy as a pyramid with the king at the pinnacle and under him several layers of officials, increasing in number down to the broad base which consisted of the labor force. Over the centuries, the hierarchial structure underwent changes, and numerous anomalies developed which were never fully resolved. The only major systematic reorganization of the administration took place during the reign of Tiglath-pileser III. Assyrian administration was essentially a military structure, since Assyria was a militaristic state. There was usually little if any distinction between military and civil service. Although the chain of command was generally rigidly restricted to the next layer in the administration, the king as absolute monarch had the right to intervene at any level in any affair.

Bureaucratic positions tended to be hereditary in practice, the son learning his father's job by working with him. Thus, we find that certain levels of the bureaucracy tended to be monopolized by a small group of families. Patronage was the rule in Assyria, and no one could get a position without influence.

Scribes were a special part of the Assyrian administrative system. The scribes were an elite group who had graduated from a demanding and lengthy educational system. There were scribes at every level of the bureaucracy, with the vice-chancellor at the top and the numerous lesser skilled scribes at the very bottom, who kept track of the unskilled laborers and their wages. Since the vast majority of Assyrian officials were illiterate, the scribes had considerable influence over the running of state affairs.

Assyrian officials derived their revenue from the resources under their jurisdiction, and the revenue was usually in kind. On occasion, the king would reward an official for special service with expensive clothing, jewelry, tax exemption, or residence for life at the palace. Officials, including scribes, constantly complained that they were underpaid, and the custom of bribery was universal. There is frequent reference in our sources to punishment for inefficiency and corruption, which is an indication that these were rampant. Nevertheless, the Assyrian officers seem to have been a relatively hard-working, conscientious lot, and the king generally set them a very good example in this regard.

For administrative purposes, the Assyrian empire was divided into two major units. The central and most important unit was the land of Asshur itself, the Assyrian heartland. This included the four major cities of Asshur, Arbela, Nineveh, and Calah, together with the surrounding agricultural land. Each of these cities had special privileges, including tax exemptions and military impositions.

Beyond the Assyrian heartland was "greater Assyria." The size and organization of this territory changed over the centuries. When it reached its greatest extent in the Sargonid period, two types of administration were used to control this vast territory. Some parts of the empire were directly controlled by the king through provincial governors, while other parts of the empire were controlled by treaty arrangements between the Assyrian king and the local ruler. Some of these rulers were regarded as equal partners in the treaty arrangements, while others were regarded as vassals. Treaty arrangements with vassals included keeping foreign princes and nobles as hostages at the Assyrian court.

Babylonia always had a special position in the Assyrian state, as observed already in the discussion of the political history. Assyria tried to deal with Babylonia by various means; for example, sometimes

concluding treaties with Babylonian kings as equal partners, or at other times ruling Babylonia directly. The fact is that Assyria never was able to find a satisfactory solution for the administration of Babylonia.

The administrative center of the Assyrian state varied from time to time. Originally, it was at the city of Asshur, but in the 9th century Ashurnasirpal II made the center Calah. Finally, in the 7th century, Sennacherib chose Nineveh as the administrative center and this city remained the capital of the Assyrian state until its downfall. At each of these sites have been found remains of the state archives, including voluminous correspondence. These records and reports are in part a result of the king's standing order to all officials that they must report "whatever you see and hear." To ensure rapid communication between the capital and the outlying regions of the empire, there was a corps of messengers who were supported by a network of roads and posting stations. In an emergency, messages could be relayed even more quickly by a system of observation towers and fire signals. The Assyrian frontiers were carefully guarded by a series of fortresses manned by Assyrian troops.

I. Socioeconomic Structure

The socioeconomic structure of Assyria was very conservative and slow to change, a feature which it had in common with most preindustrial civilizations. Change in social structures and economic procedures was rare, the attitude being that if something had been good enough for previous generations it was certainly good enough for the present generation. Only when former ways of doing things were no longer possible did the Assyrians consider developing new approaches. This rarely happened, and so the socioeconomic structure of Assyrian civilization underwent only minor modification throughout its lengthy history.

The core of the Assyrian social structure was the tribe, and fundamental motives for every Assyrian's life were the protection and propagation of his family and tribe. This fact is well illustrated by the common personal-name type, whose use expressed the desire of the individual to preserve his tribe or family. This desire also found expression in the common practice of adoption, for adoption not only provided a childless couple with care for their old age, but also assured them of the continuation of their family. Even the dead were kept within the home, for they were buried under the floor.

Apart from this central position of the Assyrian family, there was a class structure which was closely linked to power, wealth, and social standing. The king was at the top, immediately succeeded by the nobility of varius levels. Under them came the lesser officials, then the skilled laborers, and finally, at the bottom, the unskilled laborers. The unskilled laborers consisted of two groups: freemen and slaves.

Slavery was not nearly so extensive in Assyria as it was in the Roman empire. Although slaves provided an important part of the labor force for Assyria, particularly for the major building projects of the kings, the Assyrian economy did not depend upon slavery as did the Roman economy. There were two types of slaves in Assyria; the debt slave and the prisoner of war. The debt slave was a native Assyrian, and his slavery lasted only so long as he was unable to pay off his debts. In other words, it was the Assyrian form of bankruptcy. A debt slave enjoyed a number of privileges; he could marry a free person, appear as a witness in a court case, conduct business transactions with other slaves or their masters, and even own property to which slaves were attached. In theory, it was always possible for a debt slave to pay off his debts and regain his freedom. In practice, however, manumission was rare in Assyria. The high interest rates, to be mentioned later, meant that it was not only easy to fall into debt slavery but that once in that situation it was very difficult to amass enough resources to buy one's way out of debt. The other type of slave, the foreign captive, was in an entirely different position. He had no real rights in Assyria, and he was given the most menial tasks to perform. His only hope of freedom was escape or death.

The status of women in Assyrian society was extremely low, even lower than in Babylonia. In Assyria, one rarely found a woman acting in a legal or business transaction on her own behalf, for she had virtually no legal rights as an individual. She was entirely dependent upon her male relations—father, husband, sons, and brothers—and their position in society. She was confined to separate quarters, the harem, and apart from her immediate male relatives her social intercourse was restricted entirely to other females. Marriage, the rearing of children, cooking, and the general care of the home were her established roles in life.

The vast majority of Assyrians lived in the large cities, the major centers being Asshur, Nineveh, Arbela, and Calah. There are no reliable statistics for population figures, but one estimate has concluded that Calah at its height contained about 63,000 inhabitants, while Nineveh probably had about 120,000 (Oates 1968: 43–44). The immediate surrounding countryside was insufficient to support such large numbers of nonproductive people, which is why, beginning in the 9th century B.C., the agricultural land cultivated by the Assyrians had to be extended. Ashurnasirpal began the program of deporting foreign peoples into the undeveloped regions of Assyria to create new farms in order to provide the growing city populations with the necessary food.

Within the cities, the streets were narrow and dark, being flanked by the blank walls of houses. An Assyrian house was centered around an inner courtyard, and apart from the street entrance there were no openings on the outside.

As has been observed, the socioeconomic structure of Assyria changed only when it was compelled to do so. Certainly, the economy was forced to alter as Assyria developed from a small cluster of autonomous city-states first into a nation and then into an empire. As the Assyrian empire evolved, in a sense two separate economic systems developed. In the Assyrian heartland itself, the economic structure which already existed continued with only slight alterations. Beyond the boundaries of the heartland, however, the economic organization of the territories now under Assyrian control inevitably changed.

In Assyria proper, the economic bases were agriculture, animal husbandry, and trade. The S border of Assyria coincided with the S limit of dependable, annual rainfall, so that Assyria's meadows could be cultivated with relative ease and profit. At the same time, the position of the city of Asshur at a strategic crossing point of the Tigris river meant that it straddled a major trade route between E and W. Thus, from earliest times the inhabitants of the Assyrian heartland were involved in foreign trade, a necessity since so many resources had to be imported into Assyria.

As to actual ownership of land, all land in theory belonged to the king as the representative of the god Asshur on earth. In practice, however, the crown had direct control over only a limited amount of territory. The rest was controlled by wealthy institutions such as temples or by large families. This still left much land in the control of private individuals. Frequently, land in Assyria was held under an arrangement called *ilku.* By this arrangement, the client had the use of the land in return for performing state service, which involved both civil and military works. Obviously land which had an *ilku* obligation was less valuable because the impositions involved were relatively onerous. In the Neo-Assyrian period, it was possible for the more important and wealthy Assyrian citizens to make payments in lieu of *ilku* service. This is significant for the history of the Assyrian army in the late period, since many wealthy landowners sent goods in payment of their *ilku* obligations rather than manpower. Thus, the state was forced to hire foreign mercenaries to fill the ranks of the army.

Crafts in Assyria were carried on in the palace and perhaps also in temples and on large estates. Originally the craftsmen actually worked in these buildings and were issued raw materials with which to make the finished products, but in Neo-Assyrian times craftsmen worked on a contract basis whereby they could repay their masters for the raw materials in a variety of forms and could keep back a certain amount for themselves as a commission.

Money was unknown in Assyria and seems to have been an invention of the Greeks. Business was carried on by trading in kind, although there was a standard of exchange in terms of precious metals, silver or copper. There was a standard for measurements, including weights. Some of these official weights have survived, being stone or metal carved in the shape of such animals as ducks or lions. These weights bear cuneiform inscriptions indicating their measurement. Careful accounts were kept of business transactions, and hundreds of administrative tablets, mainly from palaces, have been recovered. Prices fluctuated according to supply and demand, and there is no indication of state control over prices.

The economic organization of the Assyrian empire had one goal—the enrichment of the Assyrian heartland and in particular the Assyrian court. The Assyrian king had no interest in the economic development of the outlying regions. So long as these conquered territories contributed annual tribute to the state treasury and remained submissive to his control, he was happy. But as time went on, the

nonproductive element of the population of the Assyrian heartland increased, and greater and greater demands were made on the outlying regions for supplies. This escalating oppressiveness increased economic hardship and engendered hatred of the Assyrian rule. It is no exaggeration to say that the economies of the outlying regions of the Assyrian empire were gradually destroyed in order to prop up an artificial economy in central Assyria. This economic circumstance was no small factor in the weakening and eventual fall of the Assyrian empire.

J. Legal Structure

The supreme legal authority in Assyria was the god Asshur, which meant in practice his representative on earth, the king, who was the chief justice in the land. The king rarely exercised his authority in this capacity, however, for most legal disputes were settled at a lower level. In ancient Assyria there was no specialized legal branch of the government comparable to what we are used to today in modern society. The vast majority of disputes were handled by the individuals involved, frequently with the intervention of a third party as an objective arbitrator. This third party was usually a neighbor. There were no courts as such, and there was no codified law. There was a document known now as the Middle Assyrian Laws (see *ANET,* 180–88), but this was more literary than legal. This is illustrated by the fact that in the few records of legal disputes from Assyria, no reference is ever made to the Middle Assyrian Laws. The real law of Assyria rested in custom and precedent. Disputes which could not be decided on this basis between the two parties, with the frequent help of a third objective individual, were referred to the official bureaucracy.

A number of Assyria's legal documents have come down to us. In Assyria, a legal document was the record of a transaction between two or more parties which included the names of witnesses to the transaction, the name of the scribe who recorded the transaction, and the date upon which it took place. A common feature of such texts was the inclusion of seal impressions of the major participants in the transaction. If an individual was too poor to own a seal, he pressed his fingernail into the moist clay, and this fact was duly noted on the tablet. Legal documents were frequently enclosed in envelopes of clay, and a brief version of the transaction was written on the outside of this envelope, which was then duly sealed. There were also legal documents in Aramaic on parchment or papyrus, but all of these have perished; only the bullae (lumps of clay with brief notes in Assyrian) which were squeezed over the cord binding these documents have been preserved.

In Assyria, there were four major kinds of legal documents: conveyances (sales), contracts, receipts, and court records. The word conveyance covers all texts which record the transfer of property, and most of these are therefore sale documents, although rentals, marriages, adoptions, and inheritances also come under this heading. Conveyances contained provision against future claims and penalties for making false claims, which included heavy fines and occasionally some bizarre provisions. For example, a guilty party might have been required to present a number of white horses to a god if he had been convicted of making a false claim about a sale. Or he might have been required to burn his eldest son or, even more curious, to swallow an enormous amount of wool, thus in effect committing suicide. These more bizarre penalty provisions seem to have been more theoretical than practical, and there is no evidence that they were ever enforced. In the case of the sale of slaves, the seller normally had to guarantee that the slave would remain free of illness for 100 days after the sale.

The second type of legal document, the contract, involved an obligation on the part of one party in favor of another, and this covered all kinds of loans and promissory notes. "True loans" were not common, since debts were incurred by the inability of an individual to pay the rent in the form of a portion of the harvest of land which he had contracted to cultivate. Interest rates were very high, the normal being in the range of 25–33 percent, but rates of 100 percent or more per annum are attested. For this reason, many people remained in debt for their entire lives, and frequently they went bankrupt, which means they fell into debt slavery. When a debt was paid, however, the tablet recording the debt was smashed, thus effectively destroying all evidence of the loan. Only occasionally, for special reasons, was it felt necessary to write out a receipt for the payment of a debt. Thus, this third type of legal document was relatively rare.

The creditor always had the obligation to provide proof of a debt. If a creditor could not produce a contract with a record of the loan, he had no claim against an individual.

The fourth type of legal document, the court record, was uncommon. This reflects the fact already stated that most disputes were settled privately. On the rare occasions, however, when this proved impossible, the disputants would go to an official in the Assyrian administration for a decision. When this happened, an official record was made of the proceedings, and these are what we call court records. But it should be noted that no law court was involved here, since they did not exist in ancient Assyria. The disputants simply went to a high administrative official, who was often the mayor of their village or town. If this official could not come to a decision, the disputants were sent to the "ordeal." Unfortunately, little is known about the Assyrian ordeal. The presiding judge at the ordeal was the god, and after the litigants declared their respective claims before the god, the deity issued his verdict. How the god came to this decision and how it was announced are unknown, but the decision was final and binding upon both parties. It should be noted that no reference is made here to the king in this final appeal, although he was the supreme justice in the land. In administrative matters, it is known that an Assyrian subject could appeal directly to the monarch.

Murder and bodily injury were special cases. These again were normally settled by private agreement, and this is particularly so in the case of murder, for murder involved the blood feud, or vendetta. In Assyria, there was no such thing as a state crime apart from treason, which was punishable by death. Since there were no state crimes, prisons did not exist for the incarceration of criminals. However, the state might detain individuals for political reasons, and private individuals might forcibly restrain a person who had wronged them until the wrong had been redressed.

K. Religion

Religion is a complex subject in any civilization, and there is no exception to this for ancient Assyria. A primary consideration is the difference between the official or state religion and popular belief. This is true not only in ancient Assyria but also in modern society. What people actually believe, what they actually do in their religious observances, and what is actually recorded as official religious doctrine may be quite different matters. In dealing with an ancient society such as that of the Assyrians or Hebrews, our knowledge is inevitably limited to and conditioned by the written records. In the case of the Hebrews, this means the Bible; in the case of the Assyrians, this means the multitude of cuneiform writings concerning rituals, hymns, incantations, etc. Thus, most of what can be said here about Assyrian religion concerns the state religion.

Assyrian religion had two outstanding features: polytheism and the cult. The polytheistic nature of Assyria is comparable to that of Sumer or Babylonia, although the number of gods was more restricted. The chief gods in Assyria were Asshur, who was the king of the gods, followed by the goddess Ishtar and the gods Ninurta, Shamash, Adad, and Sin. Around each god there was centered a cult which included a large temple complex and a ziggurrat, as well as priests and a supporting staff. This cult involved the performance of regular religious rituals and the presentation of offerings.

The chief Assyrian god, Asshur, was almost characterless in comparison to the other gods of Assyria. Although he officially ruled and controlled all the land of Assyria and reigned supreme over all other gods, he really played no role in Assyrian mythology, and no personal characteristics are evident for him. This is in contrast to the other Assyrian deities.

Much more lifelike and vivid is the figure of the goddess Ishtar. She was responsible for two contrasting activities: battle and love. In both these spheres she played a leading role, and there is a major place for her in the mythology, which in origin at least is largely Babylonian. She was the patron deity of two major Assyrian cities, Nineveh and Arbela, which shows the high regard the Assyrians had for Ishtar. Part of her cult included female ecstatics; these were prophetesses who went into a trance and made pronouncements to the Assyrian king of future victories and prosperity. These pronouncements were duly recorded and sent to the king from Ishtar's cult at Arbela.

Another outstanding deity in Assyria was Ninurta, the god of warfare and hunting, who was the firstborn son of Asshur. Ashurnasirpal brought the cult of Ninurta to the fore with the dedication to

Ninurta of the chief temple at his newly constructed capital of Calah. Adad, the god of storm and rain, was another distinctive Assyrian deity. He shared with Shamash the responsibility for divination. The god Shamash, the sun-god, was responsible for justice, a role he also played in Babylonian religion. It should be noted that all of these major deities were males with the exception of Ishtar. This is a reflection of the dominance of the male in Assyrian society, and the fact that Ishtar is an exception is because she was the patron deity of Nineveh in pre-Assyrian times.

Assyrian culture was greatly influenced by Babylonian culture, and this is particularly so in religion. Three distinctly Babylonian deities—Enlil, Marduk, and Nabû—became popular in Assyria at different periods. Enlil first appeared in Assyria during the reign of Shamshi-Adad I (1813–1781 B.C.). He was eventually identified with the god Asshur, who assumed his epithets and the cultic practices which surrounded him. The cult of Marduk appeared in Assyria by the 14th century B.C., and eventually Marduk became so popular there that Sennacherib, in the 7th century B.C., tried to suppress the Babylonian cult. Nabû, the son of Marduk, became popular in Assyria in the 9th century B.C. when great temples were built at Assyrian cities in his honor.

While the Assyrians may have had some religious rituals and practices of their own, by the time we reach the well-documented period in MA times, Babylonian influence is evident everywhere. Most religious ceremonies in Assyria, and in particular the New Year Festival, were greatly influenced by Babylonia.

So far only the major deities have been mentioned, but there were also many minor deities, all with their own temples and shrines. An Assyrian city had many temples in it devoted to these various gods and goddesses, and larger temples contained several shrines for different deities. A temple was a community unto itself, with its own hierarchy of personnel and its own economic resources, at least in origin. By the Neo-Assyrian period, however, Assyrian temples were no longer economically independent. They had become accustomed to receiving major benefits from royal campaigns. This brought them greater prosperity but at the same time meant they lost some control over their own affairs. Besides the priests, the temple personnel included artisans, scribes, kitchen staff, and domestic servants.

The king was the chief priest in the land since he was Asshur's representative on earth. His presence was frequently required at religious ceremonies, particularly at the celebration of the New Year, in which his right to reign for another year was confirmed by the god. Religion in the form of the temple rituals and divination had great influence on the Assyrian king. Not only was the king required to participate in religious rituals but he also felt compelled to consult the diviners regularly on major state decisions. Thus, the priests and diviners had a great deal of influence on state affairs.

By far the most important Assyrian ritual was the New Year ritual, called the *Akītu.* Most of the ceremony was performed in the *Akītu* temple, there being one outside the walls of each major Assyrian city. The ceremony involved an elaborate procession of the statues of the gods followed by a great feast. The *Akītu* festival included the coronation ritual in which the god Asshur confirmed the right of the king to rule for another year, and during which the princes and nobles renewed their loyalty oaths.

The Assyrians were tolerant of other religions and religious practices. They did not attempt to impose the worship of Asshur or any other Assyrian deity upon peoples they conquered. They did, however, carry off divine symbols of conquered peoples which they held as hostages in order to insure the loyalty of these suppressed populations. These symbols were returned once the Assyrians were assured that the people would be loyal. Indeed, far from suppressing foreign cults of conquered peoples, the Assyrian king sometimes presented offerings to them and sponsored building works on their temples.

Most of what we know, and therefore most of what has been said so far, concerns the official religion of Assyria. Very little is known of the religious beliefs and practices of the common people. The masses had little to do with the great state festivals other than to stand by the roadside watching the great processions go by. It is known that each Assyrian believed he had a personal god, and that this personal god would present his needs and desires to the higher gods. In return, each Assyrian was expected to present offerings to this individual god. Magic, both black and white, was widely practised among the common people, and we have many documents from Assyrian libraries recording incantations.

Divination, the prediction of the future, was closely related to Assyrian religion. Allusion to this practice has already been made in preceding paragraphs. In the Neo-Assyrian period, there were two major types of divination: astrology and extispicy. Astrology involved regular observation of the movements of the stars and planets and the recording of such movements and any events on earth which took place at the same time, for the Assyrians believed there was a link between what happened in the heavens and what would happen on earth. Extispicy meant the examination of the entrails of sacrificed animals, since the shape and color of these entrails, such as the liver and lungs, indicated what would happen in the future. Divination was carried out mainly by Babylonian diviners.

L. Everyday Life

Everyday life in Assyria was much the same throughout Assyria's history, the daily behavior of someone living in the Old Assyrian period being essentially the same as that of someone living in the Neo-Assyrian Empire. Of course there was a great deal of difference between the everyday life of a member of the upper classes in Assyria and a member of the lower classes. In the following discussion, such differences will be noted where appropriate.

The most outstanding characteristic of everyday life in Assyria was its spartanism. Assyria was a militaristic society, and everything revolved around the warrior. People who were not warriors were regarded simply as support staff for the fighting men. This, in particular, meant that the status of women was restricted entirely to that of supplying the needs of soldiers. Women were segregated from men and lived in a harem, and their role in society was to bear and raise children and to maintain the household. They were entirely dependent upon their male relatives and had few legal rights of their own. Men were the dominant sex, and in theory all men were soldiers and were subject to military conscription. In practice, certain types of workers, such as shepherds, were excluded from this service.

The standard of living in Assyria was relatively high for an ancient culture for two reasons. First, Assyria was naturally a highly productive region, and thus the inhabitants of the Assyrian heartland from prehistoric times enjoyed the fruits of the land and the products of animal husbandry. Second, in the Neo-Assyrian period, the residents of Assyria proper enjoyed the prosperity brought to their land by the hold their kings had over the surrounding economies. The food the average Assyrian ate consisted mainly of barley in the form of bread spread with sesame oil. The usual beverage was beer, although wine was not uncommon. For vegetables, they had onions, leeks, and garlic. In addition, they enjoyed eggs from chickens and ducks, and fish from the rivers. For sweets they had grapes and honey, and in the Neo-Assyrian period nuts became more common as exotic nut trees were introduced into Assyrian gardens. Goats produced milk, which was turned into ghee (clarified butter) and cheese. The meat of animals and fowls was rarely eaten, it being preserved for festive occasions since it was a luxury. Of course the upper classes and in particular royalty enjoyed meat and wine more regularly. In fact, royal banquets were far from uncommon.

Royal feasts are frequently mentioned in our sources, as they were used to celebrate a variety of occasions. Every new year in connection with the Akitu ritual, there was a ceremonial banquet called the *tākultu.* Other occasions for royal feasts were the conclusion of successful military campaigns and the end of major building projects. An example of the latter is the great banquet staged by Ashurnasirpal II to celebrate the completion of the building of his capital, Calah. The menu of this banquet, which was served to 70,000 guests invited from all parts of Assyria, the provinces, and the surrounding lands, was engraved on stone by royal scribes for posterity (cf. *ANET*, 558–60).

The basic material for constructing all buildings was mud brick, which was sometimes baked in the sun or, more rarely, in kilns for greater durability. Marble (the so-called "Mosul marble") was available in quarries in the vicinity of Nineveh, but given the difficulty of extracting, transporting, and working this relatively hard substance, its use was generally restricted to monumental buildings. Timber of various sorts, including the popular "cedars of Lebanon," was imported for these monumental buildings as well. The house of the middle-class Assyrian usually consisted of two stories built around an inner courtyard. There was a pool of water in the center of the courtyard and steps on the side that led up to a balcony surrounding the second story. Family life was centered on this courtyard, and all doors and windows

opened onto it with the exception of the main doorway leading into the street. The houses of wealthier people and the palaces of the kings had extensive gardens. Assyria also had its homeless poor, who carved out sleeping quarters for themselves in the city walls or in the ruins of monumental buildings, while some simply slept in doorways. The streets were narrow, twisting, and filthy since they had open sewers in the center to carry off all waste from the houses.

A variety of textiles was woven from goat's hair and sheep's wool. The resulting cloth was dyed in various colors and cut into various shapes for clothing. In addition, both men and women wore some jewelry made from precious metals and stones, which had to be imported. Of course, the wealthier classes enjoyed more elaborate clothing and jewelry.

The favorite recreations of the Assyrians were military in character. They loved to hunt (on royal hunts, see above). Contests in archery, javelin-throwing, stone-slinging, and similar sports were other popular pastimes. The Assyrians also entertained themselves with more peaceful pursuits. The parades of the great religious festivals were eagerly watched by the common people lining the streets of the great Assyrian metropolises. In the squares and gates, scribes and poets recited epics and sang songs to the masses. Both the parades and the recitations were accompanied by vocal and instrumental music, the instruments including strings, winds, and percussions. Older and more sedentary people entertained themselves with board games, while children had toys such as clay models of chariots and soldiers.

M. Legacy

A major legacy of Assyrian civilization to the history of the world is the practical creation of an empire which embraced a large part of the civilized world. It was the Assyrian kings who first extended their authority well beyond the confines of national boundaries to rule over or effectively control a variety of far-flung peoples and territories. Subsequent conquerors—the Achaemenid Persians, Alexander the Great, and the Romans—would strive to emulate the Assyrian achievement.

A second legacy was the elaborate structure and formality of the Assyrian court, which survived in later, neighboring cultures such as Achaemenid and Safavid Persia and Ottoman Turkey. Similarly, Assyrian military organization, strategy, and tactics reappear in these and other later civilizations.

A more subtle legacy is the protective role which Assyria played in sheltering Babylonia from foreign conquest, thus allowing that land to devote so much energy to cultural pursuits. Indeed, Assyria took an active part in creating libraries in which Babylonian literary and scientific works predominated. The libraries of Ashurbanipal at Nineveh are still our most important source for Babylonian culture. See *CAH* 1–3; *GARI*; TCS 5; *LAR*.

HISTORY AND CULTURE OF BABYLONIA

The name “Babylonia” (see MESOPOTAMIA) can be used as both a geographical and a political term. As a geographical name it covers the S part of the modern Republic of Iraq, approximately from Baghdad in the N to Basra in the S. On the W it extends roughly to the border of Saudi Arabia and on the E to Iran. In ancient times this area was a unified political unit only in certain periods, including the latter years of Hammurapi (ca. 1792–1750 B.C.) and the time of the Neo-Babylonian Empire (627–539 B.C.). Before Hammurapi it was frequently divided politically into two areas, with Nippur at the center. The N was called Akkad and the S Sumer, and the phrase “the lands of Sumer and Akkad” was still in vogue long after the political division had any reality.

———

A. Geography

1. Physical Features. Babylonia is the S part of Mesopotamia, the "Land Between the Rivers," a name which reflects the importance of the Tigris and Euphrates rivers. These join to form the Shatt-el-Arab, which drains into the Arabian/Persian Gulf in the S. A major tributary of the Tigris is the Diyala river. The rivers flood the flat plain in the springtime, bringing water sorely needed for plant growth. The S part of Babylonia consists of marshes, where, since prehistoric times, people have lived as much in boats as on land. The N extremity of the plain is determined by the narrowest point between the Tigris and the Euphrates, although culturally Babylonian civilization often stretched farther up the Euphrates to such ancient sites as Mari. To the W are the Syrian and Arabian deserts, and to the E are the Zagros mountains. From the point of view of physical geography, the Khuzistan plain to the SE is an integral part of Babylonia despite the presence between them of the Qarun river, which flows into the Shatt-el-Arab.

2. Climate. The climate of a region affects not only its flora and fauna but also the human inhabitants and their behavior. Thus, in prehistoric times, the dwellers of the Babylonian plain were prompted to invent artificial irrigation systems in order to regulate the erratic water supply from rainfall and flooding rivers so that crop production was possible. From late spring to late fall the weather is hot and dry, while in the winter and early spring it is cool, sometimes close to freezing, and rain falls in abundance. The sudden and frequent downpours turn dry gullies, known as *wadis,* into swift rivers in a matter of hours. In the dry weather, high winds from various directions blow up fierce sandstorms, and in late summer a scorching wind from the S arises which is important for the ripening of dates. As far as is known, there was no significant change in climate during the historic period.

3. Natural Resources. Babylonia was rich in only a limited number of natural resources: soil, salt, bitumen, reeds, water, fish, birds, animals, and plants. The soil was valuable not only for agriculture and animal husbandry but also as a source of clay for bricks (used for building) and for tablets (used for writing). Reeds from the marshes were used as writing styluses and in building, either as the main material in the construction of reed huts or, when coated with bitumen, for binding mats placed between layers of mud bricks. The rivers, marshes, and Arabian/Persian Gulf teemed with various types of fish and also provided useful communication routes by boat. Birds were abundant, especially in the marshes, for Babylonia was, and is, at the S end of a major flyway of birds migrating from Europe. Wild animals in antiquity ranged in size and type from mice and snakes to wolves, pigs, gazelles, onagers, and lions. Missing from the list of Babylonia's natural resources are important items such as stone, metals, and timber, which had to be imported through trade.

4. Agriculture and Animal Husbandry. Agriculture and animal husbandry were the mainstays of the economy of the Babylonian plain throughout ancient times. The chief crops cultivated were barley and sesame, the former to make bread and beer and the latter to make vegetable oil. Onions, garlic, leeks, and mustard were common, but green vegetables were rare. In S Babylonia the date tree was, and still is, grown in large plantations for its fruit.

The most popular domestic animals were mules, donkeys, cows, sheep, goats, pigs, dogs, and cats. Mules and donkeys were used as pack animals and for riding. Cows and goats provided milk and hides, while sheep produced wool. Only on special occasions would these animals be slaughtered for meat; chickens, ducks, geese, wild birds, and cheese were more economical sources of protein. Horses were not used extensively until the late 2d millennium B.C., when they began to be used for drawing chariots; the camel also became common at about that time.

5. Trade, Communication, and Transportation. Foreign trade flourished as early as prehistoric times, when the inhabitants of the Babylonian plain sought good timber (such as cedar from Lebanon) and stone (such as marble from Assyria) for building; metals (such as tin and copper) for weapons and utensils; and precious metals (such as gold and silver) and precious stones (such as lapis lazuli) for luxury items. Overland communication and transportation followed river courses, since these provided water and food for travelers. In particular, the Diyala valley was a conduit for goods traveling to and from the Iranian plateau. Water routes were intensively used, with rafts and boats plying up and down the Tigris and Euphrates and larger boats carrying cargo through the Arabian/Persian Gulf to the coast of Oman and beyond. The speed with which one could travel these routes varied according to many factors, such as

weather, terrain, and means of travel. Under optimum conditions a caravan covered about 25 km a day, while a swift runner could cover about 160 km in the same time. This meant a trading caravan could ideally transport goods from the Gulf along the Tigris to the mouth of the Diyala, a distance of about 600 km, in about twenty-four days. A relay of fast runners could deliver a message over the same route in about four days, under ideal conditions.

6. Settlement Patterns. Inevitably, people settled in Babylonia by the water, for it provided their basic needs and was the easiest link for trade. Only as the inhabitants developed artificial irrigation were they able to spread beyond onto the plain. This required cooperation and organization, and thus urban communities developed. By the dawn of history (ca. 3000 B.C.), the Babylonian plain was dotted with a multitude of villages, towns, and cities. Along the Euphrates, on the periphery of the plain, were the seminomads, herders of sheep and goats, who wandered between the plain and the Syro-Arabian desert. They could not go far into the desert until they had the camel, in the 1st millennium B.C., and that is why they are called seminomads or donkey nomads. (Adams 1965; 1972; 1981).

B. Sources

Until the mid-19th century of our era, the only sources available for ancient Babylonian history were the scant remarks in the Bible and in the writings of classical authors. By A.D. 1850, this had all changed, thanks to the beginning of archaeological excavations at ancient sites and the decipherment of Babylonian inscriptions. Since that date, research on the archaeological and written remains of Babylonian civilization has added enormously to the sources for and knowledge of this ancient culture. This activity continues today; and as these words are being written, yet more sources are coming to light.

1. Written Sources. a. Indigenous. The contemporary, indigenous inscriptions of Babylonia, consisting of tens of thousands of texts, are by far the largest body of sources. These are written in the cuneiform writing system and in the Babylonian dialect of the Akkadian language. The vast majority of inscriptions are written on clay tablets, although some are on clay cylinders, bricks, stone slabs, and various objects made of precious stones and metals. These texts may be divided into a few groups; namely, royal inscriptions, letters, contracts, and administrative documents.

Royal inscriptions were originally written records commissioned by the king to report to the gods that he had fulfilled his duty on earth. Principally, this duty entailed building projects (such as a temple), so that royal inscriptions were normally building inscriptions. As to their pious purpose, very early they developed into boasts by the ruler of his achievements. As a source for reconstructing Babylonian history, they are useful because of the wealth of detail they provide about kings, gods, and buildings. But one must remember that they are "official statements," and therefore should be used carefully.

Fortunately, a significant number of letters, many of them to or from the king and his officials, have been recovered. These allow us to look behind the official facade presented by the royal inscriptions and snatch glimpses of what was really going on and how those in charge were reacting. Normally, letters can be used for historical research in a meaningful way only when there is a cohesive corpus. Thus, for example, we have scores of letters written by Hammurapi to his chief officer at the city of Larsa, and this permits us to study that king's treatment of a city which he had just conquered. Individual and broken letters are usually of minimal value.

Babylonian contracts and administrative documents number in the tens of thousands for certain periods, such as the NB Empire (627–539 B.C.). Like letters, they are normally only useful as sources when a cohesive corpus or archive has been recovered. A good example is the Murashû Archive, a corpus of documents left behind by a rich and influential family of businessmen of the Persian period (539–331 B.C.). See MURASHÛ, ARCHIVE OF.

Later indigenous written sources comprise chronicles, king lists, and literary texts. Fortunately for us, the Babylonians wrote a number of chronicles, mainly of the later period, which narrate concisely but precisely outstanding events year by year. These, together with lists of kings, are the backbone of our chronological reconstruction of Babylonian history. The chronicles are a reliable source in that they do not have a particular theory to prove, nor are they nationalistic in attitude. Literary texts of value to the historian are limited in number and very fragmentary. Nevertheless, they provide insights otherwise

denied us; for example, a badly preserved historical epic of the late Kassite period (13th century B.C.) speaks of a religious rebellion against the reigning monarch, an event otherwise unknown from other sources. (Grayson 1975: 56–77).

b. Foreign. The earliest biblical reference to Babylonian history seems to appear in Genesis 14, in which an invasion of Palestine by eastern rulers is narrated. While the identity of these rulers and the events elude us, there can be little doubt that a kernel of historical fact lies here in obscurity and that the references to Amorites suggest the Old Babylonian (OB) period (ca. 2000–1595 B.C.). Much later in time, more concrete information appears in the biblical account (Isaiah 39) of the envoy sent to Hezekiah, king of Judah, by Merodach-baladan II, king of Babylonia (7th century B.C.). See MERODACH-BALADAN. This information is valuable in reconstructing the war waged by Merodach-baladan against Sennacherib, king of Assyria. See SENNACHERIB (PERSON). By far the most dramatic biblical source for Babylonian history (2 Kings 24–25; 2 Chronicles 36; Jeremiah passim) is about the invasion of Judah by Nebuchadnezzar II, king of Babylonia (604–562 B.C.). See NEBUCHADNEZZAR. The final capture of Jerusalem in 586 B.C. and the exile to Babylonia of many of its inhabitants is narrated in detail in the Bible, a welcome circumstance since the Babylonian chronicle for this period has not yet been found.

Among other foreign sources are the 1st-century writings of the Jewish historian Josephus, who wrote in Greek. Indeed, Babylonian history is touched upon by a number of classical authors, including Herodotus, Ctesias, Diodorus Siculus, Xenophon, and Claudius Ptolemaus. Legends these preserve about Babylonian personalities (such as Nitokris, "queen of Babylonia") may well have had a historical basis, but this is now difficult to document.

2. Archaeological Sources. The best-known Babylonian site, from an archaeological point of view, is the city of Babylon itself. Systematic excavation of this large tell was undertaken at the beginning of this century by a German expedition led by Koldewey. More recently, excavations have been resumed by the State Organization of Antiquities of the Republic of Iraq. The monumental buildings, walls, and processional way of the Neo-Babylonian period (6th century B.C.) have been uncovered. Earlier levels are not so well preserved. At Dur-Kurigalzu, the capital of the Kassites (ca. 1595–1200 B.C.), digging has been done over some years, and both palaces and temples have been discovered. Other major archaeological sites are Nippur, Ur, Larsa, Isin, and Sippar, to name only a few.

C. Chronology

Babylonian chronology is well established for some periods but poorly known for others. The best period, from this viewpoint, is the time from the mid-8th century B.C. and later. There are three main reasons for this: the wealth of indigenous documents bearing dates; the Babylonian chronicles and king lists; and the link these have with voluminous Babylonian records of observations of the movements of stars and planets, which modern astronomers can date. Between ca. 1595 and 750 B.C., chronological evidence is much more sparse. There are relatively few dated documents and chronicles, and the king lists are so badly broken that sometimes even the names and order of the kings are unknown. For the oldest period, ca. 2000–1595 B.C., the relative chronology—the sequence of kings and events—is well known, but the absolute dates are very uncertain. There are, in fact, three schools of thought among modern scholars about these dates, giving rise to the terms "High Chronology," "Middle Chronology," and "Low Chronology." This article follows the Middle Chronology. For the High or Low chronologies, add or subtract, respectively, about sixty-four years.

D. Political History

If one could chart graphically the political history of Babylonia, it would appear like a rugged mountain landscape, the tall peaks symbolising the few periods of Babylonia's greatness and the deep valleys the long periods of weakness. For Babylonia, unlike Assyria, was rarely a great military or political power, the exceptions being the reigns of Hammurapi, Kurigalzu, Nebuchadnezzar I, and the Neo-Babylonian Empire. But even during the times of political eclipse, Babylonian culture flourished and left a legacy for Eastern and Western civilizations alike.

1. Akkadians, Amorites, and Sumerians. Babylonian civilization was a pastiche of cultures and peoples which blended together to create one of the world's great civilizations. The evolution of an

outstanding culture from the fusion of different ethnic groups was an ongoing process in Babylonian history. It continued to operate as new peoples moved into the Babylonian plain in subsequent periods. Chief among the ethnic strains in the population of Babylonia ca. 2000 B.C. were the Akkadians, the Amorites, and the Sumerians. The Sumerians and Akkadians had been present in the area for a long time and had created a civilization in the 3d millennium, commonly called "Sumerian," of which Babylonian civilization was a direct heir. See above MESOPOTAMIA IN THE THIRD MILLENNIUM B.C. Some Amorites were also living in the plain with the Sumerians and Akkadians in the 3d millennium, but it was the massive immigration of Amorite tribes around 2000 B.C. that transformed the old order of things into Babylonian civilization.

The oldest of the three peoples were the Sumerians, who spoke a language which cannot be identified with any known family of languages. This is not unusual in the history of ancient SW Asia, where there were many such tongues. Both Akkadian and Amorite, on the other hand, belong to the Semitic language family, a group which also includes Hebrew and Arabic. The region from which Semitic speakers spread was the Syro-Arabian desert (as we shall see when discussing other such groups, the Arameans and Arabs). The origin of the Sumerians is still debated.

The Sumerian language was in decline by 2000 B.C., being gradually replaced by Akkadian. This latter language was now being influenced by Amorite, and out of this melting pot emerged the Babylonian dialect of Akkadian. The other major Akkadian dialect was Assyrian. A writing system called cuneiform, which had been invented for Sumerian a thousand years before, was borrowed by the Babylonians to write their own language. It is an indication of the influence of Sumerian culture in Babylonia, however, that the Babylonian scribes also continued to write literary and learned works in Sumerian, a language which was no longer widely spoken or understood. To the very end of Babylonian civilization, religious rituals, scientific compositions, and divinatory texts were written either in Sumerian or in a technical jargon which consisted largely of Sumerian logograms. But for affairs of state, business transactions, and everyday interchange, the Babylonian dialect of Akkadian prevailed from about 2000 B.C. until about 700 or 600 B.C., when another Semitic language, Aramaic, gradually gained popularity. This phenomenon was linked to Babylonian political and cultural history, as will be discussed later. Aramaic first became the everyday tongue and then slowly became more common in the domain of business and administration. At the same time, the Aramaic writing system, which utilized an alphabet, gained in favor. Nevertheless, Babylonian Akkadian and the cuneiform script continued to be used in some circles, essentially temples, until the beginning of the Christian era.

The borrowing of the cuneiform script and the continued, albeit restricted, use of the Sumerian language by the Babylonians were not the only spheres in which a Sumerian legacy is evident. In fact, Sumerian culture permeated Babylonian civilization, and it is no exaggeration to say that it is impossible to understand Babylonian history without a firm grounding in Sumerian history. Babylonian literature, law, religion, socioeconomic structure, and political structure all bear witness to a pervasive Sumerian presence. This influence was most evident in S Babylonia, the ancient center of Sumerian culture, although even in such a city as Sippar far to the N there was abundant testimony. Indeed, geography played a large role in this cultural continuum, for it was natural that later peoples, many of whom still had Sumerian blood, living in the same region, should carry on the same traditions. It is fortunate for us that the Babylonians were so influenced by and in awe of Sumerian culture, for it is primarily thanks to the Babylonians that so much of Sumerian literature and religion is known today. Most Sumerian literary and religious compositions were first written down in the early OB period (see 2. below) and deposited in libraries, the best of which was at Nippur. The discovery of the Nippur library in the last century opened to modern eyes the riches of ancient Sumerian civilization. Thus, in addition to Babylonia's own legacy (see K. below), her role in this respect has earned our gratitude.

2. Early Old Babylonian Period (ca. 2017–1793 B.C.). The fall of the city-state of Ur in S Babylonia ca. 2004 B.C. marked the end of Sumerian civilization, while the foundation of an Amorite dynasty at Isin, some distance N of Ur, in 2017 B.C., was the beginning of Babylonian civilization. There was some overlap, as evident from the dates, since the founder of the Isin I dynasty, Ishbi-Erra, was at first a vassal

of Ibbi-Sin, the last king of Ur. But as Ur was more and more surrounded by enemies, primarily Amorite tribes and Elamites, Ishbi-Erra became increasingly independent. By the time Ur fell, Ishbi-Erra had already been acting as an independent ruler for some time.

The period of history which ensued is characterized by the emergence of various Amorite dynasties in various small city-states, each of which was autonomous if only for a brief time. Chaos and warfare between these city-states were rife, and frequently one or more of the city-states fell under the power of another. In the confusion two city-states, Isin and Larsa, often commanded center stage, however precariously, and thus the Early OB era is often called the Isin-Larsa period.

a. The Amorites. The Amorites were the moving force in this era, and it is this aspect of them which must be discussed here. The name Amorite embraces a number of Semitic-speaking tribes who came in large numbers from Syria-Arabia to Babylonia, and other parts of the Near East, toward the end of the 3d millennium. They were seminomads, or donkey nomads, despised by the residents of Babylonia because of their primitive ways but feared because of their fierce fighting qualities. Some actually entered Babylonia peacefully and took up menial tasks, such as digging ditches. Indeed this peaceful process had been going on long before 2000 B.C. But others entered with force and captured the key centers in Babylonia. Gradually they, like all immigrants to Babylonia, adopted the Babylonian language and customs, and even the later kings of the Amorite dynasties commonly bore Babylonian names. See also AMORITES.

b. Isin. The founder of the Isin dynasty, Ishbi-Erra, was an Amorite from Mari, a city on the middle Euphrates, and he was part of a whole group of immigrants to Isin from Mari. During his long reign (ca. 2017–1985 B.C.) he not only became the independent ruler of Isin but also gained control over Nippur and Larsa and even over Ur, to which he had formerly been subservient. It is apparent that he was struggling to hold sway over the territory which formerly had been the empire of Ur. It is not surprising, therefore, that he adopted the efficient if complex administrative system of the Ur bureaucracy. A new element appears in his administration, however. Officials in the state bureaucracy at Isin were extremely obsequious, as shown by the personal names which they adopted ("Ishbi-Erra-Is-the-Life-of-the-Land," "Ishbi-Erra-Is-the-God-of-His-Land," and "Ishbi-Erra-Is-my-God").

The history of Isin after Ishbi-Erra's death is a long tale of numerous rulers of limited political power constantly vying with the heads of other city-states for the upper hand. The first invasion of Babylonia by Assyria took place during this time. Of significance, though, is the fact that cultural activity was very much alive during this period and resulted, among other things, in the rebuilding of temples, the writing of literary compositions, and the compilation of "law codes." Moreover, a custom of the ruler issuing edicts to correct social and economic abuses now became well established. (Kraus, 1984.)

c. Larsa. The dynasty of Larsa was also Amorite and was founded about the same time as the dynasty of Isin, ca. 2025 B.C. Unlike the Isin rulers, however, the members of the Larsa dynasty were politically insignificant until a certain Kudur-Mabuk crashed into Larsa and made it his center of operations ca. 1834 B.C. Kudur-Mabuk was the colorful and energetic head of an Amorite tribe called Yamut-Bal. He and his tribe had been employed as mercenaries by the Elamites, but when he captured Larsa he regarded himself as independent, and nothing further is heard of Elam.

Kudur-Mabuk clearly had an ambitious and long-range policy. He seems to have treated the defeated people of Larsa well and appointed his son, Warad-Sin, as ruler of Larsa (ca. 1834–1823 B.C.) while he wandered forth once more to seek his fortune in war. Thus, the son looked after the administration of the state, and the father captured more territory for its domain. When Warad-Sin died, presumably at a relatively young age, Kudur-Mabuk was still alive and took over the administration for a time. But he had no liking for office work, and after a few months he appointed another of his sons, Rim-Sin, as king of Larsa.

Rim-Sin was destined to be the longest-living king in Babylonian history (ca. 1822–1763 B.C.). His reign marks the high point in Larsa's political fortunes. In the early years of his reign, Kudur-Mabuk paid careful attention to him, an indication of his youth and inexperience. Eventually, however, nothing more is heard of Kudur-Mabuk, for the old warrior had obviously died at last.

Between about 1820 and 1804 B.C., Rim-Sin was very active, undertaking numerous military campaigns. He gradually gained control of all Babylonia except the north. In his thirtieth year (ca. 1804 B.C.), he captured Isin. This was the high point of his career, and it was celebrated with due pomp and circumstance. It is of particular interest that he used this victory to date subsequent events in his reign. Thus, his thirty-first year was called "The first year after the king captured Isin"; his thirty-second year, "The second year after the king captured Isin," etc. This is the first known example in history of an era dating system. It was short-lived, however, for it did not survive Rim-Sin's death.

By the close of the Early OB period a number of phenomena had developed. Culturally, Babylonian civilization had passed through its formative years and was ready to blossom. Politically, socially, and economically, the scene was still confused, but the stage had been set for the entrance of one of Babylonia's greatest kings, Hammurapi.

3. The Hammurapi Age (ca. 1792–1750 B.C.). No king of Babylonia, with the exception of Nebuchadnezzar II, is so well known in modern times as Hammurapi. Although he is never mentioned in the Bible, the discovery of his famous "law code" in the last century has made his name a household word. Since then, industrious archaeological excavation and research over more than a century have presented a fuller picture of Hammurapi and his era. He was a giant among giants, his chief opponents being Rim-Sin of Larsa (discussed above), the kings of Mari, and Shamshi-Adad I.

a. Mari. The discovery in the 1930s of the Mari archives, consisting of about 20,000 cuneiform tablets, was the single most important event in reconstructing the history of the Hammurapi age. Most of the documents from Mari, located about 300 km upstream from Babylon, are letters and administrative texts, and from them we learn of the complex politics of the time in which international intrigues and coalitions were commonplace. Before the time of Hammurapi, Mari was one of several autonomous city-states in N Mesopotamia and Syria and was controlled by a dynasty of Amorite origin. An early important king of Mari was Yahdun-Lim, who claimed sovereignty over states as far W as the Mediterranean. He also concluded working agreements with the seminomadic tribes along the Euphrates that were perennial problems for Mari. But Mari soon fell under the sway of Shamshi-Adad I. See also MARI (ARCHAEOLOGY).

b. Shamshi-Adad I (ca. 1813–1781 B.C.). Shamshi-Adad I was also of Amorite extraction. During his successful military career he moved around a great deal but finally settled his capital at Shubat-Enlil in E Syria. At the height of his power he controlled the city-state of Asshur and the area of Assyria, and he, or at least his supporters at Asshur, went to some effort to promote the fiction that Shamshi-Adad was a rightful member of the ruling dynasty at Asshur. Thus, he was regarded in later tradition as a king of Assyria. It is relevant to our purpose that he captured Mari after Yahdun-Lim was assassinated and appointed his younger son, Yasmah-Adad, as governor of Mari. Ishme-Dagan, his elder son, was made governor of Ekallatum, just south of Asshur. Thus, Shamshi-Adad, with his two sons, ruled over most of N Mesopotamia. By this time, however, Hammurapi had ascended the throne at Babylon.

c. Hammurapi (ca. 1792–1750 B.C.). Hammurapi was the sixth member of the first dynasty of Babylon, another Amorite dynasty. When he ascended the throne, Babylon was only one of a few city-states of medium power. Earlier kings of Babylon had laid the foundations of political and military power firmly; nevertheless, with such foes as Rim-Sin to the S and Shamshi-Adad to the N, Babylon was not an obvious candidate for supremacy. But Hammurapi made it supreme, conquering the other states and inaugurating a cultural golden age in Babylonia. Indeed, this is the first time one can speak of "Babylonia" as a unified political entity.

The name Hammurapi is actually Amorite, and since his two immediate predecessors bore Akkadian names, this suggests a return to ancestral values. In this same vein, Hammurapi made extensive use of Amorite troops in his conquests. He was not merely a warrior, however. He frequently used international diplomacy to achieve his ends, as is apparent from the Mari archives. Peaceful measures were the salient features of the first half of his reign. He carried on friendly correspondence with Shamshi-Adad I, and there may actually have been a treaty between the two rulers. Similarly, there is some evidence of a treaty

with Rim-Sin in those early years. This is suggested by Hammurapi's sending of his troops to defeat some nomads which had harassed Rim-Sin's territory.

But the scene changed when Shamshi-Adad died and Eshnunna, a city-state on the Diyala river, formed an alliance with Elam and marched against Mari. The death of Shamshi-Adad also led to a revolution at Mari, where Zimri-Lim, son of the assassinated Yahdun-Lim, gained control. In face of the dramatically changed political scene, Hammurapi allied himself with Zimri-Lim and thus forestalled the attempt of the Elamo-Eshnunna coalition to capture Mari.

Zimri-Lim and Hammurapi remained good allies for many years, exchanging friendly letters (of which many have survived) and helping each other in time of need. Nevertheless, they each had agents in the other's court who reported regularly on the other's movements. The king of Mari was wise to be on the alert, for eventually Hammurapi became more active militarily, his principal target now being Rim-Sin at Larsa. The campaign against Larsa lasted five years, at the end of which the city and its territory fell to Hammurapi and was absorbed into the Babylonian state.

Now that Hammurapi controlled all of S Mesopotamia, it is not surprising that he turned his attention northwards. He attacked Zimri-Lim at Mari and was immediately successful. Over the next few years he consolidated his hold over Mari and expanded his domain to embrace Asshur and the area in between. Now Hammurapi was king not only of the Babylonian plain but also of the area which would eventually be called Assyria.

The age of Hammurapi was not just one of military clashes. The "law code" for which Hammurapi has become so famous in modern times is an example of the concern the king had for justice. This is amply borne out by the royal correspondence found at Larsa, in which the king deals with individual complaints over land rights and related problems. It is very clear from this archive that the Babylonian monarch was accessible to any subject who had a just grievance. In fact, Hammurapi was, so far as one can tell, as good an administrator as he was a diplomat and soldier. In religion, the Sumerian beliefs and practices still prevailed, but there were some changes. Shamash, the sun-god and chief god of the N state of Sippar, now came to prominence. A curious institution at Sippar, consisting of celibate women being dedicated to Shamash, was favored by Hammurapi. In general, however, there was a tendency toward the economic weakening of the temple in favor of the palace. This process began in the 3d millennium as a result of the wealth that was brought back by the campaigning kings and deposited in the palaces. Finally, literature in the Akkadian language was flourishing by the age of Hammurapi, and many modern critics believe that this was the period of "classical Babylonian," just as 5th-century Athens was the time of "classical Greek."

4. The Fall of Babylon (ca. 1750–1595 B.C.). The decades after Hammurapi's death saw the leveling off of Babylonian power and then gradual decline. Samsu-iluna (ca. 1749–1712 B.C.), Hammurapi's son and successor, managed to maintain his hold over much of the territory he had inherited. But already in his time serious competition for supremacy, never really suppressed, came again to the fore. Chief among the competitors were the Kassites, the people of the Sea-Land, and Rim-Sin II of Larsa. It is these forces which gradually weakened Babylonian might, leading to its fall.

The Kassites were first mentioned by name in written documents from the reign of Samsu-iluna. In fact, there is a reference to a Kassite army. It is apparent from this, and from their subsequent seizure of power at Babylon (ca. 1595), that they continued to be troublesome to Babylonia throughout the two centuries under discussion, but few facts have so far been recovered to prove this.

More concrete information is available about the "Sea-Land," a literal translation of the Akkadian expression *māt tāmtim* used to describe the area of the marshes on the N periphery of the Arabian/Persian Gulf, part of the homeland of the Sumerians. About the time of the foundation of the first dynasty of Babylon, a dynasty of the Sea-Land emerged and eventually produced its most powerful king, Ilimaila, who was a contemporary of Samsu-iluna. Ilimaila chipped away at Babylon's S holdings and even gained control for a time over Nippur. The Sea-Land kings continued to wax in power until the end of the first dynasty of Babylon when the Sea-Land, like Babylon, was conquered by the Kassites.

During the reign of Samsu-iluna yet a third power, Rim-Sin II of Larsa, challenged Babylonian suzerainty. This Rim-Sin, a nephew of the great Rim-Sin, managed to gain independence for Larsa for perhaps as long as five years. From there he expanded his influence farther afield but eventually was defeated at Kish, near Babylon, and killed. This left Babylon, the Sea-Land, and the Kassites as the three major powers in the area until the fall of Babylon.

Very little information is available concerning the events leading up to the fall of Babylon. The dearth of documentation is in itself a testimony to the chaotic nature of affairs in the latter days of the first dynasty of Babylon. Only one fact is well documented: Babylon was actually captured ca. 1595 B.C. by a Hittite king, Murshili I, who looted the city and then withdrew. How it came about that a Hittite army was so far from home and that it retreated so quickly are mysteries, but the facts are attested to in both Babylonian and Hittite sources. The people who gained from this raid were the Kassites, who now entered Babylon and established there a dynasty which lasted for four centuries.

5. The Kassites. The Kassites, unlike other major migrants to Babylonia such as the Amorites or Arameans, remain very much of an enigma. There is doubt about their origin, their language belongs to no known family of languages, and they left little of their culture as a legacy to Babylonian civilization. Part of the reason for our lack of facts about them is, no doubt, that they were confined to Mesopotamia, whereas other large groups such as the Amorites and Arameans also had an impact on Syria-Palestine, and thus we learn about them from the Bible.

It is clear that the Kassites were illiterate nomads who probably came into Mesopotamia from the central Asian steppes either through the Caucasus mountains or the Iranian plateau. Virtually nothing of their language has survived, for they adopted the Babylonian language when they learned to write in cuneiform. They lived on the periphery of Mesopotamia for some time, possibly several centuries, before taking control at Babylon ca. 1595. As noted above, they are first mentioned by name in Babylonian documentation in the reign of Samsu-iluna, where they are in the form of an army; but, no doubt, peaceful Kassite penetration of Babylonia had gone on for some time before.

From Samsu-iluna's time onwards, there is evidence that Kassites were pressing into Babylonia both in armed bands and by peaceful means. The latter method is illustrated by Babylonian documents in which Kassites are listed as herdsmen and harvesters. More information about this early phase can be gleaned from a Babylonian king list, which gives the names in succession of the "Kassite Dynasty" in Babylonia. Although the list is in part badly broken, it is apparent from the large number of names and from synchronisms with later kings of Assyria that the earliest rulers in this list could not have been resident in Babylonia. In other words, the list seems to begin with the time when the Kassites had moved into the Mesopotamian periphery, long before they captured Babylon ca. 1595 B.C. In this early era the rulers could have been little more than tribal chiefs. The first such leader, Gandash, was probably a contemporary of Samsu-iluna and therefore the one who led the Kassite "army" against that king. Nothing is known about subsequent rulers, other than their names, until the accession of Agum II (the ninth in the list), who was probably the first Kassite to rule at Babylon.

6. Middle Babylonian Period (ca. 1595–1000 B.C.). The Middle Babylonian period covers two ruling dynasties at Babylon: the Kassite dynasty and the 2d dynasty of Isin. The two are divided by an invasion and capture of Babylonia by the Elamites ca. 1157 B.C. Each dynasty produced one outstanding monarch, Kurigalzu of the Kassite dynasty and Nebuchadnezzar I of the Isin dynasty. During the two dynasties, and particularly during the reigns of the two kings just mentioned, the culture and economy of Babylonia thrived. There were, nonetheless, long periods of depression caused largely by the inroads of Elamites and Assyrians.

a. Kassite Dynasty. Agum II seems to have been the Kassite king who first took control of Babylon after the Hittite raid ca. 1595 B.C. He ruled over Babylonia and the east Tigris region, the first area of Kassite presence. With one exception the events of his reign are virtually unknown: he won back from the Hittites the cult statue of Marduk, the tutelary god of Babylon, which had been part of the booty carried off in the Hittite raid. When the statue was returned, it was installed with much pomp and ceremony in the newly renovated temple of Esagil, symbolizing the return of Babylon's fortunes. In subsequent centuries

Marduk's statue would again be seized as booty on no less than four occasions, each one marking a drastic decline in Babylon's morale.

In tracing the history of Babylonia we must now skip over more than two centuries, for lack of documentation, to the 14th century B.C. In this era letters found at Amarna, on the upper Nile in Egypt, suddenly illuminate the darkened stage, for many of these letters are from Babylonian kings to the pharaoh. See AMARNA LETTERS. The language of the letters is Babylonian and the script is cuneiform, evidence that Babylonian was the lingua franca of the Near East in the 14th century B.C. The Amarna Letters show that Babylonia was now accepted as a major power in the Near East and that its kings dealt as equals with the Egyptian monarchs. The main theme of the correspondence is an exchange of Egyptian gold for Babylonian princesses, who would enter the pharaoh's harem. It is reasonably obvious, then, that a treaty existed between the two nations. If written copies of such a treaty ever existed, they have not survived, and one can only surmise what the purpose was. But Egypt was very worried about the power of Mitanni in E Syria and also the Hittite invasion of W Syria. Egyptian interests would have been helped by a friendly ally on the other side of those two powers, and that consideration would lie behind any treaty.

The Amarna Letters provide a hint of the decline in Babylonia's importance, after a time, in Egyptian eyes. The Babylonian king began to complain that Assyrian ambassadors were being received at Amarna. This may have been shortly before Babylonia actually became a puppet state of Assyria under Ashur-uballiṭ I (ca. 1364–1329 B.C.), for letters of Ashur-uballiṭ to the pharaoh were also found at Amarna. Just how Assyria gained ascendancy over Babylonia is still to be explained by future discoveries. What is known is that the daughter of Ashur-uballiṭ was married to the Kassite king of Babylonia. The Babylonians rebelled against this king and put a usurper on the throne. Ashur-uballiṭ invaded Babylonia to avenge his son-in-law, put down the revolt, and installed another man as king. This information comes from two documents, the Synchronistic History and Chronicle P (see HISTORIOGRAPHY [MESOPOTAMIA] and *TCS* 5), which disagree in certain details although they both have the general outline presented here.

At some time after Ashur-uballiṭ's invasion, Babylonia regained independence and entered the greatest era of the Kassite period, the reign of Kurigalzu. This king not only held the Assyrians at bay, but he probably defeated their army on one occasion in a pitched battle at Sugaga, a place just south of the city of Asshur. He also launched successful campaigns against Elam, capturing the Elamite king, and possibly also the Sea-Land. Like most Babylonian rulers, he was a great builder. He erected temples and palaces at various cities, but his chief concern, and indeed creation, was the founding of Dur-Kurigalzu ("fortress of Kurigalzu"). At this city, virtually a suburb of modern Baghdad, he constructed a complex of temples and palaces which have been under excavation for the last four decades by Iraqi archaeologists. The temple tower (ziggurat) of Dur-Kurigalzu is still in large part standing today and dominates the surrounding landscape.

With the death of Kurigalzu, Babylonian history is again obscure, and apart from mention of occasional clashes with Assyria, little is known for a century or more. One of these encounters with Assyria, during the reign of Tukulti-Ninurta I (1244–1208 B.C.), led to an Assyrian invasion of Babylonia and to the death of its king, Kashtiliash IV. The Assyrians looted Babylon and carried off the Marduk statue. For a brief period afterward, Babylonia was ruled by Assyria. The death of Tukulti-Ninurta meant freedom again for the Babylonians, and during the next few decades Babylonia not only remained independent but may have exercised some authority over a temporarily weak Assyria as well. During this time the Marduk statue must have been returned, although no specific record has been preserved. Major changes were taking place within Babylonia in this period, these changes centering around a religious revolution which inevitably had a political and economic impact. The controversy, as we know from a recently published Babylonian epic, was instigated by the attempt to recognize officially the god Marduk as king of the gods. The nobles of Babylonia supported the cause and, after a struggle, forced the king Adad-shuma-uṣur (1218–1189 B.C.) to accede to certain demands. Precisely what these were is unknown, since the epic is badly broken (Grayson 1975: 56–77).

The end of the Kassite dynasty was rapidly approaching. During the one-year reign of Zababa-shuma-iddina (1160 B.C.), both the Elamites and the Assyrians invaded Babylonia from different sides. The Kassite dynasty was now tottering, although its last member, Enlil-nadin-ahhe, managed to hold onto power for three years before an Elamite attack in 1157 B.C. captured and carried him off to Elam. The statue of Marduk was also removed. The destruction of the Kassite dynasty by the Elamites was commemorated in various Babylonian literary works and won for the Elamites a notorious reputation, which would endure for centuries.

While the Kassites had little cultural impact upon Babylonian civilization, much happened in the cultural sphere during their four centuries of power. As noted already, the god Marduk was moving up in rank to become king of the gods, and Dur-Kurigalzu is a lasting monument to Kassite building endeavors. In literature there was much editing and organization going on, and most Babylonian literary works, such as the *Gilgamesh Epic*, were given their final form during this period. In addition, many original poetic works, mainly about such Kassite kings as Kurigalzu, were composed in this era. The cultural impact of Babylonia on the West, on the other hand, is apparent from the discovery of a cache of inscribed stone seals of the Kassite type at Thebes in Greece.

b. Second Dynasty of Isin. After the Kassite dynasty fell, there is obscurity in Babylonian history for a brief period. During this time a new dynasty, the "second Isin dynasty," was founded at Isin and eventually produced one of the most important kings of the Middle Babylonian period, Nebuchadnezzar I (1133–1116 B.C.; not to be confused with Nebuchadnezzar II of the Bible). By the time he ascended the throne the capital was once again Babylon rather than Isin or Dur-Kurigalzu.

Nebuchadnezzar I became famous in Babylonian history for two major reasons which are closely linked. The first reason is that he led one or more highly successful expeditions into Elam and severely battered this hated enemy. Dramatic details of part of this invasion are narrated in the text of a Babylonian boundary stone, wherein we read of the heat and thirst which afflicted the Babylonian soldiers who, nevertheless, conquered the Elamite army. We learn from the same source that the chariotry was particularly effective in winning the day. Elam was devastated and looted, and among the plunder brought back to Babylonia was the statue of Marduk. This, the return of Marduk's statue, was the second reason for Nebuchadnezzar's fame in Babylonian tradition. As remarked above, there is a pattern in Babylonian history revolving around the occasions when the statue was abducted by an enemy and later brought back. This, the third such time, was used by the Babylonian king to proclaim officially that Marduk was king of the gods. The movement in this direction, which must go back to the time of Hammurapi, gained momentum in late Kassite times, as observed when speaking of the rebellion against Adad-shuma-uṣur. Now the time was ripe to make the formal proclamation. The temple of Esagil was renovated for the occasion, and special hymns and poems were composed. The statue of Marduk was led down the great processional way, lined with Babylonians, and was accompanied by the statues of lesser deities. Once Marduk was installed upon his dais, and after the proper ceremonies and rituals had been performed, the other gods were returned to their shrines. Marduk now reigned supreme. His statue was not disturbed again until 689 B.C. (see D.8.c. below).

One final event known about the reign of Nebuchadnezzar I is that he made two attacks on Assyrian border towns. Our only source, the Assyrian *Synchronistic History*, says these attacks were unsuccessful. Even if this is true, the fact that Babylonia, not Assyria, was the aggressor is an indication of the relative strength of the two.

The subsequent kings of the second Isin dynasty are of minor importance, with the exception of Marduk-nadin-ahhe (1098–1081 B.C.), who raided the Assyrian border town of Ekallatu and carried off the statues of its gods. These statues remained in Babylonia for centuries, despite long periods of weakness, until Sennacherib recaptured them in the 7th century B.C. As the end of the 2d millennium approached, Babylonia once more entered a dark period. The Aramean invasions considerably constricted her ambitions and caused serious disruptions within Babylonia itself. In the wake of these incursions, a restored and even more vigorous Assyria pressed down upon Babylonia's N border.

7. Babylonia and Assyria (ca. 1000–627 B.C.). a. A Period of Weakness (ca. 1000–748 B.C.). During the 2d millennium Assyria increasingly became an important background presence in Babylonian history, and in the 1st half of the 1st millennium this was even more evident. Other peoples and powers, such as the Arameans and Elamites, had a significant impact upon Babylonia, but it was Assyria which gradually gained the leading control over Babylonia. At the beginning of the 1st millennium Babylonia was independent once again, for Assyria was struggling against the Arameans for its very survival. The Arameans penetrated Babylonia, too, winning land and wealth and causing much chaos.

There is more detailed information available for the 9th century B.C., which shows that Babylonia and Assyria, after some minor skirmishing, were on good terms. The first important Babylonian king of the millennium, Nabu-apla-iddina (ca. 887–885 B.C.), had a treaty with his Assyrian counterparts. His reign is a highlight in a bleak period of Babylonian history. The country's borders were secure, internal stability prevailed, and energy was devoted to reconstruction and restoration. For example, thanks to the discovery of a text of Nabu-apla-iddina's inscribed on a stone tablet, we know that the king sponsored the rebuilding of the temple of the sun-god (Shamash) at Sippar.

When Nabu-apla-iddina died, his successor, Marduk-zakir-shumi I (ca. 854–819 B.C.), renewed the old treaty with Assyria, which was now ruled by Shalmaneser III (858–824 B.C.). There is actually an Assyrian relief showing the two kings clasping hands to seal the agreement. The renewal of the treaty proved advantageous for Marduk-zakir-shumi; when his brother led a rebellion and seized some of Babylonia for himself, Marduk-zakir-shumi called upon Shalmaneser to intervene, invoking the treaty between them. The Assyrian responded by attacking and defeating the brother and restoring the kingdom intact to Marduk-zakir-shumi. After this incident, Babylonia continued to enjoy peace with Assyria and general prosperity. In fact, Babylonia subsequently was able to repay Shalmaneser's favor. When Shalmaneser was getting very old, a major rebellion broke out in Assyria and continued for some years. It appears that one of Shalmaneser's sons, Shamshi-Adad, sought and gained Babylonian support. A fragmentary copy of a treaty between Shamshi-Adad and Marduk-zakir-shumi I testifies to this, although the Babylonian king used the occasion to demote the Assyrian to a lower status so that in the treaty he appears as the lesser party. When the rebellion had been suppressed and Shamshi-Adad, the fifth king of that name, had been crowned, he invaded Babylonia, presumably out of revenge for the humiliating treaty imposed upon him. This is the first time for almost a century that there was open conflict between the two states. Shamshi-Adad V led three expeditions into Babylonia, capturing major Babylonian cities, including Babylon, and Babylonia was forced to pay tribute.

The Assyrian Adad-narari III (810–783 B.C.) continued the aggressive stance toward Babylonia, although it is unknown how many campaigns he sent there. A treaty favorable toward Assyria was imposed upon Babylonia, which again had to pay tribute. Fortunately for Babylonia, this reign marked the end of a troublesome time with Assyria. By the end of Adad-narari's reign, Assyria was once again hard pressed by another power, this time Urartu, and had no time to meddle in Babylonia. Thus for the first half of the 8th century B.C., Babylonia, free of foreign invasion, seemed to be in a position to enjoy peaceful pursuits. However, there is no clear evidence of economic prosperity or cultural development during this phase. Indeed, even the political history is obscure, which suggests that Babylonia was experiencing some difficulties. There is some indication of a major religious upheaval at the Ishtar temple in Uruk. Whether or not this was more widely spread is unknown.

b. Under Assyrian Control (ca. 747–627 B.C.). Babylonia's fate was closely linked to that of Assyria throughout this era, particularly so in the Sargonid age in Assyria. When Tiglath-pileser III (744–727 B.C.) took the Assyrian throne, Nabu-nasir (747–734 B.C.) had barely begun his rule at Babylon, a rule that held great promise for Babylonia: the borders were secure, the state was stable internally, the king encouraged literary and scientific projects (including astronomical observations and chronicle writing), and Tiglath-pileser III concluded a treaty with Nabu-nasir.

The death of Nabu-nasir brought an abrupt end to Babylonia's fortunes. Mukin-zer, the leader of a tribe of Chaldeans in S Babylonia, attempted to seize the Babylonian throne, forcing Tiglath-pileser III to respond by invading Babylonia, pushing Mukin-zer and his forces back south, and having himself

crowned as king of Babylonia. Thus, for the first time, Assyria and Babylonia were a united kingdom, ruled by an Assyrian monarch.

To understand subsequent events in Babylonian history, it is necessary to look briefly at the various groups now present in the Babylonian plain, for the Babylonian population was quite heterogeneous. Essentially there were four elements: "native" Babylonians, Elamites, Arameans, and Chaldeans. To this one must add a small group of Assyrians who came to Babylonia under the Sargonids as soldiers and administrators. Each of these groups had special interests and goals which frequently clashed with those of the others. Thus, throughout the Sargonid age Babylonia suffered from internecine unrest, and this caused Assyria to invade frequently, for Assyrian kings wanted both a subordinate and a stable neighbor to the south.

The most active of all anti-Assyrian agitators in Babylonia at this time was MERODACH-BALADAN II. He was the leader of a Chaldean tribe called Yakin and first took an active military role toward the end of Tiglath-pileser III's reign. When Sargon II (721–705 B.C.) ascended the Assyrian throne, Merodach-baladan had himself crowned king at Babylon. The Assyrian tried unsuccessfully to depose Merodach-baladan, who ruled Babylonia for the next decade. But in 710 B.C., Sargon finally defeated the Chaldeans, and Merodach-baladan took refuge in the S marshes.

Our sources for this period are primarily Assyrian, and their view is that Merodach-baladan and other active figures in Babylonia were "rebels" or "usurpers" who oppressed Babylonia, and it was only the Assyrians who restored peace and prosperity. This may, in part, be true, but the Assyrians were still making a profit out of Babylonia to the latter's disadvantage. This is evident from the increasing resistance to Assyrian rule, which came to a head in the reign of Sennacherib (704–681 B.C.).

Babylonia, as represented by Merodach-baladan and other leaders, staunchly resisted Sennacherib. Merodach-baladan actually regained the throne at Babylon briefly in 703 B.C., forcing the Assyrian to turn from other concerns (Palestine) and invade Babylonia. Merodach-baladan again fled south to the marshes, but over the next few years he stirred up opposition to the Assyrian occupation. Sennacherib attempted to rule Babylonia through puppet kings while he led the Assyrian army in an abortive attempt to capture Merodach-baladan. The critical point in this phase of Assyro-Babylonian affairs was the entry of Elam into the fray. The Elamites invaded Babylonia, captured Sennacherib's son and heir (who had been crowned king of Babylonia), and carried him off to exile and death.

Sennacherib was enraged by this, regarding it as Babylonian treachery. He launched vicious campaigns first against Elam and then against Babylonia, finally capturing Babylon itself in 689 B.C. He boasted that he had looted, burnt, and destroyed the city (*LAR* 2: 339–41). The statue of Marduk was taken away to Assyria. This was one of the lowest points in Babylonian history. Its capital city was in ruins, and its tutelary god was gone.

The next Assyrian king, Esarhaddon (680–669 B.C.), set himself the task of reconciliation with and reconstruction of Babylonia. This was a wise policy and won for him a reign untroubled on the S border. Esarhaddon ordered and had carried out the rebuilding of Babylon and in particular of Marduk's temple, Esagil. The god's statue was not actually returned until after Esarhaddon's death. For some unknown reason, Esarhaddon had decided that when he died his kingdom would be divided between two of his sons, and thus Ashurbanipal (668–627 B.C.) came to rule over Assyria and Shamash-shuma-ukin (667–648 B.C.) to rule over Babylonia. It was a major error, for it was only a matter of time before war broke out between the brothers. Shamash-shuma-ukin, although an Assyrian, had the support of Babylonia in his dispute with his brother. To this he added the aid of the Elamites and Arabs. Increasing unease broke into open battle in 652 B.C. and continued for four years, to 648 B.C. Assyria quickly gained the upper hand, and, after a long siege, Babylon fell and Shamash-shuma-ukin perished in his burning palace (*LAR* 2: 789–98). Ashurbanipal now ruled Babylonia through a puppet king, Kandalanu (647–627), but little is known of those years.

Given the tumultuous political scene in Babylonia during the Sargonid age, it is no surprise that cultural and economic pursuits did not flourish. There were brief periods when business could be conducted

somewhat normally, of course, and there is slight evidence of literary activity, but taken as a whole it was a very bad time for Babylonia.

8. The Neo-Babylonian Empire (626–539 B.C.). a. Imperial Beginnings (626–605 B.C.). Out of the ashes of a Babylonia scorched by the Assyrians in 689 and 648 B.C. rose a new dynasty destined to establish both an independent Babylonia and Babylonian rule over the former Assyrian empire. The founder of this dynasty was Nabopolassar (625–605 B.C.), a Chaldean who was crowned king at Babylon after defeating an Assyrian army in Babylonia. No details of Nabopolassar's background are known; nor is there much firm evidence about the situation before the events leading up to his coronation. It is apparent, however, that the Babylonians were actively rebelling against the Assyrians and trying to expel them from their land. Nabopolassar became the champion of this freedom fight, and in 626 B.C. he led Babylonian troops to lay siege to Nippur, which contained an Assyrian garrison. The siege was lengthy and the people so impoverished that some of them, as we know from contracts discovered at Nippur, were forced to sell their children into slavery so that they could buy food. Eventually the siege was lifted when an Assyrian army arrived and pursued the Babylonian troops as far as Babylon. In a battle outside Babylon's walls, the Assyrians were defeated. This was the last attack Assyria ever made on Babylon. The Babylonians were so elated by this success that they crowned Nabopolassar as their king, thus founding a new dynasty. The new monarch's first act was to return to the Elamites statues of their gods which the Assyrians had abducted and brought to Babylonia many years earlier. This indicated a firm bond of friendship between the two states. Elam, however, had become very weak as a result of the raids of Ashurbanipal and in future years played no meaningful role in Babylonian affairs.

During the early years of Nabopolassar's reign, the Babylonian offensive went from success to success, and Assyria gradually withdrew to the north. When Nabopolassar pushed up to the Upper Euphrates region, Egypt became alarmed and sent aid to Assyria (616 B.C.). Such an alliance had never existed before and is a symbol of the momentous changes occurring in ancient Near Eastern politics. About the same time that Egypt aligned itself with Assyria, the Medes allied themselves with the Babylonians. The Medes had long been established in W Iran and more recently had spread their control westward into eastern and central Anatolia. For the next four years the Medes and Babylonians pounded away at Assyrian holdings and at the Assyrian heartland itself. In 614 Asshur was captured. Then, in 612 the allies laid siege to Nineveh. The siege lasted all summer before the city fell. A remnant of Assyrians escaped W to Harran, where a mini-Assyrian dynasty was established. Nabopolassar, supported by the Medes, attacked Harran in 610 and forced the combined armies of Assyria and Egypt to flee to Syria. In 609 this army returned and made a vain attempt to dislodge the Babylonians and Medes from Harran.

The decisive battle between the two sides came in 605 at Carchemish. Egypt now stood alone, for nothing is ever heard again of an Assyrian army. By this time the Babylonian army was being led in alternate years by the king Nabopolassar and his son and heir Nebuchadnezzar. In 605 the son was in charge of the expedition. Nebuchadnezzar led a surprise attack on the Egyptian army at Carchemish. The Egyptians were caught inside the walls but managed to break out and avoid being sealed in by a siege. The fighting was fierce, and the Egyptians eventually broke and ran with the Babylonians in hot pursuit, slaying every man they could catch. This was the ultimate victory for Babylonia. Assyria was destroyed, and Egypt had lost any credibility in Asia. Eventually the Babylonians would follow this up by campaigning to and claiming all of Syria-Palestine. But there was a slight delay. News arrived after the Battle of Carchemish that Nabopolossar had died. Nebuchadnezzar returned swiftly to Babylon, where he was crowned king.

b. The Empire (604–556 B.C.). Nebuchadnezzar II (604–562 B.C.) is widely known by readers of the Bible as the king responsible for the sack of Jerusalem and the exile of many of its inhabitants in 587 B.C. Be that as it may, Babylonia reached its greatest heights as a political power during his reign, and the Babylonian empire came to include essentially the same territory as the Assyrian empire. This extension of power was the result of vigorous campaigning by Nebuchadnezzar. No sooner were the coronation ceremonies over for Nebuchadnezzar, after the death of his father, then he hastened back to Syria to resume his campaigning. He had defeated the Egyptians at Carchemish in 605 B.C., but this did not

automatically bring Syria-Palestine under Babylonian control. In the following years he led a series of expeditions W of the Euphrates. Sometimes local rulers acknowledged him as lord and paid tribute without question; at other times, they resisted and the Babylonian army laid siege to their cities.

By 601 Nebuchadnezzar felt his hold over Syria-Palestine was strong enough to permit a campaign against Egypt. This was a mistake. A pitched battle between the two forces in Egypt resulted in a stalemate, and Nebuchadnezzar, choosing discretion, led his army back to Babylon. After a year spent repairing the damage to his army and equipment, he resumed his Syrian campaigns. This was urgent, for the Babylonian humiliation in Egypt had encouraged W states to rebel. One such state was the kingdom of Judah and its capital, Jerusalem. Jerusalem during this period was torn between two factions, one pro-Egyptian and one pro-Babylonian. The king, Jehoiakim, and his supporters were in favor of siding with the Egyptians, but the prophet Jeremiah preferred the Babylonians. Although Jehoiakim had paid tribute to Babylonia after the Battle of Carchemish, Babylonia's ignominious withdrawal from Egypt in 601 led him to renounce his allegiance to Babylonia and throw in his lot with Egypt. Nebuchadnezzar could not let this key center fall away, and so in 597 he besieged and captured Jerusalem. He appointed a new king, Zedekiah, and imposed a heavy tribute. Jehoiakin, son of Jehoiakim who had died, his family, and many leading citizens were taken as captives to Babylon, and modern excavations have unearthed some of the lists of rations for these prisoners. This event was the first of two disasters for Jerusalem. Egypt, as Jeremiah had predicted, did not intervene.

In the years after 597, Zedekiah allowed himself gradually to be persuaded by those who favored Egypt. Eventually, with a promise of Egyptian support, he abandoned allegiance to Babylonia, refusing to pay tribute. In 587 Nebuchadnezzar again invaded Judah, capturing various cities as he marched on Jerusalem. These Judean cities were not plundered but were treated mercifully in a deliberate attempt to weaken the resolve of Jerusalem's defenders. Therefore, when Nebuchadnezzar laid siege to Jerusalem, Jeremiah and his supporters pointed to the lenient treatment of other cities and vainly urged capitulation. Meanwhile, the Egyptian army moved into Judah and tried, unsuccessfully, to lift the Babylonian siege. Then the Babylonians captured Jerusalem. The city was plundered and destroyed, its leaders were executed, and most of the remaining population were carried off in exile to Babylonia.

True to Babylonian tradition, Nebuchadnezzar was as much a builder and a patron of culture as he was a military leader. The wealth and political security which his campaigns produced enabled him to pursue these activities with unexcelled results. His building program at Babylon was extensive, involving major replanning and new construction. He built a new palace by the Euphrates at the N edge of the city. The walls also were rebuilt, and a bridge was constructed to facilitate communication between the two parts of Babylon that lay on opposite sides of the river. The temple tower (ziggurat), the legendary Tower of Babel, was completely restored, as was the temple of Esagil, Marduk's shrine, adjacent to it. The origin of the legendary idea of the "Hanging Gardens of Babylon" (one of the "Seven Wonders of the Ancient World") may have been the live vegetation growing at the top of the ziggurat that, from a distance, would have appeared to tower over the city walls.

While it is apparent that literary and artistic activity must have flourished during this reign, it is difficult to document it since such creations are rarely dated. However, fragmentary remains of an epic about Nebuchadnezzar bear witness to the high regard which creative Babylonians had for him. Nebuchadnezzar's reign marks the apogee of the Neo-Babylonian empire. After his death he was succeeded by some relatively unimportant monarchs, including Evil-Merodach and Nergal-Sharezzer. If the kingdom was still strong, it was nevertheless no longer expanding.

c. Nabonidus and the Fall of Babylon (555–539 B.C.). Nabonidus, the last member of the Neo-Babylonian dynasty, is an intriguing figure. See NABONIDUS. While forces portending doom to Babylonia gathered on the horizons, he found time to promote a religious change, to undertake major building operations, and even to live in the desert for ten years. He did not, however, ignore the external dangers to Babylonia's security—far from it. When at last the Persian army invaded Babylonia, he fought valiantly but in vain to repel them.

Nabonidus' religious changes provide a key to his other actions. He was not in the direct line for the throne (one Babylonian text called him a "usurper"), and it is unknown how he became king. His mother, Adad-guppi, certainly played some part in this. She came from Harran, the city where the ruling Assyrian dynasty made its last abortive attempt to survive. There, she worshipped the tutelary deity, the god of the moon. When Nabonidus came to power, he promoted this cult of the moon and sought out similar cults in Babylonia. Thus he favored the Babylonian deity Sin, god of the moon and the city Ur. He had little interest in Babylon's god, Marduk. This brought down upon his head the wrath of the Marduk priests and supporters who, among other things, wrote literary works condemning Nabonidus for his sacrilege.

A second unique feature of this king's reign was his ten-year self-imposed exile in Tema, an oasis in the Arabian desert. While he lived there his son, BELSHAZZAR, managed affairs at Babylon. Many writers, ancient and modern, have suggested reasons why Nabonidus went to live there, but none of these reasons can be proved valid since no contemporary document gives details of the event. It is a fact that pre-Islamic Arabs in the Arabian peninsula revered the moon-god, and this may have been an important motivation for Nabonidus, given his intense interest in this cult. But this would not exclude one or more other reasons, such as an attempt to regain his health, for the long exile.

The third area of special interest in this reign was the manner in which Nabonidus conducted his building operations. It was, of course, usual for a Babylonian king to erect or restore monumental buildings, as Nabonidus did. What was unusual was the zeal with which he sought out ancient statues and inscriptions of his predecessors when digging in the foundations of old buildings. This characteristic has won for Nabonidus the epithet "the world's first archaeologist" among modern scholars.

Given these intriguing facets of the king's character, it is a pity he met such an ignominious fate. The Persians under Cyrus the Great had been gathering around the borders of the Babylonian empire, preparing for a major assault which took place in 539 B.C. The Persians came down the Diyala river, and Nabonidus, at the head of his army, met and fought with them at Opis near modern Baghdad. Nabonidus was defeated. The Persians then marched on Babylon where, according to a native source, the Babylonians opened the gates and with rejoicing welcomed Cyrus as a deliverer from the "tyrant" Nabonidus. This sounds like a biased account, and it is hard to believe that all Babylonians were glad to see the Persian invaders. Indeed, Herodotus says the city had to be taken by force. Whatever the truth, Babylon did fall to the Persians in 539 B.C., and so ended indigenous rule in Babylonia.

9. Babylonia Under the Persians and Greeks. Although the Babylonians ceased to be politically autonomous in 539 B.C., their civilization continued for several centuries under foreign rule. The conqueror of Babylon himself, Cyrus, ensured the preservation of Babylonian culture by avoiding any interference in domestic affairs so long as the Babylonians were loyal. This was a feature of Cyrus' rule, known from other areas he had conquered, notably Palestine. In the Bible, as in Babylonian works, Cyrus is enshrined as a savior who restored justice and good administration (cf. Isa 45:1–13). In Babylonia, this view of Cyrus is sometimes extreme and therefore suspicious, but the general picture is nonetheless valid.

Babylonia continued to be well treated under Cambyses II (529–522 B.C.) and remained docile. When revolt broke out in Persia at the death of Cambyses, however, Babylonia took the opportunity to appoint her own kings for a year or two. But Darius I (521–486 B.C.) successfully suppressed the rebellion and pacified the various parts of his empire, including Babylonia. He put the provincial administration in order, and Babylonia gained the doubtful honor of contributing more tribute to the Persians than any other province.

Only one further serious attempt at independence was made by Babylonia during the Persian era, and this was in the reign of Xerxes I (485–465 B.C.). The rebels put their own appointee on the throne and withheld tribute from Xerxes, thus bravely disowning any allegiance to Persia. Xerxes responded with devastating deliberation. He sent in an army which not only defeated the rebels but looted and destroyed Babylon as well. Marduk's temple, Esagil, was demolished and his statue carried off to Persia. It is not surprising, perhaps, that nothing further is heard of Babylonian rebellion for the remainder of Persian rule.

The incredible march of Alexander the Great through W Asia and his defeat of the last Persian monarch, Darius III (335–331 B.C.), is part and parcel of Babylonian history, for Alexander chose Babylon as the

capital of his Asiatic-European empire. Tragically he died at Babylon at a young age, just as he had conquered the area from the Attic peninsula to the Ganges valley and was preparing to organize his empire. It would appear that the Babylonians liked Alexander, as well they might considering what he planned to do for them.

Because Alexander had not yet consolidated his empire, wars broke out among the Diadochi, Alexander's successors. From the conflicts emerged Seleucus I (305–281 B.C.) as king of Babylonia and W Asia. He founded both a new dynasty and a new dating system, the latter called the Seleucid Era and based on the date on which Seleucus marched into Babylon (312 B.C., a retroactive date). By this time the Greek language was widely spoken and written in Babylonia by the ruling and educated classes. Nevertheless, Aramaic and Akkadian continued to be used in some circles. In fact, Akkadian cuneiform was used for several centuries more in temples for religious, divinatory, and administrative texts, the last such text dating to A.D. 64.

There are no indications of major revolts by the Babylonians against their Seleucid masters. There was some dissatisfaction, however. This was in part due to the creation of a new city, Seleucia-on-the-Tigris, which drained off some population from Babylon. A more subtle reason for discontent is that the Babylonians felt themselves superior to the Greeks. This attitude is elusive to detect but there, nonetheless. There was a feeling that the Greeks were uncultured barbarians with no history or civilization to speak of. Thus, a Babylonian priest, Berossos, wrote a history of Babylonia in Greek, only fragments of which have survived, in order to teach his masters about a great civilization (i.e., the Babylonia civilization).

Eventually the Arsacids pushed into Babylonia in the 2d century B.C., forcing the Seleucids to withdraw to Syria. Our sources for the political history now rapidly dwindle, and little is known about the history of Babylonia in this time.

E. The State

The political structure of the Babylonian state was essentially that of the Sumerian state. Only gradually did changes take place to meet new conditions, particularly when Babylonia became a major imperial power in the 7th and 6th centuries B.C.

1. The King. The institution of monarchy in the Babylonian plain was Sumerian in origin. As in Sumer, the political philosophy was that monarchy came from the gods. The gods appointed a particular human being to rule and, in so doing, made him the supremely powerful human on earth. He had absolute power in every sphere—administration, courts, economy, army, society in general—except religion. In religion, he had to respect the position of the high priest, and this fact was made manifest once a year, in the New Year Festival. Part of the New Year's ritual called for the high priest to slap the king's face and pull him by the ears. The purpose of this was to remind the king that he was a humble servant of the gods. The king had certain duties to perform as a condition of his divine appointment. First, he was responsible for the nourishment of the gods, which meant that he had to contribute substantially from state resources toward the maintenance and building of the temples. Second, he was responsible for the "shepherding" of the people, which in fact meant maintaining an elaborate bureaucracy to carry out the administration. Third and finally, he had to administer justice to all, rich and poor, young and old; and thus, he was both a judge and a legislator.

In practice the monarchy was hereditary, with primogeniture (inheritance by the firstborn son) being the rule. The heir had to go through an elaborate coronation, which included both the gods and the Babylonian nobility approving his accession to the throne. There were numerous disruptions to the succession in Babylonian history, and there were many short-lived dynasties, particularly in the early centuries of the 1st millennium.

Along with the institution of monarchy came the idea that the king was divine, a concept also inherited from the Sumerians. This idea persisted in the early Old Babylonian period, during which many hymns were composed in praise of kings as gods and their names were preceded in writing by the cuneiform sign which indicated divinity. By the time of Hammurapi, however, the idea had died out and never reappeared. The image of the Babylonian king, as portrayed in literature and art, was of a pious ruler who

fulfilled his divine commissions and had little to do with war and commerce. Of course in practice he had much to do in both spheres, particularly with regard to war during the Neo-Babylonian empire. This image is quite different from that of the Assyrian king, who is depicted as a vigorous, albeit pious, warrior.

2. Administration. While the king was an absolute monarch, he required an elaborately structured administration to run the state. It is a feature of Babylonian administration that any Babylonian who felt he had a grievance could appeal directly to the king. There are many examples of this happening and of a king, such as Hammurapi, taking direct charge and personally correcting the grievance.

Babylonian administration can be portrayed as a pyramid with the king at the pinnacle and the numerous unskilled laborers, including slaves, forming the foundation. In between were several layers of bureaucrats and workers. Directly under the king were the governors of provinces and city mayors. Under these were the superintendants of tradesmen and laborers, and under these, in turn, were the next lower classes. Among the general population, first came the freemen, who were economically well off, owning land and doing little or no actual labor themselves. Below them were the half-free, palace officials, tradesmen, and small tenant farmers who did much of the work. Then there were the slaves, who were either debt slaves or prisoners of war. On the periphery of this structure were the seminomads, who would perform public works, including fighting, in return for payment. A group outside of the system was the temple personnel, for the temple had its own administrative system.

At every level and in every segment of Babylonian administration there was the scribe, for meticulous records of administrative matters had to be kept. This was another legacy from the Sumerians. There were chief scribes attached to the court, scribes in the governors' palaces, and even scribes assigned to record the rations issued to gangs of workmen dredging out canals. It is fortunate for us that this was so, since most of what we know of Babylonian administration has been learned from the letters, lists, memoranda, etc., left by these scribes. Another ubiquitous occupation was that of tax collector. There were numerous tax collectors throughout the land to collect a share of every crop and custom duties on every item going through the cities' gates. Public works were performed by corvée, it being the responsibility of every Babylonian to contribute some of his time to the maintenance of roads and irrigation canals.

Over the long passage of time in Babylonian history, some fundamental changes in the monarchy and administration took place. In the Old Babylonian period, a change that had begun in Sumerian times came to fruition: the economic and political supremacy shifted from temple to palace, a change brought about by the increasing campaigns of the monarch which enriched his palace's treasury. By the time of Hammurapi, the palace was clearly more powerful and wealthy than the temple. During the 1st millennium, however, another shift developed: by the time of the Neo-Babylonian empire, the king had lost some authority and revenues to the provincial governors, the city mayors, and the temple. In fact, even under the Persians and Seleucids the temples were large and wealthy institutions.

F. Socioeconomic Structure

As in other aspects of Babylonian civilization, The Sumerian legacy in the socioeconomic structure is quite apparent. This is, in significant part, an inevitable condition imposed by Babylonian geography, which considerably limited the economic options open to the inhabitants of the plain. Thus both the Sumerian and Babylonian economic structures rested upon three foundations: agriculture, animal husbandry, and foreign trade (see A. 5–6 above).

The theory behind the economic structure was distinctively Sumerian and had been taken over by the Babylonians. According to this theory, the gods owned all the land and the king administered it for them. In practice, however, private ownership of land was common, and a Babylonian could buy and sell real estate at will. He need be careful only of two conditions, payment of taxes and provision of corvée labor, since ownership of any land entailed these two obligations. There were small and medium-sized plots of land as well as large estates, the latter sometimes consisting of land scattered over more than one province. Not only land transfer but virtually any economic transaction was carefully recorded in writing by the scribes, and tax collectors were at work everywhere, since virtually every transaction involved a payment to the palace.

Money did not exist in Babylonia—it seems to have been a Greek invention—and payment was in kind according to a standard exchange. Silver was the metal most commonly used as the standard, although in some periods use was made of other metals, such as gold, tin, or copper. This system was not so cumbrous as one might think, since credit was well known. Most transactions that were recorded, from small commissions to farm little plots of land to major property transfers, involved credit. The most important and wealthiest Babylonian businessmen, called the *tam kārum,* had extensive resources built on credit, and they dealt in both domestic and foreign trade. Interest rates varied a great deal, but 25 percent was common, rates of 33 percent to 50 percent were not unusual, and rates up to 100 percent were known. Because of such high interest rates, a large number of Babylonians were in debt all their lives, and many went bankrupt, which in Babylonian society meant they became debt slaves. They had the right to buy themselves out of slavery, and some did manage to do so. Despite these tragedies, credit and interest were the basis of an enormously successful economy, for as a Babylonian proverb stated: "Lending money is like making love and getting it back is like having a son."

There is some uncertainty about whether Babylonian business was uncontrolled (free market) or whether the state imposed some restrictions on it (state regulated). There is evidence on both sides of this question, and that is why there is uncertainty. On the one hand, it is clear from records of everyday transactions that prices fluctuated in relation to supply and demand. An extreme example is the exorbitant prices charged for food in 7th-century Nippur when it was under siege by Nabopolassar and food was very scarce. On the other hand, there are many references in Babylonian documents to royal decrees which state the cost of such diverse things as the purchase of grain and the rental of boats. The problem of these diverse facts remains to be resolved, but it is obvious that the Babylonian economic structure was neither entirely free nor entirely controlled.

The urban character of Babylonian society, another legacy from the Sumerians, is striking. The surrounding countryside merely served the needs of the city, which was the focal point of Babylonian economy and society—indeed the center of every aspect of Babylonian civilization. It was the city that fostered not only pragmatic pursuits but also intellectual and artistic endeavors. It is thanks to the urban centers that Babylonian civilization is noted for its art, literature, and science. There was much rivalry among the cities, and some of them, such as Babylon and Sippar, claimed ancient privileges which even the Assyrian conquerors had to respect. Those privileges involved such things as exemption from certain taxes, billeting of troops, and levying of troops.

The structure of Babylonian society was essentially the same as that of the administration, which has already been outlined (E. 2). Family and tribal affiliation was of fundamental importance to a Babylonian, and one usually remained in the social class into which one was born. It should be noted that slavery, although a basic element in Babylonian society, was not a major component either of the society or of the economy. The number of slaves was relatively small, and much of the menial labor was done by free or half-free individuals. This, of course, was in contrast to the situation in the Roman Empire.

Four observations can be made about the character of Babylonian society. First, Babylonians were a very religious people, and religion pervaded every aspect of life for everyone, from the king down to the slave (see I below). Second, they had a strong sense of morality, and there was strong disapproval when anyone broke the moral code. Gods could err morally as well, and there are examples of this in the mythology (see H below). Third, Babylonian society, like preindustrial societies in general, was very conservative. Change, if it occurred at all, was slow; for to their minds it was foolish to abandon a practice or theory that had existed since time immemorial. Fourth, and finally, it was a society very conscious of its past. Kings commonly referred to the achievements of their predecessors, and records of Babylonian history were kept in various forms for the use of the king and scribes. Epics about great heroes of the past were recited to the illiterate.

Over the many centuries that Babylonian civilization flourished, there were some gradual changes in the socioeconomic structure. By about 1000 B.C. some "large cities," such as Babylon, had emerged and become the focal points of Babylonian life. This process involved, in part, siphoning off population from other urban centers, particularly the old Sumerian cities in the south, which gradually shrank in size.

During the 1st millennium, both domestic and foreign trade activity expanded as a result of imperial conquest first by the Assyrians and later by the Babylonians. Thus, by the time of the Neo-Babylonian empire, the Babylonian population and economy were concentrated in a few large cities and a few big temples.

G. Legal Structure

Since the discovery of the law code of Hammurapi in the 19th century, it has been well known how important the subject of law was in Babylonian civilization. The "Law Codes" (for several are now known) are, however, not really what the name suggests; to understand the legal structure of Babylonia, we must look as well at other documentation, contracts and court records. Only by combining these two different types of records can we achieve an understanding of the function and character of law in Babylonia. See LAW.

1. Law Codes. The law code of Hammurapi is now only one of several such documents known from ancient Mesopotamia. In chronological order there are the codes of Urukagina (ca. 2350 B.C.), Ur-Nammu (ca. 2112–2095 B.C.; *ANET,* 523–5), Lipit-Ishtar (ca. 1934–1924 B.C.; *ANET,* 159–60), Eshnunna (ca. 1900 B.C.; *ANET,* 161–3), and Hammurapi (ca. 1792–1750 B.C.; *ANET,* 163–80). Related to these are non-Babylonian codes, viz. the MA laws (*ANET,* 180–8), the Hittite laws (*ANET,* 188–97), and the Hebrew laws (Exodus 19–23). The languages of these documents vary, some being in Sumerian (Urukagina, Ur-Nammu, and Lipit-Ishtar), some in Akkadian (Eshnunna, Hammurapi, and MA), one in Hittite, and one in Hebrew; but they all share similarities in structure and content. A good illustration of the similarities is the group of laws concerning goring oxen:

Eshnunna 53. If an ox gored an (other) ox and killed (it), both ox owners shall divide the price of the live ox and also the equivalent of the dead ox.

54. If an ox is known to gore habitually and the authorities have brought the fact to the knowledge of its owner but he has not had his ox dehorned; (if then) it gored a citizen and killed (him), the owner of the ox shall pay two thirds of a mina of silver.

55. If it gored a slave and killed (him) he shall pay fifteen shekels of silver

Hammurapi 250. If an ox, when it was going along the street, gored a citizen and killed (him), that case is not subject to claim.

251. If a citizen's ox was an habitual gorer and his city-ward notified him that it was an habitual gorer, but he did not pad its horns (or) keep watch over his ox and that ox gored and killed a member of the citizen class, he shall pay one half mina of silver.

252. If it was a citizen's slave, he shall pay one third of a mina of silver.

Exodus 21:28. If an ox gored a man or a woman and they died, the ox shall be stoned and its meat shall not be eaten but the owner of the ox shall be clear.

21:29. If the ox habitually gored in the past and its owner was informed but did not keep watch over it and it killed a man or woman, the ox shall be stoned and its owner shall also be executed.

21:31. If it gored a man's son or daughter, he shall be dealt with according to the same law.

21:32. If the ox gored a slave, male or female, the owner shall pay to their master thirty shekels of silver, and the ox shall be stoned.

21:35. If one man's ox hurts another's and it died. then they shall sell the live ox and divide the price of it and the dead animal also shall they divide.

The similarities are striking and cannot be explained away simply by the fact that any society which used oxen would, from time to time, have trouble with renegade oxen (cf. Finkelstein 1981). There is a clear connection here. This is, of course, not surprising in the case of the Eshnunna and Hammurapi codes. They were close in time, culture, and geography.

But what about the Hebrew laws? To understand this connection one must look at the whole question of the relationship between Babylonian and biblical literature, since the Babylonian law codes were, as we shall see, as much literature as law (see H. 1 below). Just when these cultural similarities appeared is uncertain. It could have been in the Amorite period, when Amorites occupied both Babylonia and Palestine early in the 2d millennium; or it could have been in the Amarna age, when there was much international exchange throughout the Near East.Other areas in which there is similarity are the prescribed punishments for bodily injury:

Eshnunna 42. If a man bit the nose of a (nother) man and severed it, he shall pay one mina of silver. (For) an eye (he shall pay) one mina of silver, (for) a tooth on half mina, (for) and ear one half mina, (for) a slap in the face ten shekels of silver.

Hammurapi 196. If a citizen destroyed the eye of a member of the citizen class his eye shall be destroyed.

200. If a citizen knocked out the tooth of a citizen of his own rank, his tooth shall be knocked out.

Exodus 21:22–25. If men were fighting and hurt a pregnant woman so that she had a miscarriage and yet no harmed followed, the one who hurt her shall be fined, according to what the woman's husband shall impose upon him; and he shall pay as the judges determine. If any harm follows, then you shall give life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burn for burn, wound for wound, stripe for stripe.

What is striking here is that the Eshnunna code prescribes financial restitution for bodily injury, but both the Hammurapi and Hebrew codes prescribe proportional physical retaliation against the guilty party. Thus, we see that the principle of reprisal (*lex talionis*), an eye for an eye and a tooth for a tooth, had a late appearance in Mesopotamia. Since Hammurapi was of Amorite origin, and the Amorites were also well entrenched in Palestine at about the same time, it seems that this custom may have been Amorite in origin.

The traditional modern term "law codes" implies a formal code such as the Romans had, or we have today, which is a comprehensive and cohesive collection of laws to be obeyed and used as the rule in legal disputes. Since the Babylonian documents were none of these things, it is really incorrect to use the term "law code."

Even a quick examination of Hammurapi's "law code" shows that it is not such a document. It is not comprehensive; it covers many legal situations but leaves many, including homicide, out. Nor is it cohesively consistent. In various sections of the code theft, for example, is dealt with but in different ways. In section 6 it is stated that the theft of any property from a temple is punishable by death, but in section 8 that theft of an animal from a temple means the thief must repay thirty times the animal's value. On the other hand, there is a total lack of evidence that anyone in Babylonia ever thought the code must be obeyed. In particular, among the large number of contracts and court records of Hammurapi's time, never once is the "code" referred to.

If these documents are not "law codes," what are they? To seek an answer to this question we must go back to the first document, that of Urukagina. This text is actually a royal inscription of Urukagina, last king of the first dynasty of Lagash. Within the royal inscriptions there was incorporated a record of numerous social and economic reforms which the king had decreed. Those reforms included reduction of taxes and what we would call "fair trade" enactments. Similarly, the very fragmentary text of Ur-Nammu is really a royal inscription, a record of reforms which he had carried out. The same is true of the Lipit-Ishtar "code." It is known that in late Sumerian times and the early Old Babylonian period, kings, when they first came to the throne, frequently issued numerous decrees to correct abuses which had been developing during previous reigns. Thus, for example, if too many people had been falling into debt slavery because of high interest rates, a new king might decree a reduction in the rate. Not only did this practice alleviate hardship, it also made the new ruler popular with the people. These decrees were written down in collections by the scribes, initially as archival records. But the collections proved useful to the scribes composing royal inscriptions, for they could and did copy them into the royal texts as proof that

the king had ruled his people with justice. The Eshnunna "code" is actually such a collection of decrees, while the Hammurapi code, which has a lengthy prologue and epilogue, has the structure of a royal inscription. Thus, each article was, in theory, a decree originally intended to deal with a specific issue; but the scribes not only copied decrees from texts of previous rulers but also added some articles of their own to "round out" to their own satisfaction a particular theme. The "law codes" then give us only part of the picture of the Babylonian legal structure. They reflect attitudes and mores peculiar to this civilization and, of course, give real indications of what Babylonians regarded as legally right and wrong; but we must go on to examine the everyday legal transactions in order to shed more light on this topic.

2. Law in Practice. There are two kinds of legal documents in Babylonia: contracts of various sorts and court records (cf. *ANET,* 217–22; 542–47). All legal documents had certain features in common. They were drawn up on clay tablets in the presence of witnesses whose names were written on the document, and the personal seal of each witness was impressed in the wet clay. Then a clay envelope was wrapped around the tablet and a précis of the contents inscribed over most of the surface. Thus, if anyone in the future tried to tamper with the document, it would immediately be obvious from the broken seals on the envelope.

Contracts included marriages, divorces, adoptions, conveyances (sales) of movable and immovable property, loans, and the hiring of human and animal labor. These were private transactions, and the state was not normally involved. The contracting parties, after an oral agreement, had a scribe draw up the necessary contract, as described above. Some types of contracts, such as marriage contracts, were for obvious reasons kept permanently. Tablets recording loans and debts, on the other hand, were destroyed when the debt was paid, thus eliminating the need for a receipt. If a creditor could not produce a written document proving a debt against someone, he had no legal claim against that person.

Court records are not nearly so common as contracts, since legal disputes were usually settled privately. But if the state legal machinery was put in motion, records of the proceedings had to be kept. Unfortunately, the court records are not very useful sources of information about how Babylonian courts worked. This is true where the customs had been well known to everyone involved, and so no need had ever been felt to write them down.

Judges did exist in Babylonia, and the king himself was the head of the whole judicial system, the supreme judge as it were. If all else failed, a Babylonian with a grievance could ultimately appeal to the king. More than one judge presided in a case, and they were assisted or advised by an assembly (*puhru*). Both claimant and defendant were called upon to state their respective cases and to produce witnesses to prove them. Oaths to the gods were taken by everyone. It is unknown how the judges came to a decision. However, when they could not reach a decision for some reason, they resorted to trial by ordeal. This meant the accused was thrown into the river. If he sank, he was guilty; if he survived, he was innocent. This was far more sensible than the water ordeal for witches in medieval Europe, where the survivor was judged to be a witch and burnt!

In Babylonian law there were no state cases. All disputes and all court cases were between private individuals. The state did not take anyone to court. Even in the case of homicide, it was the family of the victim which sought punishment and compensation. Here the vendetta, the blood feud, prevailed and led to terrible feuds between families. Imprisonment as a punishment was largely unknown, for there were no state prisons. The only reason anyone was ever incarcerated was for a political crime. Even this was rare, since execution was the common punishment for treason.

3. Status of Women. The status of women in Babylonian society is best discussed under the legal structure, since there is more information about the legal status of women than about other areas. In the Old Babylonian (OB) period, the status of women was relatively high, but as time went on, women's rights and prerogatives declined so that in later Babylonian history their status had greatly diminished.

Legally, a Babylonian woman in the OB period was equal with a Babylonian man in many respects. She could own, buy, and sell property as she liked. She could borrow and lend, she could adopt children, and she could serve as a witness to a contract. She could sue someone, and she could own her own seal. This leaves large areas, however, in which she had few or no legal rights. Most significant is that a woman was

under the authority of either a man (a father or husband) or a temple. Most women, as most men, were expected to marry, and a man could have more than one wife. Until marriage a woman lived in her father and mother's house and was under the authority of her father. When she married, she moved to her husband's house, which meant the house of her father-in-law, and was under her husband's authority. Unmarried women entered the service of a temple. In the OB period, there are examples of women receiving a good education and even becoming scribes. Women living in a household were kept apart in a harem, and normally male visitors never saw them. The women were responsible for the cooking, cleaning, household chores in general, and care of the children. The amount of physical labor a woman actually did depended on the economic status of her family. A member of the court harem did no labor, since this was done by the palace staff. But even poorer families had servants of some kind to help with menial tasks.

There were various types of temple women, but one of the most important and interesting was the *nadītum*, which means "fallow woman"; that is, a woman who is not to bear children. The institution of the *nadītum* flourished during the OB period. While there were different kinds of *nadītums*, the best known were those who lived in a cloister. The largest cloister was at Sippar and was dedicated to the god Shamash. The women were regarded as brides of Shamash, and many bore names compounded with the divine name *Aya*, meaning the spouse of Shamash. The *nadītum* was not a priestess, for she neither performed rituals nor assisted in any. Exactly what her duties were and what went on inside the cloister are unknown. Clearly it was a religious institution, but there was an economic element as well. Most of the *nadītums* came from wealthy families, and when they entered the cloister, they were accompanied by a substantial dowry. This dowry was administered by the cloister but remained the private property of the *nadītum* and reverted to her family at her death. Thus, a family in dedicating a daughter to the cloister preserved some of its property intact. If the girl had married instead of becoming a *nadītum*, the dowry would have been lost to the family.

The rulers and officials of Babylonia were always men. Only rarely did a woman achieve any kind of political pwer; and when she did, she had no official status. To illustrate this point, let us look at two women, one from the Old Babylonian period and one from the Neo-Babylonian period. Shibtu was the wife of Zimri-Lim, king of Mari and contemporary of Hammurapi (ca. 1792–1750 B.C.). She took much interest in her husband's affairs, and Zimri-Lim soon learned that he could trust her to manage important state matters. This was particularly important when he was on campaign. A number of written reports from Shibtu to the king on various administrative matters have been preserved, and she was frequently entrusted with highly confidential matters. Yet her private side also emerges in the correspondence; in one brief but joyful letter, she announced to her husband the birth of twins. The other example of a stateswoman is Adad-guppi, mother of Nabonidus (555–539 B.C.). This remarkable woman lived to the age of ninety-five, having been born during the reign of Ashurbanipal (668–627 B.C.). She claimed to have served every king in the Neo-Babylonian dynasty and to have persuaded Nebuchadnezzar II to take her son Nabonidus into his service. Once established at the Babylonian court Adad-guppi no doubt continued to maneuver and manipulate affairs to her son's advantage. As a result, he eventually became king. Adad-guppi exercised so much authority that a legend evolved around her memory, portraying her as a queen in full control of Babylonia, a legend embedded in the histories of Herodotus (where she is given the name Nitokris).

H. Literature, Learning, and Libraries

One of the most significant legacies of Babylonian civilization is its extensive literature. The tradition of writing down legends and songs, which had been transmitted orally, for posterity began with the Sumerians, just at the beginning of the Old Babylonian period. Until that time very little Sumerian literature existed. But the scribes became worried that their civilization would die and so began an industrious and lengthy endeavor to preserve in writing their oral heritage. This impetus was passed on to the Babylonians.

In discussing the written records preserved in Babylonian libraries, an important distinction must be made. On the one hand, there is "literature" in the strict sense of the word (artistic and creative writings

such as epics and myths); on the other hand, there are compositions of little or no literary merit, which, nonetheless, the Babylonians regarded as having lasting value (lexical texts, prognostic texts, etc.). In the following discussion we shall first speak of Babylonian "literature" in the strict sense; and then, we shall treat the other kinds of written works preserved in Babylonian libraries.

1. Literature. As stated above, the impetus to write literature in Babylonia goes back to the Sumerians. It is, therefore, not surprising to find Sumerian influence in the form, content, and style of Babylonian literary works. (A sample of Babylonian literature, in English translation, can be found in *ANET*).

One form of literature in which the Babylonians departed from the Sumerian inheritance was poetry. Babylonian poetry is a very distinctive art form, followed later in Hebrew and Arabic poetry. The chief characteristic of this poetry is parallelism. That is, there are two parallel parts to each phrase, line, or stanza. The parallels may be synonymous or antithetical, or yet some other variation. Apart from parallelism, there is nothing that can be called a universal characteristic of Babylonian poetry. It does not rhyme; while it may have meter, to date this has not been proved. A feature of Babylonian poetry is the frequent use of repetition. Long speeches are repeated verbatim in an epic, or the same motif will appear in the same words in different compositions. Thus, Ishtar's short lament over the destruction of the Flood appears in different epics.

While different genres are apparent in Babylonian literature, there is no evidence of how the Babylonians themselves divided up their literature or what names they gave for such English words as "epic," "myth," and "hymn." In modern terms, the following genres can be recognized: epic, myth, prayer, and hymn. Standing separate is a group of texts called "Wisdom," a name borrowed from a translation of the Hebrew term used to describe such book as Proverbs and Job.

Several Babylonian epics, which are in poetry, are known, and by far the most imporant is the GILGAMESH EPIC. There were Sumerian poems about Gilgamesh (*ANET,* 44–52), but the epic itself was a Babylonian creation (*ANET,* 72–99; 503–7). It is a lengthy poetic narrative of the life and adventures of Gilgamesh, ruler of Uruk, who sought in vain for eternal life. A version of the Flood story makes up part of this epic. The Flood story, of which there were several versions in Sumerian, is itself the major theme in the *Atram-hasis Epic.* Here, we read that when the gods decided to destroy humankind (because they made too much noise and disturbed the gods' rest), one man and his family were spared. This man's name was Atram-hasis.

Myths were very popular in Babylonia and were also written down in poetry. One myth is the *Descent of Ishtar Into Hell* (*ANET,* 106–9). This composition was originally in Sumerian, and the Babylonian version is essentially an edited translation. It describes the descent of Ishtar into hell in search of her lover, Dumuzi, who had been lured down there by the goddess of the underworld. An independent Babylonian myth is *Enuma Elish*, "When Above," sometimes called the *Creation Epic* (*ANET,* 60–72; 501–3). This is a kind of religious treatise, for it describes and justifies how Marduk, the god of Babylon, became king of the gods.

It is often difficult to tell the difference between Babylonian prayers and hymns, since there is usually no indication of whether the poem was accompanied by music. The number of such texts is in the hundreds, but only a small proportion, including a long hymn to Shamash, the sun-god, are of outstanding literary merit (cf. *ANET,* 383–92).

Within the general category of Wisdom Literature, there is a diversity of works. There are a few compositions sharing a common theme, the problem of evil, but each is unique in form. Such a work is one called *Ludlul Bēl Nēmēqi,* "I Will Praise the Lord of Wisdom" (*ANET,* 434–37; 596–600). In this lengthy and somber piece, the poet complains, like Job, that though he has been good all his life, his reward has been one long series of misfortunes. "Does the righteous man receive no just reward?" is his question. Another type of Wisdom Literature is represented by the "Disputes" and is Sumerian in origin. An example of a Babylonian Dispute is a work called *The Date Palm and the Tamarisk.* In this highly structured literary work a formal debate between the two kinds of trees takes place, each enumerating its merits to the disadvantage of the other. Finally, there were a number of Proverb collections, mainly in Sumerian but some in Babylonian (cf. *ANET,* 425–27).

Babylonian literary works such as these played a dual role in Babylonian civilization: entertainment and edification. Some of the Wisdom Literature, such as the *Wisdom of Shuruppak,* was intended to teach proper conduct to the young. On the other hand, the *Gilgamesh Epic* both edifies and entertains as the hero grapples with the reality of mortal existence. The vast majority of Babylonians were illiterate, which meant that they could not read this literature for themselves; it had to be recited to them in groups in formal or informal gatherings, sometimes with musical accompaniment. There is reason to believe that some compositions, such as the *Descent of Ishtar Into Hell,* was staged. The seven steps by which Ishtar entered hell, the actions of each step being precisely described, strongly suggest a dramatic performance.

2. Learning. Learning was the prerogative of the scribes, for only they were literate. In fact, learning in the academic sense was confined to a small number of scribes, since the majority were employed in everyday business, writing letters, contracts, and administrative texts. The privileged few who had free time to pursue knowledge were in the employ of the palace or temple. They were poorly lodged and not well paid, if we believe their frequent complaints. The daily activities of these scribes were diverse, depending on their training, talent, and experience. Some, such as the astrologers, were employed in divination, some in looking after the royal correspondence, some in preparing royal inscriptions for building works, and so on. The majority, however, spent much of their time making new copies of library and archival texts (similar to the occupation of monks in scriptoria in medieval Europe).

The scribal profession as a whole had a tremendous influence in Babylonian society, because most people could neither read nor write. Even the king and his chief officers were illiterate. This meant that all written communication with the king, as with anyone else, had to go through at least two scribes, one to write the letter and one to read it out upon arrival. Here, there was plenty of scope for slanted interpretation or misunderstanding. Occasionally, as in the Amarna Letters, the scribe writing a letter would add a note to the colleague who was to read the letter out, suggesting what the reader should emphasize.

As with all Babylonian occupations, the scribal profession was essentially hereditary. Of course one prerequisite was excellent eyesight, since magnification had not been invented. The course of study for the potential scribe lasted many years, probably until his late teens. The hours were long and the discipline, which included corporal punishment, strict. In the schoolhouse, learning was mainly acquired by rote, and the students copied and recopied set texts. Thousands of these copies, "school texts" as we call them, have been unearthed by modern excavations.

At least some, and possibly most, of the privileged scribes who gained senior positions in a palace or temple had a certain amount of time free from their formal duties to indulge in their own interests. These were the scholars and poets who produced Babylonian literature and scholarly texts. They were very conscious of their special status and proudly wrote down the name of the scribal school to which they belonged. The one place where they remained anonymous was in the authorship of literary texts. Thus, while we know the names of scribes who edited and copied such a famous text as the *Gilgamesh Epic,* we are never given the name of its author.

Babylonian learning included vast areas of knowledge which can be grouped together under the headings astrology and astronomy, extispicy and anatomy, medicine, mathematics, lexicography, theology, historiography, and commentaries. Some of this learning, mainly astronomy and mathematics, spread to Greece in the Hellenistic age. The Babylonian practice of divination (see I below) gave rise to extensive records of astronomical phenomena and calculations on future celestial movements, including eclipses. It also, in the case of extispicy (examination of animal entrails), led to the compilation of much material on anatomy and physiology.

Babylonian medicine had two sides, one practical and one theoretical. On the practical side, the Babylonians had a vast store of knowledge concerning herbs, medicines, and the symptoms for which they were efficacious. A Babylonian doctor could do certain kinds of surgery, such as an operation on the eye, probably to remove a cataract. On the theoretical side, the Babylonians had a vast store of incantations and rituals to exorcise the demons believed to cause a patient's illness. The incantation priests (*āšipu*) worked hand in hand with the practical doctors (*asû*) to cure a sufferer.

The heyday of Babylonian mathematics was the early Old Babylonian period (ca. 2000–1780 B.C.). During that time mathematicians went beyond the crude arithmetical necessities of everyday life to explore what we call algebra and geometry. They discovered Euclid's theorem and the Pythagorean triangle more than a thousand years before those Greek scholars lived. Scores of Babylonian "problem texts" have been discovered, and they include both practical problems (such as calculating the height of a ziggurat) and theoretical problems.

Lexicography, the science of words (the principles and practices of making dictionaries), was a highly important occupation. Next to prognostic texts, lexicographical texts were the most numerous in ancient Babylonian libraries. These included lists of names (plants, animals, professions, etc.), bilingual and multilingual dictionaries, and lists of cuneiform signs of various shapes and interpretations. Among this material were many lists of god names in which several divine names were frequently identified with one god, indicating a basic syncretistic theology.

As stated earlier, Babylonians were keenly interested in their past, and in academic circles this meant that scribes compiled works on the subject. These included king lists, chronicles, and poetic works about famous figures of the past. A few scribes went farther and wrote in a prophetic style about past events in an attempt to justify modern change or possibly even to make a real prediction seem credible. This literature (*ANET*, 451–52; 606–7), which has parallels in the biblical book of Daniel, may well be the beginning of apocalyptic literature. See APOCALYPSES AND APOCALYPTICISM.

As if this were not enough learning, the scribes occasionally indulged in highly esoteric composition. They wrote some commentaries to literary texts, which to our minds often seem abstruse and are difficult to read. From time to time they also wrote in numbers rather than in cuneiform signs, each number representing a syllable or word. Such passages are extremely hard to decipher. They were really learned games, such as difficult crossword puzzles.

3. Libraries. More is known about Assyrian libraries than Babylonian libraries. (The reader is referred to the discussion under Assyria [previous article] for fuller information than can be given here.) The reason is the chance of archaeology. Most libraries in Babylonia were unearthed in the 19th century before proper excavation techniques had been developed. At Asshur, on the other hand, scientific methods were employed with great benefit to modern knowledge.

Libraries no doubt existed in all major Babylonian cities; specifically, they have been discovered at Babylon, Borsippa, Sippar, and Nippur, to name the best known. The library discovered at Nippur is largely early Old Babylonian in date and Sumerian in content. Most of the tablets are now housed in Istanbul, Jena (East Germany), and Philadelphia. The libraries from Babylon, Borsippa, and Sippar are both Old and New Babylonian in date and the contents mainly in Akkadian. Most of these tablets are now in the British Museum.

Recently (1986), a whole new library was discovered at Sippar by archaeologists from the University of Baghdad. This is the most important find of the decade and when the tablets have been analyzed and published, they will supply much information on the subject. The texts seem to be Neo-Babylonian in date. The discovery also sheds light on the physical arrangements in a Babylonian library. The tablets were stored in deep cubicles made up of clay shelves and uprights. Brief markings on the tablet edges were notes ("call numbers") to assist the libraries in locating the texts they wanted.

I. Religion

Babylonian religion permeates Babylonian society, being present in every event, every action, every institution, every thought. This feature cannot be overemphasized, particularly in our modern secular society where such a phenomenon seems so strange. For this reason it has become fashionable in scholarly circles in recent years to be very negative about the possibility of our gaining an understanding of ancient religion. Some modern specialists in Babylonia claim that the very nature of the available sources excludes any comprehensive and profound knowledge of Babylonian religion (Oppenheim 1964); but this is overstating the case. Among the tens of thousands of artifacts and inscriptions which archaeologists have excavated, there is a wealth of information on the subject. This includes religious scenes in art, votive figurines from temples, mythological texts, rituals, hymns, prayers, and offering lists.

We can never discover exactly what a given Babylonian thought about religion, of course, anymore than we can do this for a modern human being; but, as shall be seen in the following pages, we now have considerable information about this subject.

Babylonian religion was very heavily influenced by Sumerian religion, and all of the characteristics described here are characteristics of Sumerian religion. Babylonian religion had a number of outstanding characteristics. It was a polytheistic religion, the number of gods, goddesses, demons, etc., being in the hundreds. These were ranked in a hierarchy, but there were many overlaps and regional differences. To further complicate matters, each divinity had a spouse. The religion was animistic, for every animate and inanimate object was believed to have life and being. Cults were an important part of Babylonian religion, and every city had both major and minor cults, each with its temple, priests, offerings, and rituals. There was an official or state religion, and there was private religion. Morality was involved in Babylonian religion, and a very high ethical tone is evident in some writings. Divination and magic were important parts of the Babylonian way of life.

1. State Religion. The chief Babylonian gods, and the cities where their cults were centered, were Marduk at Babylon, Nabû at Borsippa, Enlil at Nippur, Ishtar at Uruk, Sin at Ur, Shamash at Sippar, and Nergal at Cuthah. When Babylonian history began, the Sumerian god An was still officially regarded as the king of the gods. In practice, Enlil, as in Sumerian times, played the chief role. See ENLIL. As time passed and the city of Babylon became the political and cultural center of the land, its god, Marduk, gradually moved into a more important position. Ultimately, he was officially recognized as king of the gods, during the reign of Nebuchadnezzar I (ca. 1125–1104 B.C.; see D. 6 above). Many of the attributes and much of the mythology attached to Enlil became his. In the late period, Marduk was often simply called *Bel*, "lord." Nabû was Marduk's son and was the god of scribes and learning. Libraries in temples were called "the shrines of Nabû." Ishtar was the mother goddess and the goddess of love. Sin was the moon-god, and his cult became unusually important during the reign of Nabonidus (see D. 8 above). Shamash was the sun-god and always had great prominence because he was in charge of justice and divination. Nergal, who was commonly associated with Erra, was the god of the netherworld, and death came under his jurisdiction.

Each cult not only had its own temple, personnel, and offerings but also its own festivals and rituals. The festivals of the major cults were, of course, more important than those of minor cults. The chief event of all was the *Akītu* or New Year Festival. This was celebrated every spring at Babylon for the first twelve days of Nisan, the first month of the year. The statues of gods from other cities, such as Nabû from Borsippa, were brought by boat with great ceremony to Babylon. Here, they greeted Marduk and accompanied his statue, placed on a ceremonial float, out of the temple. The magnificent procession progressed down the wide avenue from Marduk's temple through the Ishtar Gate to the *Akītu* house outside Babylon's walls. In this house rituals were performed and the *Enuma Elish* poem, describing how Marduk became king of the gods, was recited. Then Marduk was escorted back to his temple, and the gods returned to their own cities and temples. The Babylonian king had an essential role in state religion, and this was particularly apparent in the *Akītu* festival. At one point the chief priest would slap him in the face and drag him by the ears to Marduk's throne, where he forced the king to bow down and recite a confession. Another part of the *Akītu* festival was the sacred marriage between the king and the chief goddess, Zarpanitu. The marital act was actually carried out by the king with the chief priestess.

Babylonian mythology is quite colorful, and many of the myths, which are in poetry, are exciting to read (see H. 1 above). This is true in part because the Babylonians had a very anthropomorphic view of their gods. They believed that the gods looked, thought, and behaved just like human beings. The only difference was that the gods were immortal and normally invisible. In the mythology the gods loved, hated, fought, ate, drank, sinned, and repented just like mortals. Babylonian cosmology saw the world as divided into three parts, with heaven above, the netherworld below, and the earth in between. Shamash, the sun, traveled through the netherworld at night. The stars and planets were identified with specific gods, and their movements were carefully studied for astrological reasons. The earth itself was seen as a

disk surrounded by salt water, with fresh water bubbling up from below the earth to form rivers and lakes. Babylonia and its two rivers, the Tigris and the Euphrates, were in the center of the world.

In Babylonian belief, the gods, heaven, and underworld had always existed. There are no stories of how the gods and their dwelling places evolved, as there are, for example, in Egypt. Humankind, however, was created by the gods, as was earth. There are various stories about the creation, but the central theme is basically the same: there was a major conflict between old gods and young gods. One story, *Enuma Elish,* says the reason for the war was that the young gods were making too much noise and disturbing the sleep of the old gods. Another story, *Atram-hasis,* says the young gods became tired of doing all the work to clothe and feed the old gods and went on strike. In *Enuma Elish,* Marduk is chosen champion of the young gods. He defeats the leader of the old gods, the dragon Tiamat, and creates earth out of her body. Then, with a lump of clay and some blood from the dead spouse of Tiamat, he creates man. Man is placed on earth to serve the gods.

The *Atram-hasis Epic* narrates the creation of man in somewhat the same fashion, but then goes on to describe the Flood. After humankind had been created and had relieved the young gods of menial toil, the humans multiplied rapidly. The noise this multitude made disturbed the gods, and after holding an assembly the gods decided to destroy their creations with a Flood. The Flood duly came and swept over the face of the earth. But one man, Atram-hasis (in other Flood stories he has other names), had been warned by the god Ea that the Flood was coming. He therefore built an enormous boat, loaded his family, livestock, and all his possessions into it, and thereby survived the deluge.

Death and its sequel were very gloomy subjects in Babylonian thought, for there was no concept of a happy afterlife. Slightly different views are given in different texts of what happened after death, but there is a pervading sense of misery. It was first and foremost important to bury a dead person, for otherwise his or her ghost (*eṭemmu*) would wander about homeless and might haunt relatives and friends. The body was buried under the floor of the family home, where antiquated family archives were also buried. After proper burial, the ghost went down to the netherworld. This is eloquently described in the *Gilgamesh Epic* (8: 34–39):

> To the dwelling where none may leave who have entered,
> To the dwelling where the occupants have no light,
> Where they eat dust and clay they consume.
> They are dressed like birds, wings are their clothes,
> They see no light but dwell in darkness.

Every human being went to this gloomy place upon death. There was no paradise for the good or hell for the bad. It is not surprising that Babylonians had a fatalistic view of life and that some of them practiced hedonism, getting as much pleasure from life as they could before they died.

The temples in which the cults had their homes were major economic and social institutions in Babylonia. To provide some impression of this, one might roughly compare it with the status of the Christian Church in Western Europe during the Middle Ages. Physically, the temple consisted of a large complex of buildings with shrines, kitchens, dormitories, workrooms, and storage rooms. Normally a temple tower, or ziggurat, was part of the temple complex. The size of a temple's staff depended on the temple's importance and wealth. The temple of Marduk at Babylon in the 1st millennium was an enormously large and rich institution. We have no indication of the numbers of people on its staff, but they were probably in the hundreds. At the top was the chief priest, and next to him were his chief advisers. There were several different kinds of priests who performed the various rituals and related sacred duties. Craftsmen and laborers, including kitchen staff and herdsmen, were employed by the temple both to provide for its own needs and to produce a surplus for trade and profit. A temple usually owned some land and also had a share ("offerings") in crops and herds from some property it did not own. The more important temples also received support from the palace, although the amount of this support varied from period to period. This support included building and repairs that were carried out by corvée at the order of the king. Containers were left at temple doors for worshippers to deposit voluntary offerings.

Temple revenues were in kind, and the food provided for the gods was in practice consumed by the temple personnel.

2. Popular Religion. Little is known about popular religion in Babylonia, since most of our sources are artifacts and documents excavated at the large temples. It was believed that everyone, even the lowest slave, had a personal god and that the god's rank had a direct relation to the human's rank. The relationship between a human and his or her god was quite businesslike. The human provided food and clothing for the god, and the god, in turn, carried the human's requests—such as for good health—to a higher god who could perform the deed.

Magic, both black and white, was universal in Babylonia, but one suspects, although it cannot be proved, that it was particularly popular among poorer people. Incantations and rituals in the hundreds are known from the great libraries. These cover the whole gamut of life: love potions, illness, business affairs, a house infected with insects, childbirth, etc. Clay dolls with human hair were sometimes fashioned as part of a ritual, such as one designed to cast an evil spell on a person. Herbs and roots were the most common elements used in the rituals, and frequently the rituals describe how to use them to mix a poultice or medicine, particularly in the case of illness.

Babylonian texts occasionally refer to roadside shrines. Some of these were certainly part of the state religion, but others were probably manifestations of popular belief. Anyone who has traveled in the Near East must have been struck by the number of small shrines of virtually every religion in town and country alike, even today.

3. Divination. As religion permeated Babylonian civilization, so did divination. The theory and practice of prognostication—predicting the future—was endemic to this culture and affected every aspect of life. It was based on the belief that the gods, whenever they decided to do something, sent a message or messages to human beings through a variety of means. If humans wished to know what the gods intended, they had to learn how to read these signs.

Almost anything could be a medium for divine messages, such as the shape of smoke from a fire, the configurations of oil poured upon water, the flight of birds, or the sudden appearance of a snake. The Babylonians, building upon a Sumerian tradition, developed the science (if we can call it that) of reading these signs into a very complex and comprehensive system. This system was carefully recorded on clay tablets and filed away in libraries for reference. One gains some idea of the importance of divination to Babylonians from the fact that of all the documents stored in Babylonian libraries, prognostic texts were the most numerous.

The kinds of divination we know most about are those used by the king and his court. These were extispicy and astrology. Extispicy—the examination of the entrails of sacrificial animals for ominous signs—was popular in the Old and Middle Babylonian periods, but by the Neo-Babylonian period astrology had become more common. There were both active and passive approaches in divination. Thus, in the active approach the king would address a specific question to the diviners, asking if a certain proposal was approved by the gods. It might be a proposed campaign or the appointment of an official, or something else. The diviners would then sacrifice some animals or watch the heavens and, on the basis of their vast lore, report back to the king. It says much for the skill and common sense of the diviners that there is no case yet known in which any of them were later charged with a false prediction.

A passive approach to divination was also known. Thus, an astrologer might report to the king that his calculations showed that a solar eclipse would occur on such a date and that this meant the king would die. Necessary preventive action had, therefore, to be taken. In one such case, of which there are several examples, a substitute king was put on the throne and at the end of the ominous period was executed. Then the real king, who had been in hiding resumed his throne. Yet another type of passive divination is represented by dreams and prophecies. A king might receive a message from the gods in a dream, or it might be transmitted to him through a prophet. These prophets, or better, "ecstatics," were usually women who induced a trance upon themselves, probably by dancing. While the women were in the trance, the gods would send them messages for the king. Usually these messages were just good wishes for well-being and not at all like the powerful and often threatening messages of the Hebrew prophets.

J. Everyday Life

The everyday life of a Babylonian changed little over the centuries, for rapid change was unknown in preindustrial societies. Food, lodging, clothing, and general behavior patterns were essentially the same in Old Babylonian as in Neo-Babylonian times. This was true despite the frequent immigration of new peoples, since new population groups soon melted into Babylonian society, leaving little trace of their identity.

"A person is what he eats" is an old adage with much truth in it. One's diet affects one's thoughts and actions in a variety of ways. Thus, it is important to know what food Babylonians consumed. It was mainly cereal grains in the form of bread spread with oil pressed from sesame seed. The most common cereal was barley, which was also brewed for beer, the usual beverage. Wine was known but was reserved for festive occasions or for use by rich people. The people also ate leeks, onions, and garlic. Milk, usually from goats, was made into ghee (clarified butter) and cheese. Eggs from chickens and ducks were also part of the regular diet. Fish was commonly caught and eaten. For sweets, there were dates and honey. For most people, meat (fowl, sheep, or goat) was a rare luxury. Only the nobility could afford meat regularly; the lower classes were able to indulge in it only on festive occasions. Indeed, the upper classes had a great respect for good food, and many recipes for the preparation of a meal have been discovered. Not surprisingly, some of the recipes are similar to those for modern dishes found in the area.

There is a description of a banquet among the gods in the epic *Enuma Elish* (3: 133–37), and this may reflect human practice. The story does not tell us what they ate, except that they ate well, but it does say they drank enough to become quite cheerful:

> They chatted together as they sat down at the banquet,
> They drank through straws the sweet liquor,
> As they drank the alcohol their bodies relaxed,
> They forgot their cares, their mood became expansive.

The universal building material for dwellings was mud brick, the only exception being in the marshes, where reeds were used. Stone and timber, which had to be imported and were therefore expensive, were used only for palaces and temples. The house of a family of modest means was usually of two stories surrounding a courtyard. There were no openings onto the street except for the door. All windows, which had no coverings, opened onto the courtyard, where there was a pool of water. The second floor had a balcony all around the courtyard. Wealthy families and certainly the king had gardens. There were poor people who were homeless, and many of them carved out niches for themselves in the city walls or in the ruins of old temples and palaces, while others simply slept in doorways. The streets were narrow, twisting, and filthy, since they had open sewers in the center to carry off all waste from the houses. The streets were also dark and dangerous at night because of robbers.

Clothing was a relatively simple matter for most people and consisted of one or two loose-fitting garments. The material came from goats' hair or sheeps' wool. Both men and women wore some jewelry. The upper classes and royalty had more elaborate garments and, of course, wore ornaments of precious stone, such as lapis lazuli, and of metal, such as gold and silver.

For recreation the Babylonians had a variety of options. There were the great religious festivals, which included parades which they could watch. Scribes and poets recited epics and stories to audiences in the squares and at the gates. Music, both vocal and instrumental, was sung or played universally from formal hymns in the great temples to popular folk tunes. A variety of instruments—strings, wind, and percussion—were used. Ball games and wrestling were favorite sports. The more sedentary could entertain themselves with board games, some of which have been recovered in modern excavations. For the children, there were toys such as clay model wagons and dolls.

K. Legacy

Babylonia left a legacy to civilization as a whole and to religion in particular. This is not surprising considering that Babylonia was one of the great civilizations of the Fertile Crescent, an area one could call the cradle of civilization and the cradle of three great religions: Judaism, Christianity, and Islam. A

Babylonian legacy is also apparent in the modern region, southern Iraq, of the Babylonian plain and among its present inhabitants.

It is in the Bible that we find the most obvious Babylonian legacy, and since the Bible is sacred to Judaism, Christianity, and Islam, it is then a fact that all three religions have a legacy from the Babylonians. In the discussions above, a connection has been observed between Babylonian and Hebrew law and literature. It is possible that apocalyptic literature, such as one finds in the book of Daniel or the book of Revelation, has its origin in the Babylonian prophecies.

A legacy in the Bible unflattering to the Babylonians is interesting. Biblical writers had good cause to hate the Babylonians after the Exile, and this hatred took the form of regarding them as the archetypes of evil. The strongest expression is in the book of Revelation, where one reads of the iniquities of the "Great Whore of Babylon." Antagonism toward Babylonia went back much farther though, as we can see in the episode of the Tower of Babel in Genesis 11, where the writer is scornful of Babylon's wealth and pretensions, picturing its inhabitants as a godless and foolish bunch. These images of Babylon are still with us today, thanks to the Bible.

A final Babylonian legacy to religion is astrology. Astrology spread from Babylonia both east, to India and beyond, and west. In Western Europe, it gained a firm hold, thriving in the Middle Ages, and it still has a real presence in modern society.

Outside of religion, the most outstanding contribution which Babylonia has made to civilization is in science, a fact which has only come to light during the last few decades. As noted above, the Babylonians by about 1780 B.C. had made great strides in mathematics, algebra, and geometry. They had already made the discoveries which Euclid and Pythagoras would rediscover later. Before the middle of the 1st millennium they had such a wealth of astronomical data and expertise (compiled for the purposes of astrology) that they could measure the solar and lunar years very accurately. They could also predict eclipses of the sun and moon and many other celestial phenomena. This vast lore of learning and discovery spread throughout the Near East and Eastern Europe during the Hellenistic age and thus formed the basis for Greek science, which, in turn, is the basis of modern science. The Babylonians also knew a great deal about medicine and the structure of the human body, but whether much of this knowledge was passed on to the Greeks is unknown.

The influence of Babylonian literature on Greek literature has been shown to be a reality in recent years. There are, for example, reflections of Gilgamesh in the stories of Hercules, and some of the gods mentioned in the poetry of Hesiod reflect a Babylonian background. The Babylonians are famous in modern times for their law codes, and research during the last decade has shown a continuous chain in legal tradition from the Laws of Hammurapi through the Bible to modern law. (In fact there was a trial in the state of Michigan in the 1950s in which the goring-ox laws of Hammurapi's code were cited as bearing on the case! See Finkelstein 1981.)

The land where Babylonian civilization once flourished is now the S part of the modern republic of Iraq. Here, one can see a visible legacy of those ancient people in the minarets of the mosques. These towers remind one of the ancient ziggurats, or temple towers, the remains of which can still be seen at ancient sites throughout the land. In the early Middle Ages, when minarets were first being built, the ziggurats would have been even better preserved and apparent. Indeed, the famous medieval minaret at Samarra was consciously modeled after a ziggurat.

The Babylonian dialect of Akkadian is no longer spoken in the area, but there are still relics of it in the Arabic which is spoken in Iraq today. By this, it is not meant simply that Arabic, being a Semitic language like Akkadian, has words and grammatical structures related to those in Babylonian; this is certainly true. But beyond this, in isolated villages one often finds local words and expressions which are otherwise not known in Arabic but were current in Babylonian. An outstanding example of this is the technical terminology used by the date-palm cultivators in the extreme south. This terminology is actually Sumerian and therefore even older than Babylonian. But the Babylonians inherited it and passed it on to future generations.

Is there any trace of the Babylonian people themselves among the modern inhabitants of S Iraq? This is impossible to prove, but it seems highly probable. After all, when historians say a people "died out" or "disappeared," what they really mean (except in cases of genocide or mass migration) is that the old population intermarried and melted into the new immigrant populations. This was certainly the case with the Babylonians. One region which was isolated and therefore experienced little of this melting is the marshes in the extreme south (see B. above). Here the Marsh Arabs, as the people are called, live in much the same way as the ancient Sumerians and Babylonians. They are quite different in almost every respect from other Iraqis. Perhaps, then, they are the closest we can come to finding traces of Babylonians in the modern world.

A. KIRK GRAYSON

MESSENGER. See TRAVEL AND COMMUNICATION.

MESSIAH. The term going back to *Messias,* a Gk form (John 1:41; 4:25) of the Heb *māšîah,* denoting an anointed person. Hebrew *hammāšîaḥ* (Aram *měšîḥā*), "the Messiah," is usually translated in Gk with *ho christos,* the Christ.

Because a central tenet of Christianity has always been the conviction that Jesus was the Christ (the Messiah expected by Israel), much attention has been paid to the study of Jewish expectations of the Messiah. The Christian focus upon the person of Jesus has led to an undue concentration on the *person* of the Messiah in Jewish thought, even in the works of recent scholars. One should realize that in the OT the term "anointed" is never used of a future savior/redeemer, and that in later Jewish writings of the period between 200 B.C. and A.D. 100 the term is used only infrequently in connection with agents of divine deliverance expected in the future.

The use of the term "Messiah" to denote any figure expected to introduce an era of eternal bliss, regardless of the terminology used in the source, leads to confusion. The words "messianic" and "messianism" have a still wider range of meanings; they are also used in connection with expectations of a definitive change in history which is not brought about by a particular future deliverer. (In fact, the expression "messianism without Messiah" has even been coined.) These terms also appear in studies by historians of religion and by social anthropologists, who use them in discussions of developments in later Western history and in other cultures (often under Western colonial, missionary, and modernizing influence).

In the analysis of the literature that concerns us here, we should employ the words "anointed" and "Messiah" only where the sources use the corresponding word in their own language. Similarly, "messianic expectation" should only denote the expectation of a redeemer who is actually called "Messiah." We should also be careful in employing the words "eschatology" and "eschatological." The

basic element in the expectations which are commonly called "eschatological" is the conviction that God will complete and crown his dealings with his people and with the whole world by effecting a radical and lasting change, inaugurating a new era. God may use human or angelical intermediaries in bringing about this change, but quite often agents of divine deliverance are not found at all. The mythological imagery and the other expressions qualifying time and space used to describe this radical change are of secondary importance. Though it may be useful or even necessary to distinguish between the various images and concepts, we must be careful not to prejudice our analysis through inappropriate later terminology. We shall do well to use the words "eschatology" and "eschatological" without any modern connotations dependent on philosophical or theological theories concerning the relation between history and that which is "beyond history."

A. The Act of Anointing People

The Heb verb *māšaḥ* is used to indicate the applying of oil to an object or person by either pouring, rubbing, or smearing. The usual Gk equivalent in the LXX is *chriein.* When the word is employed with persons, it denotes the conferring of a specific status (except Amos 6:6). Mostly kings are anointed (Saul, David, Absalom, Solomon, Jehu, Joash, Jehoahaz); however, in some instances (high) priests were anointed (so Aaron and his sons, and Zadok), as were prophets (in one OT case, Elisha).

1. Kings. In the Jotham fable (9:7–15) directed to those who had made Abimelech king at Shechem, the trees are portrayed as wanting to anoint one tree to be king over them. The initiative here is clearly with the king's (prospective) subjects. Likewise, the men of Judah anointed David king over the house of Judah (2 Sam 2:4–7), and they were followed by the men of Israel who made him king of Israel (2 Sam 5:4 = 1 Chr 11:3, cf. 2 Sam 5:17 = 1 Chr 14:8). The case of Absalom in 2 Sam 19:11 (—Eng 19:10) may be compared. During the dynastic conflicts preceding David's death Solomon was anointed, at David's instructions, by Zadok, the priest, and Nathan, the prophet (1 Kgs 1:34, 45; in v 39 only Zadok is mentioned as the one who "took the oil from the tent and anointed Solomon"). In 1 Chr 29:22 it is the assembly of Israel which makes Solomon king and anoints him as prince for the Lord (cf. 1 Kgs 5:15 [—Eng 5:1]). In 2 Kgs 11:12 a group of people proclaims Joash king and anoints him, against the wishes of Athaliah; the LXX attributes the actual anointing to Jehoiada, the priest (cf. 2 Chr 23:11; Jehoiada and his sons). In 2 Kgs 23:30 Jehoahaz is anointed by "the people of the land."

In 2 Sam 12:7 (cf. Ps 89:21—Eng 20), Nathan reminds David that it was YHWH who anointed him king over Israel, and this is also the message of the story in 1 Sam 16:1–13, where Samuel receives instructions from YHWH "to anoint for me him whom I name to you" (v 3), and where Samuel proceeds to anoint David in the midst of his brothers. We may compare here 11 QPs^{a} 151:5–7 (cf. LXX Ps 151A). Anointing here indicates divine election (vv 7–12) and is accompanied by the gift of the Spirit (vv 13–14). Likewise, Samuel earlier had been instrumental in anointing Saul (1 Sam 9:16; 10:1); his action signified that YHWH had anointed him to be prince over his people Israel (10:1, 15:1, 17). In 10:5–6, 9–13, the Spirit of the Lord comes mightily upon Saul, and he prophesies (cf. 11:6, before an act of valor). This narrative is combined with the story of Saul's designation by lot (1 Sam 10:17–27) and the report that the people "made Saul king before the Lord in Gilgal" (1 Sam 11:15; cf. 12:1).

In 1 Kgs 19:15, 16, Elijah received YHWH's command to anoint Hazael to be king over Syria, Jehu to be king over Israel, and Elisha to be prophet in his place. In the case of Jehu this command was carried

out by one of Elisha's assistants, who told the future king: "Thus says the Lord, I anoint you king over Israel" (2 Kgs 9:3, 6, 12; cf. 2 Chr 22:7); after Jehu reported this, his men proclaimed him king (v 13).

It is hazardous to use these stories in the books of Samuel and Kings for a reconstruction of the historical circumstances or of developments in ideas about kingship and the anointing of kings in various groups in Judah and Israel. For the purpose of the present inquiry, it is sufficient to note that in their final redaction these books show a clear emphasis on YHWH's initiative, election, and commission. This also comes out clearly in the term "anointed of the Lord" (discussed below).

2. Priests. In a number of passages generally considered to belong to the so-called "P Code," Moses receives the instructions to anoint Aaron (high) priest (Exod 29:7; Lev 8:12; cf. 6:13—Eng6:20). Aaron is always mentioned together with his sons, however, and a number of times the sons also are supposed to have been anointed (Exod 28:41; 30:30; 40:13, 15; Num 3:3). In Lev 7:36 it is declared that it is YHWH who anointed Aaron and his sons. The idea is that the anointing/consecration guarantees an eternal priesthood for Aaron and his successors (Exod 40:15; cf. 29:29; Lev 6:15 [—Eng 6:22]; 16:32; Num 35:25). It should be added that in 1 Chr 29:22 the assembly of Israel anointed not only Solomon but also Zadok as priest.

3. Prophets. In 1 Kgs 19:16, Elijah is told to anoint Elisha to be his successor as prophet. The story of Elisha's call, however, does not mention any anointing; Elijah simply casts his mantle upon him (1 Kgs 19:19–21). When Elijah departs to heaven Elisha asks for and receives a double share of Elijah's spirit, and he takes up the latter's mantle (2 Kgs 2:1–14). We may compare Isa 61:1, where the prophetic author declares that the Spirit of God is upon him, because YHWH has anointed him. The emphasis is not on the rite of anointing but on the gift of the Spirit of God.

B. Anointed Persons

The Heb noun *māšîaḥ,* "anointed," is only used of persons, particularly of kings and (high) priests. In Ps 105:15, the term "my anointed one" occurs in parallelism with "my prophets" in a context that speaks about the patriarchs. In 2 Sam 1:21 it is found in connection with Saul's shield, but here a great number of manuscripts have the passive participle of the verb *māšaḥ.*

1. Anointed Kings. The emphasis on divine initiative in the stories about the anointing of kings is reflected in the popularity of the expression "the Lord's anointed" (*měšîaḥ YHWH*) and the corresponding expressions "my/your/his anointed." Saul is the Lord's anointed (1 Sam 12:3, 5), and therefore David spared his life: one should not raise his hand against the Lord's anointed (1 Sam 24:7, 11 [—Eng 10]; 26:9, 11, 16, 23). The Amalekite who claimed to have killed Saul at his request was put to death because he did not observe this rule (2 Sam 1:14, 16). We should compare here the warning in Ps 105:15: "Touch not my anointed ones, do my prophets no harm."

The expression "the Lord's anointed" is also used in connection with David's being anointed by Samuel (1 Sam 16:6) and as a reference to David in 2 Sam 19:22 (—Eng 21). In 2 Sam 23:1, David introduces himself as "the anointed of the God of Jacob"; the next verse continues: "The Spirit of the Lord speaks by me, his word is on my tongue."

In many so-called Royal Psalms the Davidic kings are regarded as "anointed by the Lord" (see D. below). We may add here 1 Sam 2:10 in the Song of Hannah (cf. 1 Sam 2:35, an oracle announcing a faithful priest … before "my anointed" for ever), Hab 3:13, and Lam 4:20 (bewailing the capture of "the breath of our nostrils, the Lord's anointed").

In all these texts YHWH's anointing of the king denotes the exclusive, intimate relationship between the God of Israel and the king whom he has appointed and given the power to reign in his name. The king is God's representative on earth and is thought to participate in God's sovereign rule. As ideas about this divine rule develop, the expectations also expand (see in particular the Royal Psalms). Quite exceptional is Deutero-Isaiah's application of the term "messiah" to the Persian king Cyrus: "Thus says the Lord to his anointed, to Cyrus" (Isa 45:1; cf., however, Hazael in 1 Kgs 19:15–17). For Israel's sake, YHWH calls this mighty king who does not even know YHWH by name. Cyrus gets the commission and the power to secure peace and freedom for God's chosen people (Isa 45:1–7); he is God's shepherd (44:28) where Davidic kings have failed.

2. Anointed (High) Priests. In Lev 4:3, 5, and 16, the (high) priest is called "the anointed priest"; in 6:14 (—Eng 6:22), "the priest from Aaron's sons who is anointed to succeed him." It is also probable that (high) priests are meant in Dan 9:25 (speaking about "the coming of an anointed one, a prince") and 9:26 (announcing that "an anointed one will be cut off"): Joshua, in the time of Zerubbabel, and Onias, in the time just before Antiochus IV Epiphanes' capture of Jerusalem, respectively. One should note that here *māšîaḥ* is used twice absolutely but without an article.

C. Anointed King(s) in the Psalms

In the Royal Psalms (see Psalms 2, 18, 20, 21, 45, 72, 89, 101, 110, 132, and 144), the theme "the king and his God" plays a significant role. These psalms belong to and contain different genres (intercessions for the king, prayers of the king himself, thanksgivings, laments, oracles, proclamations, etc.) and are difficult to date. Some will have had a place in the temple ritual and will have been recited at specific occasions or during regularly recurring celebrations while Davidic kings reigned in Jerusalem. Others may have been composed after the Exile. In any case, all psalms continued to be used long after there had been kings in Jerusalem, and this may have influenced their present wording. Referring to God's promises and his instructions to David and his dynasty, the psalmists make far-reaching assertions. These were related to the currently reigning king and his family, not to some future son of David. But because the ideal remained to a great extent unfulfilled in the present, and because these psalms were used for different kings in succession, it is not surprising that in later times these Royal Psalms were interpreted as referring to the future Davidic anointed of the Lord, whose arrival Israel hoped for.

There are a number of major theological ideas connected with the notion of the king as the Lord's anointed. In Psalm 45, a king's wedding song, the king is said to have been anointed with "the oil of gladness." He will reign in equity and righteousness, his throne is God's throne forever and ever (vv 6–7). Psalm 89 refers to God's anointing of his servant David (v 21—Eng 20). The king's (David's) relationship to God is one of a firstborn to his father. God has made a firm covenant with his offspring; he will punish them if they sin but continue to show them his steadfast love. They will reign forever, conquering their enemies (vv 20–38—Eng 19–37). The psalmist, clearly writing in a period of great distress, appeals to this covenant; he reproaches God for having forsaken his anointed and beseeches him to intervene: "Remember, O Lord, how thy servant is scorned … (the taunts) with which they [i.e., the enemies] mock the footsteps of thy anointed" (vv 39–53, esp. 51–52 [—Eng 38–52, esp. 50–51]). Psalm 89 should be connected with Nathan's prophecy to David in 2 Sam 7:14–17, partly referring to Solomon, but in its present form clearly speaking about David's dynasty (see esp. v 14: "I will be his father, and he shall be my son"; cf. also 1 Chr 17:3–15 and 1 Chr 22:8–10; 28:6–7, where Nathan's prophecy is applied to Solomon). In this context we should also mention Ps 132:10: "For thy servant David's sake do not turn away the face of thy anointed one"—a prayer put into the mouth of Solomon in 2 Chr 6:42. Next, there is Ps 132:17: "There I will make a horn to sprout for David; I have prepared a lamp for my anointed" (cf. 1 Sam 2:10). Also, Psalm 18 (a hymn of royal thanksgiving for God's help in obtaining a victory over his enemies) ends with a reference to God's "steadfast love to his anointed, to David and his descendants forever" (v 51 [—Eng v 50]; cf. 2 Sam 22:51; see also Ps 21:7; 144:10; and 2 Sam 23:5, which mentions an everlasting covenant between God and David).

Psalm 2 portrays the nations as plotting "against the Lord and his anointed" (v 2). The king will conquer and rule the earth, because he is God's king (v 6), even God's son: God decreed "You are my son, today I have begotten you (v 7). The king will be victorious over all God's opponents and his dominion will be worldwide, like that of God's. This idea is also found in Psalm 110, which in v 4 calls the king "priest forever after the order of Melchizedek," and in Psalm 72, which prays for fertility and peace, and extols the king's righteousness which has showed itself in his help for the poor and the oppressed (cf. the story of Solomon's dream at Gibeon in 1 Kgs 3:5–15).

In a number of other psalms the certainty of God's help for his anointed forms the basis of an appeal to God in days of trouble—see Pss 20:7 (—Eng 6); 28:8; and 84:10 (—Eng 9); cf. also Pss 61:7–8 (—Eng 6–7) and 63:12. When the king prospers, the people are secure in God's protection and individuals live in peace.

D. OT Prophecies about Future Davidic Kings

Except in Isa 45:1 and Hab 3:13 (already discussed above), the word "anointed" is not found in the books of Isaiah, Jeremiah, Ezekiel, or the Twelve Prophets. However, prophecies concerning future Davidic rulers found in these works contain elements that cannot be neglected in the present inquiry. They are mentioned here as they occur in the biblical books; as a rule, no attempt will be made to distinguish between genuine utterances of the prophet concerned and the additions to his work made later in the course of the formation of the present writings. The fact that certain ideas found expression is more important than their date; the analysis of the way in which they received their present form is bound to remain hypothetical in many cases.

In the much disputed prophecy of Isa 7:14, the name of the (royal?) child about to be born is Immanuel ("God is with us"), probably as a reminder of God's continuing care for the house of David and his people. In Isa 9:1–6 (—Eng 2–7), light in darkness, joy, deliverance from enemies, and peace are promised to be effected by a descendant of David who will reign forever with justice and righteousness (cf. 16:5; 32:1). His names are "Wonderful Counselor, Mighty God, Everlasting Father, Prince of Peace" (v 5 [—Eng 6]). In Isa 11:1–9, a situation is portrayed in which the tree representing the Davidic dynasty has been reduced to a mere stump. Yet a branch will grow out of its roots. The Spirit of the Lord will be on this descendant of David. His wisdom and knowledge are extolled, as are his righteousness and help for the meek of the earth. "He shall smite the earth with the rod of his mouth" (v 4; contrast Ps 2:7: "you shall break them with a rod of iron"). Verses 6–9 give a picture of a paradisiac situation on God's holy mountain; the earth will be full of the knowledge of the Lord. Verses 10–16 add that the nations will seek the root of Jesse, that Ephraim and Judah will be reunited, and that those in exile will be brought back.

The passage in Mic 5:1–3 (—Eng 2–4) announces the birth of a ruler from a renowned family of old (that of David) in Bethlehem. He will feed his flock and make them dwell securely, as would a good shepherd. He will be great to the ends of the earth, strengthened by the Lord and reflecting God's glory. Verse 2 (—Eng 3) mentions the return of the rest of the brethren to the people of Israel. Verses 5–6 add a prophecy concerning deliverance from the Assyrians.

In Jer 23:1–4, the shepherds are accused of neglecting their duty and scattering the flock. The Lord will bring his people back and appoint new and more responsible shepherds. In vv 5–6 the coming of a righteous "Branch" for David is announced. He will reign as king and execute justice and righteousness, and Judah and Israel will dwell together securely. His name will be "the Lord is our righteousness" (cf. the name of the last king, Zedekiah). This prophecy is repeated with some changes in 33:14–16. Verses 17–26, clearly reflecting a much later situation, interpret it collectively as referring to the eternal, unbreakable covenant between the Lord and David with his family, as well as with the levitical priests (cf. 1 Sam 2:35; 1 Chr 29:22; and Zech 4:14 and 6:9–15 below).

The verses in Ezek 17:22–24 portray how the Lord will take a young twig from the lofty cedar and plant it on a high mountain in Israel where birds of all sorts will gather in the shade of its branches. Comparison with 17:1–21 shows that the image refers to a future Davidic king, standing in clear contrast to Zedekiah, who has broken the covenant and is brought to Babylon. In Ezekiel 34 God accuses the bad shepherds who have neglected their flock and announces that he will gather together his flock and will himself care for his sheep. In this context he announces: "I will set over them one shepherd, my servant David, and he shall feed them … I, the Lord, will be their God and my servant David shall be prince (Heb *nāśî*) among them" (vv 23–24). A period of peace and plenty will follow. Also in chapter 37 (the vision of the resurrection of Israel) "my servant David" is introduced as king and prince of the Israelite people, who have been brought together in their own land (vv 24–25). As in Hos 3:5 and Jer 30:9 (cf. Amos 9:11), "David" does not denote the name of the king expected to return, but a future ideal ruler from his family, a perfect servant of the Lord. It should be added that the blueprint of the new Israel found in Ezekiel 40–48 (in which everything centers around the new temple) pays much attention to the role of the Zadokite priests. The rights and duties of the prince in relation to the people and the temple are defined precisely.

In the time immediately after the Exile, Haggai, on God's behalf, commands the rebuilding of the temple. He directs his words to Zerubbabel, governor of Judah, and to Joshua, the high priest. In Hag

2:20–23 Zerubbabel is addressed as "my servant," and God assures him that "I have chosen you" (expressions recalling the status of Zerubbabel's ancestor David). In the upheaval and total renewal of the present world which the Lord will bring about, Zerubbabel will be the Lord's "signet ring" (cf. Jer 22:24); that is, he will be protected by God whose representative he is. Many exegetes think that Zerubbabel is intended in the references to "my servant the Branch" (Zech 3:8) and "the man whose name is Branch" (Zech 6:12). The fact that the crown is not given to him but to Joshua, the high priest (Zech 6:9–14), is problematic and should best be explained by a correction of the text at the time when high priests and not kings functioned as leaders in Jerusalem. According to another interpretation, "the Branch" (see Jer 33:14–26) really refers to an ideal Davidide of the future. We should note that he is expected to have a priest alongside his throne with whom he cooperates in good harmony (6:13; cf. Jer 33:14–26). In 4:14 there are two "sons of oil" (RSV "the two anointed") who stand by the Lord of the whole earth.

Among the prophecies which were later added to Zechariah 1–8 is an oracle (9:9–10) about a humble king riding on an ass, righteous and bringing salvation because God has shown his righteousness to him and given him protection. He is not said to belong to David's family, but allusions to Ps 45:4 (—Eng 4) and Ps 72:1, 8, are apparent. God will end war, and the king will command peace until the ends of the earth. In Zechariah 12, it is announced that God will protect Jerusalem from attack by all the nations of the earth. "The feeblest on that day will be like David, and the house of David shall be like God, like the angel of the Lord at their head" (v 8; cf. Exod 23:20). It is not clear (in v 10) who is meant by "the one whom they have pierced" and who will be the object of heavy mourning.

In summary, the prophecies listed in this section announce a decisive and lasting change in the plight of the people, brought about by God. War will end, peace and plenty will be restored, Israel and Judah will be reunited, people in Exile will return; salvation has worldwide dimensions. A new era is inaugurated that will never end; it is absolutely unthinkable that God would allow the earlier situation to return. In these prophecies, the central figure is a descendant of David who represents an ideal of kingship in the name of YHWH; this is also reflected in the books of Samuel and Kings and in the Royal Psalms. The complexity of this ideal allows for all sorts of nuances in the individual texts. The emphasis is not on the person of the future king but on the fact that, at last, the Davidic ideal, which no historical king (including David) ever fulfilled, will be realized. The importance that some of these texts attach to the future cooperation between king and high priest should also be noted.

E. "Anointed Ones" in Early Judaism (200 B.C.–A.D. 100)

1. Ben-Sirach. In Sir 36:1–17 a prayer is given for the deliverance and restoration of Israel in which God is expected to act himself, without any mediator. The verb "to anoint" occurs a few times in the Praise of the Fathers (chapters 44–50). Moses ordained and anointed Aaron with holy oil (45:15), Samuel established the kingdom and anointed rulers over his people (46:13), and Elijah is the one "who anointed kings … and prophets" (48:8; cf. 1 Kgs 19:15–16). In 46:19 we find the expression "the Lord and his anointed" in a reference to 1 Sam 12:5.

In chapters 44–50 we find a long eulogy of Aaron (45:6–22) who, with his descendants, is said to have received an eternal covenant (vv 7, 15). In 45:23–26, Phinehas is extolled as "the third in glory"; he and his descendants will have the dignity of the priesthood forever, in accordance with Num 25:10–13 (cf. Ps 106:30). Chapter 50 sings the praise of Simon, the high priest, son of Onias (who officiated around 200 B.C.); in the Heb version of 50:24 the wish is expressed that the covenant of Phinehas may remain for him and his descendants forever.

In 45:25 the covenant with Aaron is contrasted with that of David. The exact meaning of this verse remains uncertain. Enough is clear, however, to suggest that the author's attitude toward David and his family is ambivalent. David is praised (47:1–11), while Solomon receives praise and blame (47:12–22). God's care for the Davidic dynasty is mentioned regularly (47:11, 22; 48:15), but looking back on the history of the Davidic kings the author concludes: "Except David and Hezekiah and Josiah they all sinned greatly"—therefore the kings of Judah came to an end (49:4). In 49:11–12, Zerubbabel and Joshua are praised for their work on the temple. Above all, Sirach is clearly interested in God's promises concerning the (high) priesthood in the line of Aaron, Phinehas, and (implicitly, see 1 Chr 5:27–41 [—Eng 6:1–15])

Zadok (cf. Ezekiel 40–48). He does not neglect God's promises to David, but they do not seem to be relevant for his audience, neither in the present nor in the future.

An addition in the Heb version on 51:12 praises God "who makes a horn to sprout for the house of David" (cf. Ps 132:17) and "elects the sons of Zadok to be priests" (cf. Ps 132:16).

2. 1–2 Maccabees. The books of 1 and 2 Maccabees concentrate on the crisis caused by Antiochus IV Epiphanes' intervention in Jewish affairs leading to the capture of Jerusalem and the desecration of the temple, and on the role played by the sons of Mattathias in restoring the true worship in the temple and (relative) independence to Israel. For the present purpose it is relevant to note that Mattathias' resistance against the measures of the Syrian king is said to have been motivated by "zeal for the law" (1 Macc 2:26, 27). He follows the example of Phinehas (2:26), who in Mattathias' "testament" (2:49–70) is called "our father" (v 54). Again, it is stressed that he was deeply zealous and received the covenant of eternal priesthood. This statement prepares the reader for the appointment of Jonathan to the high priesthood by King Alexander (10:18–21) and for the solemn decree recorded in 1 Macc 14:25–48, according to which the Jews and their priests make Simon their leader (*hēgoumenos*) and high priest forever (vv 35, 41; vv 42, 47, add "commander" [*stratēgos*]; and v 47, "ethnarch"—cf. 15:1). In v 41 we read that the arrangement would last "until a trustworthy prophet should arise"—probably an arrangement to pacify those who believed that the true leaders of the people had to be designated by God through a prophet like Samuel or Nathan (cf. also 4:46).

The book of 1 Maccabees was written to legitimize the Hasmoneans' leadership in cultic and political matters, as high priests and princes (soon to be called "kings"). This leadership lasted until the days of Herod the Great, but it was not undisputed by those who questioned the legitimacy of the Hasmoneans and/or were opposed to the fact that they combined the two offices.

The book of 2 Maccabees covers a much shorter period than 1 Maccabees. One should note that the second of the two letters in chap. 1 is addressed to, among others, "Aristobulus who is of the family of the anointed priests" (1:10); i.e., the legitimate high-priestly family of the Zadokites to whom Onias, son of the Simon (Sirach 50), belonged. Onias' piety, the intrigues to replace him, and his murder receive much attention in chaps. 3 and 4 (cf. Dan 9:26 discussed above). In 15:12–16 he appears to Judas, together with Jeremiah, and intercedes for the oppressed Jews. He is clearly thought to be with God in heaven, like the martyrs whose suffering as pious servants of God and God's law has brought about a decisive turn in the fate of God's people (6:18–31; 7:12–42; also 14:37–46). The military activities of Judas Maccabeus and other pious Jews could only succeed after "the wrath of the Lord had turned to mercy" because of the martyrs' self-sacrifice (8:1–5). Although Judas' actions are important, he is portrayed throughout as one who continually expects his help to come from the Lord (e.g., 15:21–24).

3. The Book of *Jubilees.* *Jubilees* has to be mentioned here because of Isaac's blessing of Levi and Judah in 31:13–17 and 18–20, respectively. The emphasis is on the functions to be exercised by the two patriarchs and their descendants on behalf of Israel: Levi and his sons will minister in the sanctuary but will also be judges, teachers of the law, and rulers ("princes and chiefs"). In 30:18–20, the descendants of Levi are said to have been chosen for the priesthood because of Levi's zeal to execute righteousness, judgment, and vengeance in the Shechem case (Genesis 34). The parallel with Phinehas in Numbers 25 is clear.

Judah, on the other hand, will receive strength and power, and he will be Jacob's help; his righteousness will bring peace for all Israelites. Significantly, it is said to him: "A prince shall you be, you and one of your sons." Not only the patriarch or the tribe but also David and/or a future ideal Davidic king come into the picture. In *Jub.* 33:20, it is stressed that "Israel is a holy nation to the Lord … a priestly and royal nation for his possession."

4. The *Testaments of the Twelve Patriarchs.* In their present form, the *Testaments of the Twelve Patriarchs* are undoubtedly Christian, and this becomes particularly clear when the extremely varied passages dealing with the future are analyzed. Reconstructing earlier redactions of the Testaments or earlier traditions used in them, which might represent the ideas of *Jewish* groups handing down material connected with the twelve sons of Jacob, remains a hazardous undertaking. Many patriarchs speak about

the position of Levi and Judah in the history of Israel. Levi will be priest, Judah will be king (*T. Iss.* 5:7), and the priesthood is superior to the kingship (*T. Jud.* 21:1–6a). A number of passages focus on Levi and depict him not only as a priest but also as ruler, teacher, judge, and/or warrior; in those passages Judah is often mentioned only in passing, or not at all (*T. Reu.* 6:5–7, 8, 10–12; *T. Sim.* 5:4–6; *T. Levi* 4:2–6; chaps. 5–6 [referring to the Shechem episode; cf. Genesis 34 and *Jub.* 30:18–20]; 8:2–17; chap. 13 *passim*.

Levi's descendants are, however, singled out as sinners against Jesus Christ in *T. Levi* 4:4, chaps. 10, 14–15, and 16; while in 5:2 it is expressly said that Levi's priesthood will be limited to the period before God's decisive intervention in the history of Israel. This corresponds with *T. Reu.* 6:8, which limits Levi's priestly activities to the period "until the consummation of times (the times) of the anointed high priest, of whom the Lord spoke." This is the only place where the word *christos* occurs (cf. *T. Levi* 17:2–3, where the passive participle *chriomenos* is used twice for persons anointed for the priesthood), and the reference here is to Jesus. This is clear in *Testament of Levi* 18, where the advent of a new priest is announced after a steady deterioration of the levitical priesthood. He is not said to be a descendant of Levi, and he is described with words and phrases which are partly parallel to those found in *Testament of Judah* 24, a chapter describing the advent of an ideal king from Judah, after a period of sin and exile for the sons of Judah. It has been assumed that these two Testaments originally closed with a description of an ideal levitical high priest and an ideal king from Judah. This has to remain a conjecture, however; in their present form both chapters refer to Jesus Christ.

Also, where "salvation" or "a savior" is predicted to come out of (one of) these tribes (*T. Sim.* 7:1–2; *T. Naph.* 8:2; *T. Gad* 8:1; *T. Jos.* 19:6 (11); cf. *T. Levi* 2:11; *T. Jud.* 22:2; *T. Dan.* 5:10), only one person is referred to—again it is Jesus, who is often connected with Judah in particular. The Testaments in their present form remain interested in the juxtaposition of Levi and Judah and of priesthood and kingship; but whenever they mention an agent of divine deliverance in connection with these two tribes or with one of them, they mean Jesus.

5. The Qumran Scrolls. The community which used the writings discovered in the caves at Qumran was a priestly sect led by Zadokite priests. Under the leadership of an influential teacher, the "Teacher of Righteousness," who was regarded as an authoritative interpreter of the Law and the Prophets, it separated from the Jerusalem temple and the Hasmonean priesthood officiating there. The group interpreted the events of the immediate past and present in the light of the Scriptures, and it also dreamed of a decisive turn brought about by God, when its views would be proved correct. The texts dealing with the future show a great variety in images and concepts. Attempts have been made to distinguish stages in the eschatology of the Qumran documents; yet a cautious, mainly descriptive approach seems advisable. Our evidence remains fragmentary, and it is probable that the members of the group, while adhering to some basic convictions, could differ in the description of details.

Restricting ourselves to those passages where the terms "to anoint" and "the anointed one" occur, we note first that in a number of cases the prophets of the OT are called "anointed ones" (CD 5:21–6:1; 1QM 11:7, 8; and especially CD 2:12, where we should read "the anointed ones of his Holy Spirit"). This corresponds to the designation "the anointed one of Spirit" used in 11QMelch 18 for the "one who brings good tidings" of Isa 52:7, clearly inspired by Isa 61:1. The good tidings are concerned with God's intervention in the future through Melchizedek, conceived as an angelic figure. Another future prophet is mentioned in 1QS 9:11: "… until there shall come the prophet and the anointed ones of Aaron and Israel," perhaps referring to Deut 18:18–19, a text mentioned in 4QTestim alongside Num 24:15–17 and Deut 33:8–11.

In 11QMelch 18 the word "anointed" is certainly not used as a technical term. With regard to the high priest and the prince expected in the future, the situation is not very different. The people at Qumran looked forward to the times when the meaning of the Law would be fully clear and when God's will would be obeyed completely. Then, a duly appointed high priest and a Davidic prince would discharge their respective functions properly. Then also, the final battle against demonic forces and human enemies

would be won. In a number of texts—but by no means everywhere—the anointed status of high priest and prince is mentioned, so that it is advisable to avoid the translation "messiah," which suggests titular use.

In 1QS 9:11, "the anointed one of Aaron" figures beside "the anointed one of Israel." The latter designation returns in 1QSa 2:14, 20, a description of an eschatological banquet where he and the high priest and their subordinates are present. In lines 11–12, the priest is said to be "at the head of the whole congregation"; whether the expression "the anointed" mentioned here refers to the royal figure (and whether it is used absolutely) is not clear, due to the defects in the text. It is clear that the high priest is the leading figure; he is also the leading figure in the War Scroll, where "the prince of the congregation" is mentioned only in passing (1QM 5:1). God's directives for the war are transmitted by the high priest (1QM 2:1; 15:4; 16:13; 18:5; 19:11); victory is won through the help of the Holy Ones sent from heaven. The passage in 4QFlor mentions "the Branch of David" who shall arise with the Interpreter of the Law at the end of time (lines 11–12; cf. Jer 23:1–4; 33:14–16, etc.). Just before this, the *Florilegium* quotes from 2 Sam 7:11–14, and later it adds Ps 2:1. The "Interpreter of the Law" is also found in CD 7:18–21; he is said to come together with the "Prince of the whole congregation." He is a priestly figure. Also, in some other texts the king is portrayed as being dependent on the interpretation of the priests: see 11QTemple 56:21; 57:11–15 (cf. 58:18–21, where the king has to consult the high priest before going to war); and 4QpIsa^{a} 8–10, which interprets Isa 11:1–3 as referring to "the Branch of David," and then makes the latter's judicial activity dependent on the teaching of the priests.

The meaning of the expression "anointed one of Aaron in Israel" in CD 12:23–24; 14:19; and 19:10–11 (cf. "anointed one from Aaron and Israel" in 20:1) remains disputed. The word *měšîaḥ* is found here in the singular, but many have argued that the expression nevertheless admits of a plural interpretation. Because CD 7:18–21 mentions two persons, the expectation of a priest and a king may also be assumed in the other passages. It is also possible that at some stage the prerogatives of the "anointed one of Israel" were absorbed into the concept of the anointed Aaronic priest.

The royal figure is often designated as prince (of the congregation) with a term taken from Ezekiel 40–48. He is also called "Branch of David" (to the texts just mentioned may be added 4QPBless 3–4), "anointed one of Israel," or (in 4QPBless 3) "the righteous anointed one" ("the anointed one of righteousness"), an expression close to the absolute "anointed one" which may be present in 1QSa 2:11. In 1QSb 5:20–29, a blessing for the prince of the future congregation has been preserved. It is concerned with his victory over the ungodly, his dominion over the earth, and his justice for the oppressed (it quotes Isa 11:4–5).

As may be expected from a priestly community, the future high priest is by far the most important figure, particularly as teacher of the law and mediator of God's will. His role may be compared to that of the Teacher of Righteousness in the past (CD 6:11). He is undoubtedly the primary leader of the people; he also plays an important role in 1QM, although he does not participate in the actual warfare (1QM 9:8), in contrast with the Davidic prince in 1QM 5 and elsewhere. To the texts already mentioned may be added 1QSb 3:1–7 and 18–21, a blessing for the future high priest, which is directly followed by a blessing for the sons of Zadok.

6. The *Psalms of Solomon.* The *Psalms of Solomon* were probably written around 50–40 B.C. by pious Jews propagating strict obedience to God's law. Psalms 2 and 8 react to Pompey's intervention in Judean affairs in 63 B.C., together with the events leading up to and following it. The authors are clearly opposed to the Hasmoneans, who had not discharged their priestly duties properly and had usurped the high priesthood (8:11) as well as royal authority (17:5–6). The authors also anticipate God's deliverance; in the case of *Psalms of Solomon* 17 and 18 (not in *Ps. Sol.* 11), this is expected from a Davidic king—e.g., *Ps. Sol.* 17:21: "Behold, O Lord, and raise up unto them their king, the son of David, at the time you have (fore)seen, O God, to rule over Israel your servant." This king will rule as the representative of God who himself is king of Israel forever and ever (vv 1, 46). In *Ps. Sol.* 17:21–45, the king's rule is described at great length with many references to the OT psalms and prophecies discussed above. Two features are dominant. First, the king will free Israel from its enemies, and the people in the dispersion will return and the nations will serve God. Second, the king will serve the Lord as the ideal pious, obedient, and wise

man (these psalms, after all, are ascribed to Solomon), and unrighteousness will be banished from the country.

In 17:32 and 18:5, 7 (plus the superscription), the king is called "anointed." In view of 18:5 ("his anointed one"), the *christou kyriou* in 18:7 and the superscription to *Ps. Sol.* 18 are also translated "of the Anointed of the Lord." In 17:32 all Gk mss read *christos kyrios,* "an anointed Lord." The parallel expression in 18:5 would suggest that the Gk here is the result of careless copying or deliberate alteration on the part of a later Christian scribe in changing a genitive into a nominative (cf., e.g., Lam 4:20 LXX and Luke 2:11). Alternatively, we may assume that the king was designated by two honorifics following one another (cf. Dan 9:25 and the use of "Lord" in Ps 110:1). In any case, the expression is used in *Ps. Sol.* 17:32 as a qualification rather than a title; this is different in *Ps. Sol.* 18, a conventional composition made up when the psalms were put together into one collection. Here, "the anointed of the Lord" has become a fixed expression denoting the Davidic king appointed by God to bring about a turn in the fate of Israel.

7. Egyptian Jewish Sources. In the writings of Philo we find little that is relevant to our investigation. His description of the future happiness of the just and virtuous in his *On Rewards and Punishments—On Blessings and Curses* presupposes many elements of the common eschatological scenario; only in his interpretation of Num 24:17 LXX in *Praem.* 95 do we get a glimpse (and no more) of a savior figure.

In Book 3 of the *Sibylline Oracles* (very complex, and difficult to interpret), we see reference to "a holy prince" who "will come to gain sway over the scepters of the earth forever," introducing "the most great kingdom of the immortal king" (vv 46–50, to be dated after the battle of Actium in 31 B.C.). Verses 652–795 (a long eschatological passage to be dated around the middle of the 2d century B.C.) begin with a reference to "a king from the sun," sent by God, "who will stop the entire earth from evil war" and will act "in obedience to the noble teachings of the great God." Various traditional elements are found, including a reference to Isa 11:6–8 in vv 788–95.

The fifth book of the *Sibylline Oracles,* dating from the beginning of the 2d century A.D., refers to a savior figure who is depicted as coming from heaven. We read about a king sent from God to destroy all kings (5:108–9); a great star coming from heaven bringing destruction (155–61); an exceptional man from the sky (256–59; Christian interpolation in v 257); and a blessed man from the expanses of heaven who, with a scepter given by God, destroys the cities of the enemies and renews Jerusalem and the temple (414–33).

8. Pseudo-Philo. For the sake of completeness, we should mention here the *Liber Antiquitatum Biblicarum,* falsely ascribed to Philo and generally dated in the 1st century A.D. (before A.D. 70), which retells the story of Israel from Adam to the death of Saul. In a concluding note about Phinehas, it says that God anointed him in Shiloh when he appointed him priest (*L. A. B.* 48:2). Some scholars suppose that there is a textual mistake here and think that the original text spoke of Phinehas anointing Eli, his successor (50:3). The little boy Samuel is anointed (as priest?), hailed as prophet, and called "a light for this nation for a long time" (51:6–7). In 51:6, there is a clear reference to 1 Sam 2:10. Chapter 59 relates at great length David's anointing by Samuel. Verse 4 includes a hymn by David (cf. 11Qps^{a} 151:5–7; cf. Ps 151A LXX) in which he blames his brothers and parents for forgetting him "when the anointed of the Lord was to be designated." The descendant of David mentioned in 60:3 is probably Solomon, not a future ideal Davidic king.

9. Josephus. The Jewish historian Josephus is our most reliable source of information about the unrest in Palestine during the 1st century A.D., which found its climax in the war between the Jews and Romans in A.D. 66–70. At a critical moment in his life, Josephus had switched allegiances to the Romans, in his own view not for political reasons but guided by God, who granted him insight into his dealings with his people, in the past and in the present. Josephus' account of the events and the motives underlying people's actions is, therefore, biased. This comes out clearly in *JW* 6.311–13, where he speaks about an "ambiguous oracle" found in the Scriptures "to the effect that at that time one from their country would become ruler of the world." The ordinary people and the wisemen interpreted this as referring to a man

from Israel. Josephus (who does not specify the scriptural passage) is convinced, however, that the oracle "signified the sovereignty of Vespasian, who was proclaimed emperor on Jewish soil."

Josephus records many incidents and rebellions from the death of Herod onward to the overall war in A.D. 66–70. In a number of cases these were led by men who were able to gather a substantial group of people around them. None of the men is called "anointed/messiah" by Josephus. Some of them were clearly brigands, leading groups of impoverished peasants, and at times resorting to guerrilla warfare against those in power. Others are described as prophetic figures resembling Moses (and Joshua)—see *Ant* 20.97–98; and *JW* 2.258–63 = *Ant* 20.167–71; *Ant* 20.188 (cf. the Samaritan Mosaic prophet in *Ant* 18.85–87, and the commotion in Cyrene recorded in *JW* 7.437–42). See also MESSIANIC MOVEMENTS IN JUDAISM.

Still others are reported to have had royal aspirations. Josephus mentions three such men in the time following the death of Herod the Great: Judas, Simon, and Athronges (*JW* 2.55–65; *Ant* 17.271–85). The extent to which these men and their followers fostered "messianic" hopes, inspired by popular memories of David as leader of a sizable band of brigands before being installed as king (1 Samuel 21–30), remains uncertain. It is said of two leaders in the Jewish War that they had royal aspirations. They were Menahem (see especially *JW* 2.433–34 and 441–48) and Simon bar-Giora (see especially *JW* 4.510 and 575; 7.29–31).

In two passages in the present text of the *Antiquities,* Josephus speaks about Jesus as the Christ. The first (18.63–64) includes the statement "He was the Messiah"; the second (20.200) introduces James as "the brother of Jesus who was called the Christ." Josephus may have included a notice or notices about Jesus (if only because at the end of the 1st century A.D. he was aware of the Christian claim that Jesus was the Messiah), but the present reports have certainly undergone Christian redaction. See also JOSEPHUS.

10. Early Christian Sources. The followers of Jesus of Nazareth regarded him as the Messiah expected by Israel. (For the typical Christian use of the term (*ho*) *christos,* see CHRIST.) In this section, Christian statements about Jewish beliefs in the Messiah are reviewed briefly, but they should be read against the background of discussions between Jews and Christians, like those mentioned in the book of Acts. There, Paul is portrayed as trying to convince members of synagogues in the Diaspora that Jesus is the expected Christ (Acts 9:22; 18:5; cf. 18:28 of Apollos). This included proving that the Christ had to suffer and to rise from the dead (17:3). In all instances, the designation *ho christos* is used, without any further addition.

In Mark 12:35, Jesus questions the obviously common conception of the scribes that "the Christ is the son of David"; in Mark 15:32, the chief priests and the scribes speak of "the Christ, the King of Israel." In the Markan passion story, much emphasis is placed on the fact that Jesus is the Christ and may be called King of the Jews, but without any political overtones that would justify his crucifixion. The apocalyptic discourse in Mark 13 anticipates false messiahs and false prophets (vv 21–22). The situation in the period leading up to the Jewish War is reflected here; the readers are reminded that Jesus the Christ, whose return to power is expected, differs completely from the popular leaders of the time.

In the discussions between Jesus (and in one case John the Baptist) and "the Jews" in the Fourth Gospel, the statements of the latter serve to highlight by contrast certain aspects of Johannine christology; yet they have some value in themselves. In 7:42, the Christ is said to be a descendant of David, and to be a native of Bethlehem; in 12:34, the Christ is said "to remain for ever"—reflecting the emphasis on David's everlasting kingdom (Ps 89:36–37; Ezek 37:25). In 7:27, the statement "when the Christ appears, no one will know where he comes from" may be connected with conceptions found in apocalyptic texts (see below). John the Baptist's declaration, "Among you stands one whom you do not know" (John 1:26), and his denial that he should be Elijah (1:21), may be explained by the conception of a savior living incognito on earth, to be revealed and to be anointed by Elijah (found as a Jewish notion in Justin's *Dialogue with Trypho* 8.4; 49.1; cf. 110.1).

The expectation that the Christ will do signs (John 7:31) is not found in Jewish sources; signs are usually connected with an expected prophet like Moses (also in John 6:14; 9:16–17). A similar leveling of different terminologies is found in 4:25, 29, where a Samaritan woman raises the question whether Jesus

may be the Christ, and professes to believe in the Messiah who, "when he comes, will show us all things." The few indications we possess of a Samaritan expectation of a future agent of divine deliverance all point in the direction of a person like Moses, thought to be predicted by Deut 18:15–19. Sometimes this person is called *Taheb* ("the one who returns"), sometimes he is regarded as Moses redivivus (see a number of passages in the 4th century A.D. *Memar marqah*; three times it is said that the *Taheb* will reveal the truth). We may also compare the report about a Samaritan prophet in the days of Pilate (*Ant* 18.85–87).

11. Apocalyptic Texts. a. 1 Enoch. In this composite document, the book of Dreams (chaps. 83–90), to be dated just before 161 B.C., portrays the birth of a white bull (symbol of a good and pious man) after the final judgment (90:37). His relation to the wild ox in 90:38 is not clear. No special activities of the bull or the wild ox are recorded.

The dating of the Parables of Enoch (chaps. 37–71) remains disputed, since they are only found in the Ethiopic version, and no Aram or Gk fragments are extant. Most scholars now date this part of *1 Enoch* to the second half of the 1st century A.D. The central figure is a heavenly redeemer, often called "that (the) Son of man" (cf. Dan 7:9–14, referred to in *1 En.* 46:1–3), the Chosen One (cf. Isa 42:1; see *I En.* 39:6; 40:5, etc.; and cf. 46:3), or the Righteous One (38:2; cf. 46:3, 56:3). The heavenly redeemer, who is thought to have been with God from the beginning (48:3, 6) and remains in God's presence, reveals all things to the elect and is the judge of the world and the champion of the righteous, destroying their enemies (who are God's enemies). See also SON OF MAN. So 48:8–10 speaks about the defeat of the kings of the earth by God's elect because "they have denied the Lord of Spirits and His Anointed." The phrase "his anointed" occurs here because of the reminiscence of Ps 2:2. In chapter 52, the visionary sees mountains of iron, copper, silver, gold, soft metal, and lead and is told by an accompanying angel that "these will serve the dominion of His Anointed that he may be potent and mighty" (52:4). In v 6, this is explained by their melting as wax before fire in the presence of the Chosen One. In the description of the complex redeemer figure in the Parables, elements from many Scriptural texts are used (e.g., Isa 11:2–4 in *1 En.* 49:3–4 and 62:2–3). This redeemer figure receives many names derived from Scripture, one of which is "His Anointed."

b. The *Syriac Apocalypse of Baruch.* Like *4 Ezra* (see below), *2 Baruch* was composed in the years following the destruction of the temple in A.D. 70. It has the expressions "My Anointed" (39:7; 40:1; 72:2), "my servant, the Anointed One" (70:9), and "the Anointed One" (29:3; 30:1). In all cases a royal figure is meant who reigns for a limited period, introducing a time of complete bliss and incorruptibility. In 70:9, it is said that "my servant, the Anointed One," will reign after wars and disasters on earth. The holy land will have peace (71:1); of the nations, only those who have not subjected Israel will be spared (72:2–6). Peace, joy, harmony, and health will abound (chaps. 73–74, with references to Isa 11:6–8 and Gen 3:16–18). Also, "For that time marks the end of what is corruptible and the beginning of what is incorruptible" (74:2).

In the interpretation of the vision of the vine and the cedar (chaps. 36–37), "the kingdom of my Anointed" is said to come after the end of the fourth kingdom (39:7). The enemies, including their last leader (represented by the cedar), will be destroyed. "My Anointed One" will charge him with all iniquities and destroy him on Mt. Zion (39:8–40:2). The Messiah will reign over the remnant of God's people in the place God has chosen (40:2). "His kingdom will stand forever, until this work of corruption comes to an end and the times appointed are fulfilled" (40:3).

In *2 Bar.* 29:2–30:1, the reign of "the Anointed One" in the holy land is described in paradisiac terms; the emphasis is on the slaughter of Leviathan and Behemoth for food, on abundant fertility, and on the return of the manna. When the Messiah's presence on earth has come to an end, he will return in glory, and a general resurrection will follow (30:2). The Messiah is clearly thought to have been in heaven before his revelation on earth (29:3; 39:7; cf. 73:1).

c. *4 Ezra* (= 2 Esdras). Four passages in this work mention an agent of divine deliverance. In 7:26–29, this agent appears (or "is revealed") with his companions when the now-invisible city and the now-concealed country become visible. He will bring 400 years (according to most versions) of happiness to

all who survive. After that period everyone, including the divine agent, will die; there will then be a period of silence for seven days, as there had been at the beginning of creation; finally, the new aeon of incorruptibility will begin, bringing with it resurrection and judgment (7:30–44). The divine agent is called "my son, the Anointed One"; in this passage, "my son" must either be interpreted against the background of Ps 2:7 or be considered (as most scholars think) a translation of Gk *ho pais mou,* which should have been translated "my servant." As for the "companions" mentioned in 7:26, we may point to 6:26 and 13:52. Presumably, a select group of pious men are meant, including Enoch, Moses (?), and Elijah. In 14:9 Ezra receives the promise that he will be taken away from the earth and "will remain with my son and with those like you, until the end of time." This translation is reported at the end of chapter 14 in the majority of the versions of the book.

In the interpretation of the vision of the Eagle and the Lion (11:1–12:3), the lion is explained as "the Anointed One whom the Most High has kept back to the end of days, who will spring from the seed of David" (according to all versions except the Latin; cf. Gen 49:9, 10). We note here the absolute use of the term (Lat *unctus*), the idea that the Messiah is already in existence (cf. *2 Baruch* and *1 Enoch*), coupled with the notion that he is a descendant of David. As in the vision itself (11:36–46), he charges his counterpart (the eagle = the Roman rulers) with certain crimes (12:32). The next verse adds that he will convict and destroy them; he will also give joy to the survivors in the land—until the day of the final judgment comes.

In chapter 13 the designation "anointed one" is not found. In a vision, a human figure comes from the depth of the sea and flies with the clouds of heaven (cf. Dan 7:2, 3, 13). He destroys a great host of adversaries with a stream of fire from his mouth (vv 3–11; cf. Isa 11:4 and Ps 18:9 [—Eng 8]). He does so after carving out a vast mountain and flying upon it (v 6; cf. Dan 2:34–35, 44–45). After the destruction of the enemies, he sends for a peaceful company that is joined by other people coming from captivity (Jews from the Diaspora) and still others (presumably converted Gentiles). The interpretation of the vision in vv 25–53 differs in many details from the vision itself. In vv 25–26 we hear that the man was held in readiness by the Most High through many ages; v 32 speaks of "my son/servant who will be revealed" (cf. also vv 37, 52). In vv 37–38, his main activity is (surprisingly) that he convicts the nations, reproaches them for their evil devices, and destroys them "without effort by means of the law." The man will stand on Mt. Zion—in fact, "Zion will come into sight before all men, completely and fully built" (v 36). He will deliver, order, and protect the survivors (vv 26–48) plus the returned ten tribes, which receive much attention (vv 39–47). In v 52, the companions of "my son/servant" are mentioned. No mention is made of a final judgment succeeding the days of this redeemer. The expectations concerning the end in general and the coming of an agent of divine deliverance in particular are clearly rather diverse in *4 Ezra.*

d. The *Apocalypse of Abraham.* This text, also usually dated some time after A.D. 70, mentions in 31:1 that God will sound the trumpet out of the air and will send his chosen one (Isa 42:1; cf. *1 Enoch* 37–71) who will summon God's people oppressed by the Gentiles.

F. Later Jewish Writings

The period from the destruction of the temple (A.D. 70) to the end of the 2d century is important because of the reactions to the events of A.D. 66–70 and the impact of the revolt of Simon bar-Kokhba in A.D. 132–135 leading to the expulsion of Jews from Jerusalem. In the present context, we shall restrict ourselves to some brief remarks.

1. The Eighteen Benedictions. This Jewish daily prayer is known to us in two later recensions, a longer Babylonian one and a shorter Palestinian one. We do not know exactly in what form(s) it was prayed in the 1st century A.D., before and after the fall of Jerusalem. Both versions pray for the gathering of the dispersed, for the reinstatement of the proper judges and counselors, for God's mercy on Jerusalem and the temple, and for the proper worship in the temple. The Babylonian recension speaks explicitly of God's return to Jerusalem and the rebuilding of the city. We find this in the fourteenth benediction that also prays: "raise up quickly in its midst the throne of David." The fifteenth benediction adds: "Make the Branch of David to sprout quickly, and let his horn be exalted by thy salvation. For we await thy salvation all the day. Blessed art thou, Lord, who makest the horn of salvation to sprout" (cf. Ps 132:17; Sir 51:12

[in Heb]; and the references to the "Branch of David" in Jeremiah, Zechariah, and the Qumran Scrolls). The fourteenth benediction of the Palestinian recension combines the prayer for Jerusalem with that for the house of David: "Be merciful … to the kingship of the house of David, thy (righteous) anointed. Blessed art thou, Lord, God of David, who buildest Jerusalem." The elements of the hope on God's intervention of the future found in these two recensions will certainly have formed part of the daily prayer in the period after A.D. 70 and, formulated differently, probably also in the years before.

2. Rabbinic Sources. It is notoriously difficult to use the data in the Mishnah, Tosephta, the two Talmuds, and the oldest Midrashim for historical purposes. One has to be extremely careful in establishing the original form of the many sayings of individual scholars, and the problems of ascription are many. The same holds true for the traditions about the various scholars.

No messianic sayings are recorded of Tannaitic scholars who died before A.D. 70. In sayings attributed to later Tannaim, we find a distinction between the days of the Messiah and the world/age to come, comparable to that found in *2 Baruch* and *4 Ezra* (though there are many differences of opinion as to the exact nature of the days of the Messiah). The Mishnah mentions the (Davidic) Messiah only in two places: *m. Ber.* 1:5 speaks about "this world" and "the days of the Messiah," while *m. Soṭa* 9:15 mentions further deterioration of the state of affairs "in the days of the advent (lit. the footprints) of the Messiah." It should be noted that the Mishnah speaks several times about "the anointed one," meaning "the anointed (high) priest" (in particular in tractate *Horayot*), and that it distinguishes him from "he who is dedicated by the many garments" (*m. Hor.* 3:4; *m. Meg.* 1:9; *m. Mak.* 2:6). If this contains a reminiscence of a time when (high) priests could not be anointed (later rabbinic sources mention that the oil of unction was hidden away in the days of Josiah), it may explain why the sect of Qumran, and probably other groups as well, anticipated the day when a properly anointed high priest would arise.

Very important is the tradition that Rabbi Akiba hailed the leader of the second revolt, Simon bar Kokhba, as the Messiah. On coins of the revolt, Simon is called prince (*nāśîʾ*; cf. Ezek 34:24 and the Qumran Scrolls) of Israel; sometimes he is mentioned together with Eleazar the Priest, who also appears singly. On some coins, a temple appears with a star above it. This may be a reference to Num 24:17, "a star shall come forth out of Jacob …," the text that is central in the tradition concerning Rabbi Akiba, recorded in *y. Taʿan.* 68d. In the variant sources there is a play of words on Simon's name. In newly discovered documents from the Judean desert, he is called "son of Kosiba"; the many who, like Akiba, hailed him as the Messiah called him "son of the star" (Aram *kôkbāʾ*). In rabbinic writings, the *s* in the name is usually changed to a *z* (bar-Koziba), implying that he was regarded as "the son of the lie" (i.e., a liar). The fact that Simon (not of Davidic descent, as far as we know) was regarded as Messiah by a great man like Rabbi Akiba shows the intensity of the longing for redemption and explains the great deception in the years after 135. The subtle change in the spelling of his father's name shows this, as does the saying of Rabbi Yoḥanan b. Torta, handed down together with that of Rabbi Akiba: "Akiba, grass will grow out of your cheekbones and the Son of David will still not have come." It is often thought that the notion of the death of a figure called Messiah, son of Joseph (or son of Ephraim), in the war against the final enemy, Gog, arose in the time after the defeat of Simon bar Kokhba (Kosiba). The notion of a Messiah from Joseph as a warrior is also found without the idea of defeat; according to some scholars, this must have existed earlier.

3. The Targums. It is difficult to assess the value of the messianic paragraphs in the various Aramaic translations of sections of the Hebrew Bible. We have to rely on manuscripts of a relatively late date, the texts of which are of a composite character; there are also many variations between related Targums, and the original wording and original date of the constitutive elements are difficult to establish. Yet much work is being done on these writings, especially with a view to investigating to what extent passages in them may shed light on discussions that are known to have taken place in the period from the 2d century B.C. to the 2d century A.D, in particular at the time early Christianity originated. One example may be given here. The star from Jacob in Num 24:17 was interpreted messianically by R. Akiba, as we have seen; in the Qumran Scrolls, Num 24:17 is connected with the prince of the congregation in 4QTestim 9–13 and 1QM 11:6–7. In CD 7:18–21, the "star" is interpreted as the Interpreter of the Law, while "the

scepter" (mentioned immediately afterward in Num 24:17) is equated with the prince of the whole congregation (cf. 1QSb 5:27–28). The LXX version of the verse, which speaks about "a star" and "a man," is referred to in Philo, *Praem.* 95 (cf. *Vita Mos.* I 290). R. Akiba, therefore, was by no means the first to connect Num 24:17 with a future redeemer.

In *Tg. Onq.*, "the king" and "the Messiah" are spoken of; in *Tg. Ps.-J.*, "a king" and "the Messiah and a scepter"; in *Tg. Neof.*, with some variation, "a king" and "a redeemer and a chief" (so also *Frg. Tg.*). The Targums clearly represent an old traditional interpretation; their testimony supplements our evidence. On the other hand, it is only the evidence from older sources that enables us to determinate the date of the interpretation found in the Targums.

G. Summary

The term "Messiah"/"Anointed One" is not found very often in the Hebrew Bible and in the Jewish writings of the period between 200 B.C. and A.D. 100. In the Hebrew Bible, people are anointed to become kings, or (high) priests, or (in one case only) a prophet. In the great majority of cases, the term "anointed" is connected with a royal figure. In the Royal Psalms, God's promises and instructions to David and his dynasty are recalled. The psalmists make far-reaching assertions, but these are always connected with the reigning king (who, among other things, is called "the Lord's anointed") but not with a future son of David. Yet these psalms, which continued to be sung long after there were any kings in Jerusalem, will have helped to shape the hope for an ideal Davidic king. So did the prophecies concerning a future king from David's family, but in these texts the term "anointed" does not occur. It should be noted that in various texts importance is attached to cooperation between king and high priest.

An investigation of Jewish writings around the beginning of the common era reveals that the term "Messiah" was by no means generally used as a designation for God's representative or intermediary at the beginning of a new age of peace for Israel and the nations. The expectations of a radical and definitive change brought about by God did not necessarily include a task for (human or angelic) agents of divine deliverance, and the fact that God's agents were anointed need not be stressed. The expected future Davidic king in *Ps.Sol.* 17 is only called "anointed of the Lord" in passing; in *Ps.Sol.* 18, the term seems to have become a fixed expression in denoting the future ideal Davidic king appointed by God. The complex redeemer figure in the Parables of Enoch is only twice called "his (i.e., the Lord's) anointed," probably under the influence of Ps 2:2. A royal messiah is found in *2 Baruch* and *4 Ezra*; in these writings, his reign is a temporary one. In the documents of Qumran, we meet a future high priest who is once called "the anointed one of Aaron" and a future king called "the anointed one of Israel" or "the righteous anointed one." Whether the expression "anointed ones of Aaron and Israel" in the *Damascus Document* refers to two persons or to one remains unclear. In one fragment we meet a prophetic figure called "the anointed one of the Spirit" (cf. Isa 61:1).

Christian statements about Jewish beliefs and expectations found in the NT writings tend to put a relatively strong emphasis on the Jewish hope for the Messiah. They should be read against the background of discussions between Jews and Christians about Jesus, whom the Christians believed to be the Messiah (Christ).

MESSIANIC BANQUET. The term refers to the use of the symbols of food and a festive meal to signify immortality and the joys of the end time or afterlife. The terms "eschatological banquet" and "apocalyptic banquet" are more correct for the general phenomenon, while the term "messianic banquet," technically speaking, refers primarily to traditions that make specific reference to the presence of the Messiah. However, because such distinctions are not always maintained in the scholarly literature, the concept as a whole will be discussed here. In our literature, it is primarily connected with the thought world of the apocalyptic, but aspects of the symbolism are widespread in the ancient world. Like other apocalyptic motifs, the messianic banquet has its origins in a complex mythological heritage from the ANE and is supplemented in the later periods by Hellenistic parallels.

A. Sacred Foods
B. The Divine Banquet
C. Actual Communal Meals

———

A. Sacred Foods

One motif connected with the messianic banquet theme places the emphasis on the numinous quality of certain symbolic foods. The characteristic theme here is that of the "food of the gods," which confers immortality on anyone who eats it. A prominent motif expressing this idea in ANE mythology is the "tree of life" whose fruit is deemed to have special life-giving qualities (Gen 2:9; Gaster 1969: 29–34, 336–38). There are echoes of this motif in the symbolism of the menorah in the biblical cult (Meyers 1976: 95–202). Apocalyptic literature utilizes it to represent the gift of eternal life to be given by God to the righteous at the end time (*1 En.* 24:4–25:7; *T. Levi* 18:11; *4 Ezra* 8:52; Rev 2:7, 22:2, 14, 19). For the Greeks, the "food of the gods" was ambrosia and the "drink of the gods" was nectar; these conferred immortality on all who partook of them (Hom. *Od.* 5.93; *Il.* 5.335–42; 19.38–39). In the Jewish work *Joseph and Aseneth*, a honeycomb is identified as the food of the angels that provides immortality to all who eat of it (16:14; also identified with "bread of life" and manna, Burchard OTP 2: 228 n.f).

The bestowal of "life" in the sense of immortality or eternal life at the end time is connected with other symbolic foods as well. Prominent images include basic foods such as water, wine, bread, and fish (Goodenough 1953–68: vols. 5 and 6; 12.94–131; Jeremias 1966: 233–34). In *Odes Sol.* 6:8–18, it is the "living water of eternity" that snatches the soul from death (cf. *Odes Sol.* 11:7–8, 30:1–7); so also in John 4:10–14 the "living water" of Jesus is "a spring of water welling up to eternal life." In Rev 22:1–2 and 17–19, the "water of life" is equated with the "tree of life" as a divine substance that imparts eternal life at the end time (see also 7:17; 21:6).

In the Greek tradition, wine is considered to be the gift of the god Dionysus to mortals, and its effects, ranging from pleasure to literary inspiration, are viewed as the blessings of the god (Henrichs 1982: 140–43), an idea that is echoed in some Jewish traditions as well (Smith 1975). One interpretation of Dionysiac wine-drinking was the idea that one thereby would consume the god; furthermore, Dionysiac beliefs also included the promise of a happy afterlife, although this was not necessarily specifically related to wine-drinking itself (Henrichs 1982: 159–60). In the Jewish text *Joseph and Aseneth,* however, the "cup of immortality" (8:5; 15:5) refers to a beverage that guarantees eternal life in heaven to those who drink it along with the "bread of life" and the "ointment of incorruptibility" (Burchard 1987: 109–17). The wine miracle of Jesus' in John 2:1–11 has similar overtones, since it is connected in this gospel with various references to symbolic life-giving substances ("bread of life," John 6:33; "water of life," John 4:14; "vine" as source of life, John 15:1–6). The strongest connection of wine with the "messianic banquet" theme, however, is to be found in the banquet motif as described in part B. below, since wine is a required component of any festive banquet.

Bread as a numinous food in biblical tradition is especially related to the miraculous bread from heaven or manna, where it is also associated with the miraculous water from the rock (Exod 16:1–17:7; Num 11:7–9; 20:2–13). These miraculous foods take on numinous qualities in a long and complex midrash tradition that is reflected throughout our literature. The bread becomes "bread of the angels," an apparent reference to the divine food eaten by angels (Ps 78:25; Wis 16:20; *4 Ezra* 1:19); and, as "bread of life," it is a food that confers eternal life on those who eat it (*Jos. Asen.* 16:8; 14–16; John 6:25–59). Philo interprets manna and rock to be types of the Logos, or word and wisdom of God, which nourish the soul (*Leg. All.* 2.86; 3.166–70). For Paul, manna and water from the rock are interpreted as "spiritual food" and "spiritual drink" and as symbolic of the Christian Lord's Supper (1 Cor 10:1–13).

Another creation theme that becomes a part of the messianic banquet tradition is the myth of Leviathan, one of the names given to the primordial sea monster representing the power of the sea whose defeat in a cosmic battle is a constituent part of the combat motif in many ANE creation myths. In the OT, the destruction of Leviathan by God represents God's power over chaos (Ps 104:26; Job 40–41; Rev 12:3–9; 21:1). The idea that Leviathan is not only destroyed but is also provided as food (Ps 74:13–14) becomes a symbol of the provision of divine food for the righteous in the new age (*2 Bar.* 29:1–4; *1 En.* 60:7–10, 24; *4 Ezra*; see also rabbinic references in Ginzburg 1909–38: 1.27–28; 5.41–46; and Str–B 4: 1156–65). The widespread fish symbolism that occurs in Jewish and Christian art (Goodenough 1953–68: 5.3–61; Snyder 1985: 24–26; 64:65) as well as in the NT (Matt 14:13–21 = Mark 6:32–44 = Luke 9:10–18 = John 6:1–15; Matt 15:32–39 = Mark 8:1–10; see also Luke 24:42–43; John 21:9–14) has been interpreted to signify fish as a numinous or eschatological food, an idea developed at least partially from the Leviathan myth (Goodenough 1953–68: 6.3–61).

B. The Divine Banquet

This is the primary messianic banquet motif since it places the emphasis on the banquet itself, a banquet at which the Messiah is deemed to be present. This theme has its apparent roots in another pattern found in certain ANE creation myths. These myths tell of a great battle being waged in the divine sphere. When the battle has been won, the gods assemble and celebrate the victory with a great banquet (*Enŭma eliš* VI:69–94 [*ANET* 69]; Isa 34:5–7; Zech 9:15; Gaster 1961: 93–94; Hanson 1973: 46 n. 25; 53–55). Here the myth echoes the cultural tradition of the festive meal as the primary social institution for celebrating victory and deliverance (as in *3 Macc* 6:30–41; *Ps.-Philo* 27:9). Because apocalyptic literature takes up the combat and victory motifs, the banquet of celebration becomes a part of its repertoire as well (Hanson 1975: 300–22; Collins 1976: 207–9; 224–30).

This tradition is reflected in the description of the victory/coronation banquet of David in 1 Chr 12:38–40, a passage with strong messianic overtones. Here, the warriors gather and celebrate with their new king, the prototype of the Messiah. The nations come bearing gifts in tribute, and "there was joy in Israel" (v 40). This description reflects the form of the banquet of the end time, which is given a classic description in Isa 25:6–8:

> On this mountain the Lord of hosts will make for all peoples a feast of fat things, a feast of wine on the lees, of the lees well refined. And he will destroy on this mountain the covering that is cast over all peoples, the veil that is spread over all nations. He will swallow up death for ever, and the Lord God will wipe away tears from all faces, and the reproach of his people he will take away from all the earth; for the Lord has spoken.

These texts provide a summary of the basic motifs that come to be associated with the messianic banquet: victory over the primordial enemies (e.g., death), eternal joyous celebration, abundance of food, the presence of the Messiah, judgment, and the pilgrimage of the nations.

Thus, for example, in *1 Enoch*, "in that day" when the Lord shall triumph over the kings and other rulers of the earth, they will be judged and will become victims of God's wrath. Then a "sacrifice" (for the banquet) will be provided and "the righteous and elect ones … shall eat and rest and rise with that Son of Man forever and ever" (62:12–14). Here, judgment is expressed in terms of divine reversal; those who suffer now will rejoice "in that day"; those who hunger now will feast in the future. Others who may find a share at the table are those who give bread to the hungry in this life (*T. Isaac* 6:13). The table will be one with lavish provision of food and wine (as in Isa 25:6–8 quoted above; see also Joel 2:24–26; 3:18; cf. the "unfailing table" of *4 Ezra* 9:19). Indeed, it will be a table where, when the "Messiah is revealed," the primordial representatives of chaos, the monsters Behemoth and Leviathan, will be eaten (*2 Bar.* 29:1–4; see also the reference to death being swallowed in Isa 25:8 quoted above).

In the NT, the messianic banquet theme is especially prominent in the gospel tradition. Jesus' provisions for the hungry in his food miracles (Matt 14:13–21 = Mark 6:32–44 = Luke 9:10–17 = John 6:1–15; Matt 15:32–39 = Mark 8:1–10; John 2:1–11) are paralleled by the theme of the beatitudes: "Blessed are you that hunger now, for you shall be satisfied" (Luke 6:21 [= Matt 5:6 = *Gos. Thom.* 69b]). In one of the favorite images of the parables, the kingdom is compared to a great banquet (Matt 22:1–10 = Luke 14:16–24 = *Gos. Thom.* 64). Indeed, the themes of joyous banquet, judgment, pilgrimage of the nations, and presence of the Messiah are marvelously brought together in the early tradition: "The Son of Man came eating and drinking, and they say, 'Behold, a glutton and a drunkard, a friend of tax collectors and sinners' " (Matt 11:19 = Luke 7:34). This theme is then played upon by the gospel writers, especially Luke, with numerous references to table fellowship with Jesus (Matt 9:10–13 = Mark 2:15–17 = Luke 5:29–32; Smith 1987).

The theme of the pilgrimage of the nations to the table becomes the rallying cry for the emerging gentile church and, when combined with the divine reversal theme, is interpreted to mean that they will take the place of Israel at the table: "I tell you, many will come from east and west and sit at table with Abraham, Isaac, and Jacob in the Kingdom of heaven, while the sons of the kingdom will be thrown into the outer darkness; there men will weep and gnash their teeth" (Matt 8:11–12 [= Luke 13:28–29]; cf. Luke 16:19–31; 14:16–24 [= Matt 22:1–10]; 22:28–30; Jeremias 1958: 59–63). In a different context, this same theme is utilized in a Eucharistic passage in *Did.* 9.4 to represent the unity of the Church gathering at the table: "As this broken bread was scattered upon the mountains, but was brought together and became one, so let the Church be gathered together from the ends of the earth into thy kingdom."

The messianic banquet is sometimes represented as a wedding banquet, a motif that is closely related to the victory banquet in its mythological origins and connections with the themes of victory and kingship of the god (Collins 1976: 223–24). More specifically, this motif is related to the theme of the "sacred marriage," a concept with a rich heritage from ANE myth and ritual (Smith 1958: 32–71). This theme is especially prominent in biblical literature as a symbol for the relationship of God with the people of Israel (Hos 2:1–23; Isa 54:4–8; Ezek 16:7–8), or, in the NT, as a symbol for the relationship of Christ and the Church (John 3:39; 2 Cor 11:2; Eph 5:23–32). The wedding banquet as a reflection of the sacred marriage theme is found in Song of Songs (2:4; 5:1; Pope *Song of Songs* AB, 374–75; 504–10), but more important for apocalyptic thought is Isa 54:5–55:5, where the theme of a divine marriage (54:5) is combined with a joyful feast which is characterized by abundance of food (55:1–2), vindication for the righteous (54:6–17), and the pilgrimage of the nations (55:5). This theme is then taken up in the NT, where it becomes a prominent image for the joys of the kingdom in the gospel tradition, especially in the parables (Matt 9:15

= Mark 2:19–20 = Luke 5:34–35; Matt 22:1–14; 25:1–13; Luke 14:7–11; cf. John 3:29; *Gos. Thom.* 104) and the miracle at Cana (John 1:1–11). In Revelation it is the primary motif for the messianic banquet (19:7–9; 21:2, 9; 22:17; Collins 1976: 223–31).

Among the Greeks and Romans, the festive banquet was also utilized as a symbol for the joyous afterlife (Pl. *Resp.* 2.363.c–d; Lattimore 1962: 52), a theme especially associated with Orphic and Dionysiac beliefs (Henrichs 1982: 160). This idea is also associated with funerary reliefs that picture the deceased reclining at a festive meal, although there is some debate whether this motif is meant to refer to an eschatological banquet or whether it simply idealizes the past life of the deceased (Cumont 1942: 417–22; Nock 1946: 145 [= *Essays* 2.613]; Dentzer 1982: 530–32).

C. Actual Communal Meals

The examples mentioned to this point represent the symbolic use of meal motifs in literature and art which sometimes, but not always, have some connection to actual meals. Some texts, however, are more explicit in connecting the theme of the messianic banquet to actual meals of a community. The communal meals at Qumran, for example, seem clearly to have been defined as a proleptic messianic banquet, since the description of the meal is heavily liturgical in form and, furthermore, includes the presence of the Messiah (1QSa II.11–22; Cross 1961: 85–91). The interpretation of the Passover meal in Judaism also had eschatological overtones (Jeremias 1966: 59).

Other examples are less clear. Goodenough, for example, has proposed the existence of a "mystic meal" in Hellenistic Judaism, based especially on texts from Philo and meal symbolism found on Jewish monuments, but his conclusions are largely discredited today (Goodenough 1953–68: 12.94–105; 125–31; 190–98; Smith 1967: 57–59). The meal references in *Joseph and Aseneth* have suggested to many interpreters that actual ritual meals with cultic significance were being referred to, but the data are complex and subject to varying interpretations (Burchard *OTP* 2: 211–12 n. i; 1987: 113). From the world of the Greeks and Romans, the funerary banquet whereby the family and friends of the deceased would commemorate his death has been interpreted to signify in some sense the proleptic enjoyment of the eschatological banquet in the afterlife, but this interpretation is still much debated (Cumont 1922: 199–206; Kane 1975: 342–43). The ANE version of the funerary banquet, known as the *marzeaḥ,* has also been interpreted to have eschatological overtones (Porten 1968: 183) as well as connections with the sacred marriage theme (Pope *Song of Songs* AB, 210–29).

In the NT, most of the references to bread, wine, and meals in general have been interpreted to refer either primarily or secondarily to the Christian communal meals, either the LORD'S SUPPER or the AGAPE MEAL. This is true, for example, with many of the references to divine food. Thus, the "bread of life" in John 6 that provides "eternal life" to all who eat it, which is a christological reference in its primary sense, is specifically connected with the Eucharistic "flesh" and "blood" in vv 51c–57 (perhaps from a later redactor). So also the Eucharistic bread and wine are identified with "spiritual food" and "spiritual drink" (1 Cor 10:1–22) and deemed the "medicine of immortality" (*Ign. Eph.* 20:2).

The food miracles of Jesus are also related to Christian communal meals. For example, when Jesus provides miraculous bread, he does so with the same ritual actions as those mentioned in the Last Supper passages (Matt 14:19 = Mark 6:41 = Luke 9:16 = John 6:11; Matt 26:26 = Mark 14:22 = Luke 22:19 = 1 Cor 11:23–24; Luke 24:30). Thus, it is the "breaking of the bread" that signifies the presence of the Lord at the community meals (Luke 24:30–35; Acts 1:4).

When Jesus provides miraculous wine in abundance (John 2:1–11), it is at a wedding feast (= messianic banquet). Elsewhere Jesus' own wine drinking and the image of "new wine" are related to the theme of rejoicing in the presence of the bridegroom at the wedding feast (Matt 9:14–17 = Mark 2:18–22 = Luke 5:33–39; John 3:25–30; *Gos. Thom.* 47, 104; Jeremias 1963: 117–18). In the Last Supper tradition, the wine is given an eschatological interpretation: "Truly, I say to you, I shall not drink again of the fruit of the vine until that day when I drink it new in the kingdom of God" (Mark 14:25 [= Matt 26:29 = Luke 22:18]).

Thus, the various examples of food and banquet imagery in the NT, especially to be found in the Gospels and Revelation, clearly give prominence to the messianic banquet motif and, furthermore,

connect that theme with the communal meals of the Church. This suggests that one of the ways in which early Christians interpreted their communal meals (both Eucharist and agape) was as a messianic banquet being celebrated proleptically in the presence of the risen Lord.

MESSIANIC MOVEMENTS IN JUDAISM. That Jews at the time of Jesus expected the coming of the messiah has been a central axiom of biblical studies. Recent critical analyses of Palestinian Jewish literature of late Second Temple times have indicated that there is little basis for that generalization (de Jonge 1966). The realization that "messianic" expectations were relatively unimportant in the literature of the time is also leading toward a more critical and confined use of the terms "messiah" and "messianic." Partly because of their supposed importance and centrality in the Jewish context of Jesus, and partly because of the Christian theological claim that Jesus constituted the fulfillment of the Jewish expectation, "messiah/messianic" came to be used as comprehensive terms for Jewish expectations of future salvation in general. Expectations of future deliverance and well-being are extremely diverse in biblical and other Jewish literature in postexilic times. Various (and often multiple) divinely chosen or sanctioned agents of salvation are mentioned, including angels, suffering righteous ones, and prophetic figures. Often the salvific action is taken directly by God, with no human agent involved. A "messiah" is mentioned infrequently in late Second Temple Jewish literature, and even then is not necessarily portrayed as engaging in redemptive action. Thus, there is increasing momentum in biblical studies to cease using "messiah/messianic" as synthetic terms covering any and all agents of salvation and

expectations of future well-being. The current move is toward greater precision in the conceptual apparatus utilized in attempts to understand biblical literature and history. Use of the terms "messiah/messianic" would thus be confined to literary and historical phenomena (a) where the Hebrew term "messiah" or its equivalent occurs, (b) where another term that can be clearly established as closely associated occurs, or (c) where a particular social-historical form is evident that has previously been associated with the term. Because "messianic" has been used so generally and synthetically, however, we should take note of historical figures and movements that have previously been included under the term.

———

A. Popularly Anointed Kingship in Biblical History

Starting with the popular kingships of Saul and David, a tradition of "messianic" movements developed in Israel, as reflected in the books of Samuel and Kings. Partly because of their struggles to maintain independence of the Canaanite city-states, the early Israelites apparently resisted any form of kingship, the understanding having been, apparently, that Yahweh was their king. In crisis situations, leadership was provided by charismatic "liberators" such as Deborah (Judges 4–5) and Gideon (Judges 6–8). Gideon reportedly refused to accept the institutionalized rule of hereditary kingship on the principle that "the Lord will rule over you" (Judg 8:22–23). In response to the severity of the Philistine crisis, however, a popular form of kingship emerged first in the recognition of Saul and then especially of David as chieftains or kings of the coalition of Israelite tribes. The rise of David from his origins as a warrior and bandit chief to being "anointed" king by the assembled Israelites shows that popular kingship was a distinctive social-political form. Whatever the terminology used (*roš* or *nāśîʾ*), popularly recognized or "anointed" kingship was a form quite different from either banditry or that of the charismatic "liberators." Whether known as "chieftain" or "king" (Num 31:8; Josh 13:21), the first popular kings of Israel, like the "chieftains" of the tribes, provided regularized, centralized political leadership (Bartlett 1969; Speiser 1967). David and his movement then provided the principal precedent and historical prototype for subsequent popular messianic movements.

Once the Davidic monarchy became established in its imperial domination of Palestine, it developed a self-legitimating royal ideology, with heavy borrowings of mythic motifs from Canaanite kingship. Much of the earlier scholarly discussion of messianic ideas and expectations drew heavily on this official royal ideology. That was understandable insofar as some of the texts that figured prominently in NT christology (e.g., Psalms 2 and 110) originated in the official royal Davidic theology. The imperial kingship, however, never completely replaced or suppressed the Israelite tradition of popular kingship in which David himself had begun. It lived on, particularly in the northern kingdom of Israel. Obviously its principal social location was not in the royal court but among the people, prophetic circles, and even the army. The tradition operated as a popular memory, capable of reappearance in concrete social movements (Tadmor 1968). It is an example of what anthropologists call a "little tradition," as opposed to the official "great tradition," although ironically our only evidence for it comes through the written narratives of the latter. Judging from their occasional appearances in biblical narratives, the popular messianic movements can be understood in terms of three principal characteristics: (1) kingship was constituted *by popular anointing* or election; (2) it was *conditional*, depending on the king's maintenance of a certain social policy; and (3) the anointing of a new king was usually a *revolutionary* action.

Physical strength and military prowess may have been prerequisites for recognition as king or chieftain (1 Sam 10:23; 16:18; cf. Judg 6:12; 8:22). The hero was made king, however, by popular acclamation, whether by the people as a whole, by a representative assembly of elders, or by the assembled peasant militia (Wolf 1947; Tadmor 1968).

First, "the men of Judah" and then "all the elders of Israel" "anointed David king" over Judah/Israel (2 Sam 2:4; 5:3; cf. 1 Sam 11:15 on Saul). Consistent with popular election, popular recognition could be

withdrawn and another person acclaimed. Once David had established a more imperial monarchy over Israel, a large proportion of the people rejected him in favor of his son Absalom, whom they anointed to be (king) over them (2 Samuel 15–19; esp. 15:10–12; 19:10). When Rehoboam threatened to intensify Solomon's oppressive practices, Israel hailed Jeroboam "to the assembly and made him king" (1 Kgs 12:20; cf. 2 Kgs 23:30). It is a confirmation, not a contradiction, of the popular election of the king that Yahweh also "anointed" the kings through the hand of a prophet such as Samuel, Ahijah, or Elisha. Yahweh's anointing anticipated the people's action, and the popular election fulfilled the will of Yahweh (1 Kgs 11:26–40; 12:1–20; 1 Kgs 19:15–17; 2 Kgs 9:1–12; 9:13).

Secondly, as suggested in the abandonment of an alienated or oppressive king and the anointing of a new one, the popular kingship was conditional (*CMHE*, 221; 224; 233 n. 62). From their origins as a free people, the Israelites retained a sense of independence and a commitment to egalitarian social-economic ideals expressed in the Mosaic covenant. Their suspicions of established monarchy were rooted in earlier experiences of domination by Canaanite kings. Thus, when they experimented with a new political form in the Philistine crisis, they viewed kingship as subject to certain "covenantal" stipulations. Subsequent historical narratives portray the duties and responsibilities of kingship as "written up in a book and laid up before Yahweh" (1 Sam 10:25). The conditions of kingship were transmitted in covenantal traditions (Deut 17:14–20) and even found liturgical expression in the "great tradition" (Ps 132:12). Centuries later Jeremiah, in his prophecies against Davidic kings (Jer 22:1–9; 13–19), apparently gave voice to this same popular concern that kingship is properly conditional.

Thirdly, the people's or prophet's anointing of a king was a revolutionary act. In its very origins with Saul and David, popular kingship was a means of mobilizing centralized political-military power against the foreign domination threatened by the Philistines. Much of Israel, apparently including Judah, rose in rebellion against David in anointing Absalom over them. The revolutionary action of such messianic movements recurred in subsequent centuries. Like Ahijah's and the people's designation of Jeroboam as king, Elisha's and the Israelite army's anointing of Jehu brought a revolutionary overthrow of an established monarchy that had become intolerably oppressive. It would appear to be a manifestation of this same popular tradition when "the people of the land" anointed Jehoahaz in 609 following the fatal defeat of his father, Josiah, by the Egyptians, an action that was both resistance to foreign domination and, apparently, a rejection of the reactionary royal officials in Jerusalem. This last case shows how resilient the popular tradition of anointed kingship was, not just in the N kingdom of Israel but even in Judah, which had for centuries been dominated by the Davidic monarchy and its absolutist royal ideology.

B. Popularly Recognized Kings in Late Second Temple Times

Given the paucity of sources for Second Temple times, there is simply no way of telling whether, and how, this tradition of popular kingship may have remained alive among the common people. The fact that narratives of the popular anointing of kings such as Saul and David were included in the written documents of the great tradition makes it likely that the popular memory could have been reinformed through the continuing interaction of the official and popular traditions, particularly through the work of scribes and teachers whose responsibility it was to perpetuate the official tradition. There was certainly occasion for the memory of popularly elected kings to be revived in late Second Temple times when the Romans conquered Palestine and particularly when they imposed the tyrannical Herod as king. The Idumean strongman conquered the people with the aid of Roman legions, then taxed them heavily to support his lavish Hellenistic-style monarchy. As noted above, there is little by way of literary evidence for any longing for a messiah among the literate groups. But it would not be surprising if the ordinary people (who left no literary remains), suffering under an illegitimate and oppressive king installed by an alien imperial power, had been eager for an "anointed" king from their own ranks, like Saul or David of old.

Several movements, each headed by one who "claimed the kingship" or "was proclaimed king" by his followers, occurred around the time of Jesus. At the death of Herod in 4 B.C.E., revolts erupted in each of the principal Jewish districts of Herod's realm. These movements were led by Judas in Galilee, Simon in Perea, and Athronges in Judea. During the first great revolt against Rome in 66–70, there was a brief

"messianic" incident among the group known as the Sicarii; and then there was a very powerful movement led by the popularly acclaimed king Simon bar Giora that became the largest force resisting the Roman reconquest in 69–70. Josephus, our principal source for these movements in 4 B.C.E. and 66–70 C.E., avoids any explicitly "messianic" language. Yet we cannot dismiss the social form in which he reports of these movements as due merely to his use of the typical Hellenistic terminology for kingship, such as "donning the diadem." The Israelite tradition of popular kingship had become embodied in biblical narratives and thus surely also in popular memory. Information to be gleaned from Josephus on certain aspects of these "kings" fits well with the interpretation of the biblical tradition concerning the popular "anointing" of kings (e.g., the great physical stature and military prowess of Simon, Athronges, and Simon bar Giora; *Ant* 17.10.6–7 §273, 278, likely reflects the tradition of the anointed king as a mighty warrior; 1 Sam 16:18; Michel 1967–68: 403). Furthermore, when we note that the prophetic figures and movements reported by Josephus were clearly informed by traditional biblical prototypes, the conclusion seems obvious that the groups led by the popularly proclaimed kings were "messianic" movements based upon the prototypical messianic movements of biblical history. In fact, Josephus' Hellenistic terminology of kingship points up the political authority seriously claimed or exercised by these kings and their movements.

The heads of the movements that arose at the death of Herod were all of humble origins. Athronges was a "mere shepherd" as David has been, according to the tradition; and Simon had been a royal servant, perhaps a tenant or lower-level official on one of the royal estates in Perea (*JW* 2.4.2–3 §57, 60; *Ant* 17.10.6–7 §273, 278). In Galilee the popular king was the son of a famous brigand chief; i.e., Judas was leading the revolt at the death of the tyrant who had killed his father a generation previously. (This Judas, the popular king in 4 B.C.E., was different from Judas of Galilee who led the "fourth philosophy" and its resistance to the Roman tribute in Judea in 6 C.E., a figure whom Josephus describes as a teacher, *sophistes*; *JW* 2.8.1 §118). All three movements were based in the countryside, and the followers of Simon, Athronges, and Judas were largely from the peasantry. A number of them may indeed have been "desperate men" (*Ant* 17.10.5 §271; cf. 1 Sam 22:2) because of the deteriorating economic situation of the peasants who were faced with the multiple demands of tithes, tribute, and taxes. "The brigands he collected," referring to Simon's movement, may be Josephus' pejorative phrase for the rebels, or it could be a reference to peasants who, having lost their land, had been drawn into bands of brigands who were hiding out in the mountainous terrain of Perea before joining Simon's movement (*JW* 2.4.2 §57).

The groups participating in these movements appear to have been somewhat organized, at least into "companies" for military purposes. Athronges' brothers served as heads of the divisions of the movement in Judea (*Ant* 17.10.7 §280–81). Josephus' report that the Pereans proclaimed Simon king in their "madness," and that they fought with "more recklessness than science," indicates the special inspiration underlying these movements (*Ant* 17.10.6 §274–76). The movements appear to have had a double goal: to liberate the people from Roman-Herodian domination and to restore the traditional ideals of a more egalitarian social-economic structure. According to Josephus, the groups stormed the royal palaces at Sepphoris and Jericho not merely because of the intolerable Herodian tyranny, and not simply to obtain weapons, but also in order to take back the goods that had been seized by Herod's officials (*Ant* 17.10.6 §274; *JW* 2.4.2 §57). They attacked the forces of both the Herodian and Roman rulers, and they raided the gentry's estates as well as royal residences. The long-suppressed resentment over prolonged political domination and economic exploitation poured out into an egalitarian anarchism typical among peasant uprisings.

The movements led by Athronges, Simon, and Judas were far more serious than marauding bands of raiders or extensive rural riots. They were genuinely political movements that resulted in effective control of considerable areas for a time. The very size of the army that Varus, legate of Syria, deemed necessary to reconquer Jewish Palestine (three legions and four regiments of cavalry, plus auxiliary troops) helps us appreciate the scope and importance of these movements. Even then, the movement in Judea continued for some time before the Roman and royalist troops could finally subdue the various companies of Athronges' peasant followers (*Ant* 17.10.7 §281–84). There is surely no direct connection between any of

these movements and the later one focused on Jesus of Nazareth little more than a generation later. But the memory would have been fresh of the earlier movements of Jewish peasants, from villages near such towns as Bethlehem, Emmaus, and Sepphoris, who had taken action in common under a leader they recognized as king. As a reminder that we are dealing with actual people and places, it is worth noting that in 4 B.C.E., just a few miles N of the village of Nazareth, the town of Sepphoris was burned and its inhabitants sold into slavery by the Romans in retaliatory suppression of a popular messianic movement.

The brief appearance of Menahem as a royal pretender toward the beginning of the Jewish revolt in 66 C.E. was really more of a messianic incident among the group called Sicarii than a movement. This incident has been misinterpreted by those scholars who use Menahem as evidence for a supposedly violent "Zealot messianism" that can serve as a foil for portrayal of Jesus as a nonviolent messiah. It is even claimed that Menahem stood in a Zealot messianic dynasty. It is now becoming recognized, however, that the Zealots proper did not originate until the middle of the Jewish revolt, in the winter of 67–68, by which time the Sicarii, who had previously been mistakenly identified with the Zealots, had long since withdrawn to Masada, where they sat out the duration of the revolt. The Zealots were involved in a social-revolutionary movement like the messianic movements; but the social form taken by the Zealot movement was not popularly proclaimed kingship but popularly elected priestly leadership. The claim that they were part of a "messianic dynasty" is rooted in a mistaken identification of Judas, the popular king of 4 B.C.E., with Judas of Galilee, the scholarly leader of the "fourth philosophy" in 6 C.E., from whom Menahem was descended. It is clear that Menahem could not have been a "Zealot messiah."

The Sicarii had emerged in the 50s as an urban group engaged in terrorist activities, such as assassination—of high priests who were collaborating with Roman rule—and kidnappings—in order to extort the release of their members who had been taken prisoner (*Ant* 20.8.10 §186–87; 20.9.3 §208; *JW* 2.13.3 §254–57). Josephus does not even mention the Sicarii in his reports of the early stages of the revolt during the summer of 66. However, some of them had apparently joined the insurrection in Jerusalem in time to participate in the burning of the royal palaces, of the house of the high priest Ananias, and of the public archives (*JW* 2.17.6 §425–27).

Josephus finally reports three incidents involving Menahem, in rapid succession. First, Menahem obtained arms from Herod's arsenal at Masada, whereupon he "returned like a king to Jerusalem and, becoming a leader of the revolt, directed the siege of the royal palace" (*JW* 2.17.8 §433–34). Second, although there is no indication that he became the main leader of the rebellion, he clearly became a prominent leader, for Josephus describes the garrison besieged in the royal palace as negotiating "with Menahem and the leaders of the insurrection" (437). Third, Josephus reports that the "infatuated" Menahem having become an "insufferable tyrant," the followers of the temple captain Eleazar now "laid their plans to attack him in the Temple, where he had gone up in state to pay his devotions, arrayed in royal robes and attended by his suite of armed fanatics. Eleazar and his companions rushed upon him, and the rest of the citizens, to gratify their rage, took up stones and began pelting the arrogant doctor" (*JW* 2.17.9 §443–45). A few of the Sicarii managed to escape to Masada, where they sat out the remainder of the revolt. Menahem himself, having escaped temporarily, was soon caught, tortured, and killed (447–48).

This messianic incident among the Sicarii has some differences from, as well as similarities to, the popular messianic movements. While the Sicarii were attacked by the followers of the temple captain Eleazar, they apparently fought for the interests of the common people, having joined in the destruction of the public archives "to destroy the money-lenders' bonds and to prevent the recovery of debts" (427). In connection with the popular kings of 4 B.C.E. and Simon bar Giora later during the great revolt, Josephus describes social-economic, political, and military activities. In his portrayal of Menahem, he includes a dramatic religious feature as well: the ceremonial celebration of Menahem's claim to kingship in the temple. Finally, whereas the other figures who "claimed the kingship" were from the common people and were popularly acclaimed, Menahem was known as a scholar (*sophistes*, 445) like his (grand)father, Judas of Galilee, and he was also a leader of an urban-based group apparently without a broader base of popular support. In any case, having been cut short before it had a chance to build wider support, Menahem's posturing as king in the temple appears to have been more a messianic incident than a true movement.

Historically, the most important messianic movement at the end of the Second Temple period was that led by Simon bar Giora, who became the foremost political-military commander in Jerusalem during the great revolt and whom the Romans executed with pomp and ceremony as, in effect, the vanquished king of the Jews. Josephus reports far more extensively on Simon and his movement than he does on the popular kings in 4 B.C.E. In those reports, Simon appears as an active organizer of the movement he led.

Like those proclaimed kings following the death of Herod, Simon was of humble background; as his name indicates, he was a mere "son of a proselyte." He became the leader of a substantial force, as the insurrection erupted in the summer of 66, and was one of the heroes of the audacious Jewish victory over the Roman army that advanced on Jerusalem that fall (*JW* 2.19.2 §521). Once the high priestly aristocracy regained control of Jerusalem and organized a provisional government, however, the last thing they wanted was to have a popular military hero in command of a nascent peasant militia. Hence, they passed over Simon in making appointments of district commanders. With his great "physical strength and courage," however, Simon continued to foment rebellion in the toparchy of Acrabatene (*JW* 4.9.3 §503–4; 2.22.2 §652–53). When the junta in Jerusalem attempted to suppress his activities there, he simply moved elsewhere.

After the death of the high priest Ananus (summer of 68?), one of the principal leaders of the provisional government in Jerusalem, Simon began building a movement more systematically. A number of parallels between the rise of Simon and that of the popularly "anointed" prototype David emerge from Josephus' accounts. It is unlikely that this is due simply to the literary artifice of Josephus himself, who was especially hostile to Simon, probably because the "despot" had imprisoned his parents during the Roman siege of Jerusalem. Like David, Simon had begun as a leader of a guerilla band that posed a threat to the existing government, but then eventually he was followed by thousands of people as well as by a large army. The initial followers in both cases were the "worthless" and discontent (*JW* 4.9.3–4 §507–13; cf. 1 Sam 22:2); but with the people searching for effective leadership against impending foreign conquest, Simon, like David, came to be recognized as king by masses of people, including some of the notables. Moreover, when Simon moved first to consolidate control of S Judea before moving on Jerusalem, he may have had more than military strategy in mind. He may have been following the Davidic prototype, liberating Judea and establishing righteous rule there (Michel 1967–68). Establishing a firm base in Hebron, in particular, may have been especially symbolic; it was surely remembered as the place where David had first been anointed prince of Judah and from which, once he was recognized as king of all Israel, he went on to take Jerusalem and to liberate the whole country. Josephus' digression just at this point in his narrative to the great antiquity of Hebron and its association with Abraham may well have been an attempt to divert attention from the Davidic associations of Hebron (*JW* 4.9.7 §529–34).

The social-revolutionary aspects of Simon's movement come through far more explicitly in Josephus' reports than did those of the popular kings of 4 B.C.E. After decades of economic pressure on the peasantry under the exploitative rule of Herod and the double burden of having to pay tribute to Rome and dues to priests and temple, Simon and his followers were likely attempting to restore social justice. Simon's proclamation of "liberty for slaves and rewards for the free" (§508) has the ring of prophetic promises. Justice for the poor was to be a feature of the future king, the righteous branch of David, according to prophecies such as those in Isa 11:1–9 and Jer 23:5 (cf. Jer 34:8–9).

Simon's followers, however, were by no means simply an anarchic horde of peasants wildly plundering the estates of the wealthy and storming the barricades of the city. Judging from Josephus' account, Simon and his movement were well organized and disciplined. They even thought ahead about the support system that would be necessary for a prolonged war of liberation. Apparently Simon also maintained a rigorous social discipline once he became the foremost leader in Jerusalem. Acts by Simon that Josephus bitterly condemns, such as the execution of deserters, may have been evidence of the social-political discipline necessary to maintain order among a people subject to a prolonged siege (Michel 1967–68: 406). Simon's discipline can be understood in terms similar to those expressed in *Psalms of Solomon* 17. In the great "war" against the oppressive alien rulers, the anointed king would "thrust out sinners from the

inheritance" and "not suffer unrighteousness to lodge anymore in their midst, thus purging Jerusalem, making it holy as of old" (*Ps. Sol.* 17:26, 29, 33, 36).

Two final symbolic events indicate unmistakably how Simon bar Giora had assumed the position of king of the Jews. Josephus reports that, as Jerusalem and the temple were being destroyed, Simon surrendered to the Romans in a highly dramatic act: dressed in a white tunic and a royal purple mantle, he arose out of the ground at the very spot on which the temple had formerly stood (*JW* 7.2.2 §29). The attire was that of a king, a symbolism that would have been clear to both Jews and Romans. This was the attire a king wore on formal state occasions, such as the funeral of Herod (*JW* 1.33.9 §671). Jesus of Nazareth was portrayed as being dressed in such garments when he was mockingly called "king of the Jews" (Mark 15:16–20). Not so clear, however, was the precise purpose Simon had in mind with this symbolic surrender. Was he, by this self-sacrificial surrender to the Romans as the unmistakable king and leader of the enemy, hoping to mitigate the Romans' punishment that would otherwise fall on his people with great severity? Whatever Simon's purpose in his dramatic surrender, the Romans indeed ceremoniously paraded him (appropriately robed), scourged him, and executed him as the enemy head of state and leader (was it explicitly as "king"?) of the Jews in one of the principal events of the triumphal celebration of the great Roman victory over the rebellious Jewish people (*JW* 7.5.3–7 §115–62). By contrast, Simon's rival for leadership, John of Gischala, was simply imprisoned.

The case most clearly recognized in scholarly literature as a messianic movement was the Bar Kokhba revolt of 132–35. Whereas there is very little occurrence of "messianic" ideas in Jewish literature prior to the messianic movements of 4 B.C.E., scholarly visionaries produced more explicit and elaborate pictures of a future messiah toward the end of the 1st century C.E., after Jerusalem and the temple had been destroyed (*4 Ezra* 13; *2 Baruch* 29; 36–40; 72–74). Thus, the Bar Kokhba movement may have been influenced by more clearly developed expectations of a messiah as well as by the biblical tradition of popular kingship. In any case, the revered elderly Rabbi Akiba, who had not forgotten his peasant roots, proclaimed that Simon bar Kosiba, the leader of the insurrection in 132, was the fulfillment of the oracle in Num 24:17: "a star shall go forth from Jacob"; hence the name *Bar Kokhba*, which means "son of the star" (*j. Ta*ʿ*an.* 4.68d). Other rabbis, probably the majority, were not only skeptical but critical. The same rabbinic tradition has Yoḥanan ben Torta answer: "Akiba, grass will grow out of your cheek-bones and the son of David will still not have come." Other rabbinic traditions denigrate the leader of the rebellion with a pun on his name; that is, bar Koziba, or "Son of the Lie." Akiba and the followers of Simon bar Kosiba, however, understood their leader in messianic terms. Coins from the first year of the revolt corroborate that Simon was regarded as the elect ruler, the "Prince (*nāśî*) of Israel."

Undeterred by rabbinic rejections, large numbers of Jewish people must have joined the movement. Simon and his followers established their own government in extensive areas of Judea while defending themselves against Roman attempts at reconquest. Their coins, inscribed "Year I of the Liberation of Israel" or "Year II of the Freedom of Israel," reveal that their assertion of independence from Roman domination had inaugurated a new era. Documents found at Muraba'at and Hever, moreover, indicate that Simon exercised a rigorous administrative and military discipline, and that he and the other leaders placed great emphasis on strict observance of traditional religious regulations. As in 69–70, the Romans sent a massive military force to reconquer the country, but Simon and his followers forced them into a prolonged war of attrition through skillful guerrilla operations based in caves and mountain strongholds. Only after extended campaigns and costly battles could the Romans finally "annihilate, exterminate, and eradicate" this messianic movement from the land (Dio Cass. 59.13.3).

That these popularly recognized kings and their "messianic movements" governed a limited area and were able to maintain the people's sovereignty for only a short time—ranging from a few weeks (Judas, son of Hezekiah) to a few years (Athronges, Simon bar Giora, and Simon bar Kosiba)—does not lessen their significance. That several of these movements occurred within a few generations at the end of the Second Temple period indicates not only that the Jewish peasantry was capable of producing its own leadership and of taking collective action in a politically conscious way, but also that the actions took a distinctive social form because of the peasants' memory of previous liberation and popular sovereignty.

C. Popular Prophets and Prophetic Movements

Certain prophetic figures who appeared in Judea in the mid-1st century C.E. have been labeled "messianic" prophets or "prophetic pretenders to messiahship" (*TDNT* 6:812–28; Hill 1979). These labels, however, obscure both the distinctive character of the figures and the movements they led and their distinctive difference from the movements led by popular kings that can more appropriately be designated "messianic." Contrary to suggestions by some and the misleading label "messianic," there is no overlap or confusion between these two types of movements and their leaders. Our principal source, Josephus, writes explicitly that Theudas and "the Egyptian" appeared as *prophets,* and he mentions nothing to suggest that they also assumed some royal posture.

Prophets such as Theudas and "the Egyptian" must also be distinguished from other prophetic figures active in this same period. Reports about these figures in Josephus and the Gospels, when placed against the background of earlier (biblical) Israelite prophetic phenomena, indicate that these prophets were of two distinctive types, each reminiscent of or in continuity with a biblical tradition. Prophets of both types apparently arose from among the people, and not from one or another of the literate groups such as the Pharisees or Qumranites. But some of them, such as Jesus, son of Hananiah, and probably John the Baptist as well, were primarily individual spokespersons for God, delivering oracles of judgment related to their respective historical situations. Jesus is particularly reminiscent of Jeremiah in his lament over the doomed city of Jerusalem. During the Jewish revolt, other prophets (none of them named by Josephus) proclaimed oracles of deliverance. Judging from Josephus' reports, some of these may have been more apocalyptic in their inspiration and style, but the visionary imagery suggests that these prophecies concerned historical deliverance, not any "end of the world." These prophets, whether their oracles were of judgment or of liberation, were individual messengers, and none of them (including John the Baptist) appear to have organized or led a mass movement.

The prophets such as Theudas and "the Egyptian," on the other hand, inspired and led mass movements that were suppressed by Roman troops. On the basis of Josephus' general descriptions of several such movements along with his accounts of Theudas, "the Egyptian," and a Samaritan prophet, we are justified in discerning here a distinctive type of prophets and prophetic movements. That is, these prophets, while also messengers of God, did not simply announce the will of God but (1) led actions of deliverance (2) involving "revolutionary changes" (3) in accord with God's "design" and (4) corresponding to one of the great formative historical acts of deliverance led by Moses or Joshua.

According to Josephus' summary statements, there must have been several prophetic figures who at some point or another led their followers out into the wilderness in anticipation of new deliverance (*JW* 2.13.4 §259; *Ant* 20.8.6, 10 §168, 188). The most important, judging from their recollection in the NT as well, were those led by Theudas and "the Egyptian."

> During the period when Fadus was procurator of Judaea, a certain impostor named Theudas persuaded the majority of the masses to take up their possessions and to follow him to the Jordan River. He stated that he was a prophet and that at his command the river would be parted and would provide them an easy passage (*Ant* 20.5.1 §97).

> There came to Jerusalem from Egypt a man who declared that he was a prophet and advised the masses of the common people to go out with him to the Mount of Olives … For he asserted … that at his command Jerusalem's walls would fall down, through which he promised to provide them an entrance into the city (*Ant* 20.8.6 §169–70; cf. *JW* 2.13.5 §261–62).

The placement of Theudas prior to Judas of Galilee (6 C.E.) in Acts 5:36 is merely either a result of chronological confusion or a lack of solid information by Luke. In Acts 21:38 Luke has simply confused "the Egyptian's" movement with the terrorism by the Sicarii during the same period under the governor Felix (52–60 C.E.). The fundamental reality of all of these movements appears to be that the prophets were leading their followers into some great anticipated liberating action by God.

Josephus says that these prophets were "fostering revolutionary changes" (*JW* 2.13.4 §259). From his explicit reference to "the masses" and "the common people," it is clear that the social base of these movements was the Judean peasantry. Their quest for "rest from troubles" and "freedom" or "liberation"

suggests a rejection of the established order in hopes of attaining an independent life free of oppressive burdens. Some of these movements appear simply to be acts of withdrawing from an intolerable situation. The prophet from Egypt is more explicitly confrontational: he apparently led his followers out to participate in God's overthrow of the Roman-dominated established order in Jerusalem. There is no indication in our texts that any of these movements were violent, let alone armed, as has sometimes been suggested. But the brutal suppression of these movements by overwhelming military force indicates just how threatened the ruling groups were about the "revolutionary changes" that these prophets and their followers anticipated. At the very least, of course, if the participants abandoned their fields in anticipation of divine deliverance, then these movements posed a genuine threat to the productive base on which the ruling groups were economically dependent.

The report that the prophets would show their followers "marvels and signs that would be wrought in harmony with God's design" (*Ant* 20.168) should be read against the background of Jewish apocalyptic literature. "God's design" is apparently a reference to the "mystery" or plan of God for the resolution of the current crisis that figures so prominently in Daniel and the Qumran texts. The hostile Josephus writes that "deceivers and impostors, under the pretence of divine inspiration … persuaded the masses to act like madmen" (*JW* 2.13.4 §259). That is, stated in more positive, traditional biblical terms, these prophets, filled with the Spirit of God, inspired their followers with the conviction that they were called to participate in God's imminent liberating action.

A new action of deliverance anticipated by these prophets corresponded to one of the great historical acts of deliverance. The historical analogies according to which the new acts of salvation were imagined are clear, at least in general. The prophet from Egypt and his followers were clearly motivated by the great battle of Jericho; in similar fashion, God would now dramatically liberate Jerusalem from Roman domination. The "charlatan" who promised his followers "deliverance and rest from troubles if they chose to follow him into the wilderness" (*Ant* 20.8.10 §188) was surely attempting to realize a new exodus from bondage out into the wilderness, in imitation of Moses of old. The precise analogy in Theudas' case is less clear. Perhaps it should be seen as a new exodus and/or entry into the land: as Moses parted the waters for the deliverance from Egypt and/or as Joshua had parted the waters of the Jordan for the entry into the promised land, so Theudas was acting as God's agent in the new deliverance from Roman oppression and/or in reentry into the land of promise.

Israelite traditions had long since juxtaposed the Exodus from Egypt and entry into the land. And prophetic traditions such as that in Isa 51:9–11 had already conceived of new redemption along the lines of the original formative acts of redemption. Contrary to generalizations often found in scholarly literature, there is virtually no literary evidence for the currency of an expectation of an eschatological prophet like Moses in the 1st century (Horsley 1985a). In the cases of Theudas, the "Egyptian," and "the charlatan," however, there did occur concrete movements led by prophets in actions of liberation that correspond typologically to the great constitutive historical actions led by the prototypical prophets Moses and Joshua. Even though Josephus is careful to say only that Theudas and the "Egyptian" claimed to be prophets and that such leaders were really "deceivers and imposters," he nevertheless used for them the same distinctive language that he used in his accounts of Moses and his "signs and miracles" of deliverance (*Ant* 2.13.3 §286; 2.15.4 §327; cf. 20.8.6.10 §168, 188; *JW* 2.13.4 §259). Josephus' reports thus indicate that there must have been a distinctive social form of *prophetic movements* in 1st century Palestinian Jewish society, parallel to but different from the popular messianic movements.

RICHARD A. HORSLEY

MESSIANIC SECRET. Frequently in the Gospels, especially in Mark, Jesus is portrayed as trying to maintain an element of secrecy about himself and his work. Today, this feature is referred to as the "messianic secret," a term derived from the classic study of W. Wrede (1901; trans. 1971).

A. Wrede

Prior to Wrede's work, 19th-century scholars had read the Gospels, especially Mark, as almost exact transcripts of the life of Jesus. In particular, the secrecy texts in Mark were understood as evidence for the fact that Jesus wished to reveal his identity to the disciples only gradually so that they might come to a deeper understanding of him. Much of this was thrown into question by Wrede's work.

Wrede showed that no gradual development in the disciples' understanding can be traced in Mark. Instead, he argued that the theme of secrecy in Mark is all-pervasive. Wrede referred to a number of features in the gospel as evidence for this theme of secrecy: (1) Jesus explicitly commands the demons to be silent about his identity after exorcisms (1:25, 34; 3:11–12); (2) Jesus gives orders that his miracles are not to be publicized (1:43–44; 5:43; 7:36); (3) Jesus commands the disciples to be quiet about him (8:30; 9:9); (4) Jesus tries to keep his whereabouts a secret (7:24; 9:30); (5) Jesus gives private instruction only to a chosen few (7:17; 10:10); (6) the so-called "theory of parables" (4:11–12) shows that in Mark, Jesus teaches in parables in order deliberately to hide his intent from the crowds; and (7) despite their privileged position, the disciples in Mark regularly fail to understand Jesus (6:52; 8:17–21).

Wrede argued that all these features were unhistorical and were therefore secondary editorial additions to the tradition. For example, the secrecy charge at 5:43 was patently absurd, with a girl in a room just restored to life from death and the crowd clamoring just outside the door. Similarly, the theory of parables in 4:11–12 could not be traced back to Jesus, since Jesus used parables in order to make his message clear, not unintelligible (Wrede 1971: 62). Wrede found the key to the secrecy theme in 9:9. Here, a time limit is set so that the disciples are to remain silent about what they have seen until after the resurrection. Wrede argued that this time limit was intended to apply to all the elements of secrecy in Mark: the period prior to Easter was one of secrecy, but after the resurrection full revelation occurred.

Wrede also attempted to account for the origin of the secret. He argued that a primitive Christian belief was that Jesus had *become* Messiah at his resurrection (Acts 2:36; Rom 1:3–4); later Christian reflection led to the belief that Jesus' earthly life had also been messianic. The secret was the result of the coming

together of these two views, so that Jesus' earthly life was now described as messianic but with the proviso that this could only be made public after the resurrection (Wrede 1971: 229).

One corollary which Wrede drew was that, if this reconstruction was right, the secret could only have arisen at a time when no explicit messianic claims by Jesus were known. Hence, "*Jesus actually did not give himself out as messiah*" (Wrede 1971: 230; Wrede's italics). This corollary by Wrede has often been criticized vehemently by many, and it has often been thought that Wrede's whole thesis could be refuted by pointing to messianic elements in the tradition which could be traced to Jesus. This probably misses the point of Wrede's analysis, which was an attempt to look at the gospel of Mark and to explain the actual secrecy motifs as they occur *in Mark.* Wrede's point about the lack of messianic claims by Jesus was only a corollary drawn from his theory about the origin of these secrecy motifs.

B. Developments since Wrede

Wrede's work has been extremely influential, even if his detailed theories are no longer accepted by many. Certainly he opened the way for later form and redaction criticism in seeing the gospel tradition as reflecting the beliefs of the first Christians quite as much as the life of Jesus.

1. The Historical Explanation. One of the most common reactions to Wrede, especially in English scholarship, has been to argue that much of the secrecy complex isolated by Wrede should be traced back to Jesus and attributed to a variety of reasons. Jesus may have wished to reinterpret the title "Messiah" (hence the secrecy charge in 8:30); he may have wished to avoid excessive publicity after the miracles; or he may have used the medium of parables in order to try to get people to think for themselves. Further, Jesus may have regarded his own role as Messiah as in some sense incomplete during his earthly ministry (Taylor 1948; Aune 1969; Dunn 1970; Moule 1975). However, it is still questionable whether Wrede's analysis has been met on its own terms; that is, as an analysis of Mark. How do the secrecy charges function within the gospel, and why do some of them appear in redactional, rather than traditional, strands of the gospel (e.g., 1:34; 3:11–12)?

Wrede's theories about the secondary nature of the secrecy elements have always received a more positive response in German scholarship. One modification of Wrede's theory which has gradually evolved, and is now generally accepted, concerns the stage at which the secrecy charges in Mark entered the tradition. Wrede argued that they were pre-Markan. Most today would argue that if they are secondary, they are due to Mark himself (Strecker 1983: 51–54). However, this necessitates a change in Wrede's explanation of the origin of the secret; for Mark provides no evidence that he is aware of a nonmessianic interpretation of the life of Jesus. Hence Wrede's corollary about the lack of any explicit messianic claims by Jesus must also be modified, since this corollary followed directly from Wrede's explanation of the origin of the secret in Mark (Strecker 1983: 54). Several alternative explanations have been proposed.

2. The Apologetic Explanation. According to this theory, the secrecy texts explain the failure of the majority of Jews to respond to Jesus (Dibelius 1934: 230; Burkill 1963), as well as, perhaps, the failure of the majority of Mark's contemporaries to respond to the Christian gospel (Watson 1985, who also stresses the social aspects of such a proposed Sitz im Leben for Mark). This theory encounters difficulties as an explanation for the whole secrecy complex in Mark. For example, it fails to explain the points in the gospel at which the secret is broken (1:45; 7:36–37, where Jesus' commands to silence are disobeyed). Also Jesus' final rejection by the Jewish authorities is not due to any secrecy about who Jesus is, since it is precisely at this point that the veil of secrecy is lifted (14:61–62).

3. The "Epiphanic" Explanation. Ebeling (1939) believes that the points at which the secret is broken form the basis for a very different explanation. According to this, the secrecy texts in Mark are simply literary devices which highlight Jesus' glory and the epiphanic nature of the events concerned. Thus, the accounts of the miracles show that Jesus' fame spread irresistibly despite all attempts, even by Jesus himself, to prevent it. Similarly, the theory of parables serves to highlight the transcendent nature of the revelation for the reader, who belongs with the disciples within the circle of initiates. This theory also runs into problems elsewhere in Mark as an explanation of the whole secrecy complex. Some secrecy charges are *not* broken (5:43), and the time limit in 9:9 is also not easily accommodated within the theory.

4. The "History of Revelation" Explanation. Perhaps the most popular theory today is that the secret represents Mark's understanding of the history of revelation (though within this broad explanation there are some significant variations). Wrede's explanation of the secret fails, since there is no evidence that Mark's material was ever understood non-messianically. Thus, many today would argue that the secret is not so much Mark's way of imposing messianic belief on non-messianic material as it is Mark's way of *controlling* his already messianic material to conform to his overriding theology of the cross. Thus, the secrecy elements form Mark's way of showing that Jesus' true identity can only be properly understood in the light of the cross. Prior to the crucifixion, Jesus' identity as "Son of God" might be misunderstood, and so confessions of this nature are regularly suppressed. Only as, and precisely as, the crucified one is Jesus' identity as "Son of God" not open to misunderstanding. Hence, only as Jesus dies can any human being come to the recognition that Jesus is the Son of God (Mark 15:39). The case for "Son of God" being the most important christological title in Mark, and for the secret being primarily concerned with Jesus' identity as "Son of God," is well set out by Kingsbury (1983).

The importance of the cross and resurrection is recognized by many as the key to understanding the messianic secret in Mark (Conzelmann 1968; Strecker 1983; Schweizer 1983). Within this overall explanation, there is scope for variation. Some have argued that the secret is a matter of past history alone, so that the present era of the Church is one of full and open proclamation (Strecker). Others would argue for a more "existentialist" explanation: the secret remains a secret for those outside the community; revelation after Easter is a possibility, but it only becomes an actuality for the person who is prepared to follow Jesus on the road to the cross, in the way of discipleship (Conzelman; the importance of the theme of discipleship is stressed by Schweizer). But in either case, the secret is to be interpreted as part of Mark's way of pointing to the cross as the essential clue to Jesus' true identity for the Christian disciple.

One development which has attracted some considerable support has been the attempt to specify in more detail the christology which Mark is seeking to control by the secret. Many have argued that Mark is opposing a specific christology, usually described as a *theios aner* christology; i.e., a view of Jesus as primarily the great miracle worker and bearer of supernatural power (Schweizer 1983; Luz 1983; Weeden 1971). Thus, Mark's use of the secrecy motif is to be seen as a conscious attempt to modify views about Jesus which were current in Mark's community. Criticisms can justly be brought against excessive use of the phrase *theios aner* itself (Kingsbury 1983: 25–45), but the idea represented by modern scholarship's use of the phrase may well have been current in Mark's day. Räisänen (1976; 1989) questions whether Mark was indeed opposed to such a view of Jesus, arguing that Mark's attitude to Jesus' miracles is wholly positive. Yet despite the importance of the miracles for Mark, there is still an element of reserve about them in the gospel: they can only occur in a context of faith (6:5; 9:23), and they are not to be had on demand (8:11–12). The theory that Mark is trying to modify such an alternative view of Jesus, whether by outright opposition (Weeden 1971) or by more gentle incorporation (Luz 1983), is thus a very attractive one.

C. The Unity of the Secret

In more recent studies, there has been a strong tendency to question very radically whether Wrede was justified in trying to explain all his evidence from Mark by a single theory. For example, the silencing of the demon in 1:25 was not originally part of Mark's messianic secret. Rather, it is a standard part of the exorcism itself. It is only in the later redactional summaries of 1:34; 3:11–12, that this motif is changed by Mark from a silencing—which is the actual act of overpowering the demon—to a silencing which prevents other people from learning the secret of Jesus' identity from the demons.

The "parable theory" text in Mark 4:11–12 should almost certainly be separated from the other themes (Räisänen 1989). These verses fit well with an "apologetic" type of explanation. They provide some reason for Jewish rejection of Jesus' message, and for a lack of positive response to the preaching of the Christian gospel by Mark's community, by claiming that such a lack of response is due to the divine will and has many precedents in the history of God's people (Mark 4:11–12 cites the classic "hardening" text of Isa 6:9–10). The verses thus provide encouragement and hope for a community that perhaps feels itself

to be beleagured and unsuccessful in its mission. Such an explanation does not, however, adequately explain the other parts of the secrecy complex isolated by Wrede.

Within the rest of the secrecy complex, others have also questioned whether the evidence can all be explained by a single theory. Luz (1983) would distinguish between the secrecy charges concerning Jesus' identity (the "messianic secret" proper) and the secrecy charges after the miracles (the "miracle secret"). The latter are generally disobeyed and are to be interpreted as highlighting Jesus' glory as a miracle worker (the "epiphanic" explanation); the former are not disobeyed and show that Jesus' true identity is only to be seen in the light of the cross (the "history of revelation" explanation). While some of the details here may be questionable, this attempt to split up the various motifs referred to by Wrede is probably justified (Räisänen 1989).

One part of Wrede's evidence which is often considered separately today is the motif of the incomprehension of the disciples. This is certainly rather different from the other motifs in Wrede's complex. For example, in the other secrecy charges, those addressed have the right idea about Jesus and are told not to tell others; in the case of the disciples, they usually have the wrong idea, or even no idea at all about who Jesus is. One view which has aroused a lot of discussion is that the disciples represent a group within Mark's own community, and that Mark's unfavorable picture of the disciples represents a polemical attitude toward this group. Thus, many see the disciples in Mark as representative of the group which holds the christology which Mark is opposing; i.e., the *theios aner* christology (Weeden 1971).

Yet despite Mark's negative picture of the disciples, it is difficult to maintain that Mark's attitude to them is one of outright opposition. They do respond to Jesus' call (1:16–20; 3:13–19); they go out on mission (6:7–13); and they (probably) achieve their restoration with the risen Jesus (as 16:7 suggests). Thus, while Mark may well be trying to modify views of others within his own community, it is hard to see the *disciples* in the story as representative of these other people. It is more likely that the picture of the disciples in Mark is intended to enable the Christian reader to identify with them and to learn from their failings not only about the nature of discipleship but also about the forgiveness and grace of God which is available to those who fail (Best 1977; Tannehill 1977). A more positive role for the disciples is suggested by Räisänen (1989): they may function as the spokespersons for Mark's own views in a confrontation between Mark and the bearers of the Q tradition who have a defective understanding of Jesus and of the significance of his death and resurrection. Such a Sitz im Leben for Mark is, however, somewhat speculative and depends in part on the theory that Mark, unlike Q, is wholly positive about Jesus' miracles. Further, it must remain doubtful whether the disciples really do attain full understanding about Jesus in 8:27–29 (Räisänen): the sequel suggests that they still do not appreciate the full truth about Jesus and the nature of his task. Full insight about Jesus is only attained at the cross by human characters in the story.

D. Conclusion

Wrede's theories about the messianic secret have undergone many modifications since they were first published in 1901. Probably nobody today would give wholehearted support to all that Wrede said about the texts in Mark which he considered. Nevertheless, it is recognized that Wrede identified elements which occupy a key role in Mark's gospel. Many of these elements are due to Mark himself, and hence are not to be traced to Jesus, and their interpretation is vital for a proper understanding of Mark's gospel. Some parts of the whole complex of motifs considered by Wrede should probably be isolated from the rest and considered separately. Nevertheless, the remaining parts of the secrecy complex in Mark, whereby the secret of Jesus' identity is only fully revealed to human characters in the story when Jesus is seen as the crucified one, play a key role in the gospel. These secrecy texts are thus of vital importance in the understanding of Mark's christology and ecclesiology; i.e., in Mark's understanding of who Jesus was and of what it meant to be a disciple of Jesus.

METHEGH-AMMAH [Heb *meteg-hā›ammâ* (מֶתֶג־הָאַמָּה)]. Methegh-ammah is not known as a name of a place in the Bible, though some have interpreted it so (e.g., RSV). The Heb words *meteg-hā›ammâ,* which literally mean "the bridle of one cubit," appear only in 2 Sam 8:1: "David took (or received) the methegh-ammah from the hand of Philistines." According to *tg. Jon.* Gen 26:31, Isaac "took one cubit's length of the bridle of his ass, and gave it to him (Abimelech) as a sign of friendship." According to this explanation, the giving of the "bridle of one cubit" signified "friendship" or possibly surrender. This meaning fits well with the context of 2 Sam 8:1. Then the meaning becomes "David received the bridle of one cubit (as the token of surrender) from the hand of Philistines." This interpretation is not far from the translation of LXX: "David took the tribute from out of the hand of the Philistines." David might have received the bridle of one cubit as a token of surrender, together with the "tribute." The Vulgate translated it: "David got the bridle of gift from the hand of Philistines." Jerome considered the "bridle" itself a gift.

There is no biblical support to interpret Methegh-ammah figuratively as the "control of the mother city" because *methegh* ("bridle") is not used figuratively anywhere else in the Bible, and *ammah* as the word for *›ēm,* "mother," is not used in the OT. It is a mere speculation based on a seemingly parallel text, "He took Gath and its towns from the hand of Philistines" (1 Chr 18:1), in which "Gath and its towns" corresponds to the methegh-ammah in 2 Sam 8:1. It is very difficult to consider that the Philistines had a capital or a centralized "mother city" because they had five cities under five rulers, but it is possible to consider Gath as the mother city for the surrounding towns. However, the question remains as to why the name of the mother city "Gath" was omitted in 2 Sam 8:1 even though there were four more mother cities besides Gath.

YOSHITAKA KOBAYASHI

METHUSELAH (PERSON) [Heb *mĕtûšelaḥ* (מְתוּשֶׁלַח)*; mĕtûšālaḥ* (מְתוּשָׁלַח)]. Son of Enoch when Enoch was 65 years old (Gen 5:21); and, at 187 years of age, father of Lamech (Gen 5:25). Methuselah lived 969 years (Gen 5:27), the longest life span of anyone mentioned in the Bible. The name Methuselah is composed of two elements. The first element reflects the West Semitic *mutu,* "man, husband." The second element, *šlḥ,* has been identified variously as a weapon, a canal, or a divine name (Skinner *Genesis* ICC, 131–32; Driver 1948: 77; 81). The association with a divine name is preferred on the basis of comparisons with early West Semitic names from Amarna (*mu-ut-ba-aḫ-l (ù)* EA 255, 3; *mu-ut-*^{d}*IM* EA 256, 2, 5) and Ugarit (*mu-ut-*^{d}*U PRU* 3: 205; RS 16.155.6; *PRU* 4: 234; RS 17.112.6; Sivan

1984: 250). The suggestion that the divine name be identified as Laḥ, with the antecedent relative pronoun *š* (Van Selms 1966: 318–26) is unlikely due to a lack of comparable structures (*mutu* + *ša* + divine name) attested elsewhere in personal names (see METHUSHAEL), and due to the name Shelah itself, which, if explained in the same way, would have no antecedent. On the other hand, a divine name based on the *šlḥ* root is plausible. Whether or not a Canaanite deity, Šalaḥ, was god of the infernal river (Tsevat 1954; Loretz 1975), and such a divine name may have formed part of the personal name Methuselah. The meaning of the name would then be, "man (i.e., devotee) of the deity Šalaḥ.[w] However, a problem with this interpretation is that such a deity is not attested outside of personal names.

Outliving his son Lamech by five years, Methuselah died in the 600th year of his grandson Noah, in the year of the Flood according to the chronology of Genesis 5–6. Beyond the general recognition that the lengths of life spans decline as the genealogy of Genesis 5 progresses, the significance of Methuselah's long life is disputed. The relationship of Methuselah to Methushael, the corresponding name in the Cainite genealogical list of Genesis 4, is not clear. The LXX renders both names *mathousala.* However, it is unnecessary to posit one original name preserved in two separate traditions. Comparable ANE antediluvian genealogies preserve similar-sounding names which are contemporary but distinct and are intended to reflect distinctly different individuals (Finkelstein 1963: 50; *GHBW*, 150–51). There was also significant embellishment on Methuselah in late Second Temple writings, notably in *1 Enoch*.

RICHARD S. HESS

METHUSHAEL (PERSON) [Heb *mĕtûšā᾽ēl* (מְתוּשָׁאֵל)]. Son of Mehujael and father of Lamech in the line of Cain (Gen 4:18). Comparisons with the genealogy of Seth in Genesis 5 have related Methushael with Methuselah (*GHBW*, 161–62). The difference between the names is limited to the final two consonants: *mtwš᾽l* vs. *mtwšlḥ*. The first element in the name Methushael reflects the West Semitic *mutu,* "man, husband." The remainder of the name may be composed either of the relative *š* followed by *᾽l,* "god"; or it may be made up of the single element, *š᾽l,* which could either be a form of the verb "to ask" or the proper name "Sheol" (Gabriel 1959: 414–15).

Therefore, the name could mean either "man of God," "man of the request (i.e., prayer)," or "man of Sheol." If the name is West Semitic, the first option is less likely due to the absence of such relative pronouns in personal names (Gray 1896: 164–65; Moran 1961: 61; 70 n. 76; Huffmon *APNM*, 265; Gelb 1980: 33). As for the second option, the use of *š᾽l* in a nominative form is also unusual in personal names. On the other hand, the use of a proper name in construct with a term such as "man" is paralleled in Methuselah and seems possible in this case, Sheol being understood as the name of a deity (Tsevat 1954: 45; *EncMiqr* 5: 643–44; *IDBSup*, 224; Gelb 1980: 26; 158–60). The name would then mean "man (i.e., devotee) of the god Sheol." Examples of *mutu* followed by a divine name occur in West Semitic personal names of the 2d millennium B.C. (Huffmon *APNM*, 234; Sivan 1984: 250), but not those of the 1st millennium. Although there are no other examples of personal names containing a divine name *š᾽l;* there are examples of underworld deities, such as Nergal, Reshef, and Mot (Tigay 1986: 66–67 n. 12), appearing in West Semitic personal names.

RICHARD S. HESS

MEUNIM [Heb *mĕʿûnîm* (מְעוּנִים)]. MEUNITES. The Hebrew Bible gives the impression that these are a Transjordanian and/or Arabian people (1 Chr 4:41; 2 Chr 26:7; Ezra 2:50 = Neh 7:52). However, the actual spellings of the name(s) in Hebrew suggest that the Bible may actually be referring to *two* peoples: those from Maʿin and those from Maʿon. The Kethib of 1 Chr 4:41 and Ezra 2:50 reads *mʿynym,* "Meinim" (although in both passages the Qere to be read is *mĕʿûnîm,* "Meunim"). The Kethib of 2 Chr 26:7 and Neh 7:52, on the other hand, is *mʿwnym,* "Meunim." However, the problem is compounded by the fact that the LXX renders all four of these citations as *Minaioi,* "Minaeans." Furthermore, the LXX reads *Minaioi* also in 2 Chr 20:1 and 26:8, where the Heb reads *ʿammônîm,* "Ammonites." Since the word "Ammonites" does not make sense in either of these passages, it can be assumed that—prior to a metathesis of the *mem* and the *ʿayin*—these passages also originally referred to *mʿwnym/mʿynym.* We cannot be certain how all of these biblical references should be distributed between these two peoples; however, on historical grounds (presented below) it is plausible to read *mĕʿînîm* ("people from Maʿin") in 1 Chr 4:41 and 2 Chr 26:7, 8; and to read *mĕʿûnîm* ("people from Maʿon") in Ezra 2:50 = Neh 7:52 and 2 Chr 20:1.

The **Meinim,** or Minaeans, were people associated with the S Arabian city-state *mʿn* (*Maʿîn, hence *mĕʿînîm*). These people gained control of the incense road around 400 B.C. and established trading colonies in the major cities in W Arabia and Egypt and in Mediterranean port cities like Sidon. Gaza became their most important colony city. According to Diod. Sic. 3.42.5 (quoting a source from the 3d century B.C.), the Minaeans brought incense to Petra. Both at Gaza and at Petra, the Minaeans are attested epigraphically (Knauf 1985: 116–17). The Minaeans cannot have been present at Gaza in the 5th century (when the incense trade still was controlled by the Sabeans); nor were they "Arabs" or "nomads" (*pace* Katzenstein 1989: 79).

The Minaean presence at Gaza (which may have lasted beyond the city's destruction by Alexander in 332 B.C.) and at Petra forms the historical background of 1 Chr 4:39–41 and 2 Chr 26:7–8. In general, the historical material in Chronicles (unparalleled in Samuel and Kings) reflects the conditions of the Chronicler's own time; i.e., the 4th and/or 3d centuries B.C. (Welten 1973: 195–200). According to 1 Chr 4:39–41, Simeonites moved to "the valley" (Heb *haggay*); i.e., Gaia/al-Jîʾ, the ancient name of Wâdî Mûsâ at the entrance of Petra, and exterminated the Meinim (Kethib) whom they encountered there. The dating of this "event" to the time of Hezekiah (4:41)—a time when the tribe of Simeon had ceased to exist for several centuries—serves as a cross-reference to 2 Chr 26:7–8. This latter text (in the) reports an action of Uzziah against the "Philistines, Arabs, and Meinim" resulting in a Minaean tribute to the Judean king which made his fame spread to Egypt. Demographically, this text actually presupposes the composition of Philistia's population in the *postexilic* period, and the Minaean trading network which included Egypt. The archaic terminology of the two biblical references conceals economic conflicts in late Persian and early Hellenistic Palestine expressed in the vocabulary of warfare and tribes looking for pasturage.

The **Meunim,** on the other hand, are the inhabitants of any one of several biblical places called Maon (Heb *māʿôn;* the shift of *ô* in a stressed syllable to *ū* in a pretonic syllable is a frequent feature in Hebrew). The original tradition underlying 2 Chronicles 20 centers around a local conflict in the area between Tekoa (v 20) and Engedi (v 2). The "Maon" in this vicinity is probably the Moabite Beth-Baal-Meon, today Mâʿîn (M.R. 219120). If its inhabitants were the Meunim (MT *mhʿmwnym;* LXX *Minaioi*) of 2 Chr 20:1, the neighboring Moabites and Ammonites could easily have been incorporated in the tradition. In the next stage of the tradition's growth, another Maon, present-day Maʿân (M.R. 220956), was regarded

as the place of the Meunim's origin, leading to the incorporation of "Edom" (v 2) and "the inhabitants of Seir" (vv 10; 22–23) in 2 Chronicles 20. The temple slaves mentioned in Ezra 2:50 (= Neh 7:52) could have come from either of the two Maons mentioned, or even from the third Maon in Judah (Josh 15:55; 1 Sam 25:2; 1 Chr 2:45), which by that time was controlled by the Idumeans. See also MAON.

Eph'al (1982: 219–20) and Borger and Tadmor (1982) prefer to read "Meunim" (rather than "Meinim"/Minaeans) also in 1 Chr 4:41 and 2 Chr 26:7–8. They identify the Meunim with the Mu'nayya that Tiglath-pileser III mentions in connection with the border region between Palestine and Egypt. The Assyrian reference seems to match the two biblical references both geographically and chronologically. It is, however, impossible to identify the Akkadian tribal name "Mu'naeans" (most probably from an ancient Arabic tribal name or personal name *Ma'n) with Heb *mĕ'ūnîm* (from Maon/Mā'ân; Knauf 1985: 114–15). It is equally impossible to date the two biblical references to the time of Uzziah/Hezekiah on demographic grounds (see above). The reason that 2 Chr 26:7–8 was (erroneously) attributed to Uzziah was because of his action against three Philistine cities (2 Chr 26:6), a note which belongs to the small amount of reliable historical information in Chronicles (Welten 1973: 153–63). The dating of 1 Chr 4:41 to Uzziah's successor Hezekiah can be explained as a cross-reference from this account on the Meinim to the other one, 2 Chr 26:7–8.

ERNST AXEL KNAUF

MEVORAKH, TELL (M.R. 143215). A small mound (Ar: Tell Mubarak) in the Sharon plain, on the S bank of Nahal Taninim.

The Institute of Archaeology of Hebrew University conducted four seasons of excavations during 1973–76. In the first season, a trial trench was dug at the W end of the N slope. The excavation area was greatly enlarged during the second and third seasons and extended to the center of the mound and the E side. During the fourth season, the center of the mound was excavated to virgin soil. By the end of the fourth season, the stratigraphy of the mound was clearly established.

The first settlement (stratum XV) was a rectangular fortress built of mud bricks; founded on the low natural hill in the MB I. In the next stratum (XIV), also dating to the MB I, the fortress was surrounded by many residential houses which covered the entire hill. These settlements were unwalled.

During the MB II (stratum XIII), the inhabitants constructed a *terre pisée* rampart, about 30 m square, which buried the previous fortress and buildings to a height of 3 m. The rampart had a steep outer face, and from its ridge at the edge of the mound it sloped downward toward the inside, thus creating a crater. The rampart was constructed of a hard-packed core covered with rather loose layers of sand brought from the surrounding hills. Within this was an aggregate of stone implements from earlier periods which included a few obsidian tools dating from the Pre-Pottery Neolithic. The inner slope of the rampart was strengthened by a series of stone supporting walls. Some residential rooms and a large kitchen had been built inside the crater for the use of the settlers—probably soldiers of a small unit stationed there—and their families. Several burial jars of infants were discovered beneath the floors of the structures.

In the third season of excavations, the N section in the *terre pisée* was deepened to examine more closely the form of the natural hill. It became clear that both the slope of the hill and the *terre pisée* rampart were very steep. The footings of both descended into a layer of black soil peculiar to the beds of rivers or marshes. It seems, therefore, that the N end of the MB II fortress was bounded by water. The E side of the fortress may have been fortified differently—perhaps with a brick wall now eroded—but this assumption must await further excavations.

After the destruction of this settlement, another was built on the same location in the MB III (stratum XII). It appears that this was also fortified, since its walls and rooms were constructed within the rampart. The stone supporting walls of the inner slope were again strengthened. The main difference between the latter two MB settlements is the burial methods. The infant burial jars of stratum XII had not been buried under the floors as had been done in stratum XIII, but the outer slopes of the ramparts. On some of these jars are Hyksos stamp impressions.

Stratum XI, the first settlement of the LB, included the remains of a large building which occupied the entire excavation area. See Fig. MEV.01. Its form, interior installations, and especially the finds leave no doubt that it should be understood as a sanctuary. The N side of the building leans against the inner side of the MB rampart (as at Hazor, area C). Almost all of the sanctuary hall, measuring 10 m by 5 m and oriented E–W, was cleared. The floor and walls were all coated with beaten lime plaster. In the NW corner stood a rectangular (1 m by 1.5 m) plastered platform (ca. 0.6 m high) with five steps leading up to it from the E. On the lime floor near the corner of the platform was the round imprint of a small (wooden?) column, which may have supported a canopy. A plastered bench ran along the W (short) end of the hall, and in front of it near the center of the room stood two plastered installations whose functions are still obscure. The long N wall was cleared along its whole length. Immediately to the E of the platform was a long, low plastered bench which reached the NE corner and then turned along the E wall. The bench thus extended more than 8 m. In the center of the hall stood a large round stone, which may have served as a column base. The floor of the sanctuary sloped toward the S where a drain running against another plastered bench was located. Because of the slope, the S wall was destroyed, except for a small section in the SW corner. The entrance to the sanctuary may have been in the S wall.

The sanctuary of stratum X consisted of the same building layout and orientation, but the platform and steps of the earlier period were enclosed and buried within two low walls which formed a new and higher platform (ca. 1 m high). The small finds preserved on this platform included two Mitannian-style cylinder seals, two faience disks, two cups (one of alabaster, the other of clay), a pair of bronze cymbals, a bronze knife, a javelin, and arrowheads. There were also many imported Cypriot vessels. Among the local ware of special interest were many jars, jugs, juglets, bowls, lamps, and, especially, decorated chalices and goblets. The only hint of the type of cult that practiced here was the discovery of a well-preserved bronze snake, about 20 cm long, which closely resembles the bronze snakes found in contemporary sanctuaries at Timna and Hazor.

The sanctuaries of both strata XI and X were bounded on the S and W by large stone-paved courtyards, the extent of which have not been determined. The sanctuary and its courtyards occupied almost the entire area of the LB site. The compound may therefore represent a wayside sanctuary, the first of its kind to be discovered in Israel.

Stratum IX, which consists of the remains of a large building with parts of two rooms and a stone pavement, stood over the remains of the earlier sanctuaries. The purpose and function of this LB building remain unclear.

The first stratum (VIII) of the Iron Age (IB) is represented by a rectangular platform which was filled to a height of about 1 m with homogeneous red-brick material. It was surrounded on the W, S, and E by a stone wall more than 1 m thick, while on the N it was set into the MB II rampart. This platform apparently served as the foundation of a building the remains of which are only scantily preserved on the N. The purpose of the Stratum VIII building is unknown, although from the foundation and few wall fragments that remain it appears to have been a large and important building. To the S of the platform, part of a courtyard was found with a floor of thick beaten lime.

Above the remains of the stratum VIII platform was a four-room house, also from the Iron Age IB (stratum VII), dated to the 10th century B.C. A large building was surrounded by a broad courtyard with a floor made of a thick layer of beaten lime, and the whole complex was encircled by a wall about 1-m thick. The pottery included local red hand-burnished ware and undecorated pottery, as well as imported Cypriot vessels, among them Cypro-Phoenician, Bichrome, and White Painted ware. This complex has been identified as either an administrative center or an official storehouse.

There are also three Persian phases. The lowest (stratum VI) is represented only by a series of deep pits filled with ashes, bones, and pottery, including Attic and Cypriot ware. On one of the local sherds found in a pit were rows of stamped rosettes much in the manner of the Judean stamps. In the second phase (stratum V), a building was found on the W part of the mound. In the upper phase of the Persian period (stratum IV), the entire mound was occupied by what seems to have been a single large building. Since the last two phases were encircled by a casemate wall, they may again be interpreted as an administrative center or large estate.

Above the Persians levels were some scattered walls, apparently belonging to the Hellenistic period (stratum III). Despite the many Roman and Byzantine finds collected on the mount (stratum II), it is clear that no structures from these periods were built on the summit. Instead, all building activity during these periods was limited to the surroundings, and a large wall, the purpose of which is not yet clear, was found at the base of the N side of the mound. Stratum I consisted of the entire surface of the site, which was densely covered by numerous graves of the Arab period. In one case, three superimposed graves were found. Most of them were normal cist graves, but two or three were unusual infant-jar burials.

EPHRAIM STERN

MEZAHAB (PERSON) [Heb *mê zāhāb* (מֵי זָהָב)]. The "father" (or "mother") of Matred, whose daughter Mehetabel married the "Edomite king" Hadad (II) (Gen 36:39; 1 Chr 1:50). See also MATRED; MEHETABEL; HADAD. *Mezahab,* which means "gold-water," is actually a place name rather than a personal name. As a personal name, Mezahab has a distant parallel in *Mâ› as-Samâ›,* a pre-Islamic Arab queen's name meaning "Water of Heaven" (Nöldeke 1879: 169, n. 4), which is, however, a *cognomen* rather than a personal name. In addition, the parallel would make Mezahab a female name, the mother of Matred, and the grandmother of Mehetabel. Such a genealogy appears to be unparalleled in the biblical world. However, women occupied more prominent positions among the ancient Arabs than they did among the Israelites (Knauf 1989: 24, n. 105), and the "Edomite kings" in Genesis 36 may have been Arab chieftains.

As a place name, Mezahab is Canaanite (or Ancient Aramaic). To call a native of Mezahab the "son" (preferable to the MT's "daughter"; see MATRED) of this place is in accordance with Hebrew usage (cf. the son of Jabesh, 1 Kgs 15:10). The place could have been situated anywhere in Edom, Palestine, or Arabia, even in Syria, if Lemaire's suggestion (1988) that the "Edomite king list" (Gen 36:31–39) actually is an Aramean king list of the 11th century B.C. holds true. Only Arabia is credited with having gold mines by ancient and medieval authors. The identification of Mezahab with DIZAHAB (Deut 1:1) can neither be substantiated nor rejected; in addition, Dizahab cannot be localized either.

ERNST AXEL KNAUF

MEZOBAITE [Heb *mĕṣōbāyâ* (מְצֹבָיָה)]. An adjective used to describe Jaasiel, one of David's champions; it describes a select class of warriors directly attached to the king for special assignments, named in the list of 1 Chr 11:10–47 (v 47), a list which, up to v 41a, parallels that of 2 Sam 23:8–39. Jaasiel, "the Mezobaite" (RSV), is found among the sixteen persons mentioned in the portion of the list which is unique to Chronicles (vv 41b–47). Because this adjective occurs with the definite article but without the gentilic ending *î,* and because no such place as Mezobayah is known, it seems probable that the term has been corrupted in transmission. It has been suggested (see Rudolph *Chronikbücher* HAT,

103) that two readings have been conflated: *miṣṣōbāh* ("from Zobah") and *haṣṣōbātî* ("the Zobaite"). Zobah was an Aramean kingdom located between the Lebanon and Anti-lebanon, against which Saul had fought (1 Sam 14:47). Since one characteristic of this portion of the warrior list (vv 41b–47) is that all of the identifiable places from which these champions came are in the Transjordan (Williamson *Chronicles* NCBC, 104), the suggested reading, "Jaasiel the Zobaite," seems appropriate.
RODNEY K. DUKE

MIBHAR (PERSON) [Heb *mibḥār* (מִבְחָר)]. In 1 Chr 11:38, Mibhar, son of Hagri, is listed as one of David's mighty men. In what should be the parallel passage, 2 Sam 23:36, there is a variant in the Hebrew, and the entire verse is divided differently. The passage in 1 Chr 11:38 reads, "Joel brother of Nathan; Mibhar son of Hagri," while 2 Sam 23:36 identifies the warriors as "Igal son of Nathan from Zobah; Bani the Gadite."

There is such a variety of ways in which the warriors are referred to in these sections that it is not possible to decide definitely which is the more original form. It is worth noting, however, that in the extended list of "the Thirty" (2 Sam 23:24b–39; 1 Chr 11:26–47), it is only at 1 Chr 11:38 where the relationship of "brother" occurs; the normal way of identifying the warriors is "son of" when any family relationship is mentioned. The anomaly in the case of "Joel brother of Nathan" makes it probable that it is the original reading here; otherwise, it is hard to see why the text would have been changed. In the Gk mss we find "son of" in mss B S C^2, while the rest of them follow the Masoretic Text.

On the other hand, for "Mibhar son of Hagri" in 1 Chr 11:38, 2 Sam 23:36 has "… from Zobah; Bani the Gadite," reflecting the Heb *miṣṣōbâ bānî hagadî.* The OG for Samuel, however, reads *massaba uios agērei,* suggesting that its vorlage was in basic agreement with the Hebrew text of 1 Chr 11:38. This is an indication that the text of the Chronicler represents the more original form for "Hagri" (Heb *ḥgry*) in comparison to "the Gadite" (Heb *hgdy*), as found in 2 Samuel.

In the light of these preferences for the readings found in 1 Chronicles, it is likely that "Mibhar son of Hagri" should be maintained as the preferred reading for 1 Chr 11:38.
STEPHEN PISANO

MIBSAM (PERSON) [Heb *mibśām* (מִבְשָׂם)]. 1. A son of Ishmael (Gen 25:13; 1 Chr 1:29).

2. A son of Shallum, son of Shaul, son of Simeon (1 Chr 4:25).

Since all the sons of Ishmael were ancient N Arabian tribes (see ISHMAELITES), and since Mibsam is followed by Mishma both in Gen 25:13 and in 1 Chr 1:29 and 1 Chr 4:25, the two "persons" may be interpreted as representations of the same Arabian tribe or clan. It is conceivable that this "tribe," together with his "brother" Mishma, came to be included in the genealogy of the Israelite tribe of Simeon in 1 Chronicles 4. From Genesis 34, it can be inferred that the tribe of Simeon, living in the central hill country, had disappeared at an early stage of Israel's prehistory. All references to Simeon in the Negeb are ancient constructs trying to tie the name of this tribe into the geography of the authors' world centuries after the tribe had become extinct (Mittmann 1977: 217–19). The authors of 1 Chronicles 4 frequently took recourse to the names of tribes and clans inhabiting the Negeb in their own days, including Arabian and Edomite/Idumean population groups (Eph‘al 1982: 199–200). See also EPHAH; MANAHATH (PERSON); MANAHATHITES.

The name is derived from Heb *bōśem,* Arabic *bašâm,* "balm." The tribe of Mibsam may well have been involved in the spice trade on the "incense road"; on the other hand, the name is attested as a personal name in Safaitic, and related names occur all over the Arabian peninsula (Knauf 1989: 68–69). See also BASEMATH.

MIBZAR (PERSON) [Heb *mibṣar* (מִבְצַר)]. One of the Edomite tribal chiefs (Gen 36:42; 1 Chr 1:53). The name means "fortified city, fortification," and MT *mibṣar* in Ps 108:11 [—Eng 108:10] should be emended to *māṣôr*, "entrenched, ramparted (city)," as in Ps 60:11 [—Eng 10:9]. Mibzar is one of the eleven names in the list of Edomite "tribal chiefs" (*ʾallūpîm*) in Gen 36:40–43, an addition probably originating with the P source. The name also recurs in 1 Chr 1:51b–54, an addition which represents a shortened version of Gen 36:40–43. Although some of the names cannot be classified with any certainty, Mibzar and Pinon are likely place names. See also PINON (PERSON). The original (?) place name of Mibzar was probably also used as an Edomite tribal name (and thereby worked its way into the OT genealogies of Edom as an eponymous ancestor). The place is attested in Greek (*Mazar/Mapsar/Mabsara*), Latin (*Mabsar*), Samaritan (*mābāṣer*), and Syrian (*Mabẓer*) and could be identical with the settlement (*Mabsara/Mabsar*) which lay in the vicinity of Petra (*Onomast.* 134.20–21; Hieronymus 125.17–18). It is uncertain if the name is retained in the Arabic (Wadi) Ṣabra SW of Petra.
ULRICH HÜBNER

MICA (PERSON) [Heb *mîkāʾ* (מִיכָא)]. Var. MICAH. 1. Also referred to as Micah (*mykh*), the son of Mephibosheth and grandson of Jonathan (2 Sam 9:12). The name may be an abbreviation of the name *mykyh*, meaning "Who is like Yahweh?" (Brockington *Ezra, Nehemiah and Esther* Century Bible, 180). Born to Mephibosheth after David announced his intention to care for Jonathan's descendants, Mica presumably shared a place at the king's table with his father. He is said to have had four sons, one of whom seems to have been the father of a line which remained influential down to the time of the Exile (1 Chr 8:34–35; 9:40–41; cf. Myers *1 Chronicles* 62). This seems to be in contradiction to 1 Chr 10:6, which states that Saul and his entire house perished at the hands of the Philistines. This apparent contradiction may be due to carelessness (Curtis and Madsen *Chronicles* ICC, 181), or it may be due to the use of archival material that has not been thoroughly integrated into the account (Myers *1 Chronicles* AB, 80; cf. Braun *1 Chronicles* WBC, 149–50). In any event, the Chronicler stresses not so much the extinction of the royal line as the influence of Saul's house as agents of divine rule (Coggins *Chronicles* CBC, 64; Braun *1 Chronicles* WBC, 149–50). Furthermore, scholars are widely agreed that chapter 10 is where the writer's real work begins (Myers *1 Chronicles* AB, 78–80).

2. A descendant of Asaph, the son of Zichri, a Levite and the father of Mattaniah, one of those who lived in postexilic Jerusalem (1 Chr 9:15). His name appears twice in parallels found in Nehemiah 11. In the first of these occurrences, he is again described as the father of Mattaniah (v 17), but in the second it is also noted that he was an ancestor of Uzzi, an overseer of the Levites in Jerusalem (v 22). In addition, the writer describes Mica as an ancestor of Zechariah, a trumpeter in the procession that celebrated the completion and dedication of the walls of Jerusalem (Neh 12:35).

3. A Levite and a signatory to the covenant established by Ezra (Neh 10:11).
FREDERICK W. SCHMIDT

MICAH (PERSON) [Heb *mîkâ* (מִיכָה); *mîkāʾ* (מִיכָא)]. Var. MICA. The name of nine men in the Hebrew Bible. Micah is a shortened form of such names as Micaiah, "who is like YH (WH)," and Michael, "who is like God," which express the notion of God's incomparability (Labuschagne 1966). The longer form of the name is very common in extrabiblical sources (Avigad 1986: 70–73; Shiloh 1986: 29; Tigay 1986: 56–57). The short form *mîkâ* is found once on a preexilic bulla (Avigad 1986: 41).

1. A resident of the hill country of Ephraim who set up a local shrine, according to Judges 17–18. His name varies between Micah (*mîkâ*) and Micayhu (*mîkāyhû*); such variation between the long and short forms of a single name is well attested (*TPNAH*, 150–53), though here it is possible that the variation in names reflects two sources that have been spliced together (Zevit 1983: 12). This Micah returns to his mother 1100 shekels of silver that he had stolen which his mother had sworn to make into a molten image; she uses 200 of them for that purpose (Judg 17:1–5). Originally, one of Micah's sons served as a

priest at the shrine set up for the image; he is later replaced by an itinerant Judean Levite (17:7–13), a descendant of Moses (18:30), who is eventually kidnapped along with the cult statue by the Danites (Judges 18). The story is intended to be an illustration of the principle, "In those days there was no king in Israel; each person did as he or she pleased" (Judg 17:6; cf. 18:1). It is a strong polemic against Northern worship, and fits the anti-Northern pro-Davidic ideology of the editor of Judges (Brettler 1989: 418–20). Due to the story's strong ideological interest, it is impossible to use it for reconstructing the period of Judges. It is possible that the name Micah was chosen for ironic purposes; the person whose name glorifies God, by suggesting His incomparability, is a thief who helped establish illegitimate worship of God.

2. Great-grandson of Saul. In 2 Sam 9:12, his name is spelled *mîkāʾ*, and his father is listed as Mephibosheth; in 1 Chr 8:34, 35, and 9:40, 41, his name is spelled *mîkâ*, and his father is Merib-baal (see *TPNAH*, 59). The genealogy found in Chronicles was preserved because of a continued belief in the legitimacy of the line of Saul. The short notice in 1 Sam 9:12, that "Mephibosheth had a young child and his name was Micah," is given for similar reasons: Mephiboshet would later be killed (2 Sam 21:8), and the line of Saul would continue through Micah. See also MICA.

3. Son of Imlah, an Israelite prophet during the time of Ahab and Jehoshaphat according to 1 Kings 22 (= 2 Chronicles 18). In both Kings and Chronicles, his name always appears as Micayhu (*mîkāyhû;* RSV Micaiah), with the exception of 2 Chr 18:14, where he is called Micah. Variations between the long and short forms of a single name are well attested in biblical literature (*TPNAH,* 150–53).

4. The father of one of the members of the delegation sent by King Josiah to the prophetess Huldah. In 2 Kgs 22:12, the member is called Achbor son of Micaiah, while in 2 Chr 34:20 he is called Abdon son of Micah. It is possible that the family of this Micah had an important role in the Judean court (Cogan and Tadmor *2 Kings* AB, 282–83).

5. A prophet; see MICAH, BOOK OF.

6. A descendant of Reuben according to the genealogy in 1 Chr 5:5. This genealogy lists the descendants of Joel, whose exact relationship to Reuben is not known. According to 5:6, Micah's great-grandson Beerah was exiled to Assyria by Tiglath-pileser III in the second half of the 8th century B.C.E. However, "son" in these genealogies often indicates a linear descendant rather than a "son" of the next generation, so it is difficult to date when this Micah lived. The presence of the potentially problematic name Baal within this genealogy (1 Chr 5:5) probably attests to its antiquity (Williamson *1 and 2 Chronicles* NCBC, 85).

7. A Levite, father of one of the residents of Jerusalem, according to 1 Chr 9:15 and Neh 11:17. In 1 Chr 9:15, his name is spelled *mîkāʾ* (with final *ʾalep*), and in Neh 11:17 it is spelled *mîkâ* (with final *hê*). The development of the list in Nehemiah and the relationship between the similar lists in Nehemiah 11 and 1 Chronicles 9 are complex issues (Williamson *Ezra, Nehemiah* WBC, 344–50); however, the nonintegration of the temple functionaries into the Levites suggests a date for the section incorporating Micah of after the return to Zion and before the Chronicler (Williamson *Ezra, Nehemiah* WBC, 347; Blenkinsopp *Ezra-Nehemiah* OTL, 326). Neh 11:22 names Uzi, a great-great-grandson of Micah (spelled *mîkāʾ*); this section is within an appendix which postdates the earlier part of the chapter (Williamson, 349; Blenkinsopp, 326).

8. A Levite, eldest son of Uziel. This Micah (*mîkâ*) is mentioned in 1 Chr 23:20, in the list of Levites whom David organized; and in 1 Chr 24:24 and 25, a chapter introduced by a reviser of Chronicles (Williamson, 163), as being among the Levites who are not part of the twenty-four watches. Since Micah, living in the period of David, is listed as the "son" of Uziel, Levi's grandson, "son" is being used to indicate a linear descendant. The lack of father-son relationship is further indicated by Exod 6:22, where Micah is not mentioned among Uziel's children. This process of telescoping—skipping several intermediate generations within linear genealogies—is common in genealogical thinking (Wilson 1977: 197).

9. One of the signatories of the compact (*ʾămānâ*) in the postexilic period according to Neh 10:12 (—Eng 10:11), where his name is spelled *mîkāʾ*. The authenticity of this list has been debated (Williamson,

325–29), and it probably is not a list of actual signatories, but a schematic list of people who are known as important from other lists (Williamson, 330). In this case, this Micah might be identified with the Micah known from Neh 11:17 and 22 (= Micah 7). This might be supported by the appearance of the name Hashabiah as a signatory alongside of Micah, since Hashabiah's name appears in Neh 11:22 as Micah's grandfather.

MARC Z. BRETTLER

MICAH, BOOK OF. "Micah of Moresheth prophesied in the days of Hezekiah." These words of Jeremiah (26:18), confirmed by elements in the book of Micah itself, contain practically all that we know of the life of the prophet Micah. Moresheth (probably the same as Moresheth-Gath of 1:14) was a small town in SW Judah, not yet positively identified by archaeologists. Micah was active in Judah from before the fall of Samaria (1:2–7) in 722 B.C.E.; he lived under Ahaz (735–715) and Hezekiah (715–687) and was thus a contemporary of Isaiah, and he experienced (apparently) the devastation brought on by Sennacherib's invasion of Judah in 701 B.C.E. The heading of the book (1:1) adds the name of King Jotham (742–735) in dating the prophet's ministry, but nothing in the book confirms so early an appearance.

Micah is grouped with other relatively brief prophetic books in the collection called the Twelve or the Minor Prophets. Among this group, Micah is sixth in the Hebrew canon and third in the Greek ordering (after Hosea and Amos). Both of these orderings were apparently intended to place Micah with contemporary books.

———

A. The Contents and Outline of Micah

Like some other prophetic books, Micah is made up of short poems. Whether a given poem is clear and pungent, or obscure and puzzling, it tends to be self-contained. It does not necessarily follow from what goes before or lead into what comes after. There is little obvious architecture to the book. Some units seem to have been grouped together on a catchword principle (e.g., the repeated initial *ʾattâ* and *ʿattâ* in chaps. 4 and 5)—a most superficial organizing principle! Students may find profit in investigating works which discern a more evident plan in Micah (Renaud 1964; Willis 1969), but the following paragraphs are deliberately confined to a restatement of the content of the individual poems in sequence.

The Heading (1:1). In a form typical of prophetic books, an anonymous editor has supplied the name of the prophet, information about his time of activity, and an identification of his speech as the "word of Yahweh." It is noteworthy that "Samaria and Jerusalem" are given prominence as the foci of the prophet's attention, and that the editor knew at least a little about Micah independent of the words of the prophet, since the reference to Moresheth could not have been deduced from the book.

Punishment for Samaria (1:2–7). Drawing on ancient traditions for depicting a theophany, a striking self-manifestation of the deity (Jeremias 1965), the prophet depicts the impending coming of Yahweh to punish the idolatrous city. This is most likely an early (pre-722) poem, lightly contemporized at a later time by the addition of a reference to Judah and Jerusalem (1:5).

A Transitional Lament (1:8–9) depicting the prophet's own excessive grief at the calamity and leading to a new subject: the doom to come on Judah and Jerusalem.

A Taunt or Lament over Judah (1:10–16)—of extraordinary obscurity—describes the destruction of the lesser towns of Judah, either as already suffered or as to come, evidently in the invasion of Judah by Sennacherib (701 B.C.E.). In most cases the lines of the poem are constructed on the principle that the name of the town is predictive, through punning, of its fate. The puns cannot, of course, be reproduced in translation; the effect is as though one said: "Ashdod shall be ashes."

Two Successive Doom-Speeches (2:1–5; 6–11) introduce themes characteristic of the prophet Micah as a champion of the oppressed small landholder. These speeches warn of the impending elimination of those who accumulate land from the sacred community, and illustrate the persistence of the prophet in the face of opposition from the land-grabbers.

The Divine Shepherd-King is pictured in 2:12–13 as gathering and leading a dispersed people ("Jacob"). Though all agree that this hopeful passage is not connected to its immediate context, it is difficult to assign it to a specific date or occasion, whether in the time of Micah or later. A venerable exegetical tour de force would take this optimistic fragment to be a word of the false prophets who were Micah's opponents; and other lines in the book that are at odds with the generally gloomy context are read in the same way (see, e.g., van der Woude, *Micah* POuT).

The general condemnatory tone of Micah 2 is resumed and sharpened in the three sections that follow, which focus on the corrupt leaders of Judah.

A Speech Against the Courts (3:1–4) depicts the judges of the people as cannibals, devouring every last scrap of their victims.

A Speech Against the Prophets (3:5–8) depicts them as both pettily venal and blind, in contrast to the real prophet, Micah, who is power-filled and implacable.

A Climactic Speech About Zion (3:9–12) resumes the indictment of judges and prophets, adds a line against the priests, and culminates in the famous saying, "Zion shall be plowed as a field," remembered in Judah a century after Micah's time (Jer 26:18).

The Coming Kingdom of God (4:1–5), centered at the sacred mountain, Zion, is the theme of a poem that the book of Micah shares with Isaiah (2:2–4). With its themes of universal justice, peace, and security, it may be thought of as beginning a new, more hopeful section of the book, but it also continues earlier themes by means of sharp contrast.

The remainder of the chapter is made up of brief, sometimes enigmatic poems on aspects of a glorious future:

The Kingdom of the Gathered Exiles (4:6–7).

Zion's Rule Restored (4:8).

Deliverance from Distress in Babylon (4:9–10).

The Threshing of the Enemies (4:11–13).

The Humiliation of the King (4:14). This seems to be a mere fragment, but it serves to introduce the theme of the royal Messiah, which is expanded in the following poem.

The Return of the Great Ruler from Bethlehem (5:1–4) is foretold in one of the book's most famous and influential passages, especially among Christian interpreters (cf. Matt 2:6; John 7:40–43). He is to reunite the people and bring peace.

Aspects of this promised peace are depicted in the next three oracles:

Assyria Eliminated (5:4–5).

The Irresistible Might of Jacob (5:6–8).

The Purified Nation (5:9–14). Alien elements that offend Yahweh—chariots, cities, divination, idols—will be removed, and the people's triumph over their enemies will follow.

A Covenant Lawsuit (6:1–8) follows, that is, a poem that represents God as indicting his people for breach of covenant. This suit is presented before the primordial witnesses to the agreement, the mountains, and includes a recital of the "saving acts of Yahweh," his actions in their early history. The extravagant offer of heightened sacrificial performance by the people is countered by a demand that they do justice, love kindness, and walk humbly with their God.

The two succeeding poems reintroduce the note of sharp social protest characteristic of earlier portions of Micah.

The City as a Cheat (6:9–16) announces appropriate curses on an unnamed city (Jerusalem? Samaria?) for its dishonest practices in trade.

A Disintegrated Society (7:17) gives a grim picture of where dishonesty and rapacity have gone so far that one cannot trust the most intimate of human relations: friend, lover, wife, father, child, master.

A Prophetic Liturgy (7:8–20) has been known by this designation since the influential study of H. Gunkel (1924). It is a "liturgy" because there is an alternation of speakers, a combination of themes, and a progression in mood. After the suffering people profess their continued confidence in God, a prophet announces that a great time is coming when the land will be enlarged and the people reunited. After a prayer by the people that God would "shepherd" them as in days of old, the liturgy closes with a pious acknowledgment of the greatness of God, manifested chiefly in his mercy and kindness.

B. Modern Critical Study of Micah

1. Literary Criticism of Micah. Like other prophetic books, Micah has been subjected to "literary criticism," that is, scholarly scrutiny concerned with the authorship and date of its various components. Ewald (1867) and especially Stade (1881; 1883; 1884; 1903) distinguished genuine from inauthentic and late elements in the book, using arguments that have seemed persuasive to most, and have remained decisive for much subsequent study.

Only chaps. 1–3 are the genuine words of Micah, and from these 2:12–13 must be subtracted as intrusive in its context. The hopeful material of the rest of the book contradicts chaps. 1–3 and must be discounted, especially in view of Jer 26:18, which knows Micah only as a prophet of doom. Some of the material, such as the liturgy of chap. 7, presupposes a different historical situation than that of the 8th-century prophet Micah. (Given the restricted compass of Micah, or the individual poems in the book, the study of vocabulary and style has had little place in these literary-critical arguments.)

2. Jeremiah 26 and Micah. The citation of Micah by the elders of Judah, in Jeremiah's defense (Jer 26:18), is practically unique in OT literature and is rightly scrutinized for what it may tell of the nature of Micah's message and its effect. The context of Jeremiah 26, however, shows that the citation seems to be from a narrative, otherwise unknown to us, of a confrontation between Micah and King Hezekiah, and that in that context Micah's words about the destruction of Jerusalem were taken as a conditional prophecy, averted by the king's repentance. In literary criticism of Micah, then, it is illegitimate to use the Jeremiah passage to limit Micah's message to unrelieved doom.

3. Micah 4 and Isaiah 2. Micah 4:1–4 is the same as Isaiah 2:2–4, the only substantial difference being the addition in Micah of the line beginning: "But they shall sit every man under his vine." Every possible explanation for this circumstance has been defended by scholars at some time (see Wildberger 1972: 74–90), including arguments that the passage is really by Isaiah, or by Micah, or by neither. It seems unlikely that even further study and argument will produce a consensus. On the other hand, as a foil to Micah's bleak picture of the present, corrupt Zion (chap. 3), this picture of a purified, exalted holy city is not fundamentally out of harmony with the other elements in the book of Micah.

4. Redaction Criticism of Micah. Early literary criticism of Micah resulted in the identification of a small core of authentic material, and thereby raised the question of the origin and purpose of the rest of the material in the book, the "inauthentic" material being more abundant than the authentic. More recent 20th-century criticism has sought to restore a kind of unity to the book of Micah by picturing it as the result of a process of growth over time: the original core of the book was expanded in processes of comment or exegesis, and worship, as it was fitted for liturgical use by a community which both cherished and changed the original prophetic message. Examples of this kind of treatment of Micah may be studied

in the works of Mays (*Micah* OTL), Willi-Plein (1971), van der Woude (*Micah* POuT), Renaud (1977), and Wolff (*Micah* BKAT). The sheer number of scholars who have attempted this kind of interpretation demonstrates its appeal, but the very pronounced lack of agreement among them shows how speculative it is.

5. The Search for a Setting. A different sort of attempt to rescue Micah from fragmentation and incoherence is presented in the commentary by Hillers (*Micah* Hermeneia). It proceeds from a comparison of the prophet's situation, and his reaction to it, to a recurring phenomenon in the history of religions: movements of revitalization, or "millennial" movements. Commonly, such movements arise when a people are deprived economically, and experience defection by those in temporal and spiritual authority. It is possible to see such factors present in Micah's Judah, following on the political and economic disruption caused by the fall of Samaria and the Assyrian pressure. Evidence of this is found both in extrabiblical records and in the book itself. Reactions to these depressing conditions, attested in the book of Micah and paralleled in movements of revitalization, include (aside from outbursts of protest) nativism, that is, a cutting off of foreign elements (5:10–15); belief in a "time of troubles" preceding a future reversal (5:3); belief in an impending reversal of social classes and the triumph of the pariahs (4:6–7); belief in a coming righteous ruler (5:1–6); and prediction of a new age (chaps, 4, 5). This hypothesis permits one to see many of the disparate elements in Micah as united by the common psychological or social situation from which they arise. Here and there, later ages have made changes or insertions (e.g., in the "Babylon" of 4:10), but more of the book may be thought to have originated in the 8th century than is commonly believed.

C. The Text of Micah

The Hebrew text of Micah is badly preserved, among the worst in the Bible in this respect. Although many passages present no textual difficulties or only trifling problems, others are badly, perhaps hopelessly, corrupt, a notorious case being the punning poem on Judean towns (1:10–16). Students of the book are compelled to turn for help to the ancient translations, such as the Greek (LXX) and Syriac, or to resort to conjecture to arrive at a text that makes sense.

New resources for reconstructing the text of Micah include several Hebrew manuscripts from among the "Dead Sea Scrolls." 1QpMi (IQ14) is a fragment of a commentary on Micah (Milik 1952; DJD 1: 77–80; cf. Horgan 1979; Carmignac 1962), and 4QpMi (4Q168) is an even shorter commentary or text of Micah (DJD 5: 36). Mur 88 (DJD 2: 181–205) is a long roll containing most of the Minor Prophets, but the text is so close to the traditional MT that it is of little if any use in correcting its deficiencies.

A notable addition to resources for reconstructing the history of the Greek version of the Minor Prophets is a text from the 1st century C.E. published by Barthelemy (1953; 1963). Evidence from this new source can now be used to supplement the LXX edition of Ziegler (1967).

DELBERT R. HILLERS

MICAIAH (PERSON) [Heb *mîkāyâ* (מִיכָיְהוּ)*; mikayhû*]. **1.** Mother of Abijah, king of Judah (2 Chr 13:2). Micaiah's name appears solely in the Chronicler's regnal formula for Abijah, where she is identified as the "daughter of Uriel of Gibeah." Her name and parentage are problematic. In the parallel passage in 1 Kgs 15:2, the king's mother is "Maacah, daughter of Abishalom." Furthermore, in 2 Chr 11:20 (a list of Rehoboam's wives and offspring) she is referred to as "Maacah, the daughter of Absalom." Thus, while 2 Chr 11:2 refers to her as "Micaiah, daughter of Uriel," both 1 Kgs 15:2 and 2 Chr 11:20 identify Abijah's mother as "Maacah daughter of Abishalom/Absalom." For a complete discussion of this problem, see MAACAH (PERSON); see also QUEEN.

2. Prince during the reign of Jehoshaphat (2 Chr 17:7). Micaiah is the fifth and last prince mentioned in a list of princes, Levites, and priests sent by Jehoshaphat on a teaching mission throughout Judah (17:7–9). This incident is unique to the Chronicler's treatment of Jehoshaphat and is sometimes viewed as a doublet of 2 Chr 19:4–11.

3. Son of Imlah, and the Israelite prophet who appears in the narrative describing oracular inquiries made by the kings of Israel and Judah (1 Kgs 22:4–28 = 2 Chr 18:3–27). Ahab suggests an alliance with Jehoshaphat aimed at recapturing Ramoth-gilead from the Syrians (1 Kgs 22:3–4). Jehoshaphat agrees but insists Ahab first seek oracular guidance from the prophets of the Lord (v 5). Gathering about 400 prophets. Ahab inquires whether or not to engage the Syrians in battle (v 6). Their advice is unanimous—the Lord will deliver Syria into their hands. Jehoshaphat, however, asks if there are any other prophets Ahab can consult (v 7). Ahab admits there is one prophet left—Micaiah—but grudgingly insists Micaiah never prophecies anything good where Ahab is concerned (v 8). At Jehoshaphat's insistence, Ahab sends for Micaiah (v 9). While Micaiah is being summoned, Zedekiah, son of Chenaanah, appears before the kings. By symbolic action and oracle, Zedekiah predicts Syria's defeat (vv 11–12). When Micaiah is brought before Ahab and Jehoshaphat, he initially agrees with Zedekiah. When pressed, however, Micaiah relates visions which predict the death of Ahab (v 17) and explain why the other prophets promise victory. He says that Yahweh, seeking to entice Ahab into battling the Syrians, sent a lying spirit to the prophets (vv 19–23). Upon revealing this vision, Micaiah is struck by Zedekiah (v 24) and imprisoned by Ahab (vv 26–28).

Questions have been raised concerning the historical scenario presented in 1 Kings 22. See AHAB. De Vries (*1 Kings* WBC, 265–66) separates the story into two narratives, one reflecting the conditions found in the reigns of Joram and Ahaziah (Narrative A) and the other dating 100 years later in the reign of Hezekiah (Narrative B). Miller suggests that the account originally consisted of a battle report reflecting the reign of Jehoahaz. Later, it was expanded to include the prophets and was associated with Ahab and Jehoshaphat (*HAIJ*, 253; 299–302). Both scholars assume extensive literary activity behind 1 Kings 22, which makes the chapter difficult to use for historical reconstruction.

4. A Levite (Neh 11:17, 22; 12:35). His father's name is problematic, being either Zabdi (Neh 11:17) or Zaccur (12:35). Micaiah's name occurs solely in the genealogies of his descendants, where he is identified as (1) the father of Mattaniah, a Levite living in Jerusalem (11:27); (2) the great-great-grandfather of Uzzi, overseer of the Levites in Jerusalem (11:22); and (3) the great-great-grandfather of Zachariah, a trumpeter (12:35).

5. Priest during the time of Nehemiah (Neh 12:41). Micaiah's name appears fourth in a list of seven priests with trumpets. They formed part of the crowd that, along with Nehemiah, was present at the rededication of Jerusalem's walls.

LINDA S. SCHEARING

6. The father of Achbor (2 Kgs 22:12) and probably the grandfather of Elnathan ben Achbor. Achbor was one of the men sent by Josiah (ca. 621 B.C.E.) to consult Huldah, the prophetess, about the newly discovered book of the law. The Chronicler's parallel account mentions "Abdon the son of Micah" instead of "Achbor the son of Micaiah" (2 Chr 34:20). See ACHBOR. Elnathan ben Achbor was the royal official sent by Jehoiakim (ca. 609 B.C.E.) to extradite Uriah, the prophet, from Egypt (Jer 26:22). See ELNATHAN. This Micaiah would have been at least 50 years of age at the time his son Achbor was sent to Huldah, and at least in his late 60s when (his grandson?) Elnathan was sent to Egypt. Thus, there is some question about whether this Micaiah (Heb *mîkayāh*), whose father is not named, is the same as Micaiah (Heb *mikayhû*), the son of Gemariah, who was politically active as late as 605 B.C.E. (see #7 below).

7. The son of Gemariah and grandson of Shaphan, and a (older?) contemporary of the prophet Jeremiah (Jer 36:11–13). It was this Micaiah (Heb *mikayhû*) who in 605 B.C.E. first reported to the Judean princes the words that Baruch read from Jeremiah's scroll.

Can this Micaiah be equated with the father of Achbor (see #6 above)? The difference in the spelling of the names can be explained simply as an alternate usage of long and short forms of the theophoric element Heb *-yāh* or *-yahû*. Some scholars suggest that the narratives mentioning the two Micaiahs (2 Kgs 22:3–23:24 and Jeremiah 36) are related and must be read as a unit (Carroll, *Jeremiah* OTL, 663; Thompson, *Jeremiah* NICOT, 628). Assuming that 2 Kings was available to the writer of Jeremiah 36, the name "Achbor" provides a literary link which helps to contrast the responses of the two kings when presented with a scroll (Isbell 1978; Nicholson 1970: 43). Similarly, Jeremiah 26 and 36 share key words and are also sequentially linked, like a short story (see Kessler 1966; Lohfink 1978).

When considered together, however, these three texts present problematic genealogical data. In 2 Kings 22 and its parallel in 1 Chronicles 34 (set in 621 B.C.E.), Shaphan the secretary and Ahikam ben Shaphan are listed as contemporaries of Micaiah's son Achbor. In Jeremiah 26 and 36 (set 13 and 17 years later, respectively), the contemporaries of Achbor's son Elnathan are listed as the familiar Ahikam ben Shaphan and also Micaiah ben Gemariah ben Shaphan and Gemariah ben Shaphan. If this Micaiah ben Gemariah is the same as the father of Achbor (see #6 above), then four generations of Micaiah's family could simultaneously have been politically involved when Jeremiah's scroll was read and later presented to King Jehoiakim: his grandson Elnathan, his son Achbor (not mentioned as being present in Jeremiah 36), Micaiah himself, and his father Gemariah. The absence of Achbor and the listing of Elnathan before his supposed great-grandfather in Jer 36:11 and 25 represent political and genealogical problems which are compounded even more if this Elnathan is identified as the father-in-law of Jehoiachim (2 Kgs 24:8). See ELNATHAN. This Elnathan would have been at least in his late 40s when Jeremiah's scroll was read, Micaiah would have been in his late 80s, and Gemariah would have been politically active at over 100 years of age. Overall, these genealogical data support the conclusion that Micaiah, the son of Gemariah, and Micaiah, the father of Achbor, were two distinct individuals.

MARK J. FRETZ

MICHAEL (ANGEL) [Heb *mîkāʾēl* (מִיכָאֵל)]. In the elaborate angelology that emerged in Judaism during the Hellenistic period, Michael is a prince (*śar;* Dan 10:13, 21) or archangel (*archangelos;* Jude 9; *1 En.* 20:1–7; 71:3; *2 En.* 22:6 [A]; *4 Bar.* 9:5). His name means "Who is like God?" He frequently plays

a role in late Jewish and Christian literature, but is mentioned in Scripture only in Dan 10:13, 21; 12:1; Jude 9; and Rev 12:7 (cf. 1 Thess 4:16).

Michael, along with Raphael, Gabriel, and Phanuel, is one of the four archangels present before the throne of God (*1 En.* 9:1; 40; 54:6; 71:8–9, 13; cf. *1 En.* 87:2; 88:1; 1QM 9:14–15) and of a larger group of archangels numbering seven (*1 En.* 20:1–7; Tob 12:15; cf. *1 En.* 81:5; 90:21–22; Rev 8:2). He is often represented as the leader of the archangels (*Ascen. Isa.* 3:16).

In his capacity as archangel, Michael has several roles. He is first of all the patron angel of Israel (Dan 10:23; 12:1; *1 En.* 20:5; 1QM 17:6–8; cf. *T. Mos.* 10:2). In this capacity he fights for Israel against the rival angels of the Persians (Dan 10:13–14, 20–21) and will deliver Israel from the tribulation of its enemies in the last days (Dan 12:1; cf. Rev 12:7–9; *T. Levi* 5:5–6). He is the champion of Israel against the forces of Edom (i.e., Rome; *Exod. Rab.* 18:5), and his name is emblazoned on one of the four towers used in the holy war against the Kittim (i.e., Romans; 1QM 9:14–15). In this bellicose capacity, Michael is called an archistratig or chief captain (*2 En.* 22:6 [J]; 33:10).

Michael is also an intercessor for Israel before God (Tob 12:15; cf. *T. Dan* 6:2; *T. Levi* 5:5–6) as well as for the entire world (*1 Enoch* 9; *Ascen. Isa.* 9:23 [Latin]). In relation to this role, he is described as merciful (*1 En.* 20:5; 40:9; 68; cf. 71:3) and righteous (*4 Bar.* 9:5; cf. *1 En.* 71:3), and as opening the gates of heaven for the righteous (*4 Bar.* 9:5). He is the guardian of the soul of Abraham (*T. Abr.* 19:4) and contended with Satan for the body of Moses (Jude 9). This latter story is probably derived from the lost ending of the *T. Mos.* (so Origen *princ.* 3.2.1) and dealt with Satan's claim that Moses did not deserve an honorable burial because he had murdered the Egyptian (Exod 2:12). In tradition, Michael does bury Moses (*Tg. Ps.–J.* on Deut 34:6).

Keeping the heavenly books is also attributed to Michael. The reference in Dan 12:1 to Michael defending those of Israel whose names are found "written in a book" led to the notion that Michael himself was the recording angel (cf. *Ascen. Isa.* 9:19–23 [Latin]). He was the intermediary between God and Moses when the Law was delivered to Moses (Gk *Apoc. Mos.* 1; cf. *Jub.* 1:27–2:1; Acts 7:38, 53) and puts the Law in the hearts of believers (*Herm. Sim.* 8.3.3). He is also the guardian of the secrets by which heaven and earth are established (cf. *1 En.* 60:11–25).

Michael is the leader of the angels that cause Satan to fall from heaven (Rev 12:7–9), and he will be one of the four archangels who bind the armies of Satan and throw them into the furnace (*1 En.* 54:6). He may be the archangel that announces the Parousia (1 Thess 4:16).

DUANE F. WATSON

MICHAEL (PERSON) [Heb *mîkāʾēl* (מִיכָאֵל)]. "Michael" appears to be a popular Judean name in the Persian period. The name possibly originated during the Exile in Babylon (see #1 and 10 below), and the Chronicler drew upon it to complete artificial genealogies, particularly those related to the tribe of Issachar (see #5 and 8 below). Interestingly, the name became less prominent once it was associated with a heavenly being in the Hellenistic period (see MICHAEL [ANGEL]) and only returned to prominence after the rise of Christianity.

1. The father of Sethur, the Asherite representative sent by Moses into Canaan to spy out the land (Num 13:13). This Michael appears in a list (Num 13:4–15) commonly ascribed to the Priestly writer. The historical provenance of the list is difficult to discern, as it contains both early and late onomastic evidence. Michael, however, seems to represent a later strand of onomastic development within the list, as the name arises in conjunction with other names with the theophoric *ʾēl* (see Gray *Numbers* ICC, 135–

36). Michael may then represent a name generated from the Priestly writer's own era that was used to supplement an earlier list.

2. According to the Chronicler, a member of the Transjordanian tribe of Gad during the reigns of Jotham and Jeroboam II (1 Chr 5:13). The nature of the list in which Michael appears remains unclear. While some data indicate that the Chronicler used a nonbiblical source in 1 Chr 5:11–17 (see Williamson *1 and 2 Chronicles* NCBC, 64–65), the presence of the Chronicler's style and of the name "Meshullam," a prominent postexilic name, suggests that the Chronicler composed the genealogy artificially or at least supplemented an earlier list with names from his own era.

3. A Gadite, the son of Jeshishai and the father of Gilead (1 Chr 5:14). Michael here appears as a forefather of the Gadite of the same name mentioned in 1 Chr 5:13. Textual problems in 1 Chr 5:14–15 complicate further the obscure origin of the section (see also #2 above).

4. According to the Chronicler, the great-grandfather of Asaph, the levitical singer (1 Chr 6:25—Eng6:40). The only context in which Michael appears within a levitical genealogy is in 1 Chronicles 6, a fact made conspicuous by his absence in the related levitical genealogy of 1 Chr 6:1–15—Eng6:16–30). Curtis and Madsen (*Chronicles* ICC, 134–36) have plausibly conjectured that the Chronicler expanded the genealogy of 1 Chr 6:1–15—Eng6:16–30 with common names from his era, such as Michael, in order to make Asaph contemporaneous with David. The Chronicler thereby harmonized his genealogical records with his historical narrative.

5. According to the Chronicler, a military leader, the son of Izrahiah, from the tribe of Issachar during the reign of David (1 Chr 7:3). The dependence of 1 Chr 7:1 upon Numbers 26 and Judg 10:1 (see Curtis and Madsen *Chronicles* ICC, 144–45), its style, and the lateness of the names of Michael's immediate kin suggest that the Chronicler has artificially constructed this genealogy from common names from his own era. Rudolph (*Chronikbücher* HAT, 64) plausibly conjectured that "sons of Izrahiah" (v 3a) may have appeared in the text as a result of dittography. If so, the text originally portrayed Michael as one of the five sons of Uzzi, the brother of Izrahiah, rather than his son.

6. A Benjaminite inhabitant of Jerusalem, the son of Beriah (1 Chr 8:16). For further discussion, see JAKIM.

7. A military leader of the Mannassites who deserted to David at Ziklag (1 Chr 12:20). For further discussion, see JERIMOTH #4.

8. The father of Omri, the administrator of the tribe of Issachar during the reign of David (1 Chr 27:18). The inclusion of both the sons of Levi and the sons of Aaron in the twelve-tribe structure of Israel reveals the late, artificial nature of the list of the princes of Israel in 1 Chr 27:16–22. The Chronicler has utilized the name "Michael," already identified with the tribe of Issachar (see #5 above), to create anachronistically an administrative structure during the reign of David. It may even be possible that the Chronicler meant for the reader to equate "Michael, the son of Izrahiah" of 1 Chr 7:3 with "Michael, the father of Omri" of 1 Chr 27:18.

9. According to 2 Chronicles, a son of Jehoshaphat and a brother of Jehoram (2 Chr 21:2). 2 Chr 21:2–4 alone describes the misfortune of Michael, along with his brothers Azariah, Jehiel, Zechariah, and Shephatiah. Michael and his brothers receive wealth and their own fortified cities from their father (2 Chr 21:3a). Their fortune, however, is short-lived. Following Jehoshaphat's death, firstborn son and heir designate Jehoram purges his kingdom of all potential rivals to the throne, including Michael and his brothers. While some commentators believe that the Chronicler here preserves an authentic preexilic source (see Myers *2 Chronicles* 120), the style, themes, and commonality of names in Chronicles and the postexilic period suggest that the Chronicler has created the passage for his narrative purpose. The Chronicler most likely anachronistically retrojected the postexilic name "Michael" into the time of the divided kingdom for this purpose.

10. A 5th-century B.C.E. Diaspora Judean in Babylon whose son, Zebadiah, led eighty kinsmen back to Judea from Babylon with Ezra (Ezra 8:8). However, the parallel account in 1 Esdr 8:34 identifies Michael as the father of Zeraiah, the leader of seventy men. Michael was from the family of Shephatiah, a family

involved in the first repatriation of Judah under Zerubbabel (Ezra 2:4). For further discussion, see GERSHOM. The family does not appear again in the reforms of Ezra or Nehemiah.
JOHN W. WRIGHT

MICHAL (PERSON) [Heb *mîkal* (מִיכַל)]. The younger daughter of Saul, king of Israel (1 Sam 14:49), and the wife, first of David (1 Sam 18:27), then of Palti/Paltiel (1 Sam 25:44; 2 Sam 3:15–17), and then finally again of David (1 Sam 3:15–17). Michal is introduced in a genealogical note concerning Saul (1 Sam 14:49–52). Appearing fifth and last in a list of Saul's offspring (v 49), she is preceded by her three brothers (Jonathan, Ishvi, and Malchishua) and an older sister (Merab). In the narrative, Michal loves David, a fact which pleases her father Saul (1 Sam 18:20). Once again (cf. 1 Sam 18:17–19) Saul promises his daughter to David. For the bride-price of a hundred Philistine foreskins, David can become son-in-law to the king (vv 21–27). Although Saul explains the bride-price in terms of revenge against his enemies (v 25), the narrator imputes a more nefarious reason for Saul's request: by sending David against the Philistines, Saul hopes he will be killed (vv 21; 25). Saul's plan fails, however, and David returns with the foreskins to claim his promised wife, Michal (v 27). The narrative concludes with a David whom Saul fears and hates (v 29), but whom both Yahweh and Michal (or Israel, Gk) love (v 28).

Saul's hatred of David is the backdrop to 1 Sam 19:11–17. Knowing her father's plan to kill David, Michal warns him and helps him escape. She lowers David through the window (v 12), makes the bed look as if he is still in it (v 13), and twice lies to Saul—first saying David is sick (v 14) and then insisting that David threatened her into helping him (v 17). Nothing more is heard of Michal until the brief note in 1 Sam 25:44: following David's marriage to Abigail (v 42) and Ahinoam (v 43), the narrator notes that Saul gave Michal, "his daughter" and "David's wife," to Palti, son of Laish from Gallim.

Saul's reported actions in 1 Sam 25:44 are the source of David's request in 2 Sam 3:12–16. Approached by Abner concerning an alliance, David stipulates that Michal must be returned before negotiations can commence (vv 12–13). This request is formalized by a message to Ishbosheth, Saul's son, demanding her return (v 14). In a highly dramatic scene, Ishbosheth takes Michal from her new husband and returns her to David (vv 15–16).

The final narrative concerning Michal is found in 2 Sam 6:16–23, the entry of the Ark into Jerusalem. Looking out the window, Michal, "the daughter of Saul," sees David dancing before the incoming Ark and despises him (v 16). After criticizing David for his behavior, Michal herself is rebuked (vv 20–22). Following this harsh interchange, the narrator notes that Michal, "the daughter of Saul," remained childless until her death (v 23).

(The reference to Michal, wife of Adriel, and her five sons in 2 Sam 21:8 is probably a scribal error and should read "Merab" [cf. RSV].)

Historians have puzzled over why Saul would offer one of his daughters to David, a supposed rival. Either Saul, as the text suggests, never intended the marriage to take place (assuming David would be killed by the Philistines) or else the time frame in 1 Sam 18:20–28 must be questioned. Two suggestions are to place the marriage before David's relationship to Saul deteriorated (Ishida 1977: 22) or to place it after Saul's death—cf. 1 Sam 3:12–13 (*NHI*, 184–86).

What was the political significance of David's marriage to Michal? Morgenstern (1929) identifies the marriage as a "*beena*-marriage," by which succession to the throne passed through the distaff side of the family. If this were so, then David's marriage to Michal constituted a legal right to Saul's throne. Morgenstern's argument, however, assumes a matriarchate in Israel—an assumption for which there is little evidence. It is more likely that David married Michal to gain a toehold in Saul's house. Since David's power base was in the south, he needed Michal to attract the pro-Saulide population and establish a claim to Saul's throne.

More recent treatments of Michal's marriage to David focus on the literary artistry of the story (see especially Alter 1981: 118–26; Fokkelman 1986: 209–47). See also QUEEN.

MICHAL, TEL (M.R. 131174). A site located on a *kurkar* (sandstone) cliff overlooking the Mediterranean about 6.5 km N of the Yarkon River estuary. Ancient remains are spread over five separate locations: the high tell (0.3 hectares), rising 30 m above sea level, the slightly lower N hill (about 4 hectares), and three hillocks 200 m to the E. The region was never suitable for dry farming because of the infertility of the sandy soil and poor drainage conditions. Some sustenance was certainly afforded by fishing, horticulture (grapes and figs), and hunting, but the main economic basis was apparently outside support by central political authorities and a coastal maritime trade. An underwater *kurkar* ridge at the foot of the tell may have provided a safe channel for the anchoring of small ships.

The ancient name of the site is unknown, although in the 1920s the local inhabitants referred to the immediate vicinity as "Dahrat Makmish." The official name is now Tel Michal (or Tel Mikhal).

Between 1958 and 1960, N. Avigad excavated the NE hillock, where he uncovered three superimposed cultic structures dating to the Iron Age, Persian, and Hellenistic periods. Large-scale excavations, directed by Z. Herzog, J. D. Muhly, and G. Rapp, Jr., were conducted between 1977 and 1980.

The first settlement at Tel Michal was erected on the high tell in the MB III (Stratum XVII, late 17th century B.C.), at the time that the Fifteenth (Hyksos) Dynasty was expanding from Lower Egypt along the coastal plain of S Canaan. The newcomers constructed an earthen platform, 4 m high, on which to erect their buildings. Little of this phase survived, since most of the W, seaward side of the original mound was destroyed either by wave abrasion or tectonic shocks. A second such catastrophe occurred at the end of LB I (Stratum XVI, mid-15th century). To compensate for the missing portion of the mound, huge earthworks were constructed against the E slope after each disaster, thereby increasing its width by about 30 m. A thick wall of Stratum XVI at the N end of the mound may have been part of a fort guarding the coastal approach.

The third phase, LB IIA (Stratum XV, 14th–13th centuries), left few remains, since the Iron Age builders leveled off the old ruins and dumped the debris down the slopes. A great amount of LB pottery, including a rare assemblage of decorated kraters, was found scattered on the S slope.

The tell remained abandoned for about 300 years and was resettled only in the 10th century B.C., when the three E hillocks were occupied for the first time. There were two phases of private dwellings (Strata XIV–XIII) on the high tell. An open high place was built on the NE hillock, a chapel with a stone-built altar, surrounded by *favissae,* on the E hillock, and two bench-lined structures on the SE hillock. Two winepresses were found nearby. This phase corresponds with Phoenician colonization of the central coast of Israel during the period of prosperous commercial relations between Tyre and the United Kingdom (1 Kings 9). A few meager remains in Stratum XII hint at limited occupation in the 8th century B.C.

Toward the end of the 6th century, Tel Michal entered into a long period of prosperity. Six phases of Persian-period settlement were recorded on the high tell (Strata XI–VI, ca. 525–300 B.C.). A large fort or administrative building stood at its N end, and several dwellings stood to its S. A storeroom for wine containing more than twenty storage jars was excavated, as well as a deep circular silo for grain storage.

A domestic quarter covering at least half a hectare grew up on the N hill. Pottery kilns were found on its W and N slopes. One of these collapsed with five recently fired storage jars still inside. These may have been containers for the wine processed in the nearby contemporary winepresses, two of which were excavated. A huge cemetery covered most of the E slope. Although only about 10 percent of it was exposed, it contained more than 120 burial sites of various types: cist tombs, pit graves, and infant storage jar burials. The grave goods included bead jewelry, bowls, necklaces, anklets, bronze fibulae, tools of iron, and even nails of wooden coffins.

From the temple on the NE hillock, dozens of clay and stone figurines with Phoenician affinities were recovered. There was another, smaller chapel on the E hillock, surrounded by *favissae,* one containing intact, unused oil lamps.

Following the conquest of the area by Alexander the Great, occupation continued uninterruptedly into the Hellenistic period, as testified by coins dating to the end of the 4th century B.C. The beginning of the 3d century saw an upsurge in building activity (Stratum V). A central fortress covered most of the high tell, and a large, community winepress was sunk into the debris on the N hill. A new shrine was constructed over the former chapel on the NE hillock. The monumental architecture points toward control by central economic and political powers; Ptolemaic (Stratum V) and Seleucid (Stratum IV). A hoard of 47 tetradachmas of Ptolemy I–III was found buried in the E hillock.

In the 1st century B.C., Tel Michal was incorporated into the Hasmonean kingdom. The discovery of several coins of Alexander Jannaeus and the presence of a small fort on the high tell (Stratum III) indicate that it may have been one of the fortified points on the "Jannaeus line."

In the Early Roman period (first half of the 1st century A.D.), a citadel (about 40 m by 40 m) with a watchtower in its courtyard was erected on the high tell (Stratum II). The site was then deserted for some 700 years, except for a small lookout tower of the Early Arab period (Stratum I). Afterward, Tel Michal was completely abandoned.

ZE'EV HERZOG

MICHMASH (PLACE) [Heb *mikmāś* (מִכְמָשׂ)*; mikmās* (מִכְמָס)]. An OT town located near the boundary between the tribes of Benjamin and Ephraim. The first Heb spelling is found mainly in preexilic narratives: 1 Sam 13:2, 5, 12, 16, 23; 14:5, 31; Isa 10:28; and Neh 11:31, while the second spelling is only used in postexilic narrative accounts: Ezra 2:27; Neh 7:31 (but note the reversion to the alternative spelling in Neh 11:31). The site is mentioned also in 1 Macc 9:73.

Modern scholars have consistently identified Michmash with the Arab village of Mukhmas (M.R. 176142), 11 km NE of Jerusalem. Recent archaeological surface surveyors, however, found only scattered late Iron Age sherds at Mukhmas, and therefore have proposed that biblical Michmash existed 1 km to the N, at Khirbet el-Hara el-Fawqa, where Iron Age I and II sherds were found (Kochavi 1972: 180).

Michmash nestled among the hills forming the N side of the deep Wadi es-Swenit, which extends from the central Palestinian hill country into the Jordan valley. Since this canyon becomes an impassable gorge immediately E of Michmash, the most easterly ancient road in the vicinity linked Michmash with Benjaminite Gibeah/Geba (Jaba), 2 km to the S on the opposite rim of the canyon, by way of the "Michmash Pass" (1 Sam 13:23; also called the "Geba Pass"; cf. Isa 10:29; Judg 20:33?). On each side of this pass reportedly stood two rock columns nicknamed Bozez ("slippery"?) and Seneh ("tooth"?), cf. 1 Sam 14:4–5; these probably correspond to rock formations currently found in the wadi nearly 200 m below and 1 km SE of Mukhmas.

Michmash figures prominently in the story of the Hebrew uprising against the Philistines early in Israel's history (1 Sam 13–14). Saul is reported to have struck down a Philistine *nĕṣib* ("governor"? "garrison"?), which caused the Philistines to fortify Michmash with chariots and infantry (13:4–6); the figures mentioned in the report (e.g., 30,000 chariots) are clearly exaggerated. Saul is associated closely throughout the story with Gibeah (probably an ancient toponym for Jaba), across the valley from Michmash.

Another source (13:23–14:23) seems to focus on Jonathan's role in the battle of Michmash (Blenkinsopp 1964; Arnold 1987: 184–218). Leaving Geba (Jaba) where he had struck down the Philistine *nĕṣib* (13:3), Jonathan and his squire made their way down through the Michmash pass and climbed up the steep hill, where they surprised the Philistine soldiers at Michmash. After having been joined by Saul's men, the Israelites then reportedly chased the Philistines past Beth-aven (Tell Maryam?) toward Aijalon (14:31). The notice that Saul stationed 2,000 troops to be with him in Michmash (13:2), which now prefaces the entire account, probably originally referred to the outcome of the battle of Michmash (Miller 1974: 161).

After the division of the kingdom, Asa fortified Mizpah and Geba as N fortresses of Judah (1 Kgs 15:22); the Wadi es-Swenit became the border between Judah and Israel, and Michmash probably thus lay within Israelite territory. In Isa 10:27c–32, there is a report of the advance of an invading army over this border as it progressed toward Jerusalem. This force reportedly crossed the Geba pass after having left its support equipment in Michmash (10:29) before resuming its march the next day.

In postexilic times, the village was one of the Jewish towns under Persian rule. In Neh 11:31, Michmash is listed among the cities inhabited by Benjaminites, while Ezra 2:27 (= Neh 7:31) reports a population there of 122.

In the Maccabean era, Jonathan resided at Michmash, from which he ruled his loyal Jewish followers (1 Macc 9:73) before moving to Jerusalem.

PATRICK M. ARNOLD

MICHMETHATH (PLACE) [Heb *mikmĕtāt* (מִכְמְתָת)]. The northern point of the boundary separating Ephraim from Manasseh (Josh 16:6; 17:7). The site is said to be east of Shechem, though most scholars agree that the direction is more accurately to the SE. The text does not indicate whether the site is an actual settlement or simply a striking geographical feature. Kallai (*HGB*, 400–401) summarizes the possibilities: the Gebel ʿel-Kabir range (that would place the site to the NE of Shechem, well into Manasseh); a valley, specifically the Wadi Bedan, which descends southeastward toward the Jordan valley. If it were a settlement, the site would most likely be Khirbit ʿIbn Naser. Evidence favoring one site over another is inconclusive.

ELMER H. DYCK

MICHRI (PERSON) [Heb *mikrî* (מִכְרִי)]. A Benjaminite mentioned only in 1 Chr 9:8 (MT) as an ancestor of the clan of Elah, one of four such clans listed in vv 7–9 as having returned from the Babylonian Exile. The corresponding Benjaminite section in the parallel list found in Nehemiah 11, however, omits any mention of the clan of Elah (indeed, only one clan, that of Sallu, is seemingly to be found in vv 7–9 [but cf. Curtis and Madsen *Chronicles* ICC, 171 concerning Ibneiah]). This curious anomaly led Williamson (*1 and 2 Chronicles* NCBC, 89) to suggest that the Chronicler's inclusion of four Benjaminite clans is the more plausible of the two extant traditions, and that something more than scribal error must be posited to explain the differences between the two lists.

In regard to the meaning of the name "Michri," Noth (*IPN*, 189, n. 3) pointed to the root *mkr*, "purchase," or the like. He suggested that Michri's parents perhaps meant to convey by such a name that their child represented some sort of just "recompense" or "compensation" on the part of the deity.

In place of the unique form *mikrî* found in the MT of 1 Chr 9:8, both the LXX and the Syriac attest the relatively familiar name MACHIR (Heb *mākîr*); this probably represents a metathesis of the *reš* and the *yod*. Less likely is the suggestion that the MT form resulted from a dittograph of the subsequent *waw*, later read as *yod* (the two letters are virtually indistinguishable in the later Judean scripts).

WILLIAM H. BARNES

MIDDIN (PLACE) [Heb *middîn* (מִדִּין)]. Town situated in the wilderness of Judah (Josh 15:61), within the same district as En-gedi. This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). Recent archaeological work in the Buqeiah valley has uncovered three Iron Age fortress-farms which may be associated with the towns of this district (Stager 1976). If the list in Josh

15:61–62 runs N to S, then ancient Middin is probably to be located at Khirbet Abu Tabaq (Boling and Wright *Joshua* AB, 392; M.R. 188126).

WADE R. KOTTER

MIDIAN (PERSON) [Heb *midyan* (מִדְיָן)]. MIDIANITES. The son of Abraham and Keturah in the genealogy of Genesis 25:2. It is also the name of an ethnic or political population group especially associated with S Transjordan that played a very important role in the earliest history of ancient Israel, and is probably the earliest identifiable Arabic-speaking social group.

A. The Name

The origin of the name *midyan* is unknown, though it has been suggested (Mendenhall 1973: 163ff.) that the root *mady-* is non-Semitic, and possibly cognate to the designation of Medes of much later times. The biblical genealogy (Gen 25:2) includes two variants, *midyan* and *medan,* cognates of both of which appear in Greek sources of the Hellenistic period as names of towns E of the Gulf of Aqaba (Knauf 1985).

B. Midianites in Early Biblical Tradition

Biblical tradition listed the eponymous ancestor, Midian, as one of six sons born to the patriarch Abraham by his second wife, Keturah (Gen 25:1–6). According to this account Abraham sent these sons away from Canaan to the E country, a tradition that implies an origin in Canaan proper for these proto-Arabic tribal designations. This tradition is now powerfully reinforced by linguistic evidence that derives the pre-Islamic Arabic language and writing system from the Bronze Age Mediterranean coastal region (Mendenhall 1985: chap. 10).

The Midianites as a historically existent society are represented in the Joseph stories (Gen 37:25–36) as traders traveling by camel caravan between Gilead (N Transjordan) and Egypt, and in this case dealing in slaves as well as "gum, balm, and myrrh." The term Midianite alternates with the term Ishmaelite, probably to be explained by the fact that at the time the narrative reached its present form, the Midianites had ceased to exist as a distinct social group but were identified with an ethnic group later called Ishmaelites. The narrative certainly is not earlier than the monarchy, and there is no reason to believe that it is based upon any historical event. However, the narrative does evidently make use of historical memory concerning the Midianites, and the picture it yields is plausible in view of present information concerning the society and its culture.

In contrast, the connections between Moses and the Midianites are manifold, detailed, and remarkable (Exod 2–4, 18; Numbers 25, 31) and can hardly be explained on any basis other than historical fact. Upon fleeing from Egypt to somewhere in the Sinai Peninsula after killing the Egyptian overseer, Moses joined and then married the daughter (Zipporah) of a Midianite sheepherder, variously named Reuel, Jethro, or Hobab. This Midianite shepherd was in later tradition promoted to the Midianite priesthood, doubtless because of the tradition in Exod 18:12, where we are told that Jethro offered a burnt offering and sacrifice, followed by a common meal with "all the elders of Israel." Clearly the later tradition was unaware of the significance and social context of a typical *menseff,* which at that time may very well have been an implied covenant of peace between the two groups.

By his wife, Moses had two sons named Gershom (or Gershon) and Eliezer (Exod 18:3–4). In Exod 4:18–20, his wife and sons were taken with him to Egypt, but in Exodus 18:2 they are still with Jethro—a fact that is explained by the statement that Moses had "sent her away," i.e., divorced her. Exodus 18 is the original and correct version, for the sons are repeatedly called "her sons." This corresponds to the ancient customary law by which children born to a *ger* (i.e., a resident alien) normally remain with their maternal grandfather, as in the law of Exod 21:4, and implied also in the Jacob-Laban narrative. All of these Midianite names except Eliezer actually occur in pre-Islamic Arabic inscriptions, together with most of the other names cited in biblical sources as those of Midianite or Moabite persons (Mendenhall 1984).

Later, the band of escapees from Egypt was guided in the desert by Moses' father-in-law (Num 10:29–32), though later pious tradition evidently entirely forgot this feature of the period of Wanderings and

substituted the miraculous (and drastically misunderstood) pillar of cloud and pillar of fire as desert guides (Exod 13:21–22; Num 9:15–23).

The organization of the small band was carried out according to the recommendations of Moses' father-in-law (Exod 18:13–27). The system of "rulers" of thousands, hundreds, fifties, and tens is essentially the ANE military organization, and the rudiments of the system may be identified in the census lists of Numbers 1 and 26 (Mendenhall 1958) and in the story of Gideon, where there are contrasts between "thousands" and hundreds. Whatever the social organization may have been, it is remarkable that Israelite tradition attributed it to the Midianites. Even more significant is the fact that the narrative implies that Moses' band did *not* have a preexistent social organization. This is, of course, quite in contrast to later orthodox dogma expressed in the narratives that the ancestors of all the twelve tribes went down into Egypt, and of course their descendants, complete with tribal organization, emerged from Egypt with Moses. The "mixed multitude" (Exod 12:38; Num 11:4) was the original band of Moses' followers, and the twelve tribes were added to the traditions after the formation of the Federation in Palestine proper.

Moses invited his hosts to join them in the quest for the promised land (Num 10:29), but the Midianites declined the offer. This tradition is especially important since it indicates that Moses and his band of followers were willing and eager to obtain adherents and followers of the new ideology: like all other religious movements in their formative period, the survival and success of the religious society depended upon its attractiveness to potential new adherents.

The next connection with the Midianites was tragic (Numbers 25). The festivities at Baal-Peor, somewhere near the foot of Mt. Nebo, induced one of Moses' band to join in the pagan (fertility?) rite, and a zealot for Yahweh killed both the Israelite and the Midianite princes involved (Mendenhall 1973: chap. 4). The result was lasting hostility between the two groups, and in Numbers 31 the last act of Moses' life is to order the extermination of the Midianites, in a narrative that reflects little historical reality other than a reflection of certain practices of the monarchy, and the late ideology of the priestly author of the narrative. It is probable, however, that there had been an armed conflict between the two groups, reflected in the brief notice of Josh 13:21. A nucleus of historical fact probably is involved in the names of the five kings of the Midianites who were killed in the battle, for one of the names, Rekem, is recorded by Josephus as being the original native name of Petra. Another of the names, Evi, occurs on an Ammonite seal of the 8th to 7th centuries B.C. (Hammond 1960), and the other names also occur in pre-Islamic Arabic inscriptions.

The last episode concerning the Midianites took place in Canaan proper with action concluding in Transjordan, and is recorded in considerable detail (Judges 6–8). The defeat of the Midianites by Gideon and his small band evidently had a considerable impact, for it is cited by Isaiah (9:4) centuries later as a precedent for later anticipated acts of God. The Midianites are again represented as camel riders, but this time as warriors, not as caravan traders. For various reasons, the periodic incursions of the Midianite camel riders are almost certainly to be interpreted as regular tax-collecting expeditions. In spite of the agriculture engaged in around the Midianite heartland, there is little doubt that the production of foodstuffs there was inadequate for the population, and thus the more highly productive regions of Palestine proper were called upon regularly for contributions, especially at harvest time. It is tempting, in view of all the evidence, to conclude that the Midianites may well have exercised a temporary imperial domination of Palestine and Transjordan at the very beginning of early Israel's history. Again, the parallel to the Philistine domination is striking, including the fact that, according to the biblical tradition, the Midianite policy consisted of a coalition of five kings.

The last reference to Midian as an existent political entity is the laconic notice in Genesis 36:35 that states that Hadad, son of Bedad, the fourth king of the Edomites, defeated the Midianites in the land of Moab. This event may reasonably be placed shortly after 1100 B.C. All subsequent references to Midian seem clearly to be geographical or genealogical in nature. The name remained in use as a place name, and local traditions concerning Midian and the Midianites continued until the rise of Islam. According to the Quran, the father-in-law of Moses was sent as a prophet to the Midianites to warn them of the coming destruction.

C. Midian in Later Biblical Tradition

In the narrative of the rebellion of the Edomite prince Hadad in 1 Kgs 11:18, the term Midian has already become a geographical designation—presumably referring to some section of S Transjordan. From "Midian," Hadad set out for Egypt to escape the wholesale slaughter of Edomite males that was carried out by David and Joab.

In later biblical tradition dealing with the "conquest" period, Midian is very closely associated with Moab: in the Balaam story, elders of Midian are mentioned together with elders of Moab (Num 22:4, 7) as being sent to N Syria to fetch Balaam. Similarly, in Josh 13:21, the Midianite kings of Num 31:8 are listed, but designated as *nesîkê* of Sihon, king of the Amorites who ruled in Heshbon. The term *nesîkê* is obscure and relatively late (cf. Mic 5:4 [—Eng 5:5]; Ezek 32:21), but is probably intended to indicate that they were chieftains who derived their authority from Sihon and thus were client chieftains.

Later biblical references to the conflict with Midian, however, seem to refer only to the Gideon narrative of Judges 6–8, for it was, of course, the victory that had special significance for the mainstream of the biblical tribes in Palestine proper. Psalm 83:9–12 refers to the Midianite personages by the names they have in Judges, and it refers to their destruction as a precedent for the coming destruction of surrounding enemies. In Isaiah 9:3 and the late prose addition of 10:26, the victory over Midian also is cited as a precedent for the coming defeat of the enemies of the kingdom of Judah. Finally, in Hab 3:7 and Isa 60:6, the prophecies reflect the usage of the word "Midian" as a purely geographical designation.

D. The Midianite People and Culture

Though older scholarship saw the Midianites as typical bedouin nomads because of their possession of camels, it is now clear that they had a complex and highly sophisticated society at a time when there is no reason to believe that the bedouin culture even existed (Knauf 1985). The biblical account twice gives us the names of their five kings (Num 31:8; Josh 13:21), which strongly suggests that their political organization consisted of a federation of five city-states, much like the well-known federation of the Philistines, and similar federations of the Etruscans in Italy, who were also of Anatolian origin.

Archaeological evidence strongly indicates that Midian was an important political entity that came into existence rather suddenly in the N Hejaz region, E of the Gulf of Aqaba, sometime in the 13th century B.C. Recent surveys have revealed evidence of numerous town and village sites in that region from the end of the LB into the early Iron ages (Parr et al. 1970; Ingraham et al. 1981). The people certainly spoke a language that was an archaic ancestor of Arabic, and they possessed a highly sophisticated culture that had connections from Anatolia to Egypt.

Recent archaeological surveys in the Hejaz have revealed massive walled cities, sophisticated irrigation installations, evidence of mining and smelting operations, and, most important, a unique type of painted pottery that has since been recognized as occurring in sites in the Jordan valley and Palestine proper. The painted pottery is of particular importance since the painted motifs are very closely akin to the Mycenaean pottery of Anatolia and the Aegean, while the technology of pottery manufacture is most closely related to that of Egypt (Parr 1982). See also QURRAYAH. The Midianites, therefore, constitute another example of a society that was familiar with, and created a demand for, Mycenaean types of ceramics that had to be locally manufactured in the early Iron Age. This is entirely parallel to the similar taste for Mycenaean types of pottery that brought about the local production of the well-known Philistine wares. Similar cultural processes can be observed also at Ras Ibn Hani, on the coast just N of Ugarit. This aspect of Midianite culture justifies the conclusion that there was some element in the society that had roots in the Anatolian/Aegean region, however remote they may have been.

Recent archaeological investigations have thus completely changed dominant views concerning the Midianites, and as usual new questions are raised which are not so easily answered as the old ones. One of the most basic is, What is or was meant by the term "Midianite"? In this case (as in many, if not most, other cases of terms that we regard as "ethnic" designations), the term most probably arose from some small grass-roots social organization; then, as the society grew in size and developed into a political power structure or federation, the term became increasingly remote from its original context (both social

and geographical). The consequences of a failure to recognize contrasts in the meaning of such designations of social groups have often been unfortunate.

Because the homeland of the Midianite archaeological culture is clearly in the region to the E of the Gulf of Aqaba, there has been a naive tendency to assume that all references to Midianites must either come from that region or be fictitious. In turn, this has long led to the entirely gratuitous assumption that Mt. Sinai must be somewhere in the deep S of Transjordan or in the NW region of the Arabian peninsula. The latter theory was based on the erroneous assumption that the description in Exod 19:16–25 of the theophany at Mt. Sinai derived from a volcanic eruption, which could only have taken place in the Hejaz during historical times. The narrative of the event at Mt. Sinai is a very typical description of a theophany in a thunderstorm, and is closely paralleled even in Homer's *Iliad.*

The presence of Midianite shepherd bands in the Sinai should not be a problem since the discovery of the Mari documents. Large-scale sheepherding requires considerable travel between summer and winter pasturages, often involving tens or hundreds of kilometers. There is no plausible objection to the presence of shepherd bands in the Sinai who were identified or identified themselves as adherents of the political/cultural system of the Midianites. The same is true of populations in the Jordan valley just N of the Dead Sea. The Midianites can no longer be regarded naively as primitive nomadic barbarians; they were a complex and cosmopolitan civilization with a highly diverse economy and, in all probability, an extensive control system for a few decades that included parts of Palestine and Transjordan. It is not surprising that this early society impressed itself upon the memories of populations of the region even until the rise of Islam.

GEORGE E. MENDENHALL

MIDRASH. The rabbinic term for biblical exegesis, a noun derived from the Heb root *drš,* which in the Bible means "to inquire, investigate," generally with God or a human king as the object of the verb.

———

A. Appearance of *mdrš*
B. Definitions
C. Midrashic Activity within the Hebrew Bible
D. Translation as Midrash
E. Rewriting the Bible
F. Midrash at Qumran
G. Rabbinic Midrash
    1. Classification of Rabbinic Midrashim
    2. Characteristics of Rabbinic Midrash

———

A. Appearance of *mdrš*

Ezra 7:10 is the first place in which a written text appears as the object of *drš* (Gertner 1962a: 5). Heinemann (1946: 182–85) has argued that by the end of the OT period the verb *drš* had acquired the

sense of "inquiring in order to do." In the documents from Qumran, *drš* has a variety of meanings, such as searching, inquiring, seeking, visiting, caring for, desiring, wishing, studying, investigating, and interpreting (Gertner 1962a: 11). Beginning in the Tannaitic period, the root *drš* signifies some type of logical deduction (Heinemann 1946: 185), but in the rabbinic corpus *drš* is used primarily as a term for investigating the Torah (Gertner 1962a: 6–8).

The noun *mdrš* appears twice in the Bible. The passage in 2 Chr 13:22 mentions "the midrash of the prophet Iddo," and 2 Chr 24:27 refers to "the midrash of the book of kings." Driver (1963: 529) and Bloch (*DBSup* 5: 1264) suggest that the term means virtually the same in Chronicles as it later means in the rabbinic texts; the latter refers to these books as "historical works which gloss Scripture with the goal of instruction and edification." Bacher (1965: 104) thought that in Chronicles *mdrš* referred to a book, an essay, or a study. Gertner (1962a: 10–11) stated that it referred to a narrative or account, and Zeitlin (1953: 24–25) claimed that in Chronicles the term *midraš* referred to a book in which were recorded the inquiries of the kings and the answers and explanations of the prophets. Lieberman (1950: 48) argued that *mdrš* did not have a technical meaning in Chronicles, while Finkelstein (1930: 56) suggested that the *mdrš* of the prophet Iddo was a collection of oracles and that the *mdrš* of the book of kings was "probably our book of Kings." We must conclude that the meaning of *mdrš* in Chronicles is simply lost to us at present (Wright 1967: 37).

Mdrš conveys a variety of meanings in the literature from Qumran. It refers to judicial investigation, study of law, and interpretation. Although *mdrš* alone does not necessarily refer to biblical interpretation when it appears by itself in the Qumran texts, when it is used in connection with a verse from Scripture it does seem to have a more comprehensive meaning than either *pyrwš* or *pšr* (Wright 1967: 40–41).

Although in the rabbinic corpus *mdrš* may mean study or inquiry in a general sense, its main use in these documents is to designate Scriptural interpretation. In the rabbinic collections the term signifies both the process whereby Scripture is expounded and the product of that exegesis (Gertner 1962a: 9).

B. Definitions

It has been common to define midrash in terms of its function or purpose. Slonimsky (1956: 235) found the essence of midrash in its "feeding of the life-impulse when harassed and threatened by tragic circumstances." Sanders (1972: xiv) wrote that "when one studies how an ancient tradition functions in relation to the needs of the community, he is studying midrash." Bloch (*DBSup* 5/29: 1263–80; cf. Wright 1967: 19–20) has offered several functional definitions of midrash; the major characteristic she attributes to midrash is its attempt to make a biblical text contemporary and relevant. Wright (1967: 67) has stressed the literary form of midrash and wrote, "the basic midrashic structure … is merely that one begins with a text of Scripture and proceeds to comment on it in some way." However, Gertner (1962b: 268–69) drew a distinction between covert midrash—in which neither the text, nor the midrashic idea, nor the midrashic technique is defined or mentioned—and overt midrash—in which the verse, idea, and most often the technique are explicitly stated. Finally, Sanders (1972: xiv) argued that "any definition of midrash which limits its scope to the citation and use of an actual biblical passage is deficient."

Given the varieties of functions attributed to midrash, the fact that many have ignored the possibility of midrash's being a scholarly, holy game (Heineman 1954: 2; Frankel 1956: 29; Porton 1979: 131), and the possibility that anything might be midrash if we do not require a clear connection between the comment and the verse, midrash is best defined as follows:

"Midrash is a type of literature, oral or written, which has its starting point in a fixed canonical text, considered the revealed word of God by the midrashist and his audience, and in which this original verse is explicitly cited or clearly alluded to" (Porton 1979: 112; 1981: 62; cf. Childs 1972: 49).

C. Midrashic Activity within the Hebrew Bible

Robert (1934: 42–68, 172–204, 374–84; 1935: 344–65, 502–25; 1944: 192–213) was one of the first to place the roots of the genre of midrash in the postexilic biblical texts by noting that phrases reappear in the later books of the Bible with different meanings from those they had in earlier biblical texts. They carry a new significance in their new contexts (Vermes 1961: 4). Modern scholars have pointed to a variety of biblical books as examples of midrashic activity (Seeligman 1953: 150–81; Willi-Plein 1971).

Although not employing the term midrash, Sandmel (1961: 105–22) drew attention to some "haggadic" passages in Genesis, and Vermes (*CHB* 1: 199) has claimed that Deuteronomy is partly the result of the midrashic enterprise. Zunz (1966: 45) claimed that Ezekiel was a type of midrash, for it contains the oldest examples of modification of Pentateuchal law. Halperin (1976: 129–41) has argued that Ezek 10:9–17 is an example of midrash, Bloch (*DBSup* 5: 1271–72) has pointed to sections of Ezekiel as midrashic, and Bruce (1972: 38–40) has claimed that expressions in Ezekiel and Habakkuk "call to mind" phrases in earlier prophetic books and should be considered midrashic passages. Both Childs (1971: 137–50) and Bruce (1972: 42–52) have pointed to some of the titles of the biblical Psalms as reflecting midrashic activity. In addition, Zunz (1966: 38), Schurer (*HJP¹*, 340), Weingreen (1951–52: 186–87), and most recently Willi (1972) have spoken of Chronicles in terms of midrash. It seems clear that several scholars have found the origin of midrash in the Hebrew Bible itself; however, Towner's claim (1973: 1) that the Bible does not comment upon itself in the same manner as nonbiblical texts do should be examined carefully.

D. Translation as Midrash

Translation involves interpretation. As Ben Sira's grandson states, "things once written in Hebrew do not have the same force in them when put into another language … [and books] differ not a little in translation from the original" (Goodspeed 1959: 223). Therefore, it is legitimate to consider the LXX and the Targums as types of midrash. In addition, there is little doubt that both the LXX (Rabin 1968; Bickerman 1959) and the Targums contain midrashic elements. Recent scholarship has argued that some of the LXX's midrashic passages were created by the original translators, while others are the result of editorial revisions (Gooding 1974: 1–11). There are several Targums, and they are of different types (*HJP²* 1: 99–114; Grossfeld 1972–77). *Targum Onkelos* is more or less a literal translation of the text, and most of its paraphrases occur in the poetic passages. *Pseudo-Jonathan* covers most of the Pentateuch and contains a number of unique paraphrases and some interpolations from midrash. *Neofiti I* is the Palestinian Targum par excellence (Porton 1979: 119–22). Because each of these Targums contains paraphrases, interpretations, and the like, each is a type of midrash.

E. Rewriting the Bible

The *Liber Antiquitatum Biblicarum* (James 1971), the *Genesis Apocryphon* (Fitzmyer 1966), Philo's *Life* of Moses, Josephus' *Antiquities* (Attridge 1976), and *Jubilees* (VanderKam 1977) represent another type of postbiblical midrash: the rewriting of the biblical account. This genre of midrash retells the biblical story by adding details, explaining difficult passages, rearranging material, and the like (Porton 1979: 122–25; 1981: 72–74).

F. Midrash at Qumran

There is a close relationship between many of the documents from Qumran and the Hebrew Bible. Some scholars have even suggested that the Bible was the focal point of the religious life of the Qumran community (Stendahl 1968: 61; Brownlee 1951: 56). The most important type of midrashic activity which occurred among the sectarians at Qumran was the pesher (see PESHARIM, QUMRAN). While there has been some debate over whether or not one can properly call the pesharim "midrashim" (Vermes 1955: 96–97; Roth 1960: 51–52; Slomovic 1969: 1–15; Porton 1979: 125–27; 1981: 75–77), according to our definition they are midrashim, albeit of a special type. The most important idea behind the pesharim is that the sectarians at Qumran believed that the biblical prophecies were being fulfilled in the history and life of the Qumran community (Allegro 1964: 130; Bruce 1961: 70; 77; Stendahl 1968: 190; Roth 1960: 52). Thus, the pesharim are eschatological, or even apocalyptic (Cross 1961: 76–78; 112–13; Slomovic 1969: 9).

Although Slomovic (1969: 5–15) has argued that some of the same exegetical techniques were used in the pesharim and in the rabbinic midrashim, there exist some important stylistic differences between the pesharim and the rabbinic texts: (1) the pesher quotes an entire passage of Scripture and follows it with an interpretation that has a tenuous relationship to the biblical passage, while the rabbinic texts often cite single words and phrases and present directly their interpretation; (2) the midrashim sometimes quote scholars, while the pesharim are always anonymous; (3) the several pesharim appear in only one copy,

while there are a multiplicity of versions of the rabbinic midrashim; (4) the rabbinic texts are collections of statements, some of whose original contexts are unknown and some of whose original contexts were probably in nonmidrashic settings, while the comments in the pesharim make sense only as commentaries to the biblical text; (5) the presuppositions behind the pesharim and the midrashim are different, for the single purpose of the author(s) of the pesharim was to demonstrate that the biblical prophecies were coming into being in their community, while the rabbis had a variety of purposes for creating their midrashim and midrashic collections (Porton 1979: 126–27; Brownlee 1951: 75).

G. Rabbinic Midrash

Rabbinic midrash is the creation of a subsection of the ancient Jewish community, the rabbis, whose defining characteristic was their knowledge of the Torah, both oral and written; therefore, their engaging in the creation of midrash was one manifestation of their focusing their individual lives on the Torah (Porton 1985: 1–3).

1. Classification of Rabbinic Midrashim. It is common to distinguish between legal midrashim (midrash Halakah, e.g., *Mekhilta, Sipra, Sipre*) and nonlegal midrashim (midrash Haggadah, e.g., Genesis and Leviticus Rabbah). However, this distinction is misleading. First, the so-called halakic midrashim contain a good deal of nonlegal material, and the so-called haggadic midrashim contain a significant number of legal statements. Second, it is simplistic to draw a sharp difference between legal passages and nonlegal passages, for both served as interpretations of revelation and as guides to one's actions. Third, as Bacher (1892: 416–19) has shown, the word *agadah* originally meant "exegesis"; therefore, the term "midrash Haggadah" is a tautology. Fifth, the so-called "halakic midrashim" contain exegeses on the legal and nonlegal portions of the biblical text upon which they comment.

It is also common to distinguish between Tannaitic and Amoraic midrashim. However, the exact reasons behind these designations is unclear. If they refer to the sages cited in the collections, they are inappropriate, for the Amoraic midrashim contain interpretations attributed to Tannaim, and the Tannaitic collections contain comments attributed to persons who may be considered early Amoraim. If the terms are meant to indicate the periods in which the collections were edited, this also presents a difficulty, for we simply do not know when the collections came into their present form or a form similar to the one in which they now exist.

On the basis of literary characteristics, we can define two types of rabbinic midrashim: the expositional and the homiletical. Expositional collections present a running commentary to consecutive verses of the biblical text; homiletical collections do not offer a running commentary on a single biblical book. The latter midrashim often deal with only a few opening verses of a biblical section, such as *Leviticus Rabbah,* or seem to be organized around verses read on holy days, such as the *Pesiqta de Rab Kahana* and the *Pesiqta Rabbati.* The expositional collections seldom cover an entire book. And despite the claims of many scholars, the homiletical midrashim should not be viewed as sermons delivered by rabbis in the ancient synagogues (Sarason 1981: 62–67). We simply do not know enough about the rabbis' activities to claim that they ever delivered sermons to the general public. Also, exactly how these sermons came to be written down and transmitted to us presents a problem (J. Heinemann 1970; 1971a: 141–50; 1971b: 100–22; 1971c: 808–34).

2. Characteristics of Rabbinic Midrash. Rabbinic midrash exhibits certain traits which differentiate it from other forms of biblical exegesis of our period. First, rabbinic texts are collections of independent units. Unlike the case with the pesharim, the translations, and the rewriting of the biblical narratives, the sequential arrangement of the passages of the midrash is most probably the work of the editor(s). It is likely that many of the comments that now appear in the midrashim were not originally created for a running commentary and that much of the homiletical material is literary creation from smaller units (Sarason 1982). In fact, we have many examples of midrashic comments appearing in other contexts as nonmidrashic passages (Porton 1985; Fraade 1983: 245–301). Second, we often find more than one comment per biblical unit: several synonymous, complementary, or contradictory remarks may appear in connection with a single verse, word, or letter. In the other examples, we find only one comment for a given biblical unit. Third, a large number of the rabbinic statements are assigned to named sages.

However, the editors and authors of the rabbinic collections remain a mystery just as the creators of the majority of the other forms of Jewish exegesis from this period are also unknown to us. Fourth, the rabbinic comment may be directly connected to the biblical unit or it may be part of a dialogue, a story, or an extended soliloquy. The comment may answer a question which refers to the text but which need not be connected with the biblical passage to be comprehensible. Also, one interpretation may be the result of another explanation of the text given in the same context. Fifth, rabbinic midrash atomizes the text to a greater degree than any of the other forms of midrashic activity with the exception of the LXX and the Targums, which must, because they are translations, treat every element of the biblical passage. Each word or letter may serve as the basis for an exegetical remark of the rabbis. Sixth, often the specific method which forms the basis of the comment is explicitly mentioned by the rabbis.

Rabbinic midrash must be seen as an essential element in the rabbinic worldview. For the rabbis, the Torah was their link between this world and God. A rabbi was a rabbi because he alone knew the totality of revelation, and the written and oral versions of the Torah, and it was his task, as a rabbi, to study and to actualize the Torah's content. For the rabbis, midrash was, above all, a religious, God-centered, activity. The Bible contained all the secrets of the universe, and it was the source of all knowledge and wisdom; the Torah was the complete public revelation of the One, Only, and Perfect God to His people. The Bible was the ultimate guide for human action, the final arbiter between right and wrong, true and false. Every element of the text—every letter, every verse, every phrase—was written as it was for a specific reason and purpose, and it was the rabbis' task to discover the reason and to explicate the purpose. Furthermore, the Bible formed an integrated and interrelated whole, and it was one of the major rabbinic goals to demonstrate the unity of purpose and the singleness of intent of the Bible. However, the rabbis realized that the Bible spoke to different people, even to different rabbis, in different ways; therefore, the rabbinic masters accepted the possibility of multiple interpretations of biblical passages. As long as a rabbi approached the text as a legitimate member of the rabbinic class, his explanation of the Bible had to be taken seriously, and the comment itself became part of the ongoing process of the rabbinic explication of revelation (Neusner 1972: 44–128; Porton 1985: 1–3).

Modern scholarship divides early rabbinic exegesis into two major schools: that of Ishmael and that of Akiba (Heschel 1962: xxxvii–lix; Porton 1982: 205–11; Chernick 1979; Grabbe 1982: 527–32). Ishmael's school is pictured as the more logical, while Akiba's exegesis is seen as more mystical and imaginative. However, recent work has demonstrated that it is difficult to distinguish between the exegetical techniques used by Ishmael and those used by Akiba (Porton 1982: 205–11). While there may have been two or more schools of rabbinic exegesis, there is no evidence that they began with these two sages.

Scholars have also pointed out that there are lists of exegetical principles attributed to various sages, such as Hillel's seven principles, Ishmael's thirteen, and Eliezer's thirty-two (Strack 1959: 93–98); however, again, recent inquiries have shown that the authenticity of these lists is open to serious question (Porton fc.). Furthermore, there is no evidence that the sages mentioned actually preferred to use the principles attributed to them in the lists. Finally, as Lieberman (1950: 47–82) and Daube (1949: 234–64) have shown, the exegetical techniques assigned to the rabbis were those commonly used by the Hellenistic rhetoricians. Thus, the most we can say is that our texts leave the impression that the exegetical techniques of at least some of the early rabbis were similar to the exegetical practices of their non-Jewish neighbors.

GARY G. PORTON

MIGDAL-EL (PLACE) [Heb *migdal-ʾēl* (מִגְדַּל־אֵל)]. Town in the allotment of Naphtali (Josh 19:38). Most scholars feel that since Migdal-el is mentioned together with Yiron, it must have been in Upper Galilee, though its exact location is unknown. Woudstra (1981: 293), however, does mention a possible identification of Migdal-el with Mejdel-Islim, about 16 miles E–SE of Tyre.

Bibliography

Woudstra, M. H. 1981. *The Book of Joshua.* Grand Rapids.

DAVID SALTER WILLIAMS

MIGDAL-GAD (PLACE) [Heb *migdal-gād* (מִגְדַּל־גָּד)]. Town situated in the Shephelah, or low country, of Judah (Josh 15:37), within the same district as Lachish. This settlement, whose name perhaps means "tower" of Gad (from *gdl,* "be great") is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). Based on its geographical location and the similarity in sound and meaning, most scholars (e.g., Boling and Wright *Joshua* AB, 385) have suggested a tentative identification with Khirbet el-Mejdeleh, which is located approximately 6 km SE of Lachish (M.R. 140105). However, archaeological evidence for occupation during the Iron Age is lacking.

WADE R. KOTTER

MIGDOL (PLACE) [Heb *migdôl* (מִגְדּוֹל)]. A town or city thought to be located in Lower Egypt. It is cited in three different situations. In Exod 14:2 and Num 33:7, Migdol is mentioned as a place near the spot where the Israelites had camped before crossing the Red Sea. It is described as being situated near Pi-ha-hiroth, Baal-zephon, and the sea. It is definitely thought to be located in the E Delta region, but the exact site is unknown. Suggested sites include Tell el-Her and Tell el-Maskhuta. See also PI-HAHIROTH; BAAL-ZEPHON; RED SEA.

In Jer 44:1 and 46:14, Migdol, with Tahpanhes and Memphis, is designated as a main residential location for Jews in Lower Egypt. Ezekiel uses Migdol and Syene, in Ezek 29:10, as geographical extremes of the boundaries of Egypt. Migdol is used for the N designation and Syene for the opposite S point.

The name "Migdol" used in these various contexts may not belong to the same location, but there is not enough evidence to rule out this possibility. The word is of W Semitic origin (most likely Canaanite). It is found as an Egyptian loanword that is used commonly to mean "tower" or "fortress" and as a place name for various military stations that are found in the outer boundaries of Egypt. It appears in the Tell el-Amarna Letters (EA 234: 29), but no reference to its precise location is given.

JEFFREY K. LOTT

MIGHTY MEN. See DAVID'S CHAMPIONS.

MIGHTY ONE. See NAMES OF GOD IN THE OT.

MIGRON (PLACE) [Heb *migrôn* (מִגְרוֹן)]. A locality in Benjamin (1 Sam 14:2; Isa 10:28).

Commentators have assumed that the Hebrew toponym refers to a small town or village; unfortunately, the two biblical texts referring to Migron appear to give contradictory information regarding its location. In 1 Sam 14:2, the site is associated closely with Gibeah (= Geba, or modern Jaba, 9 km NE of Jerusalem on the S flank of the Wadi es-Swenit). In Isa 10:28, however, Migron seems to be placed between Aiath (et-Tell) and Michmash (Mukhmas) on the N side of the Swenit. A. Alt (1927: 17–20) identified Migron with Tell Maryam (M.R. 175141), 1 km SW of Mukhmas, on the grounds that the invading army of the Isaian oracle passed through Migron, while its baggage was left nearby at Michmash. If Migron were a biblical village, Tell Maryam is certainly a candidate, along with a number of Iron Age sites in the vicinity of Mukhmas, e.g., Tell el-Askar (M.R. 176143) or Khirbet el-Qubbe (M.R. 176141; Kochavi 1972: 180–82).

Quite possibly, however, the toponym does not refer to a village at all, but to the impressive Wadi es-Swenit. This canyon extends from the central Palestinian watershed through the Jaba/Mukhmas area, where it deepens dramatically as it joins the Wadi el-Qelt and issues into the Jordan valley near Jericho (Dalman 1905: 161–75). See Fig. MIG.01. The ancient name *migrôn* (from the root *ngr*, "to gush forth") is similar in form to that of other Canaanite valleys (e.g., Arnon, Kishon, Kidron) and would refer to the occasional floods which sweep the wadi in winter and spring.

The reference in 1 Sam 14:2 ought then be translated, "Saul camped on the outskirts of Gibeah under 'the Pomegranate' in the Migron." The "Pomegranate" is probably identical with the "Pomegranate Rock" of Judg 20:45–47, to which 600 Gibeahite soldiers fled for refuge after an ambush by Ephraimite warriors. See RIMMON. This rock is likely the large pockmarked cave called el-Jaia in the S wall of the Wadi es-Swenit, less than 2 km E of Jaba (Gibeah/Geba). Saul and his 600 men seem to have sought refuge in this cave while the Philistines occupied nearby Michmash above the valley (cf. 1 Sam 14:11).

Isaiah's description of the invading army (10:28–29) ought not be read as a consecutive itinerary; rather, the point of the passage is that the invader "passed over the Migron" after having left military equipment in Michmash. The thought is paralleled by the following comment, that the army "passed over the Geba Pass, and spent the night." The ancient Migron apparently formed the international boundary between the kingdoms of Israel and Judah in the late 8th century B.C., and the Geba Pass marked the highway crossing over this border. Isaiah's parallelism seems to draw dramatic attention to this military violation of Judah's N boundary.

PATRICK M. ARNOLD

MIJAMIN (PERSON) [Heb *miyyāmîn* (מִיָּמִין)]. Four individuals in the Hebrew Bible bear this name.

1. A priest who appears in an organizational list associated with David (1 Chr 24:9). According to the genealogical information in 1 Chronicles 24, Mijamin was a descendant of Aaron through the family of either Eleazar or Ithanar. When lots were cast in order to organize the various officers of the temple, he was assigned to the sixth of twenty-four divisions. Given the postexilic perspective of Chronicles, Mijamin is further seen as an ancestor of a later priestly family (Braun *1 Chronicles* WBC, 228).

2. A son of Parosh and a member of the Israelite community whose members agreed to renounce their foreign wives and children (Ezra 10:25; 1 Esdr 9:26). Following more specialized lists referring to priests and Levites, Mijamin is included among the laity.

3. A priest who joined in with officials and laity alike in "sealing" the covenant with Nehemiah (Neh 10:8—Eng10:7). Given Israel's disappointing record of obeying the Lord in the past (Neh 9:1–37), a public confession of sin resulted in the establishment of a new covenant and a new determination within the postexilic community (Neh 9:38).

4. A priest who returned to Jerusalem with Zerubbabel following the Exile (Neh 12:5). Appended in the book of Nehemiah, the list in which Mijamin appears can be chronologically associated with Ezra 2:36–40.

The name Mijamin is actually a contracted form of MINIAMIN (Heb *minyāmîn*, "from the right hand," i.e., "a favored one"), which appears in 2 Chr 31:15. The fact that the Syriac of Ezra 10:25 reads Benjamin rather than Mijamin might suggest a possible equation. However, such an equation seems doubtful insofar as the name Mijamin itself occurs in various Neo-Babylonian and Persian documents.

TERRY L. BRENSINGER

MIKLOTH (PERSON) [Heb *miqlôt* (מִקְלוֹת)]. The etymology of this name, which is not attested outside of the Bible, is problematic. The ending *-oth (ôt)* is very rare in personal names (e.g., Naboth), and Noth's claim (*IPN*, 39) that it is used in hypocoristic names has little basis. The remaining element *mql* is

used in Hebrew of a "rod" or a "staff," but this element is not found in other Hebrew names, though the name *mql*› is known from Phoenician (Benz 1972: 353). Perhaps Mikloth should be connected to names, such as Koliah (Jer 29:21; cf. Benz 1972: 353 and Fowler *TPNAH,* 358), which contain the element *qôl,* "voice." Despite the difficulty in finding a likely etymology for Mikloth, no obvious emendation presents itself; and the name is supported by the versions.

1. A Benjaminite, the son of Avi-Gibeon or Jeiel according to 1 Chr 8:32 and 9:37, 38. Mikloth's name is missing in the MT of 8:31; but context, most of the versions, and the parallel 9:37 suggest that it must be restored there (Rudolph *Chronikbücher* HAT, 78). It is unclear if Mikloth is related to Saul; this depends on whether the Kish of 1 Chr 8:30 is to be identified with the Kish of v 33 (Demsky 1971: 16–20) and whether we assume (with Curtis and Madsen *Chronicles* ICC, 164) that the Chronicler has intentionally substituted Gibeon for Gibeah, Saul's birthplace. In 1 Chr 8:32, it is implied that some part of Mikloth's family moved to Jerusalem, but it is unclear exactly who moved (Williamson *1 and 2 Chronicles* NCBC, 86). On the repetition of this genealogy in chaps. 8 and 9, see AHAZ.

2. An official (Heb *nāgîd*) of Dodai the Ahohite, one of David's twelve monthly officials, according to the MT of 1 Chr 27:4. This institution is not authentic and is probably based on a similar list of Solomon's in 1 Kgs 4:7–19; it suggests that the period of David was a time of total order (Williamson, 174–75). The text of 1 Chr 27:4 is highly problematic and requires emendation. The two words which follow "the Ahohite" are *ûmāḥăluqtô ûmiqlôt,* "and his division and Mikloth." These words are graphically very similar to and are probably a corrupted dittography of the name of Dodai's tribe (Levi?), which became corrupted to *ûmāḥăluqtô,* "and his division," which is commonly used throughout the chapter. The verse would then have originally read "… Dodai the Ahohite, from the tribe of X, the officer"; this would be similar in structure to v 14, "… Benaiah of Pirathon, of the sons of Ephraim." Others (e.g., Rudolph *Chronikbücher* HAT, 178) follow the LXX and omit the three words *ûmāḥăluqtô ûmiqlôt hannāgîd,* "and his division and Mikloth, the officer."

MARC Z. BRETTLER

MIKNEIAH (PERSON) [Heb *miqnēyāhû* (מִקְנֵיָהוּ)]. One of the Levites of second rank appointed to provide music during David's second effort to move the ark to Jerusalem (1 Chr 15:18, 21). For further discussion, see ELIPHELEHU.

RAYMOND B. DILLARD

MILALAI (PERSON) [Heb *milălay* (מִלָלַי)]. A kinsman of Zechariah and a musician who performed at the dedication of the Jerusalem wall (Neh 12:36). At the ceremony, he was part of the group which paraded to the right. His name is omitted in the LXX. KB suggests that the name is either a short form of *millalyāh* ("Yahweh has spoken"; cf. Aram *mallēl*) or the result of a dittographic error (note the similarity of the following word: *gilălay*).

NORA A. WILLIAMS

MILCAH (PERSON) [Heb *milkâ* (מִלְכָּה)]. 1. Daughter of Haran, and therefore also sister of Lot, who married her uncle Nahor (Gen 11:29). Because she was the mother of Bethuel, Milcah also became the grandmother of Rebekah (Gen 22:20–33; 24:15). Whatever was the text is to be understood in terms of original sources, the present text relates Milcah to Abraham through both of his brothers, Haran and Nahor (Noth *ÜgS* 235, n. 579).

Milcah's unusual relationship with Nahor (as both niece and wife) has led to comparisons with "marriage adoption" contracts from Nuzi involving the legal status of "daughter," "daughter-in-law," and "sister" (Speiser 1963: 25; following the ANE legal customs identified by Koschaker 1933). However,

there are problems with these comparisons. Nuzi contracts are not necessarily concerned with marriage between the contracted parties (Greengus 1975: 22); instead, they provide the woman with the support of an additional family, a relationship which has been described as similar to "godparents" (Grosz 1987: 140). Some contracts at Nuzi do deal with the transference of rights in terms of who has the legal right to arrange the marriage of the person being "adopted." The biblical narrative does not discuss any transfer in the rights of giving Milcah in marriage (Thompson 1974: 233; Eichler 1977: 48–59).

The name "Milcah" is a feminine form of the root *mlk*, "ruler." Its meaning is similar to that of Sarah, and has been interpreted as an honorific description of the individual's position within the family group (Stamm 1967: 326).

2. Daughter of Zelophehad, who, along with her sisters, was responsible for eliciting Mosaic legislation regarding the daughter's right to inheritance where the father had no son (Num 27:1–11). This may be similar to practices at Nuzi and elsewhere in the ANE where daughters became recipients of inheritance property, and as such could legally be designated "sons" with provisions to keep the inheritance within the father's family, even after the marriage of the daughter (Ben-Barak 1980; Paradise 1980; 1987; Huehnergard 1985: 429–30). For hypotheses about the location of Milcah's inheritance, see HEPHER (PLACE).

Attempts have been made to associate the names of Milcah's sisters with the names of towns or of Aramean tribes, but so far a geographical identification for Milcah has not been established (Gray 1896: 116; Noth *ÜgS* 164–65; Budd *Numbers* WBC, 300). However, an association of Milcah with Hammolecheth of 1 Chron 7:18 has led to identifying territory near Tell el-Farah North as that belonging to Milcah (Demsky 1982: 70–75).

MILETUS (PLACE) [Gk *Milētos* (Μιλητος)]. A city on the SW coast of Turkey where Paul stopped and sent for the elders of Ephesus (Acts 20:15, 17), and where Paul had to leave Trophimus, who was ill (2 Tim 4:20).

The city is near the mouth of the Meander River on the SW coast of Turkey, 30 miles due S of Ephesus. Miletus was originally a coastal city, built on a peninsula with four natural harbors, but because of the silting of the area and the shifting of the course of the Meander (modern Menderes or Maiandros) River, it now lies more than 5 miles from the sea. In 1980, prehistoric potsherds were discovered in stratigraphic levels immediately above bedrock, which indicates that a settlement of some kind existed here at that time (Müller-Wiener 31:1981: 201).

According to Strabo (14.1.6), the city was founded by Cretans of the Minoan period, after which it was occupied by Mycenaeans from Achaia who used it as a fortress outpost in the 14th century B.C. Homer implies that the men of Miletus joined the Carians against the Greeks in the Trojan War about 1250 B.C. (*Il.* 2.868ff.). The city was destroyed about 1200 and repopulated by Ionians, according to Strabo, although the Greeks may never have abandoned it. It soon became the most important of the twelve cities of Ionia, probably because of its great harbor facilities and its navy, which enabled the city to establish prosperous new colonies in Egypt and on the shores of the Black Sea. Several offshore islands were under the control of Miletus during this time, including Patmos.

By the 6th century B.C., Miletus became the most prosperous Greek city, not only of Ionia, but of all Asia Minor. Its necropolis was discovered in 1987 in the village of Yeni Balat (Mellink 1989: 122–23), from which fine examples of pottery, sculpture, and dedicatory reliefs testify to the artistic and commercial prominence of the city. Miletus was one of the first cities of the ancient world to mint coins. Around the end of the 5th century B.C., the Milesian alphabet was adopted by Athens and became the standard writing system of the Greeks.

The city came under Persian influence in 546 B.C. and led the Ionian cities in the revolt against Persia in 499 B.C. This resulted in the destruction of the city by the Persians in 494, after a fierce battle was fought nearby on both land and sea. Herodotus records that "Miletus was reduced to slavery" (6.18ff.). The temple of Apollo in Didyma, about 10 miles S of Miletus, was also destroyed, but it was soon rebuilt and processions were resumed each spring between the sanctuary of Apollo Delphinios in Miletus and the temple in Didyma. The Sacred Way, connecting these two sanctuaries of Apollo, was eventually paved with large limestone slabs during the reign of Trajan in the 2d century A.D. This splendid street has been found in excavation, and work is being conducted to study its surroundings, which include colonnaded halls, fountains, a nymphaeum, and a two-story gate. Four levels of the roadway were identified in 1987 (Müller-Wiener 1988: 194).

After the Persian destruction, Ephesus surpassed Miletus as the largest city in Ionia, and it never regained its former status. However, even though the city waned in prominence during the classical period which followed, it was still an important center of commerce and art in Ionia. Its estimated 60,000 inhabitants rebuilt the city on a grid that originated in the 6th century and became widely used throughout the Mediterranean world for the next several centuries. This grid, later called the "Hippodamian Grid," was popularized by a citizen of Miletus named Hippodamus, who, in 479 B.C., used it in laying out the city. The grid somewhat resembled a checkerboard, but having rectangles rather than squares in the pattern. The city walls were not completed until the time of Alexander the Great, who captured Miletus in 334 B.C. In the Roman period, it was one of the principal metropolitan areas of Asia Minor.

The central part of the city lay on the S shore of the Bay of Lions, between hills of the peninsulas on the E and W. Eumenes II, an Attalid ruler of Pergamum in the 2d century B.C., was one of the great builders of the later city. He built the gymnasium, preserved only in Roman reconstruction, the W gate, and probably the stadium as well. Another period of intense building activity was experienced under Trajan, who erected the majestic nymphaeum and paved the Sacred Way. However, the greatest builder of Miletus was Faustina, the wife of Marcus Aurelius. She had spent some time there in A.D. 164 and was so impressed that she made a considerable donation toward the construction of the baths, which were named for her. The bathhouse is the largest and best preserved building on the site. Faustina also participated in the erection of the Roman theatre, one of the best preserved and most impressive structures in Turkey. The baths stood S of the hill on the W peninsula, SE of the market area. The theatre, which could seat 15,000, was built into the S side of this hill, as a reconstruction of an earlier Hellenistic theatre.

When the apostle Paul visited the city, it already had three impressive marketplaces, testimony to the abundance of trade stimulated by its four harbors. The South Market, situated SE of the theatre hill, is the largest Greek agora known to have existed in the ancient Greek world, covering more than 108,000 square feet. It was also used as a place for formal occasions, such as dedications by the Roman emperors. The beautiful North Gate, or Market Gate, leading into the South Market, was not built until the 2d century A.D. It was removed from its site by the German excavator and taken piece by piece to the Pergamon Museum in Berlin, where it now can be seen in a magnificent state of reconstruction.

Several temples stood in Miletus when Paul was there: the Athena Temple, S of the theater and the West Market; the sanctuary of Apollo (the Delphinion), by the harbor of the Bay of Lions; and the temple of Apollo in Didyma. There was also a bouleuterion, or senate house, in the form of a small odeion, which was built between the North and South markets. A sixteen-columned harbor gateway had been set up near the Delphinion in the first half of the 1st century A.D., just before Paul's arrival. The central of its three entrances opened toward the S onto a magnificent processional road, which measured 92 ft wide and extended southward for more than 300 ft. Vergilius Capito, a friend of the Roman emperor Claudius, built, with the emperor's aid, a colonnaded Ionic porch (stoa) along the E side of this road, as well as a small bathhouse further E. Claudius died about the time Paul first visited Miletus (Acts 20:15, 17). There was also a gymnasium in the city, as well as a stadium whose arena was 95 ft wide and 630 ft long.

Paul's first visit was at the conclusion of his third missionary journey, on which he bypassed Ephesus, traveling S from Troas, and stopped at the larger harbor facilities at Miletus. There, he summoned the elders from the church in Ephesus and spoke to them. He had bypassed Ephesus and landed in Miletus because he was in a hurry to get to Jerusalem by Pentecost (Acts 20:16) and did not want to spend time in the Ephesian area where he had worked for almost three years (Acts 20:31).

A second visit by Paul to Miletus, probably several years later, is indicated in 2 Tim 4:20, when he left Trophimus, the Ephesian, there due to the latter's illness.

JOHN MCRAY

MILH, TELL EL. See MALHATA, TEL.

MILITARY ORGANIZATION IN MESOPOTAMIA. The Mesopotamian army (Akk *ummānu, emūqu,* and *illatu* [rare]) is made known to us through representative monuments and texts from the period of the Sumerian city-states in the 3d millennium B.C., up until the fall of the Assyrian empire, and then again during the Babylonian empire under the attack of the Persians at the end of the first half of the 1st millennium B.C. The army served as an instrument of rivalries among Sumerian states, between Assyria and Babylonia, and among these countries and their powerful neighbors (most notably Elam, Egypt, the Hittites, the Mitannians, the Urartu, and Syrian principalities). The army was also confronted with waves of invaders who, over the course of time, attacked the rich Fertile Crescent, peoples such as the Guti, Sea Peoples, and Suteans. These confrontations brought about an evolution of military techniques adapted to the equipment and techniques of their enemies.

It is with the appearance of the royal military around 2700 B.C. and the struggle for hegemony among the Sumerian city-states that the cities began to surround themselves with thick walls: the excavations of Uruk uncovered a thick, 9.5-km-long wall defended by some 900 semicircular towers.

The "Stele of the Vultures" (*ANEP*, pp. 94–96) gives us a good example of the army of this period: it was organized into powerful units of six ranks, each one composed of ten men and one "officer." The primary weapon was the lance, but the mace and the encased ax, with a long, narrow blade with cutting edges, also made up part of the Sumerian soldier's equipment. The sword was also used after the mastering of metallurgy made possible the attainment of a shock-resistant blade. The protective gear of the fighter consisted of a pointed helmet, covering the ears and the back of the neck, and a small sleeveless cape, reinforced with metal and a large rectangular buckle made of wood covered with fur and studded with metal plates.

Chariots supported the infantry. Attested as far back as the middle of the 4th millennium by the archaic tablets from Uruk, their military usage, adopted by the different Sumerian city-states, represented an innovation that transformed the technique of combat. The chariot was composed of a large box, protected by a high frontal platform raised up on four wheels. According to the remains found at Kish and the decorations of the Standard of Ur (*ANEP*, p. 97), it was constructed of reed and wood, and was reinforced with metal and leather. Although it was strong and stable, it was too heavy for tactical maneuvers, and the traction of its four harnessed onagers was reduced by the position of the yoke which rested between the shoulder blades of the animal. The chariot was ridden by two men, the driver and a fighter armed with a lance, javelins, and an ax. This chariot was used to transport warriors and equipment and, once the enemy ranks were broken, to pursue the fleeing enemies. Another lighter two-wheeled chariot is also attested; it doubtless was used to ensure communications. The Fara texts, which furnish bills for repairs to the chariots and lists of troops in the garrison or sent into battle, show that the maintenance of the equipment rested with the administration of the Palace. See also CHARIOT.

The size of these Sumerian armies was low: around 600–700 men. One text itemizes the "conscripts" of Sumer: 182 men from Uruk, 192 from Adab, 94 from Nippur, 60 from Lagaš, 56 from Šuruppak, and 86 from Umma—670 in total. When conflicts arose, the regular army was reinforced by country militias levied from among the beneficiaries of arable land grants, to which nomad contingents could also be added.

The rise of Sargon around 2370 B.C. marked the triumph of a new army—one more technologically advanced and armed with the composite bow. Strength was also increasing: King Sargon was said to have attacked Syria with 5,400 men and his son Rimuš to have taken 5,700 prisoners from the Sumerian coalitionists who rebelled against him.

When the Sumerian rulers of the Ur III empire reorganized their army after the destruction of the Guti, they continued to equip it with a body of archers, based on the Akkadian model.

Throughout Mesopotamian history, the "private" (ERÉN) belonged to the staff of the palace, for whom he carried out civil as well as military tasks according to the circumstances. An unskilled laborer, he took care of agriculture and security operations, or waged battle. The army was reinforced by the incorporation of prisoners, notably Elamites, all the more so in order to fight against the incessant infiltration of nomads; some garrisons were stationed permanently in different points of the empire, especially along the borders.

During the entire period from the end of the 3d millennium to the beginning of the 2d, when the Mesopotamians were in contact with new populations, transformations progressively took place which became apparent in the 18th century and lasted up until the 1st millennium. These transformations mainly concerned the use of the horse and chariot, the improvement of siege equipment (assault towers and battering rams), the appearance of the supply services, and a developed intelligence service.

Decorated images from this period are rare, but the written documents, the Mari letters for example, describe the techniques used at the time of the sieges: the assailants filled in the moat that protected the town with a "mountain" of earth; this access ramp allowed the attack of the walls, while the archers, stationed on wooden towers, covered the soldiers who were maneuvering the battering ram. The chariots

blocked the access and prevented the approach of any external help. In response to these techniques, deeper moats, advanced walls, and glacis were developed to protect the walls from siege engines.

Moreover, this period is marked by a general development of military strength and a strengthening of the military formation of garrisons which were stationed permanently in numerous towns. The armies, whose size was still increasing, were often heterogeneous: the Babylonian forces included Elamites, Kassites, Chaldeans, Arameans, people from Mari, Hanaeans, and Yaminites. The integration of these contingents often presented a difficult problem for the central authority, notably for the nomad elements who were prone to desert at the slightest opportunity. At Mari, a *sugāgum,* in charge of the relationship between the royal administration and each of its communities, was responsible for the recruitment and the overseeing of units.

These armies included some mercenary troops, but only the sums of money and the gifts received by the high-ranking officers appeared in the "pay rosters"; for the professional soldiers (*rēdûm, bā*ʾ*irum*), the military service obligation was clearly linked to the usufruct of a piece of land, which was granted by the king in exchange for military service (cf. Hammurabi Code, §26–41).

In the first half of the 2d millennium, the assembled strength for large operations could be important: at the time of the siege of Nurrugum, Shamshi-Adad (1814–1782 B.C.) raised 60,000 men.

However, from the 17th century onward, another innovation improved the art of war: the appearance of a new type of war chariot. Light, equipped with two spoked wheels (four, six, or eight spokes), it was capable of quick and decisive maneuvers on the battlefield. In fact, if the horse and chariot were familiar for a long time, it was the Mitannians and the Kassites, great horsebreeders, who gave to the cavalry and chariotry their importance in the army and in society.

Some technical modifications, most often with Kassite names (the circle of the wheel, *allak,* the spoke, *anakandaš/akkandaš,* etc.) improved the chariot: the box was made lighter and placed on two wheels of a larger diameter. The wheels were situated more in the rear in order to lighten the load.

The "aristocracy" of the Mitannian cavalrymen generalized the use of the chariot in Mesopotamia by extending it to this particular form of chase known as "war." The commanders of the chariot squadrons, the *maryannu,* formed an elevated status in Mitannian society, and one finds officers occupying such a position also in the western regions of the Near East, which probably did not include Mitanni but who were influenced by that state.

The men that formed the crew of the chariots (*rākib narkabti*) had at their command a type of stableman (*kizû*); the units, probably of 10 chariots since a "dizainier" (*emantuhlu*) commanded them, were grouped in companies of 50 chariots under the orders of a "commander-of-50" (*rab hanša*).

Even though, at Nuzi and at Alalakh, one knows of some cases where the chariot masters sold their chariot, it seems that the chariotry belonged to the palace. Towns and villages, by way of an obligatory allowance, had to donate chariots, or parts of chariots, that were then collected by the officials and redistributed according to need. In the meantime, the chariots were stocked in warehouses and arsenals with the equipment, labeled as belonging to companies of the right or the left. A senior officer of the royal house (*šākin bīti*) was in charge of all this.

The chariots, whose manufacture called for local raw materials (wool and leather) but also imported materials (wood and bronze), represented an important investment and were an element of prestige and wealth. The period from the 16th to the 9th century B.C. is known as the age of chariotry in all of Mesopotamia.

The perfected chariot was adopted by the Hittites, who also applied the progress made in using horses: a Hittite work, although signed with a Hurrite name (*kikkuli*), reveals the technique of training a team of horses.

At the time of the battle of Kadesh, the Hittite army numbered more than 35,000 men and 3,500 chariots, and the Egyptians came close to being conquered by an outflanking movement by the Hittite chariotry that took them off guard.

The development of chariotry and the number of horses created the acute problem of replenishment of stores. During operations, it became necessary to live off the land: summer, harvesting time, was thus the

season when war was waged, despite the heat, all the more so since the dry terrain avoided the risk of the chariots getting bogged down in mud.

Until the reign of Tiglath-pileser III (744–727 B.C.), the army did not undergo any other important transformations, except perhaps the introduction of an army of slingers. The evolution of tactics, at least in Assyria, was more definite than that of technique. In fact, with Tukulti-Ninurta I (1244–1208 B.C.), the army became the tool of a policy of terror: towns were reduced to ashes, bodies of enemies piled up into heaps, and prisoners were mutilated. The objective of the war was not to annex new territory but to drain the riches and raw materials, and the consequences thereof must have dissuaded eventual resistance. This was the time of great raids across the whole country; thus, for example, Tiglath-pileser I (1115–1077 B.C.) pursued the Ahlamū-Arameans at the front of their chariots over hundreds of kilometers.

At the same time, the role of the warrior was exalted, as the poem of Erra shows. The army was the instrument of the god Ashur, destined to universal domination; warfare ideology thus found a juridical and religious basis.

During the 10th and 9th centuries, the army's strength was still increasing—Shalmaneser (858–824 B.C.) raised 120,000 men in one expedition across Syria—but two characteristics should be emphasized: on one hand, the growing importance of cavalry; on the other hand, a change of tactics. The army abandoned the great raids—(they allowed deep breakthroughs but let the nomads group themselves in the rear)—in favor of adopting a method of harassing the enemy in a defined space in order to assure lasting control of the terrain, even at the price of prolonged sieges.

With the country in submission, the army took part in economic exploitation. Loaded with booty and tribute-money—replenishment of stores, chariots, horses, oxen, precious objects, and cedar beams—it advanced no more than 20 or so miles on its daily marches.

On the other hand, the cavalry continued to grow in importance, still remaining tied to the chariotry with which it fought. The bas-reliefs of the palace of Nimrod show how the cavalrymen (most often barefoot and without a saddle or stirrup) operated in pairs: one held the reins of two mounts, the other fought with a powerful composite bow, wearing the cross-belt on his back, and a long, straight sword at his side. This was the system of modified chariotry; the bronze doors of Balawat illustrate the fundamental role that it played in battles and sieges.

It is with the reforms of Tiglath-pileser III, in the 8th century B.C., that the army of the last Assyrio-Babylonian empire was constituted. The Sargonids indeed continued his policy and his imperialistic aims using the methods by which it was equipped.

This powerful army belonged to a strongly centralized empire, which determined a certain number of its characteristics: the establishment of points of appui; increase in the number of liaison agents assuring the collection and transmission of information as well as the dispatching of orders; the organization of troops into permanent and provincial units. Numerous foreign contingents were integrated and were kept at a distance from their native land in order to break all "national" cohesion.

The strongholds assured in all of Assyria not only the surveillance of the surrounding countryside, the settling of nomadic populations, and exchanges with the natives, but also the collection of tribute money and free passage on main routes. They were the departure points of expeditions and the storehouses and warehouses for the replenishment of arms. There, like elsewhere in the country, these soldiers (*ṣābu*) carried out the service of the king (*dullu ša šarri*) which consisted of military as well as civil tasks for the economic well-being of the country.

These strongholds were connected to the central authority by a complex organization of messengers: ordinary messengers (*mār šipri*), mounted messengers (*rakbu*), emissaries (*kallap šipirti* or *kallû*). These couriers were responsible for a specific portion on the strategic itineraries.

The intelligence service, in which the crowned prince played an important role, was an essential piece of the military formation: the *dayyālu* were specially trained scouts to go and look for information, sometimes far in front of the lines. Trustworthy men (*ša qurbuti*) were in charge of verifying the authenticity of the information and assuring good transmission and coordination of orders.

Chariotry and cavalry remained the shock weapons par excellence but their respective importance changed in favor of cavalry. From now on, chariots together with the infantry played the role of light artillery from which volleys of arrows were shot. There were three men per chariot: the driver, an archer, and a third charioteer (*tašlīšu*), a shield bearer. Under Ashurbanipal a heavier chariot appeared with larger wheels which carried four men.

The "lists of horses," which included the names of superior officers of the cavalry and chariotry, show that there was an appeal to experts and specialized foreign contingents. For the chariots, the Syrian town of Samaria, the only non-Assyrian town whose unit was incorporated with its officers (*rab urâte*) in the royal army without losing its national identity, occupied a privileged position. The extreme skillfulness of its charioteers rested without a doubt on a clear technological advance (already evident under Shalmaneser) and the fact that they were professional soldiers; this professionalism gave the Assyrian king enough confidence to integrate these mercenaries into units composing his own permanent army.

As for the cavalry, it was the Urartians who furnished specialized units to the Assyrian army: their expertise was famous if one believes the account of the 8th campaign of Sargon II. However, they were integrated into the Assyrian army in various units, subordinate to an Assyrian command, perhaps because the absence of the mercenary tradition rendered their loyalty less certain.

This cavalry (*sisû ša pētḫalli*) presented, from the time of Sargon on, contingents who could attain 1,000 cavalrymen; from then on they evolved independently, and a new type of reins allowed their hands to be free to fight.

The important place held by chariotry, and even more so by cavalry, brought about the need for an abundant supply of remounts: some officers had the specific task of assuring the dispatching of horses, which was done more or less by lots, from one or several towns. The horses from the country of Kuš (Nubia), which were equipped with a proper harness, were considered the best for pulling chariots, while those from Mesu (in Iran) were the best for riding.

If a large part of this remount was furnished by tribute money from the eastern countries, one nonnegligible part was bought notably in Egypt and in Mannean country; an active and lucrative trade was led by specialized merchants (*tamkār sisê*).

Hanas (stud farms) were introduced in various places in the empire, especially in Syria and in the Assyrian capitals, Kalhu, Dur-Šarrukin, and Nineveh, whose arsenal (*ekal māšarti*) had been reconstructed on a larger scale in order to "make the horses gallop exhaustively."

As the name of an officer shows ("commander-of-50") and the composition of the cavalry units (approximately 50, 100, 150, 200, 300, and even 500 men) the tactical base unit (*kitullu, pirra*) must have been 50 cavalrymen.

The infantry (*zūku*) constituted the essential part of the army and was particularly efficient in sieges and in operations on the mountainous periphery of Mesopotamia. The populations there most often waged partisan wars which limited the usefulness of chariots.

The footmen included the heavy infantry (spear carriers) and the lighter infantry (slingers and archers). These archers could have been Assyrians but were more often raised by seminomadic populations, notably the S Babylonians, where the men, hunters and shepherds, personally possessed a bow and were skilled in using it.

To that were added the sappers; the *ṣab hupši,* the *kallāpu,* as well as the *kitkittû* who were in charge of destroying the enemy's defenses with spears and axes.

This army was composed of numerous foreign contingents who were often specialized. These contingents could be integrated in the existing units, which was the case of the conquered troops enrolled in the victorious army (for example, 10,000 Syrian archers and shieldbearers, 30,000 archers and 20,000 shieldbearers from Tabal, 30,500 Elamite archers and 30,500 Elamite shieldbearers incorporated by Sennacherib) or they even formed their own units like those levied on certain seminomadic tribes, particularly the Itueans and Gurreans who formed a sort of permanent "foreign legion" often used in military operations or as police throughout the empire.

Without coming back to the specialized Syrian troops in chariotry and those from Urartu for cavalry, it is necessary also to point out the presence in the Assyrian army of Arab contingents, on camels, pictured on the reliefs of the palaces of Tiglath-pileser III and of Ashurbanipal. Sidonians are likewise attested as specializing in the construction of boats. The role of the naval fleet in the army is very rarely mentioned in the Akkadian texts.

If the royal requests for oracles suggest there was a fear of rebellions, the contemporary documents hardly ever state acts of desertion or of disciplinary action; only the semi-nomads appear to have tried to take advantage of their mobility and of their knowledge of the country in order to escape from levies decreed by the central authority.

Whatever branch of the service the soldier belonged to, he was often enriched from pillaging and the gathering of booty, but nevertheless, throughout Mesopotamian history the soldier was locked into a situation that often approached that of a slave, deprived of any juridical status.

The hierarchy clearly distinguished the low-ranking staff (proper and specialized military) and the high-ranking staff, composed of the full ranks whose duties were both civil and military. The military titles were based either (1) on the number of men commanded by them: commander-of-50 (*rab hanšu*), leader-of-1000 (*rab 1 lim*), or (2) on the nature of the troop: *rab kalle,* "leader of dispatchers"; *rab raksu,* "leader of mounted messengers"; *rab kallāpāni,* "leader of sappers"; *rab dayyali,* "leader of scouts"; *rab urâte,* "leader of harnessing"; *rēš narkabti,* "master of the chariot"; *rab mugi ša pethalli,* "cavalry commander"; *rab mugi ša narkabti,* "chariot commander." The *mušarkisu* was in charge of all of the above.

The grades did not have the same importance in the different branches of service. The officers of cavalry and of chariotry were often rich, powerful, and important persons. The guard (*kiṣir šarruti*) constituted an elite army whose captains (*rab kiṣir*) were directly appointed by the king. The Assyrian army made up the provincial army units relieving the officers (*šaknu, bēl pāhati*) and the royal army (in the restricted sense of the term), itself constituted troops directly dependent on the king (*ša qurbuti*) and of troops "of the palace" under the command of the "great eunuch" (*rab ša rēši*).

The staff was composed of the great ones from the empire: from the second half of the 8th century this constituted two "generals-in-chef" (*turtānu*), that "of the right" and that "of the left." The "herald of the palace" (*nāgir ekalli*), the "great butler" (*rab šāqê*), and the "great senior officer" (*abarakku (rabû)*), as well as the other commanding officers, had military responsibilities. The king was the head of the army and actually directed the majority of campaigns; however, sometimes a general acted in his name, according to his orders.

This army, as powerful and well organized as it was, could not prevent the fall of the Assyrian empire (610 B.C.), then that of the Babylonian empire (539 B.C.) at the hands of the Persians. Everything had been centralized in the hands of the king; with the disappearance of the central authority, the army lost all cohesion and effectiveness.

MILK. See ZOOLOGY.

MILL, MILLSTONE. Throughout the ANE the grinding of flour was considered a dull and onerous job, performed by slaves in the larger households, by housewives in the smaller ones (Exod 11:5; Isa 47:2; Job 31:10; Eccl 12:3). Because of the necessity of reducing grain to groats, meal, or flour, however, milling was very much part of domestic life. The scraping sound of grinding stones was as characteristic of a habited home as the light of the lamp (Jer 25:10; cf. Rev 18:22). For most women, grinding was a daily recurring task. To dispossess a family of its hand mill (*rēḥayim*) would amount to taking away its means of sustenance (Deut 24:6; cf. *Ant* 4.8.26). Alongside the small-scale grinding done in the homes of ordinary citizens, there is ample evidence for the existence in the ANE of larger "milling houses," often run by the state. As a rule, working conditions here were bad; most of the employees had come under the pressure of poverty and famine. Because of the semipermanent need for more grinders, the authorities were often led to use prisoners of war as millers. The Mesopotamian "mill house" (*bīt ararri*) did in fact serve as a prison, a usage obliquely referred to in the LXX text of Jer 52:11 (*oikia mylōnos*). Judean prisoners of war in Babylonia ended up in such milling plants (Isa 42:7; Ps 107:10–16; Lam 5:13), experiencing a fate similar to that of Samson (Judg 16:21).

While the most simple way of crushing grain was to pound it in a mortar (cf. Num 11:8), the more efficient hand mill (called *rēḥayim, ṭaḥănâ* [Eccl 12:4] or *ṭĕḥôn* [Lam 5:13]) was widely used in OT times. Although currently used in the handbooks, the term "hand mill" can easily give rise to misleading associations. The *rēḥayim* was in fact a "saddle-quern," consisting of two complementary stone slabs: the *pelaḥ taḥtît,* the slightly concave "nether stone" (Job 41:16), and the smaller, loaf-shaped, upper stone called *(pelaḥ) rekeb* (cf. Akk *narkabum*), "rider (stone)" (LXX *epimylion,* Deut 24:6; Judg 9:53; 2 Sam 11:21). The lower millstone was proverbial for its hardness (Job 41:16); basalt, imported from the Hauran, was a common material, yet limestone was frequently used as well. The upper millstone, made of basalt or sandstone, was quite heavy. Used as a missile, it could prove detrimental to the human skull (Judg 9:53; 2 Sam 11:21). Kneeling in front of the quern, the miller moved the "rider" up and down the lower stone, thus grinding the grain between the two. This characteristic working position, the upper part of the body exercising additional pressure on the upper stone, is represented by a number of Egyptian statuettes. In the later Iron Age the technique was slightly improved by the introduction of two new features. The upper slab was provided with a funnel-shaped hole through which the grain could be poured, and with an edge sufficiently deep to hold a wooden bar by which the stone could be brought into motion. Also places of enforced labor like the one in which Samson spent the last months of his life were equipped with hand mills; we have to picture a room like the one discovered by archaeologists in the Western Palace at Ebla, where sixteen grindstones were found in their original places.

By the Hellenistic period the rotary mill found its way into Palestine. Based on a Gallo-Roman model, it was made of a large convex nether stone (the *ʾisṭrôbil,* from Gk *strobilos,* "pinecone") surmounted by a concave upper stone named *qelet,* a term derived from Gk *kalathos,* "basket." The Babylonian Talmud informs us that an upper class housewife might possibly do the grinding herself with the small hand mill, but that she had her servant girls work with the larger rotary one (*b. Ketub.* 59b). This rotary mill was commonly driven by a donkey or a mule. In rabbinical writings it is therefore called the *rēḥayim šel ḥămôr,* "donkey mill," as opposed to the *rēḥayim šel ʾādām,* "man-operated mill." The NT passages which speak of drowning a man by fastening a *mylos onikos* round his neck and throwing him into the depth of the sea (Matt 18:6; Mark 9:42; Luke 17:2 has *lithos mylikos*; cf. Rev 18:21) refer to the heavy upper stone from the rotary mill.

Contrary to what is often asserted, there is no evidence of the use in biblical times of small rotary hand mills equipped with a peg by which the "rider" was made to turn around a small plug of hardwood fixed in the center of the lower stone. It is true that the Gk term *onos,* "donkey," can refer to the upper grinding slab, and that the Heb word *ḥămôr,* also meaning "donkey," is sometimes used in the Mishna and in later writings as a metaphorical designation of a load carrier, such as the bed-base (e.g., *m. Kelim* 18:3). Yet to conclude from these data that the *rēḥayim šel ḥămôr* was in fact a small rotary hand mill fixed upon an undercarriage is unwarranted speculation. The Jerusalem Talmud refers to the practice of putting a horse to treading the mill (*rêḥayim*), which supposes the presence of animal-driven rotary mills in Palestine (*y. Pesah.* 4.31a). It is, furthermore, not accidental that in the Greek text of the Gospels the millstone is no longer called "donkey" (*onos*) but "donkey-driven" (*mylos onikos*). The archaeological evidence adduced in support of the small rotary mill is based on erroneous interpretation. What modern scholars have considered to be Iron Age milling implements are in fact potter's wheels, as the smooth surfaces of the objects in question show. In order to serve their purpose, grinding stones needed to have a rough surface. The rotary hand mills used by Palestinian Arabs and described by ethnographers of the 19th and 20th century did not come into use until the Middle Ages.

KAREL VAN DER TOORN

MILLENNIUM. Millenarianism is a variant of Jewish and Christian eschatology. The literal meaning of millennium (from Lat *mille*) is a "thousand," but the term is used of the expectation of a span of years which may be more or less than a thousand. This usually follows the destruction of evil and precedes the creation of a new heaven and a new earth and the enjoyment of eternal bliss. In some traditions the Messiah and the faithful reign in this earthly kingdom.

A. The Pseudepigrapha

The concept of this temporary reign is found in Jewish literature although it is not present in the Hebrew Scriptures. It does, however, occur in the Pseudepigrapha. In the Apocalypse of Weeks, *1 En.* 93 intimates the government of "his flock" or "all creation" (B and C) by the elect in the eighth week. No mention is made of the Messiah. *2 En.* 32:3–33:1 has a similar chronology. The eighth day (i.e., the year 8000) begins a time "not reckoned and unending." *2 Bar.* 29–30 describes a time of great earthly fertility for the righteous when the Anointed One is revealed. After this period those who sleep will arise and "the multitudes of the souls will appear together, in one assemblage, of one mind." We may compare *2 Bar.* 39:3–40:4 "he (the Anointed One) will … protect the rest of my people who will be found in the place that I have chosen. And his dominion will last forever until the world of corruption has ended." *4 Ezra* 7:26–31 gives a more detailed picture. The city and the land will appear again, the Messiah and the elect will be revealed, and they will rejoice for 400 years. This passage shows obvious Christian redaction. Then the Messiah and all human beings will die and the earth will go back to its primeval silence. After this the general resurrection and judgment occur.

4 Ezra 7:53–55 (23–26) implies an earthly paradise for the righteous. *4 Ezra* 20:25–27, 38–59 speaks of the restored Jerusalem (cf. 13:36). *Pss.Sol.* 17:26f. expects the Messiah, the gathering together of the people and tribes, the purification of Jerusalem (17:30), and the coming of the nations to bring gifts to Jerusalem (17:31). The *Sibylline Oracles* (5:414–30) anticipates the Messiah, the new city, and the new temple. We may also compare the Jewish-Christian *Apoc. El.* 5:36–39 which mentions a 1000-year reign.

B. Rabbinic Sources

Rabbinic references to the temporal messianic reign are as follows: *Pes.* 68a refers to the Messianic age and states that the "righteous are destined to resurrect the dead." *Ber.* 34b makes a distinction between this world and the days of the Messiah: in the latter there is no subjugation to foreign powers. A similar thought is expressed in *Sanh.* 91b. In *Sanh.* 99a three opinions are cited: "R. Eliezer said: The days of the

Messiah will last forty years … R. Eleazar b. Azariah said: Seventy years … Rabbi said: Three generations … R. Dosa said: Four hundred years … Rabbi said: Three hundred and sixty-five years, even as the days of the solar year … . Abimi the son of R. Abbahu learned: The days of Israel's Messiah shall be seven thousand years … Rab Judah said in Samuel's name: The days of the Messiah shall endure as long as from the Creation until now … R. Nahman b. Isaac said: As long as from Noah's day, which are mine …" For further distinction between the days of the Messiah and the world to come see *Šabb.* 63a; 113b. In *Sanh.* 97a Tanna debe Eliyyahu teaches that the Messianic era will last 2000 years (cf. *ʿAbod. Zar.* 9a). *Sanh.* 97b states that the son of David will come after not less than 85 jubilees, he will come in the last one. R. Hanan b. Tahlifa says after 7000 years and R. Abba the son of Raba (Babylonian Amora) after 5000 years. R. Jahocachua predicted 2000 years; Barakhja and R. Dosa, 600 years; Jose the Galilean 60 years or three generations; R. Akiba 40 years and Rabbi three generations (also 365 years).

C. Christian Idea of the Millennium

The idea of a messianic interregnum was adopted by Christians. In the NT we find an implicit reference to an interregnum in 1 Cor 15:23–28 where Christ will rule until the cosmic powers, including death, have been conquered and then he will hand over the kingdom of God (cf. Col 1:12–13). However, the only explicit reference to a messianic interregnum in the NT occurs in Rev 20:4–6, a text which has often taken on a fascination and extravagant importance for Christians. This pericope comprises the final acts of the mythic drama of the Divine Warrior portrayed in Revelation. It is the establishment of a temporary kingdom on the purified earth which appears to be refertilized by the blood of the slain (Rev 19:12–18). The saints, perhaps only the martyrs, experience "the first resurrection" and reign for a thousand years with the Messiah. Then comes the general resurrection, the judgment, and the creation of a new heaven and a new earth. Christians have traditionally interpreted this text allegorically and see it as a symbolic reference to the "death" and "resurrection" of Christians through baptism. They understand this to be the first resurrection. The thousand year span is the time from the birth of Christ until his parousia. Rev 20:4–6 is also used as one of the key texts which indicate that all baptized Christians share in the sovereignty and priesthood of Christ.

A similar concept of the interregnum occurs in the *Ascen. Is.* 4:1–18. Here Christ with his angelic forces destroys Beliar and his armies and takes them to Gehenna. Then he gives rest to the faithful who survive on earth with the saints who descend from heaven. No definite time span is mentioned. After this interim reign the faithful leave their bodies and ascend to heaven.

D. Patristic Evidence

1. Papias. Our first evidence of patristic belief in the millennium is from Papias as cited by Irenaeus (*Haer.* 5.33.4) and Eusebius (ca. 260–ca. 340 *Hist. Eccl.* 3.39). Papias is an enigmatic but important figure in the history of early Christianity. He was born about 70 C.E. and appears to have written about 125–130 C.E. He was a "hearer" of John, a companion of Polycarp, and later the bishop of Hierapolis. Irenaeus (ca. 130–ca. 200 C.E.) judges Papias to be an important witness to the eschatological tradition of the early Christian communities. Papias seems to have had a fairly representative group of apostolic traditions at hand, from both Palestine and Asia Minor. Irenaeus says that Papias wrote about the millennium in his Fourth Book and described it as a period of prodigious fertility and of profound peace. There will also be harmony among the animals (cf. Isa 40:6) who will no longer be carnivorous. Papias states that this is not to be taken in an allegorical sense, that is, it does not mean merely that the various nations will dwell in the peace of one faith. Our next reference to Papias is Eusebius (*Hist. Eccl.* 3.39), he says: "Among these (things of a fabulous nature) he (Papias) says that there will be a millennium after the resurrection of the dead, when the personal reign of Christ will be established on this earth." The witness of Papias is not to be taken lightly because he intimates that his eschatological tenets came through the "elders" who saw and heard John the disciple of the Lord.

2. Justin Martyr. Justin Martyr (100–165 C.E.), the most significant apologist in the 2d century, also bears witness to the belief in the millennium. The relevant text is found in *Dial.* 80–81. The main features of interest are as follows. Trypho, the Jew with whom he debates, challenges Justin on the purported Christian belief that "this place, Jerusalem, shall be rebuilt; and … your people … gathered together, and

made joyful with Christ and the patriarchs, and the prophets, both the men of our nation, and other proselytes who joined them before your Christ came." Justin assures him that many Christians do hold this belief but other sincere Christians are not of this mind. He adds "but I and others who are right-minded Christians on all points, are assured that there will be a resurrection of the dead, and a thousand years in Jerusalem, which will then be built, adorned, and enlarged, [as] the prophets Ezekiel and Isaiah and others declare." Justin bases his belief on the Hebrew Scriptures and obtains his idea of a thousand, as do Jewish writers, from Ps 90:4 "the day of the Lord being a thousand years" (cf. 2 Pet 3:8). We may summarize Justin's views as follows: the millennial belief is held by many Christians but not by all; the center of the kingdom will be the renewed Jerusalem; people will live lengthy lives; there will be physical begetting; the animals will live at peace with one another and with human beings; there will be a wondrous fertility of the earth.

3. Irenaeus. The next important writer to witness to millennial belief among Christians is Irenaeus (130–ca. 200). He was one of the most important Christian theologians and heresiologists of the 2d century. Irenaeus (*Haer.* 5:32–39) elaborates the millenarian theory which he inherited through Papias and Justin. He inserts his eschatological (apocalyptic) beliefs into his recapitulation theory. He states that, as the world was made in six days, so it will end in 6,000 years. The Antichrist, symbolized by the number 666, will reign for three and a half years and will then be destroyed by Christ and sent into the lake of fire. The righteous, however, will be brought to the times of the kingdom, that is, "the rest, the hallowed seventh day." God's promise to Abraham will be fulfilled and he will receive the promised inheritance of the land (Genesis 15). Irenaeus supports this tenet from Matt 8:11 "many from the east and the west shall sit down with Abraham and Isaac and Jacob."

The last part of the text under discussion (*Haer.* 5:37–39) is not found in all manuscripts and may have been precluded because of Irenaeus' millenarian belief. (However, some fragments of the Syriac and Armenian versions were found in the early part of this century.) Irenaeus conceives of an earthly kingdom as the beginning of incorruption "by means of which kingdom those who shall be worthy are accustomed gradually to partake of the divine nature (*capere Deum*)." The righteous receive the land which was promised to Abraham and reign in it. Irenaeus argues that Abraham and his seed will receive the promised land at the resurrection of the just because God's promise cannot fail and he did not inherit the land during his earthly life (cf. Acts 7:5). The just will comprise both Jews and Gentiles. He also asserts that Christ referred to the millennium (earthly kingdom) when he said that he would not drink of the fruit of the vine until he drank it anew in the kingdom of the Father (Matt 26:29).

4. The Montanists. The millennial belief was received enthusiastically by the Montanists (ca. 156–200 or later), but they expected the heavenly Jerusalem to descend at Pepuza in Phrygia, not Jerusalem (Epiph. *Anac.* 48:1). From Phrygia, Montanism spread to Africa, Gaul, and Rome.

5. Tertullian. Tertullian (ca. 160–ca. 220), the foremost Western theologian, championed both the cause of millenarianism and the Montanists. In *Adv. Marc.* 3:24–25, he states that the Jews will be restored to Palestine and that the city of Jerusalem will come down from heaven. The faithful will reign for 1,000 years. He adds that in one city in Asia Minor, the new Jerusalem had been seen hovering in the sky for 40 days. Tertullian repudiates an allegorical interpretation of these things (*Adv. Marc.* 4:31).

6. Commodianus. Commodianus (3d century or later) followed the schema of 7,000 years (*Carmen* 791–96). He adopted chiliastic views and expected marriage, the begetting of children, a clement climate, universal peace, and the return of the ten tribes.

7. Victorinus of Pettau. Victorinus of Pettau (d. ca. 304), author of the oldest extant Latin commentary on the Apocalypse, takes a more modest approach but keeps quite close to a literal interpretation of Rev 20:4–6 except that he sees the millennium as the fulfillment of God's promise to Abraham. Jerome (342–420 C.E.) thoroughly redacted this commentary of Victorinus and interpreted the millennium allegorically.

8. Lactantius. A more fervent adherent to the chiliastic approach is later found in Lactantius (ca. 240–ca. 320). He draws upon the *Sibylline Oracles* and describes the righteous as begetting children and being served by the heathen (Div. Inst. 7:24). He states that the cosmic bodies will be radiant and the earth

prodigiously fertile. Among other sources Lactantius was influenced by the *Fourth Eclogue* of Vergil (70–19 B.C.E.).

The millennial belief in the early church was a tradition that was both vigorous and persistent and one which obtains in many persuasions today. Many Christians who opposed the belief accused Christian millenarianists of "Judaizing." Millenarianism was entertained by the *docti (-ae)* and the *indocti (-ae)* alike. It was the subject of serious debate in the major centers of Christian theology in Rome, Alexandria, Asia Minor, and perhaps Gaul.

The Gnostic, Cerinthus (ca. 100 C.E.), as reported by Eusebius (*Hist. Eccl.* 3.28) taught not only millenarianism but a crass chiliasm. During the thousand years people would dine sumptuously and celebrate nuptial joys.

Nepos of Arsinoe (cited by Eusebius, *Hist. Eccl.* 7.24) espoused a millenarianial theology characterized by a crude chiliasm. Apollinaris of Laodicea (ca. 310–ca. 390 C.E.) also taught a millennial theology but we only know this from Epiphanius (ca. 315–403) who said that the faithful would have the same bodies as they have now and they would keep the OT law, including circumcision (*Panarion* 77:36–38). According to Basil (ca. 330–79 C.E.), Apollinaris' views were more mythical but he did expect the observance of the Sabbath, circumcision, and the dietary laws (*Ep.* 263:4).

Similar ideas appear in Methodius of Olympus (d. ca. 311 C.E.). He scorned the Jewish interpretation of the Feast of Tabernacles. Combining a biblical realism with allegorization, he understood it as a type of the resurrection and the setting up of the tabernacle in the 7,000th year in the new creation. He speaks about celebrating with Christ "the millennium of rest" and that after the thousand years the body will be changed "from a human and corruptible form into angelic size and beauty" (*Symp.* 9:5).

The early theology of Augustine of Hippo (354–430) also shows millenarian tendencies but his later eschatology is influenced by Tyconius and he abandons millenarianism (*De civ. D.* 20:6–7).

E. Opponents of Millenarianism

Origen (ca. 185–ca. 254) made the first attempt to discredit a millennial interpretation of Rev 20:4–6 and replaced it with a spiritual interpretation by applying it instead to the spiritual growth of the soul which begins in this life and continues in the next. Tyconius, the Donatist theologian (d. ca. 400) taught that the thousand years of Rev 20:4–6 refer to the present age and to those who are reborn through baptism: the physical resurrection is in the future. The millennial rule of Christ extends from his passion to his second coming. It was Tyconius who influenced Augustine to move from his millennial position to a spiritualization of the thousand years (*De civ. D.* 20:7; cf. Maiers 1981, 108ff.; 130; 161ff.; 174ff. and 294ff.). In his later teachings on eschatology, Augustine spiritualized the millennium which he taught began with the incarnation of Christ and was fully realized in the earthly church.

The millennial hope lived on in some of the Protestant reformers, e.g., the Anabaptists of the 16th century. It obtains today in various forms among the Mormons, the Seventh Day Adventists, and the Jehovah Witnesses.

It is especially noteworthy that Christopher Columbus and other pioneers in the New World were influenced by Joachism, a development of the ideas of the "millennium" as taught by Joachim of Fiore (1135–1202). Adherents to this eschatological tradition anticipated a new age which would be ushered in by spiritual persons, thus supplying a powerful incentive to colonize the New World. Many identified these with the Franciscans and the Dominicans in their work in Latin America: they saw the New World as the new earthly Paradise.

MILLO (PLACE) [Heb *millô*ʿ (מִלּוֹא)]. An unspecified place associated with the City of David. It is mentioned in this connection in six OT passages (2 Sam 5:9; 1 Kgs 9:15, 24; 11:27; 1 Chr 11:8; 2 Chr 32:5), and once (spelled defectively) in the construction *bêt millōʿ* "house of Millo" (2 Kgs 12:20 [RSV]; cf. LXX [v 21] *oikou Mallō* "house of Mallo"). The word *millôʿ* is frequently analyzed as a noun associated with the Heb verb *mālēʾ* "to be full." The Millo at the City of David has been interpreted as referring to the filling of a breach in a wall, the filling of a space in the Tyropoeon Valley between the western and eastern ridges, the filling of a gap between the City of David and the temple mound, a filled stone tower, or the rebuilding of (damaged) supporting terraces. The archaeological evidence uncovered in recent years at the City of David points to the meaning "repair of supporting terraces" along the precipitous steep eastern ridge of the City of David.

After conquering the city from the Jebusites, David would have needed to repair these terraces to support his residence and other structures built on them (2 Sam 5:9; 1 Chr 11:8). Later Solomon has to rebuild these terraces again (1 Kgs 9:15, 24; 11:27); another interpretation suggests that in 1 Kgs 9:24 the text means that Solomon filled up the gap between the City of David and the temple platform where the king may have built a palace for his wife, Pharaoh's daughter. Still later Hezekiah again repaired these City of David terraces, at least on the eastern slope if not elsewhere in the city (2 Chr 32:5).

The etymological explanation of Millo is not entirely secure. It is not reflected in LXX's rendering *akra* "citadel." An Egyptian etymology has also been proposed. See BETH-MILLO. It is possible that during the divided monarchy the term Millo was replaced by the term Ophel (from a Heb word meaning "to rise"), signifying a raised fortress or citadel such as the Ophel at Jerusalem (2 Chr 27:3; 3:14), and the ones at Samaria and at Dibon (Mare 1987: 65–66; Mazar 1975: 173). See OPHEL.

The phrase *bêt millōʿ* (2 Kgs 12:20) recalls the similar (but differently spelled) expression referring to a stronghold called Beth-millo, located near Shechem (Judg 9:6, 20 [2x]; 2 Kgs 12:20).

MINAEAN LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

MINAH [Heb *māneh* (מָנֶה)]. See COINAGE; WEIGHTS AND MEASURES.

MINIAMIN (PERSON) [Heb *minyāmîn* (מִנְיָמִין)]. 1. The eponymous ancestor of a priestly family at the time of the high priest Joiakim (Neh 12:17).

2. A priest present at the dedication of the Jerusalem wall (Neh 12:41).

3. An assistant to Kore, the overseer of freewill offerings for the temple, in the time of Hezekiah (2 Chr 31:15). Miniamin was one of those who distributed portions in the priestly cities. The LXX, Vg and the Syr have Benjamin (Heb *binyāmîn*) here.

Only the assimilation of the *n* distinguishes Miniamin from Heb *mîyāmîn*, which the RSV renders Miamin (Ezra 10:25; Neh 12:5) and Mijamin (1 Chr 24:9; Neh 10:8). While the literal meaning of the name ("from the right") is clear, there has been dispute over the significance of the name. KB suggests that it may be related in meaning to Benjamin, hence denoting "southern." Noth (*IPN*) suggests that the name denotes "lucky person." The name is also attested in cuneiform business documents dated in the reigns of the Persian emperors Artaxerxes I and Darius II.

MINISTRY IN THE EARLY CHURCH. When discussing the early Christian understanding of ministry, one must be prepared to distinguish the extent to which the NT conceives of ministry in terms of

particular functions performed by titled persons associated with institutionalized offices and exercising some formal authority, and the extent to which it conceives of ministry in the more nonofficial terms of general service performed by any Christian believer.

———

A. Terms for "Ministry"

In the time of the NT writers there were four possible Greek terms for " (official) ministry": (1) *telos:* "office" or "free service," as rendered by a citizen, emphasizing its perfect fulfillment; (2) *timē:* "office," sometimes generally "task," stressing the dignity that is combined with its practice; (3) *archē:* "office" or "magistracy" in its character of leadership, of leading those who will follow; and (4) *leitourgia:* "public service," performed by citizens at their own expense to the community or to the gods (e.g., organizing and financing a temple festival; and the "ministry" of the priests in the LXX).

With the exception of *telos,* these words appear also in the NT in the sense of "official ministry." As such, however, they describe only the ministry either of Jewish priests (*timē*; Heb 5:4, cf. 3:3 of Moses; *leitourgia;* Luke 1:23; Heb 8:6), of pagan civil officers (*timē*; cf. Rom 13:7; *archē;* Luke 12:11; 20:20; Tit 3:1; *leitourgia;* cf. Rom 13:6), of (good or bad) angels (*archē;* Rom 8:38; 1 Cor 15:24; Eph 1:21; 3:10; 6:12; Col 1:16; 2:10, 15; Jude 6; *leitourgia;* cf. Heb 1:7), or, finally, of Jesus himself (*timē;* cf. Heb 3:3; *archē;* cf. Col 2:10; *leitourgia;* cf. Heb 8:2; 10:11–12). Similarly, the terms *hierateia* ("priesthood") or *hierateuein* ("to serve as a priest") are used of Jewish priests (Luke 1:9; Heb 7:5), while *(arc)hiereus,* ("high)priest," is used of Jewish or pagan priests (Acts 14:13) and of Jesus himself (Heb 2:17; 5:6 etc.), and *hierateuma* ("body of priests") is used of the Church as a whole (1 Pet 2:5, 9).

In Rom 15:16, Paul speaks of himself as a "minister (*leitourgos*) of Christ, who performs a priestly service (*hierourgein*) to the gospel" by bringing all nations as an offering to God, as Isa 66:20 has foretold. Here Paul may also have been influenced by the prophecy of Isa 61:6 that, in the time of fulfillment, all Israelites will become the "ministers" (*leitourgoi,* the only place in which this term and all its derivatives appear in Isaiah). Otherwise, none of the words listed above distinguishing an "official" ministry from a service freely rendered by any citizen or member of a religious group are ever used in the NT for the ministry of one or several believers (as distinguished from the whole body). In Acts 13:2 the subject of *leitourgein* is, probably, "prophets and teachers," however, what they are doing is certainly not different from what all members of the Church are doing time and again; in Phil 2:17, 25, 30 *leitourgia (leitourgos)* designates charitable help.

This is significant due to the fact that this particular usage is characteristic of all the different NT writers and that it cannot be attributed to any literary interdependencies. It does not say that there were no ministries of single persons or of groups of persons within the church; rather it indicates that the NT writers consistently refused to make any distinction between an official ministry of a selected person or group and that of any believer. Despite the fact that the Greek-speaking world offered to the early Church

a rather rich vocabulary for the notion of "ministry," most NT writers instead utilized a comparatively rare Greek word that hardly ever appears in the LXX: *diakonia,* "service" (especially of a place at table). Even the personal form of *diakonos* ("servant, slave, waiter") is to be found only in Esther (1:10; 2:2; 6:1–5), in an additional verse in Prov 10:4 (not found in the MT), and once in the very late book of *4 Maccabees* (9:17). Thus, strangely enough, a secular term is used to describe any ministry in the Church, be it a special one or one done by all the members.

This spontaneous usage in all the different layers of NT literature shows what an impression the challenge of Jesus' way of life and teaching made on all his followers. The total (eschatological) newness of a service without institutional hierarchies or resort to force was so striking that it became impossible to speak of the honor or the exemplary model of an "official" ministry apart from that of any other person in the church. Wherever somebody was serving Christ, it was exactly what a slave would do for his lord, i.e., a simple, worldly service, not a domination of others.

B. Jesus' Ministry as Model

Jesus held no official title or responsibility. He was neither an elder nor a member of the central council; neither a scribe nor a priest. When people called him "rabbi," it meant nothing more than "sir"; we never hear of any rabbinic sage who taught Jesus, or of Jesus' adherence to any rabbinic school. His parables were totally different from those of the rabbis, not illustrating some ethical or dogmatic statement, but self-contained stories, in the telling of which the kingdom of God became reality for the hearer. He was not even a teacher in the strict sense of the word. There was neither theology, nor christology, nor pneumatology one could learn from him and transmit to others; yet theology, and christology, and pneumatology came to life implicitly in his whole ministry, in his healing, in his fellowship with tax collectors, and in his parables and ethical commandments.

In contrast to the Jewish student who asks a rabbi for permission to follow (and study with) him, Jesus called his own followers. When someone would ask to follow him, he was either sent back (Mark 5:19) or the affiliation proved unsuccessful. Jesus' authority apparently was such that, with the exception of the rich ruler (who, primarily approached Jesus on his own initiative!, Mark 10:17–22), it never failed to inspire a following (see Luke 9:59 = Matt 8:21). Jesus did not even ask his future disciples whether they could read, for he did not intend to introduce them to a rabbinic course in exegesis, but into his own communion with God. Though a call of women into discipleship is not reported, it is clear that women followed him (Luke 8:1–3; Mark 15:41). "Serving" seems to be their specific form of discipleship (Mark 1:31; 15:41; Luke 8:3; John 12:2), and in so doing they perform the ministry of the angels (Mark 1:13) and of Jesus himself (Mark 10:45; Luke 22:27; 12:37, cf. John 13:1–11), the ministry that the male disciples should have performed (Mark 10:43–44; Luke 22:26, cf. John 12:26; 13:12–17).

Jesus likely called a group of twelve disciples to participate in his whole ministry. It is true that 1 Cor 15:5 speaks of "the Twelve," not of the "eleven." This, however, was a fixed phrase and does not prove its origin in an appearance of the Risen Lord to a group that had not existed previously. Thus, the historicity of the twelve disciples around Jesus is very probable, since it is difficult to imagine that the experience of a post-Easter group would be projected back into the earthly life of Jesus in such a way that one name was substituted by that of Judas Iscariot. There is, with the exception of a Qumranian body of fifteen (consisting of three priests and twelve laymen; 1QS 8:1), no evidence of a Jewish office of twelve persons apart from that of the twelve tribal princes and/or chief priests (see also 1QM 2:1–3; 11QTemple 57:11–15; 4QOrd 2:4; 3:4). This means that the twelve disciples of Jesus represented the twelve tribes and manifested Jesus' desire to call back to God the whole people of Israel, not merely a penitent part of it. Hence, their role was regarded as an eschatological one (Matt 19:28; Luke 22:30; cf. Rev 21:12, 14), not an office in an earthly institution. Whether Jesus ever considered what their function might be among his followers after his death is disputed. The Last Supper was, at least, directed towards some kind of continuation, and few doubt that Peter indeed received some kind of a specific commission (Mark 16:7; Luke 22:32; John 21:15–18), though not in the form of Matt 16:18–19 (see D below).

Before the mission of the Twelve (Mark 6:7–13) or the seventy [two] (Luke 10:1–12) Jesus bestowed upon them the authority of both proclaiming the kingdom of God and healing/exorcising. This double

authority is typical of all apostolic authority, whether reported by Mark (6:12–13), Matthew (10:8), Luke (10:9), John (14:12; 15:27), Paul (Rom 15:18–19), or in Acts (2:42–43). It is the power of his words and deeds that makes the authority of an apostle manifest.

C. Ministry in the Early Church

Jesus' impact on the early Church was considerable. Some followed his example literally as itinerant prophets (*Did.* 11:8), giving up their permanent domicile, probably also family (*Did.* 11:11?) and possessions (Matt 23:34; 10:41).

Also in the more or less institutionalized parish the newness of its life, inaugurated by Jesus, was manifested. Its real center, however, was not something like a temple cult or a synagogue service, but a meal. The scriptures were no longer interpreted by the trained scribe, who knew all the parallels, but simply by reading them in the light of what had happened in the life, death, and resurrection of Jesus. The old rule of a minimum of ten persons for a prayer service no longer obtained, since wherever two or three were gathered in his name, he would be present (Matt 18:20). This did not exclude a kind of leadership of the Twelve (1 Cor 15:5; for Luke these were identical with the apostles; Acts 1:26; 2:42; 6:2). Historically, we are not sure what their function really was. Clearly some functional leadership was exercised by the three "pillars" (Gal 2:9), Peter, John, and James (a former unbeliever). This shows both God's faithfulness to his previous call during the earthly ministry of Jesus and his freedom to choose new vessels of his gifts (which becomes even more striking in the subsequent call of Paul). The Spirit, of course, could lead former Pharisees (Paul), scribes (Matt 13:52), or priests (Acts 6:7) into the new fellowship, provided that this did not lead to a new hierarchy of trained or ordained officers over against laypersons (Matt 23:8–10; Mark 10:43–44). Consequently, there were no specifically "holy" persons or places; all church members were holy and all the earth was the Lord's (Acts 9:13, 32, 41; 1 Cor 10:26).

"The seven" were chosen "to serve tables" (Acts 6:2). However, one of them was also preaching and doing wonders (6:8, 10), while another was an evangelist (21:8; 8:5, 35, 40). Since, according to Acts 8:1, the persecution following Stephen's martyrdom spared the apostles, it seems that it targeted only the party of the Hellenists within the Jerusalem church and that the seven were its leaders (perhaps already within the social-welfare system of the Jewish synagogue prior to the split between Christian and non-Christian Jews; Walter 1983). If Stephen and Philip are typical examples, the Hellenists were a group under charismatic leadership and were clearly distinguished from the leadership under the Twelve.

Paul was called to his ministry by the risen Christ himself. Since this happened after the ascension, he was, in the strict understanding of Luke, not an apostle (Acts 1:21–22). He belonged to the "prophets and teachers" in Antioch, i.e., to the preachers of the local church. He, together with Barnabas, was called "apostle" in the sense of "missionary" (Acts 14:4, 14), probably in traditional Antiochean language. No apostle ordained or installed him to this service (13:1–3).

In Acts 15:6 and 21:18 we suddenly read of "elders" (or "presbyters"), apparently led by James. He appears unexpectedly in 12:17, singled out from the Church as a whole (cf. also 15:13). This fits into the picture of Gal 2:9, where he is mentioned first among the three "pillars," before Peter (see also 1:18–19). All this suggests that he succeeded Peter as the central leadership figure after Peter's imprisonment and departure from Jerusalem. We are never told how and when elders were introduced. It might have been assumed that the Church would simply adopt the familiar order of the Jewish synagogue as long as it still considered itself part of such a group. Acts 14:23 states that Paul appointed elders in Asia Minor. Historically, this may be questioned, since Paul never mentions elders in his undisputed letters (nor in those to the Colossians or Ephesians). According to Acts 20:28 they should rather be "overseers" (*episkopoi*) of the Church. While later this word would become an official title ("bishops"), here it still indicates function (and "elder" remains the name of the office).

James 5:14; 1 Pet 5:1, 5 and the Pastoral Epistles are witnesses of this order, though it is not always clear where "elder" means an (official) minister and where it simply refers to an older man (1 Tim 5:1–2; 1 Pet 5:5) or even one of the first generation of the Church, who had seen one or several of the original apostles (thus, probably, the author of 2 and 3 John, and Papias [Eus. *Hist. Eccl.* 3.39.4]). Doubtless, there were men "of repute" in the church of Jerusalem (Gal 2:2), and Paul acknowledges their authority (which

he believed was equivalent to his own). These included James the brother of Jesus; Peter, and John; and in a wider sense "all the apostles," who seem to be a larger group than the Twelve (1 Cor 15:5, 7, cf. 5:6). But since Paul is silent on this point we do not know how early elders became officers in this church and what their status and rights actually were.

D. Ministry in Matthew's Gospel

Most NT scholars believe that the author of the gospel of Matthew lived within a Jewish-Christian Judaism, and that his intended audience was a group of Jewish Christians living in Syria, and especially in Antioch and its surroundings. Matthew's understanding of ministry therefore must be viewed in that light.

Only Matthew reports Jesus' admonition that his disciples should never let themselves be called "rabbi," "father," or "master" (23:8–10). This indicates both the presences of teachers within the Church, and the concern not to elevate them above others, since all of them are but "servants" (v 11) of one another. The task of the rabbi "to bind" and "to loose" is given explicitly to Peter, though these verses (16:17–19) are almost certainly not authentic word of Jesus; otherwise the mere warning to the disciples and Peter in Mark 8:30–33 would be unimaginable. A Semitic background is not to be doubted, however. The words may mirror the situation of an early stage of a Jewish-Christian church, for which the Jesus tradition handed down by Peter was of crucial importance. It might even be that 1 Cor 3:11 already corrects such a claim by a Petrine church. It is also in the gospel of Matthew that we read about a similar authority being given to every member of the Church (18:18 and 19), and it is very difficult to decide which saying is older. In the context of Judaism "binding" and "loosing" means to declare which commandment is still binding and which is not, and by so declaring to bind or release a person from guilt. (For instance, the ban on any work on a sabbath does not bind the priest who has to bring offerings; thus he is released from any guilt when doing his prescribed work.) Basically this has been done for the whole Church in the teaching of Peter, and is going on continually, on this basis, in detailed decisions of the Church. In practice, they will be given by ecclesiastical scribes (13:52). It is possible that 16:19 emphasizes more ethical decisions, while 18:18 focuses on declarations of guilt or forgiveness, but the distinction is questionable since the same verbs are used in both passages.

This "teaching to observe all that I have commanded you" (28:20) is so important because this "last commission" of Jesus is associated with the sending of the disciples to all the nations. Thus, teaching and observing is expected first from the Twelve (especially from Peter) and then from all believers. The tension between the Mosaic law (still valid) and the mission to the gentiles (who are now accepted into the Church) is resolved by Matthew in the highest commandment to love God and one's neighbor. This is the "constitution" of the Church, which defines all the single commandments. This "golden rule" also forms the inclusion of the main body of the Sermon on the Mount in 5:17 and 7:12; it is added by Matthew in 19:19 (and, in its OT wording, in 9:13; 12:7) and emphasized specifically in 22:39–40.

The warning against pseudo-prophets (7:15–23) proves that there were also faithful prophets working in the Church in Matthew's day. It is not their prophecies, exorcisms, and mighty deeds that go wrong, but their "lawlessness," which leads to their neglect of love (24:11–12). The existence of prophets in Matthew's church is buttressed by the promise of Jesus to send prophets (and wise men and scribes, 23:34). Matthew 10:41 suggests that they are rather itinerant prophets. The most astonishing fact is the total lack of any reference to elders or to any fixed ecclesiastical organization. The sinner, in danger of getting lost, is to be dealt with by any member of the Church as a whole, not by some leading authority (18:10–20). The ministry is seen in its OT and Jewish context as that of prophets (perhaps already receding into the background) and rabbis or scribes (responsible both for ethical decisions and for the interpretation of the scriptures in the new light of Jesus Christ). But none of them held an institutional office or rendered a service that could not be rendered by any other gifted member. Therefore, the Church is ruled by love, which does not allow a minister to be exalted over non-ministers on the basis of their respective functions, since all of them are but servants.

E. Ministry According to Paul

1. Spiritual Gifts and Ministry. The freedom of God is manifested in the call of Paul (an early persecutor of the Church who had never been a disciple of the earthly Jesus) to be his decisive witness

before all nations. Though Luke (on the basis of Acts 1:21–22) might not include him among the apostles, Paul himself saw the "apostle" as the witness whom the risen Christ had installed for the proclamation of the gospel, and he insisted that his apostleship was equal to that of the Twelve and any apostles called before him (1 Cor 9:1; 15:5–8). Neither he nor Acts tell of any formal authority held by the originally chosen apostles, and even Gal 1:11–17 excludes such. (Paul did not even meet Peter and James until three years after his call (Gal 1:18–19).

There were certainly leaders in the churches founded by Paul ("those who are over you," or "who care for you," 1 Thess 5:12), as well as "first converts" who "devoted themselves to the service of the saints" and should, therefore, "be given recognition" (1 Cor 16:15, 18). Phil 1:1 mentions "overseers and servants," using the same terms that later designate "bishops and deacons," but apparently these are used here to qualify their functions, not as titles. No installation or legitimation either by the apostle or by the Church is mentioned; they have dedicated themselves to serving the Church. Rom 12:8 considers "those who are over (you)" to possess a special gift of the Spirit, in the same way as others may be prophets, or teachers, or healers. This shows that the Spirit is not opposing, but rather creating legal order. Being an overseer (bishop) or servant (deacon) is due to one gift among many, not qualitatively different from other gifts.

In 1 Cor 12:28, Paul initially enumerates persons ("first apostles, second prophets, third teachers"), followed by other gifts, to which he refers impersonally: "then miracles, healing charisms, helping, administration, various kinds of tongues" (RSV personalizes all of them). But in Rom 12:6–8 this is reversed; personal terms are used for "teachers, exhortors, contributors, helpers, and merciful people," whereas "prophecy" and "deacony" are spoken of impersonally. Thus, apostles, prophets and teachers are, as a rule, certainly of first importance in the Church, and Paul naturally thinks of them first. They belong to the "higher gifts" of 1 Cor 12:31, in other words, to those gifts that are normally needed most urgently. Yet, this does not lead to any fixed hierarchy which would distinguish members of a special quality (officers or priests) from other members without it, and it may be that in another situation different gifts would become preeminent.

Nor does Paul qualify male ministers differently from female ones. In Christ, "there is neither male nor female" (Gal 3:28), and this basic truth should manifest itself in the order of the Church, if only she covers her head, as it was customary in Paul's time (1 Cor 11:5–6, 13). The passage 14:34–35 prohibiting any speaking by a woman in the church service must, therefore, be a very early—but non-Pauline—marginal remark. While it is found in all manuscripts, it is variously placed either after v 33 or after v 40. This suggests that subsequent copyists inserted a marginal note, some at the place where it started (after v 33), others where it ended (after v 40). It may have been first written under the influence of 1 Tim 2:11–12 (cf. below). According to Rom 16:7, there was even a woman among the apostles (see TEV; RSV translates "men of note"): "Junia" is a well-known female name, whereas there is no evidence whatsoever for a male name "Junias" (since the name appears in the genitive case, both forms are equally possible). This woman might have been the wife of Andronicus (Brooten). In a similar way Phil 4:2–3 speaks of two women that are co-workers of Paul "in the gospel" (meaning "in the proclamation of the gospel"). It is uncertain whether Paul would have regarded them as "apostles" (in the full sense of the word, not in the sense of "messengers of the churches" as in 2 Cor 9:23) although such is possible.

There is only one standard for evaluating the gifts of the Spirit: "love" (1 Corinthians 13), which expresses itself "for the common good" (1 Cor 12:7) in "building up the church" (14:3, 5) and, thus, actually proclaiming "Jesus as lord," not just one's own ideas (12:3). Love demands a way of speaking to which the Church as a whole or even an outsider is able to respond (14:16, 23–25). 1 Corinthians 14:29 is, unfortunately, ambiguous so that it does not become clear whether those who "weigh what is said" by the prophets are, in Paul's understanding, all the church members or just other prophets. For pragmatic reasons, some gifts must be known to and recognized by the Church. For example, people must know the "administrator" to arrange for a meeting place, but it is not necessary to know who exercises the gift of intercession for the Church, even though this ministry may be much more important than administration. Such a service recognized by the Church, in a more or less formal way, may be called an "office." This

would not give it a different or special character, but would simply indicate that it has (for practical purposes) been given a recognized place within the order of the (local) parish.

2. The Apostle. For Paul, only apostleship is unique because the apostle is the witness of the risen Christ, the one foundation of the Church (1 Cor 3:11). That the apostle has seen him in a way clearly distinguished from all later experiences in visions and auditions (2 Cor 11:16–17; 12:1–4) makes his ministry unique (Gal 1:12; 1 Cor 9:1; 15:8). See also APOSTLE. The apostle is certainly more than an eyewitness to an event that happened at a certain point of history. He also conveys salvation to his hearers. This is done by the authority of his proclamation of the gospel. Even though the gospel of the crucified and risen Christ can be expressed in a credal formula which Paul "has received (from the church tradition in Jerusalem or Antioch) and handed down" to the Corinthians (1 Cor 15:1–5), the authority of Paul's preaching is not derived from that of other apostles (Gal 1:11–12); he could legitimately oppose Peter just as he could the "superlative apostles" in Corinth (Gal 2:11–20; 2 Cor 12:11–12).

The pivotal question for the Church is whether this ministry of the apostle (certainly set apart from others by Christ himself) was to be continued after the death of all the early apostles and, if so, in what way. In the authentic letters of Paul we see only that he often sent fellow workers to churches that he himself was unable to visit. Occasionally, he pointed to the fact that they were "appointed" (not by himself, though, but by the churches; (2 Cor 8:19, 23). No special rite of installation is mentioned; Paul seems to be referring either to an informal recognition of his messengers by the churches or to their decision to send some of their members to him. Without any doubt, his proclamation of the gospel must go on. Thus, there are some services without which the Church cannot live, whereas others (like speaking in tongues, mentioned in 1 Cor 12:10, 28–30; (also 1 Thess 5:19?; but not in Romans 12) may not be found in all the churches. One might include in the lists of indispensable services the administration of baptism and eucharist, though the apostles did not usually baptize (1 Cor 1:14–17, cf. Acts 10:48; 2:41–42; 19:5–6, etc.) and Paul never mentioned anyone presiding over the eucharist (instead, he addressed himself to the whole church when speaking of it; (1 Cor 10:15–17; 11:23–34). Thus, preaching the word, baptizing, and gathering for the eucharist must continue, and a church cannot be "Christian" without being responsible for these; but Paul seems unconcerned whether these are to be administered by persons specifically appointed or by any member appointed time and again by the Spirit.

F. Ministry in the Pastoral Epistles

1. Elders, Bishops, and Apostles. The Pastoral Epistles certainly presuppose "elders" and "deacons" in the churches they address (1 Tim 3:8–13; 4:14; 5:17–19; Tit 1:5). The term "the women" in 1 Tim 3:11 refers either to the wives of the deacons (but why would they not be mentioned in vv 1–7 with regard to the "bishop"?) or perhaps to deaconesses. Pivotal is the relation of the "bishop" (1 Tim 3:1–2; Tit 1:7, both times in the singular) to the "elders." Is there one bishop, chosen out of and presiding over the group of elders as described in the letters of Ignatius? Or are there, in each local church, several bishops, identical with the "elders who rule well" (as opposed to other elders who do not rule; 1 Tim 5:17; though this phrase may also simply mean that some are excelling in the task of ruling common to all elders)? However, the transition in Tit 1:5–6 is abrupt without any hint that a new ministry should be introduced, and what that text demands of elders, 1 Tim 3:2, 5 similarly demands of the bishop. "Bishop" here still seems to be a term qualifying the function of a person whose official title is "elder," as in Acts 20:28. That means that the singular is generic and due to traditional exhortations or ways of speaking, as we might say: "Appoint good ministers in your church, for the servant of the lord must be …" Strikingly different from Paul is the fact that here there is no place for female elders or bishops (1 Tim 2:11–15). However, the ministry of intercession by "enrolled" widows (1 Tim 5:5, 9) is taken seriously.

No name or title is given to the ministry of the addressees, Timothy and Titus, yet it is clear that they were formally installed by the laying on of the hands of the apostle (2 Tim 1:6) and/or the elders (1 Tim 4:14). Were these persons considered successors of the apostle and, if so, in what way? They were appointed to a local church (Ephesus and Crete, where several towns with churches existed), and it seems that Timothy was called back to the apostle either permanently or for a longer period, whereas Tychicus was sent to Ephesus (2 Tim 4:9–12, 21). Succession to the ministry of the dying Paul may be the issue

implicitly dealt with in 2 Timothy, even though this is not explicitly mentioned. The text does not offer any doctrine of apostolic succession, though it would soon prompt a long development in this direction.

2. Ordination. Unfortunately, we know very little about Jewish ordination. Rabbinic ordination seems to have been practiced at least by the time of the Pastorals epistles (beginning of the 2d century?), in accordance with Num 27:18–23. Some late rabbinic sources (*Sipre* Num., Tanchuma: Str.B 2: 648) imply that the Spirit is transferred to the ordinand, but earlier rabbinic ordination seems simply to have recognized the wisdom acquired through disciplined study. We do not know in what way such studies were a binding condition (prescribed length of time, exams) nor how early ordination authorized a person to make autonomous decisions in legal matters. It is clear, however, that the central role of the "charisma" in 1 Tim 4:14 and 2 Tim 1:6 definitely differs from what we know of Jewish ordinations, the more so since it is given "by prophecy" or "because of prophecies." The charismatic element still played a considerable role, and it was the free utterance of the Spirit that enabled the church to ordain a person to a special ministry.

What the Pastorals suggest as a good "apostolic" order is, indeed, ordination, conveying the gift of the Spirit to Timothy (not merely an installation to a specific ministry, locally and temporally limited). It is focused on a leading position within a local church (Ephesus) or a region like Crete, where Titus should "appoint elders in every town" (Tit 1:5; cf. 2 Tim 2:2). Thus, this position seems to be superior to that of a bishop or elder (see H below). There is no doubt that this is the model that will become historically fruitful for the development of the institutional church.

G. Ministry in The Johannine Corpus

1. The Gospel of John. A totally different concept of ministry is found in the Johannine writings. Except for the traditional phrase "one of the Twelve" (John 6:71; 20:21), the Fourth Gospel only once speaks of the Twelve (6:67–70), though at the crucial place where Peter confesses Jesus as "the holy one of God." Otherwise, the evangelist always speaks of "the disciples." Since, according to 11:48, almost everyone (except the authorities) seems to have believed in Jesus, and since the farewell discourse with its "new commandment to love one another" is obviously not limited to a special group within a wider body of disciples (13:34; 15:12–17), we cannot be sure how many "disciples" John believed were present at the last meal and at the commission by the risen Christ. According to 21:2, Nathanael (who is not found in any list of the Twelve) belonged to the group of disciples in the first days after Easter, and the very important figure of "the disciple whom Jesus loved" is never named nor given a special status like "one of the Twelve." He might be John (whose name is never mentioned in the Fourth Gospel) or a Jerusalemite "known to the high priest" (18:15), or an Essene, or even a merely symbolic representative of the true believer (Bultmann). The term "apostle" is lacking in the Johannine writings, except in the general sense of "messenger" (13:16), which suggests that it was still used in its functional meaning, not as a title (Klauck).

The gospel of John seems to imply no specific ministry different from that generally given to every disciple. Whereas among nonbelievers there is mention of Roman and Jewish officers, a captain of a band of soldiers (18:12), Pilate (18:29, etc.), and the high priest (11:49, etc.), among the disciples only Judas is mentioned apparently holding an office (13:29). According to John 21 (probably added to the original gospel by the evangelist himself or by one of his followers) Peter is given the commission "to tend the sheep" of Jesus (vv 15–17). The literary function of the pericope is to present this commission as the Risen Lord's forgiving response to Peter's threefold denial, which shows that service in the Church is a matter of mere grace, not of human merit.

Otherwise, there is no apparent institutional structure of the group of disciples. There are no mediators between Christ and his believers; everyone is in direct contact with the Lord. This manifests itself, probably unconsciously, in the choice of images. Whereas Paul's simile of "the body" stresses the interdependence of all members, the Johannine "vine" (15:1), "shepherd" (10:11–18), and even "grain of wheat" (12:24) emphasizes the sole importance of Christ himself and the immediacy of every disciple to him. No sheep, no branch, no grain is "helping" the other one; they all receive their lives directly from the one vine, the one shepherd, the one root and stem. The commandment to love is certainly central, but it is

not structured or institutionalized in any way. It is limited to the brothers and sisters, and 1 John 2:15 explicitly warns against loving the world. Nonetheless, "loving one another" in a totally united church is directed by Jesus himself towards winning the world to faith (17:21–23). God has loved the world when he gave his son (3:16) to save the world (6:33, 51; 12:47). Whereas Paul becomes "everything to everybody in order to save people everywhere" (1 Cor 9:22), reaching out to the world in a centrifugal way, the Johannine church concentrates, in a centripetal way, on full association in itself, on a loving brotherhood and sisterhood secluded from the world outside, in order to become contagious and to win the world for a life in faith and love. If there is a missionary activity it consists of leading the unbeliever to Jesus himself (1:36–51; 9:27; 11:28; 12:21–22 etc.), and here, female disciples are equivalent to male ones (4:39–42; 11:28; 20:18; the first witness of the risen Lord being a woman, cf. Matt 28:9–10).

2. The Epistles and Revelation. More important are the epistles. Some power was evidently exercised in the Church by Diotrephes, who refused to accept the messengers of the author and even banned "from the church" those who did (3 John 9–10). Unfortunately, we are not sure whether the author saw in him a representative of the institutional church or simply a wealthy church member skeptical of itinerant prophets. Nor do we know whether the author himself belonged to a group of such prophets, to a conventicle (Käsemann), or a "school" (Schürmann, also Klauck) within or outside of the Church in his country or region. However, 1 John states that all the believers "have been anointed by the Holy One and are all knowing" and that, therefore, they have no need that anyone should teach them; on the contrary, since the anointment teaches them about everything, it is true and no lie (2:20, 27). Yet, it is made quite clear that this anointment (the Spirit) can never speak anything that would differ basically from "what they have heard from the beginning" (2:24).

The picture of the Church in Revelation is not extensive enough to define its structure. The "angels" of the communities addressed in chaps. 2–3 are certainly no (monarchical) bishops, but a kind of heavenly counterpart to the earthly congregation (cf. the Jewish guardian angels of the nations). The astounding fact is that these congregations are living in Asia Minor, not that much earlier than those of the Pastorals and of Ignatius. And yet, only prophets play a role, and no other ministry seems to be existent. One could even ask whether not all members of these churches were themselves at least potentially prophets.

Thus, the Johannine literature, perhaps even including Revelation, witnesses to a form of a church in which the Spirit itself is the one leader. (On the use of "elder" in 2–3 John, see C above.) Any ministry is given by the Spirit (or by the risen Lord in the exceptional case of Peter, John 21), and it is the spirit that represents Jesus in the time after Easter (John 14:16–17, 26; 15:26–27; 16:7–14). The authority of any ministry is the power of the Spirit, and it lasts as long as this power manifests itself.

H. Conclusion

Thus, at the end of the NT period, the Church was confronted with 2 options. On the one hand, it could have developed along the lines of the Pastoral Epistles, ordaining bishops (eventually one in each local parish; Ignatius) and installing elders and deacons. No group, not even a group of believers, could hope to exist over an extended period of time without some such institutional order, and the order of bishop(s)-elder(s)-deacon(s) was a workable arrangement. It would remain legitimate, according to NT standards as long as (1) it would not remain compulsory for all times and places but would flexibly yield to the will of God pertaining to new and different challenges and circumstances that might arise; (2) no ministry would impart to its bearer a qualitatively different status from that of all other believers (like that of the OT priest over against the laity); and (3) the free prophetic utterance of the Spirit is taken seriously, especially in the selection of people to be ordained. (According to the Pastoral epistles, this should be restricted to men only, but according to Paul and John, women could be included.) The danger associated with this line of development is that it could yield a church in which the institutional structure of offices and the proper performance of liturgical rites dominate and strangle the life of the Spirit.

On the other hand, the Church could have developed along the lines of the Johannine literature, responding to the movement of the Spirit, which is not limited to the mediation of any ministry. The authority of its prophets and prophetesses would be paramount (as is the case in charismatic movements from the ancient Montanists to some of the modern period). This again is legitimate according to NT

standards as long as (1) such a church would not exclude any kind of order to prevent it from dissolving into disorganized chaos; (2) the "charismatics" would not elevate themselves (and their gift) above other members; and (3) the authority of the basic gospel as preached from the beginning would not be disputed either by new religiously experienced revelations or by any adaptations to modern trends popular in the contemporary world. The danger of this development is a church dominated by some strong "charismatic" individuals who may confuse their own wishes and visions with those of the Lord.

The ecumenical church of today confronts a related twofold problem. On the one hand, is the special status of the apostle, whose authority is qualitatively different from that of other believers, due merely to his status as an eye-witness to the appearance of the risen Lord, or does that special status continue (though not in the role of eyewitness) to apply to the office of priests, whose authority would, in some ways similarly differ from that of other believers? And on the other hand, does a church body without any institutional ministry still constitute a Christian church? Whatever the decision is, there is no doubt that any ministry in the Church should comply with Jesus' rule that those in positions of authority must be the servant of all (Mark 9:35; 10:43; Luke 22:26, cf. John 13:13–17).

MINNI (PLACE) [Heb *minnî* (מִנִּי)]. One of three nations summoned by Yahweh to attack Babylon (Jer 51:27). It seems certain that Minni is to be identified with the Manneans, a group located in a small but politically significant area S of Lake Urmia (Yamauchi 1982: 41). This connection is supported by the identity of the other two nations mentioned with Minni in Jer 51:27, Ararat and Ashkenaz. These peoples were little-known groups living in the N regions of W Asia. Ararat ("Urartu" in Assyrian sources) extended from modern Soviet Armenia and Iran into SE Turkey, but its geographical center was Lake Van. Ashkenaz is believed to be equivalent to "Ishkuza," the Assyrian name for the Scythians. The equation of Minni and Mannea is also in accordance with phonetic principles common to cuneiform sources and Heb (see *hatti* becoming Hittite, Gelb *IDB* 3: 392).

The history of Mannea may be traced from the time it is first mentioned in the inscriptions of Shalmaneser III (858–824 B.C.). Early in its history, Mannea was caught between two powerful neighbors at war with each other, Urartu and Assyria. Mannea continued to be mentioned in the Assyrian records over the next two centuries, sometimes as allies, sometimes as enemies (for a list of references to the *mannai,* see Parpola 1970: 236–37). The unfortunate Manneans were aligned with the Assyrians when the empire fell to the coalition of the Medes and Chaldeans. Their territory was allocated to the Medes and incorporated eventually into the Persian Empire. A Mannean contingent may have served in Cyrus' army when he took Babylon in 539 B.C. (Yamauchi 1982: 43).

It is impossible to be certain about the ethnic makeup of the Manneans. Many assume they were descended from the Indo-European Hurrians, but others have suggested a native population of long standing (Yamauchi 1982: 41).

MINNITH (PLACE) [Heb *minnît* (מִנִּית)]. One of the twenty Ammonite cities which were captured by Jephthah according to Judg 11:33. Although there is some question about the text, several translators believe Ezek 27:17 names Minnith as the source of the wheat Judah traded with Tyre. Others have preferred to amend the text to read "olives" instead of Minnith (e.g., AV; RV; RSV).

In *Onomastica* (140.3), Eusebius identified biblical Minnith with a village, known to him in Greek as *Maanith,* some 4 Roman miles from Esbus (modern Hesban) on the way to Philadelphia (modern Amman). This statement, combined with the fact that Judg 11:33 couples it with the S city of Aroer as an opposing boundary, has led scholars to locate the site somewhere between Hesban and Amman.

The most likely candidate at present is Umm el-Basatin (Umm el-Hanafish; M.R. 232137). A modern village covers much of the tell, but a large amount of ancient architecture is still visible. Although the site has not been extensively excavated, a recent survey recovered sherds from Ayyubid/Mamluk, Ottoman, Byzantine, Late Roman, Early Roman, Iron 2/Persian, and Iron 1 periods.

MINT. See FLORA.

MINUCIUS FELIX. Only one work, the *Octavius*, survives from this late-2d- or early-3d-century Christian apologist. Many readers regard it as the jewel of Christian Latin in the first three centuries. When contrasted with the other early apologies, its immediacy, intimacy, and informality call to mind the tone of Xenophon's *Symposium*, not Plato's. Refreshingly undogmatic, it contains not a single reference to scripture, nor does it broach a single item of doctrine. Although mentioned by ancient writers (Lactant. *Div. Inst.* 1.11.55 (*PL* 6.180); Jerome, *De vir. ill.* 58 (PL 23.706)), the *Octavius* fell into obscurity in the 5th century, and remained undiscovered until 1560 C.E. In that year, the French scholar F. Baudouin discerned that the eighth book of Arnobius's *Adversus nationes* was, in fact, Minucius Felix's lost *Octavius.* The only other work attributed to Minucius Felix is one named by Jerome, *De fato (vel contra mathematicos),* but he regards it as spurious; it has not been transmitted.

Jerome (*idem.*) describes Marcus Minucius Felix as a Roman lawyer of note. Certain references in the *Octavius* suggest its author possessed detailed knowledge of African affairs (e.g., 14.1; 30.3; 31.2). This has led some scholars to claim that the author was, at least originally, an African. While African authorship is argued by some (Beaujeu 1964: xxii–xxv; xliv–xlvi), other scholars reject the proposal.

In composing the *Octavius*, Minucius Felix drew on sources, both in form and in letter. His principal debt is to Cicero's *De natura deorum.* Not only is the form analogous at many points (e.g., introductory prologue, which sets the topic, and introduces the characters in the dialogue), but there is textual dependence as well (various passages in *Oct.* 19 = *Nat. D.* 1.25–42). Additionally, there are numerous quotations from or allusions to other classical and Christian writers (among the many: Plato, Zeno, and Thales; Justin and Tatian). Certain interesting descriptions of Christian religious practice in Minucius Felix's locale are mentioned: they followed Jewish dietary law, abstaining from meat sacrificed to idols (12.5; 38.1), and from meat with blood in it, i.e., not slaughtered in accordance with kosher regulations (30.6). This is remarkable evidence of the influence of Judaic-Christianity, whose interpretation of the Apostolic Decree (Acts 15:19–21) was at variance with the "liberal" Pauline interpretation (Gal 2:7–10), in the Latin West.

The *Octavius* itself is a dialogue between two friends of Minucius Felix (who calls himself Marcus in the dialogue), a fellow Christian, Octavius, for whom it is named, and a pagan fellow barrister, Caecilius. Written after Octavius's death, it recalls a pleasant day the three spent at Ostia, walking and debating the virtues of Christianity. Caecilius asks Marcus to judge the debate. He then proceeds to make a case for adhering to the traditional Roman religion and attacks Christianity with the usual charges of cannibalism, atheism, incest and superstitious beliefs (e.g., end of the world). Octavius responds with what is—for a 2d- or 3d-century apologist—remarkable restraint. Appealing largely to reason and philosophy, Octavius rebuts the charges, capping his argument by claiming that Christians "do not preach great things, but live them" (38.6). The dialogue is a purely intellectual exercise; it ends with Caecilius' conversion.

Dating the *Octavius* is the key to dating Minucius Felix, and although the efforts have been maximal, the results have been minimal. A first difficulty is to decide the authenticity of the events: did the three friends actually have such a talk, or did Minucius Felix create a fictive encounter as a vehicle for his ideas? Scholars have usually assumed that the participants are real, and that some such encounter occurred, although the actual conversation is largely the invention of Minucius Felix. Internal evidence for dating is virtually nonexistent, save for a reference to Fronto (fl. ca. 140–175 C.E.), who appears to have recently attacked Christians (31.2). However, one must then decide whether the reference to Fronto is genuinely from the time of the encounter, or whether, given that Minucius Felix states he is writing after Octavius' death, Fronto's attack came later and has been retrojected into the dialogue. A final complicating problem are the parallels between the *Octavius* and Tertullian's *Apologeticum* and *Ad nationes* which indicate literary dependence. Scholarship has been divided on the order of priority. The

priority of Minucius Felix, the use of a common source, and the dependence of Minucius Felix have all been suggested. Current scholarly fashion gives priority to Tertullian. If one accepts that sequence and dates the *Apologeticum* and *Ad nationes* ca. 197 C.E. (so Barnes 1985: 55), then the *Octavius* must be later, presumably from the first half of the 3d century. Such a dating, while generally accepted today, is at odds, however, with the reference to Fronto.

WILLIAM L. PETERSEN

MIQṢAT MAʿASE HATORAH (4QMMT). A sectarian polemical document, six incomplete manuscripts of which (4Q394–99) were discovered in Qumran cave 4. Taken together, they provide a composite text of about 120 lines. The preserved text, which apparently covers about two-thirds of the original scroll, derives from the middle and the end of the document. The beginning is completely lost.

The document is in the form of a letter (having a sender and an addressee) and is unique in language, style, and contents. The title *miqṣat maʿasê hattorâ*, meaning "some of the precepts of the Torah," has been taken from the concluding passage, reading: "we are sending you some of the precepts of the Torah."

A. Contents, Structure, and Historical Setting

It appears that MMT consisted originally of four sections: (1) an opening formula, now completely lost; (2) a calendar of the sect (with a 364-day year); (3) a list of more than 20 *halakhot* (= precepts), all of which are peculiar to this group; and (4) an epilogue which discusses the separation of the group from normative Pharisaic Judaism and attempts to persuade the addressee to adopt their *halakhic* views. The *halakhot* represent the heart of the letter, with the other sections as their framework (the calendar, although a separate section, belongs to the *halakhic* domain). Most of these *halakhot* concern the Temple, dealing with its purity, sacrifices, and festivals. The author states that disagreement over these *halakhot* is what caused the sect to secede (Heb *pāraš*) from the rest of the people (the verb *paraš* relates to the same root as the name of the Pharisees).

There are three parties in MMT referred to as *we*, *you* (sometimes singular, sometimes plural), and *they*. Who were these parties? Clearly the *we*-party is the author, who generally uses the expression "we maintain" (Heb *ʾnḥnw ḥwšbym*) expressing the sect's *halakhic* views. The *you*-party is the addressee; the prevailing second person expression in this case is "and you know." The addressee may be the leader of Israel, being compared to David and addressed as follows: "for the welfare of you and your people," and "for the welfare of you and Israel." The *they*-party is a group about whom it is said that "they do such-and-such," where the reference in each case is to some specific *halakhic* practice. A study of the *halakhic* views of this group shows that they should be identified with the Pharisees.

It appears that MMT, which discusses the invalidity of the *halakhot* of the *they*-party (i.e., the Pharisees), was written by the Teacher of Righteousness and addressed to the Wicked Priest and his colleagues. This is inferred both from the contents of MMT and from Pesher Psalms 37 (= 4Q171 3–10 iv 7–9) which states that the Wicked Priest tried to kill the Teacher of Righteousness "because of the precepts and the law which he [= the teacher] had sent him." (Note the similar passage from MMT quoted above.) Assuming that the Wicked Priest is Jonathan the Prince, MMT was composed at about 150 B.C. It stands to reason that the schism mentioned in MMT occurred a short time before the composition of the document. The paleography may also imply such an early date, as does the contrast of MMT with the prohibition of disputes with opponents found in 1QS 9:16–17.

B. The Halakhot

The *halakhot* of MMT concern the Temple cult, and most are related to biblical laws as understood by the sect. The following *halakhot* are extant (in the order of their appearance in the text):

1. Gentile grain should not be brought into the Temple.
2. A fragmentary *halakha* about the cooking of offerings.
3. A fragmentary *halakha* about sacrifices by gentiles.
4. Cereal offerings should not be left overnight.
5. The purity of those preparing the red heifer.
6. Several *halakhot* concerning the purity of skins.
7. The place of slaughtering and offering sacrifices.
8. Slaughtering pregnant animals.
9. Forbidden sexual unions.
10. Banning the blind and deaf from the "purity of the Temple."
11. The purity of the streams of liquids poured from a pure vessel into an impure one.
12. Dogs should not enter into Jerusalem.
13. The fruit of the fourth year is to be given to the priests.
14. The cattle-tithe is to be given to the priest.
15. Several regulations about the impurity of the leper during the period of purification until final purification.
16. The impurity of human bones.
17. Marriages between priests and Israelites are forbidden.

Some of the *halakhot* are already known from the Temple Scroll (11QTemple, nos. 4, 18, 13, 16). Some others have no parallel either in the Temple Scroll or in any other text from Qumran. Of special interest are two *halakhot* that parallel *halakhic* views explicitly ascribed to the Sadducees (nos. 5, 11; cf. *m. Yad.* 4:7, *Para* 3:7). In both cases the *halakhic* views attributed to the Sadducees are identical to those of MMT. It is significant to note the similarity in terminology between MMT and the Mishna in these parallel *halakhot.* This similarity implies the existence of a polemic between the Dead Sea sect and the ancestors of the rabbis. Thus, other disputed *halakhot* in rabbinic literature and in the Dead Sea Scrolls may have their origins in this polemic—e.g., the *halakha* about the deaf (no. 10) throws light on the evidence in *t. Ter.* 1:1 that all the purities of Jerusalem were prepared by the deaf son of R. Yohanan ben Godgeda.

The *halakhic* attitude of MMT is much stricter than that of the rabbis. For example, MMT identifies Jerusalem with the Camp mentioned in the Torah and asserts that all purity laws which were to be observed in the Camp should be observed in Jerusalem (contrast the more lenient rabbinic attitude in *t. Kelim, B. Qam.* 1:12).

C. The Language

The Hebrew of MMT is peculiar. Its grammar is basically that of the other Dead Sea Scrolls. However, the relative particle is *š-* (*ʾšr* occurs only once), and the participle is extensively used. An especially large number of Mishnaic words occur in the *halakhic* part of MMT; some of these are *halakhic* terms. There are also words unattested in any other Hebrew source. The following are of special interest: *hʿrybwt hšmš,* "sunset"; *bšl š-*, "so that"; *bgll š-*, "because"; *prt hḥṭʾt*, "the red heifer"; *mʿśym,* "precepts"; *ʿbrh,* "pregnant," *swmym,* "blind," *mwṣqwt*, "uninterrupted streams of liquid"; and *mśktwb,* "as is written."

D. The Contribution of MMT to the Study of Judaism

At this early stage of research, the contribution of MMT can not be fully evaluated. The following are a few preliminary remarks.

1. As has been noted, MMT consists of controversial *halakhot* and thus provides evidence not only for the *halakha* of the sect, but also for that of its opponents. Examining the *halakhic* view of the latter, we learn that they are nearly always identical with those of the rabbis. This is also the case in additional polemical passages in other Dead Sea Scrolls. This identity proves that the opponents of the sect were the predecessors of the rabbis, most probably the Pharisees. It further demonstrates that the corresponding

rabbinic *halakha* (to *halakhot* discussed in the Dead Sea Scrolls) was established at a very early date. This contradicts the view of those scholars who believe that the Pharisaic *halakha* was a "new" *halakha.* The halakhic correspondence with the Mishna serves to authenticate those historical sections in the rabbinic sources as truly reflecting the reality of the Second Temple period, even though they were put in written form much later (contra some recent scholarly trends).

2. MMT contributes much to our knowledge of the history of sectarianism in that period. For example, until now there was no explicit evidence concerning the reasons for the schism. Josephus gives the impression that the sects were primarily divided over theological questions, for instance those relating to the resurrection of the dead or the role of Divine providence. MMT proves that the real reason was the controversy over ritual laws. Josephus' description should be understood as an attempt to produce an explanation that would make sense to his Greek (and Roman) readers.

3. Of special interest to biblical scholars are the interpretations given in MMT to certain juridical passages in the Torah in particular, and its methods of interpretation in general.

4. The contribution of MMT to the history of the Hebrew language is also significant, but requires a more detailed discussion than can be undertaken here.

A. Terminology

1. *nēs.* The study of "miracles" in the Hebrew Bible may be, in fact, an illegitimate pursuit. Hebrew has no equivalent term for the English concept "miracle." It is only in rabbinic Hebrew that the word *nēs* is found with this meaning: "Ten wonders were wrought for our fathers in Egypt, and ten at the [Red] Sea" (*ʾAbot* 5:4); "If one sees a place where miracles have been wrought for Israel, he should say, blessed be He who wrought miracles for our ancestors in this place" (*m. Ber.* 9:1). In the Bible, however, the word indicates a long pole enabling something set upon it to be seen at a great distance (Num 21:8–9; Isa 30:17), or a pole for a banner (Isa 33:23; Ezek 27:7). Only in one verse does *nēs* mean a sign or wonder (in the wake of a miraculous event): "And the earth opened its mouth and swallowed them up together with Korah when that company died, when the fire devoured two hundred and fifty men; and they became a sign" (Num 26:10). In the wake of another miracle (the victory over Amalek), Moses erects an altar and calls it "*YHWH nisî*," but the meaning of *nēs* here is not clear.

2. *gĕdōlôt* (only in the plural). This term is used once in reference to human action, the "man of God" who performs miracles, as in the words of the "king of Israel" to Gehazi, Elisha's servant: "Tell me, please, all the great things (*gĕdōlôt*) Elisha has done" (2 Kgs 8:4). "Great things" in general indicates something beyond one's power or unattainable: "Neither do I concern myself with *great matters*" (Ps 131:1; cf. also Jer 45:5). The word *gĕdōlôt* thus mostly indicates God's actions, which at times have the character of a miracle: "Who had done *great things* in Egypt/Wondrous works in the land of Ham/Awesome things by the Red Sea" (Ps 106:21–22). Job 9:10: "He does *great things* past finding out, Yes, wonders without number," refers both to the upheaval of the order of creation (vv 5–7) and to the greatest miracle of all—the creation (vv 8–9). The word *gĕdōlôt* can simultaneously refer to both creation and God's righteousness in managing worldly affairs (Job 9:9ff.; and as to God's righteousness in judgment, cf. Ps 71:19). *Gĕdōlôt,* therefore, belongs to actions done within the overall sphere of God's power and sovereignty.

3. *nipla*ʿ*ôt* (only in plural). The term *nipla*ʿ*ôt,* as the parallel term to *gĕdōlôt,* also refers to the expression of God's sovereignty, of which miracles are only one aspect. In prose *nipla*ʿ*ôt* indicates God's salvation of his people in the Exodus from Egypt and the conquest of the land (Exod 34:10; Judg 6:13). These saving acts are at times bound up with miracles (Exod 3:20; Josh 3:5; Neh 9:17). Poetry also contains references to the act of redemption and the miracle of the Exodus (Mic 7:15; Pss 78:4, 11, 32; 106:7, 22).

In psalmic literature *nipla*ʿ*ôt* can refer to other saving acts as well. The refrain "Oh, that men would give thanks to the Lord for his goodness, and for his wonderful works to the children of men" (Ps 107:8, 15, 21, 31), refers to the deliverance of individuals from trouble (wanderers in the wilderness, prisoners, the infirm, and sailors). The rescue of an individual from his enemies is expressly conceived as a revelation of God's righteous judgment; the declaration: "I will praise you, O Lord, with my whole heart; I will tell of all your *marvelous works*" (Ps 9:2) relates to acquittal in judgment (cf. e.g., vv 8, 20; cf. Psalms 71; 86). God's reign of justice is bound up with his being the creator of the universe. In Psalm 96, which invites all the earth to "declare his glory among the nations, his *wonders* among all peoples" (v 3),

the Lord is praised both for his act of creation (v 4) and his righteous judgment of the earth and its peoples (v 13; cf. also Pss 75:2–5; 145:5–8). God's righteousness is enjoyed not only by man, but also by the entire creation (145:15–16). The word *nipla‹ôt* is found in connection with the creation also in Job 37:5–12.

4. *pele‹*. The noun *pele‹* appears exclusively in poetry. It is usually found as the object of the verb *‹śh,* "to do," and refers to God's saving acts: "Will you work *wonders* for the dead? Shall the dead arise and praise you?" (Ps 88:11); and on the national level: "O Lord, you are my God. I will exalt you, I will praise your name, for you have done *wonderful things* … For you have made a city a ruin, a fortified city a ruin" (Isa 25:1–2). The wonder/saving act may be connected with miracles (such as Exod 15:11; Pss 77:12, 15; 78:11–13). Occasionally, like the other terms discussed here, *pele‹* indicates God's work in creation and sovereignty over its order (Ps 89:6; cf. also vv 10–13).

5. The Verb *pl‹*. This root, from which the nouns *nipla‹ôt* and *pele‹* are derived, indicates in its verbal usage that which is beyond man's understanding. The intensity of Jonathan's love is beyond David's understanding: "your love towards me was more marvelous than the love of women" (2 Sam 1:26). The inability to come to a decision in judgment is also described by means of this verb: "If a judgment proves to be beyond your ability (to decide) …" (Deut 17:8). Man cannot comprehend the Lord and his ways (Judg 13:18 [should be translated "unfathomable"]); is incapable of understanding the ways of creation (Prov 30:18–19); man cannot hide from God, who governs all creation: "Indeed, the darkness shall not hide from you … for you have formed my inward parts … *marvelous* are your works" (Ps 139:12–14). The root *pl‹* is sometimes parallel to the root *gdl* (from which the noun *gĕdōlôt* is derived) and both indicate God's actions in different spheres of existence (Isa 28:29; Joel 2:26; Ps 31:22).

6. *‹ōt* (and *môpēt*). The semantic field of the word *‹ōt* is similar to that of the word *nēs,* though whereas *nēs* received the meaning of a miraculous deed only in postbiblical literature, such a meaning is found for *‹ōt* already in the Bible itself. The basic meaning of *‹ōt* is "mark, sign" (Gen 4:16; Exod 12:13), as well as "banner, standard" (Num 2:2). The "lights" in the heavens also have the function of "signs" (Gen 1:14), that is, indications of the transitions between different units of time.

In the Priestly source of the Pentateuch the "signs" are tangible and concrete, as in the series of 4 covenants made with a certain select body of people, each more limited than the preceding: the sign of the rainbow in the cloud for the covenant with the renewed humanity (Gen 9:13); the sign of circumcision for the covenant with Abraham (Gen 17:11); and the sign of the Sabbath for the covenant with the Israelites (Exod 31:17). The fourth covenant—with the priesthood (Num 25:10–13)—needs no sign: The existence of the priesthood is itself the sign of the covenant. Additional signs in the priestly source are equally concrete and are connected with ritual/worship. These signs testify to a miraculous event whose lesson must be remembered: the altar covered over with the metal of the censers of the 250 men who sided with Korah (Num 17:1–15 [—Eng 16:36–40]); Aaron's rod, kept as a sign before the ark (Num 17:25–26 [—Eng 10–11]); compare also the sign of the 12 stones after the crossing of the Jordan (Josh 4:5–7).

In the book of Deuteronomy, in contrast, the "signs" (or the frequent expression "signs and wonders," *‹ōtôt ûmōptîm*) are the miraculous events of the past that the people are obliged to remember (7:19; 11:3; 26:8; 29:2; 34:11). As a rendering of this Hebrew expression, Biblical Aramaic employs the phrase *‹atayā‹ wĕtimhayā‹,* "signs and wonders"; see the words of the kings who witnessed the miracles performed for those who honor God's name (Dan 3:32–33 [—Eng 4:2–3]; 6:28). The term *môpēt* means a miraculous sign also when it appears by itself (Exod 7:9; the LXX, however, reads "sign or wonder"), and in 1 Kgs 13:3: "And he gave a sign (*môpēt*) the same day, saying, 'This is the sign (*môpēt*) which the Lord has spoken: Surely the altar shall split apart, and the ashes on it shall be poured out." In place of the word *‹ōt* in 2 Kgs 20:8–9, the word *môpēt* appears in the parallel passage in 2 Chr 32:24, demonstrating the interchangeability of these two words. A phrase which sometimes accompanies the giving of a divine sign to someone is "And this shall be to you (sing. or pl.) (a sign)" (Exod 3:12; 1 Sam 2:34; 14:9–10; 2 Kgs 19:30; 20:9; Jer 44:29).

B. Miracle and Creation

The distinctiveness of the phenomenon of miracles cannot, then, be understood on the basis of the various terms employed to express the notion. It is equally impossible to grasp the essence of the biblical miracle by viewing it simply as a violation of the rules of natural order, since the concept of nature and natural laws is foreign to the religious literature of the Bible. Instead of this concept, the Bible speaks rather of the creation. Philo of Alexandria sees the creation as the miracle par excellence: "these extraordinary and seemingly incredible events are but child's play to God in comparison with that which is really great and worthy of contemplation—the creation") (*Vita Mos* 212–13), and the understanding of the rabbis is close to this; in their view the biblical miracles were predetermined during the six days of creation (*Abot* 5:6). Since the miracle is a continuation of the creation, the author of the Korah story is obliged to describe the miraculous opening of the mouth of the earth in terms of creation (Num 16:30). In the miracle, God indeed demonstrates his rule over that created by him: he can halt the course of the heavenly bodies (Josh 10:12–13) or temporarily remove the boundary fixed between sea and dry land (Exodus 14).

The creator may temporarily alter the order of creation, but miracles do not bring any new creatures into the world nor do any new elements become added to it (the manna is perhaps an exception to this rule, but here also there is a clear effort to make things sound more rational—Exod 16:31; see N below). The elements of the miraculous deed are derived from creation, from the already existing and familiar; the miracle, at times, simply brings about a change in the organization of these elements. Such a reordering makes for a surrealistic environment in which natural boundaries are obscured: Sea becomes dry land; a man (Elijah) ascends to the heavens; rain pours down in the middle of the summer harvest; heavenly bodies deviate from their fixed courses; the dead become alive, etc.

C. Precisely the Right Moment

Not all miracles disturb the order of creation. When events appear to take place at just the right moment—when a person or object materializes on the scene at the precise instant to meet the critical need (a kind of deus ex machina)—this also can be regarded as a miracle. After the angel's poetic announcement to Hagar that Ishmael will not perish from thirst we read: "And God opened her eyes, and she saw a well of water. Then she went and filled the skin with water, and gave the lad a drink" (Gen 21:19). The end of Saul's journey in search of the lost donkeys precisely upon arriving at Samuel's town is no mere coincidence, and Saul does not attain to the kingship by chance; Saul finds himself there in accordance with a divine plan to cause the anointer to meet up with the anointee (1 Sam 9:15–16). In some cases God's intervention to cause things to take place at the right moment is not explicitly mentioned in connection with the "miraculous coincidence," even though the divine activity in the story surrounding the event is quite clear: "Then Abraham lifted his eyes and looked, and there behind him was a ram caught in a thicket by its horns" (Gen 22:13). God's intervention is not mentioned also in the two incidents which take place at the beginning of the story of Moses: Moses' being found by Pharaoh's daughter (Exod 2:5ff.) and his coming to sit down by a well in Midian (vv 15ff.), both of which appear later to have been divinely arranged.

The disrupting of the order of creation and events taking place at just the right moment are sometimes mixed together, as in the prologue to the book of Job: the first and third disasters are events—robberies—taking place at the precise moment, in line with the story's theme (1:15, 17). The second and fourth, on the other hand, are the result of an upsurge of the forces of creation, fire, and wind (vv 16, 19). The rabbis also viewed these incidents as miracles: "It once happened that a fire broke out in the courtyard of Joseph b. Simai … and a miracle happened on his behalf, rain descended and extinguished [it]" (*b. Šab.* 121a).

D. Definition of Miracle

Since God's intervention in earthly events without disrupting the order of creation can be considered a miracle, one may question whether every divine intervention should be considered a miracle as well. Thus, for example, God's intervention on behalf of his people in war: several of Israel's victories are accompanied by supernatural events. In the conquest of the first Canaanite city, Jericho, for instance, the city walls collapse after seven circumambulations of the city by the ark, and the priests' blowing of the trumpets (Joshua 6; see also 2 Kgs 19:35; 2 Chr 20:24–25). In other passages a military maneuver is

mingled with a divine miracle, such as in the war against Amalek (Exod 17:8–16). Where the text is elliptical and only indicates that the Lord dumbfounded the enemy and struck them, it is questionable if this should be considered a miracle. The different literary formulations of the victory over Sisera provide a good indication of how the text itself can present an event in both miraculous and non-miraculous ways: the prose narrative—"And the Lord routed Sisera and all his chariots and all his army with the edge of the sword before Barak" (Judg 4:15)—is very different from the poetic expression of the same event (which recalls the defeat of the Egyptians at the Red Sea), whose miraculous nature is much clearer: "They fought from the heavens; the stars from their courses fought against Sisera. The torrent of Kishon swept them away" (Judg 5:20–21). Similarly, the coming of the Spirit of the Lord upon a hero is accompanied at times by a miraculous feat, such as the slaying of a thousand Philistines with a donkey's jawbone (Judg 15:14–17). It is less clear if cases should be termed miracles where the narrator chooses only to relate that the deliverer overcomes his foes by the power of the Spirit (such as Judg 3:10). The same uncertainty applies to stories which do not mention the Spirit at all, reporting only that the Lord gave the enemy into the hand of Israel (e.g. Num 21:34–35; Deut 2:31).

A similar observation can be made regarding divine punishment by means of a catastrophe. Occasionally, such a punishment is accompanied by a disturbance in the order of creation, as in the ten plagues of Egypt and the drowning of the Egyptians in the Red Sea (Exodus 7–14), the divine fire which incinerates Aaron's sons when they offered strange fire to the Lord (Lev 10:1–3), or the punishment of the 250 people who offer incense in the Korah rebellion (Num 16:31). Sometimes the miraculous character is less conspicuous, as in the death of Uzzah, who touched the divine ark (2 Sam 6:8–9) or the plague which broke out in the incident of Baal Peor (Num 25:9). Nothing remains, however, of any miraculous element in the story of the death of Er and Onan (Gen 38:7, 10), or the striking of Nabal (1 Sam 25:38), or the death of Bathsheba's firstborn son (2 Sam 12:14).

Is there, then, any line of demarcation between a divine-miraculous punishment and one that is not miraculous? Furthermore, can divine revelation, the appearance of God or of his angel to man, be considered a miracle? If revelation was a commonplace occurrence it could not be considered miraculous, and, to be sure, there are traditions which accept such appearances nonchalantly, such as God's conversation with Abraham (Gen 18:3-5) or a revelation to Isaac (Gen 26:2). Nevertheless, the notion prevails in the Bible that "for no man shall see Me, and live" (Exod 33:20), and certain mortals who attained to divine revelation express their surprise at remaining alive (Gen 16:13; 32:31) or fear for their lives (Judg 6:22; 13:22; Isa 6:5). Many times the divine appearance is not met with indifference, but the visited person responds passionately, as when Joshua falls upon his face before the Commander of the Lord's army (Josh 5:13–15; cf. Lev 9:24; Num 17:10; 20:6). The revelation is sometimes accompanied by an additional miracle, as in the case of the bush that burns but is not consumed (Exod 3:2). It is, then, difficult to set a standard for distinguishing between miraculous and non-miraculous divine appearances.

One must finally ask if events which are intuitively considered miracles are to be included as miracles, even though the narrator relates them in practically incidental terms. Examples here include (1) the plagues God brought upon Pharaoh for taking Sarai Abram's wife (Gen 12:17), which are, in fact, a parallel in miniature of the clearly miraculous series of the plagues of Egypt, and (2) the foreshortened description of the collapse of the walls of Aphek in the wake of the victory over Aram (1 Kgs 20:30)—a weak parallel to the miraculous fall of the walls of Jericho (Josh 6). Further, one may ask if the visitation of Ruth—"the Lord gave her conception" (Ruth 4:13)—is a miraculous act; the same consideration applies to the many visitations of barren wives found in the Pentateuch and Former Prophets.

The key in determining whether an event is miraculous or not lies in the degree of power and magnitude of the event as it is expressed in the text; it is not the quality of the phenomenon which decides the question but rather the manner of its formulation. The decisive factor is a literary one: the expression of excitement and wonder in the face of an incident and the amount of words devoted to its description. The definition of miracle in the Bible, then, is a literary definition: an extraordinary occurrence, attributable to God's hand (which at times disrupts the order of creation), and which leaves a marked impression in the text; the criteria for determining what is to be considered a miracle are literary in character.

E. Control Mechanisms

The literary formulation of an extraordinary event, together with certain control mechanisms, can reveal whether or not a narrator intended to draft his account of an event as a miracle. The criteria which help to determine the character of a given story consist in details that an author may incorporate into the narrative in order to come to terms with the doubts of both the characters in the narrative and of his reader, as well as to inspire belief in the miracle. The following are the most conclusive tests:

1. Repetition. The ability to repeat an action or perform a miracle whenever needed refutes the assumption that the event occurred simply by chance: the healing of those bitten by the snakes (Num 21:4–9) is not a once-only deed. Each and every bitten one is healed only upon gazing at the brass serpent (v 9). When the Philistine god Dagon falls before the ark of the Lord (1 Sam 5:2–5), the Philistines put him back in his place, failing to understand that it was God who caused the image to fall. It is the second fall which proves that God's hand is at work. Here, however, the repetition is combined with graded intensification—God's second blow to Dagon is graver than the first (v 4).

2. Restoration of Prior Conditions. The miracle-doer's ability to restore conditions to their former state after a supernatural event proves that a guiding hand is in control: Jeroboam's hand withers as a result of his attempt to harm the man of God (1 Kgs 13:4), but it is restored after the man of God's prayer (v 6). So, too, in the stories of the signs performed by Moses: the rod becomes a serpent and then changes back to a rod (Exod 4:2–4); his leprous hand "was restored like his other flesh" (vv 6–7).

3. Prayer. A miracle taking place after prayer cannot be taken as coincidence: the waters of Marah are cured after Moses' prayer (Exod 15:26), and the thirsty Samson's prayer brings about the splitting of the hollow place at Lehi, permitting water to come forth (Judg 15:18–19).

4. Prior Announcement. The prior announcement, similar to the prayer, testifies to the fact that the miracle is the result of divine intervention. Before the crossing of the Jordan, for example, Joshua announces: "Sanctify yourselves, for tomorrow the Lord will do wonders among you" (Josh 3:5), and further on (vv 10–13) he details what will happen when they cross.

5. Paradox. The words of Tertullian: "It is to be believed absolutely because it is absurd … it is certain because it is impossible" (*On the Body of Christ*, 75), are relevant for many miracle stories: the narrator or one of his characters emphasizes the "absurdity" of a miraculous event. At times the aspect of absurdity precedes the execution of the miracle and underlines the difficulty inherent in conditions at the beginning of things. Before the waters of the Jordan are divided to enable the Israelites to cross it is stated that "the Jordan overflows all its banks during the whole time of harvest" (Josh 3:15). Before it begins to rain, Samuel declares: "Is today not the wheat harvest?" (1 Sam 12:17). A character may express the paradox incidental to his doubt that a promise will be fulfilled: "Shall a child be born to a man who is one hundred years old? And shall Sarah, who is ninety years old, bear a child?" (Gen 17:17; cf. also 18:12). Sometimes the paradox is formulated by means of a negative particle or expression (Exod 3:2, 3; 1 Kgs 13:28; 2 Kgs 3:17; 20:10; Dan 3:27).

6. Miracle within a Miracle. This phenomenon, so termed in rabbinic literature, is similar to the paradox: in order to allow no room for denying the miraculousness of an event, the miracle is executed by means which appear to make its success more difficult. This Elisha cures the waters of Jericho with salt (2 Kgs 2:21); Elijah, seeking God's response in sending fire on the altar, makes things even more difficult by pouring water over it (1 Kgs 18:34).

7. Limitation. When a miracle encompasses only a certain well-defined group and bypasses another, there is clearly a deliberate intention at work. In the story of the plagues of Egypt the differentiation between the Israelites and Egyptians is pointed out in the cases of the plague of flies (Exod 8:18 [—Eng 8:22]), the pestilence (9:4, 6), hail (v 26), darkness (10:23), and the firstborn (12:21–23). A spatial limitation is perceptible in the signs of Gideon's fleece (Judg 6:35–40): First, the fleece is wet and the surrounding ground is dry; afterward the ground is wet while the fleece is dry. A temporal limitation is found in the case of the manna, when the Israelites are given a two-day portion on the sixth day (Exod 16:29), while on the seventh day there is no manna at all (v 27).

8. Foreigners Acknowledge a Miracle. Four of the plagues of Egypt are formulated as a competition between Moses and Aaron and the Egyptian magicians. In the first two, blood and frogs, the magicians manage to effect the same results as Aaron (Exod 7:25; 8:3), but are unable to undo it. A turn takes place in the third plague: the magicians are unable to produce lice (8:14 [—Eng 18]) and confess, "This is the finger of God" (v 15 [—Eng 19]). The plague of boils is the climax of the competition: this time, the magicians themselves become victims of the plague (9:11). Another competition takes place between Elijah and the prophets of Baal (1 Kgs 18). Even though Elijah allows his opponents to go first, allots them plenty of time, and even handicaps himself by pouring water on the altar, it is he who succeeds. The foreigner's admission of a miracle is an excellent proof of its miraculous nature. In the two parallel stories of martyrdom in the book of Daniel (chaps. 3, 6), both Nebuchadnezzar and Darius praise the God of Israel (3:28–29; 6:27–28) after Daniel's friends are saved from the fire and Daniel is saved from the den of lions.

9. Multiple Test-Criteria. In the plague narrative, for example, one finds the combination of the competition of the magicians, prayer, differentiation between the Israelites and the Egyptians, and repetition, i.e., a series of ten plagues. Elijah's miracle on Mt. Carmel integrates competition, a "miracle within a miracle," and Elijah's prayer to the Lord.

F. Miracle and History

The miraculous deeds of the Bible are an organic part of biblical historiography. Since God is the God of history who actively intervenes in its development, he deliberately chooses on occasion to work miracles in order to accomplish his will—and, as mentioned, the miraculous is not significantly different from other ways of divine intervention. History opens with the miracle par excellence, the creation, and from then on miracles are interwoven in a greater or lesser concentration over the length of Israelite history: from barren women giving birth to the fathers of the nation; through the Exodus, accompanied by signs and wonders; the wanderings in the wilderness under divine protection and sustenance, though God also judges their disobedience; the wars of conquest, some of which are accompanied by miracles; the exploits of the judges (Gideon, Samson); the miraculous deeds of the prophets of the monarchic period; and even the miracles worked for Daniel and his friends in exile, demonstrating that God's sovereignty is over the entire earth. The historical psalms also frequently mention miracles in order to stress God's gracious acts (105; 136), and Israel's ingratitude (78; 106). The historical surveys given by certain leading biblical figures (and which express highly developed historiographical concepts) also give voice to the role of miracles in history (cf. Nehemiah 9: the miracles, according to this chapter, are a sign of God's protection and grace towards Israel, a background against which the people's ingratitude is emphasized.

G. Miracle and Myth

The connection between the miracles of the Bible and the world of myth arises from a comparison between the miracles the Bible attributes to God's angels (or to God's appearance in the guise of an angel) and parallels attributed to the gods (in the plural) in classical literature. The miracle story of the visitation of the elderly Abraham and Sarah with a son, and the announcement given them by their three guests, is strikingly paralleled in the story of the birth of Orion as told by Ovid (*Fast.* 5: 493–540). The story recounts that one day, when the gods Zeus, Hermes, and Poseidon were touring the earth, they were well received by the farmer Hyrieus who was not aware of his guests' identity until he had finished preparing them a meal. The gods sought to reward him and promised to answer whatever wish he desired. The farmer asked for a son and the gods carried out his wish. The work of Ovid is parallel also to the story of the miraculous destruction of Sodom, which continues the whole story in the book of Genesis. Two of the three men who visited Abraham make their way to Sodom (Gen 19:1) in order to destroy it (v 13). Lot shows the visitors the proper hospitality, but the men of the city try to harm them. The city is destroyed, and only Lot and his household escape. *Metamorphoses* (book 8: 611–724) tells of the two gods, Jupiter and Mercury, who visit a Phrygian village. Whereas the villagers do not offer the gods (in human guise) any hospitality, the elderly Baucis and Philemon make every effort to do so. Ultimately, the gods reveal their true identity and their intention to destroy the inhospitable village and its inhabitants. The gods take the elderly couple up to the mountains (see also Gen 19:17); when they look back they see their village's

destruction. The Bible takes pains, however, to obliterate the mythical character by attributing the main miracle, the destruction of Sodom and Gomorrah, to God: "Then the Lord rained brimstone and fire on Sodom and Gomorrah, from the Lord out of the heavens. So He overthrew those cities" (vv 24–25).

Miracles ascribed in the Bible to prophets are attributed in their parallels in classical literature also to the gods. A miraculous feat similar to that performed by Elisha when he made the ax head float (2 Kgs 6:1–7) is performed also by Hermes (Aesop's Fables, ed. Chambry, Fable 253). In both stories the ax's owners are poor; in both the ax, meant for chopping wood, falls into a river. But whereas in the biblical story the miracle concerns retrieving the ax head for its owner—causing it to float by casting a piece of wood into the water—in the Aesopic parallel the miracle consists in taking out of the water axes of gold and silver that did not fall in the river, but are miraculously brought forth. Moreover, while the biblical miracle is intended to enhance the prophet's reputation, its parallel in classical literature is generically a wisdom fable which concerns speaking the truth and its reward.

The Bible also transforms mythological figures into human ones, while attributing their wondrous deeds to God. The Samson stories, for example, reveal much similarity to the traditions of Hercules. In the ancient oral tradition Samson was a mythological figure, a sun-hero (which accounts for his name, composed of the Hebrew word for "sun"), whose power lay in his hair. The Bible, however, is careful to obscure the mythological character of the traditions, and even uproot them altogether. According to the Bible, Samson's long hair is simply part of his Nazirite vow. When he transgresses the terms of this vow and Delilah shaves his locks, his strength is gone because God punishes him by abandoning him. When Samson thinks, for example, that he killed 1,000 men with the jawbone of a donkey by his own prowess (Judg 15:14), the reality confronts him, and in his thirst he prays and confesses: "You have given this great deliverance by the hand of Your servant" (v 18). The miracle performed is not of his own doing but by the hand of the Lord. For an additional affinity between the biblical miracle and the world of myth, see I below (on the "rod").

H. Miracle and Magic

In contrast to miracle, magic is performed by people, namely by professional practitioners of the art who are capable of forcing their will upon creation and creatures alike. While miracles are expressions of God's righteous governance of the world, the use of magic is governed only by the magician's inclination and is not always activated by moral considerations. The Bible admits, albeit in a very small voice, the existence of magic and attributes to it only limited power. After Aaron casts his rod on the ground, which becomes a serpent in the sight of Pharoah and his servants, the Egyptian magicians do the same thing, even though Aaron's feat comes out ahead: "But Aaron's rod swallowed up their rods" (Exod 7:10–12). The competition between Aaron and Moses and the Egyptian magicians which concludes with the former's victory over the latter is described above (see E.8.). The Bible portrays further encounters with magicians-sorcerers which end in the victory of God's messenger, namely the failure of the court magicians to solve Pharoah's dreams (Gen 41:8) as opposed to Joseph's divinely assisted success (v 16), and the failure of Nebuchadnezzar's wise men to interpret his dream in contrast to Daniel's success (Dan 2:47).

The Bible can apparently allow the limited power of magic due to its acceptance and practice in neighboring societies. A complete denial of its effectiveness might have brought about much more dangerous conclusions: that the magicians perform their feats by the power of other gods (cf. Deut 13:2–3). The recognition of magic's power, however, does not imply any agreement or acceptance; the Bible denounces magic thoroughly and forcefully (cf., e.g., Exod 22:17; Deut 18:10; Mic 5:11; Mal 3:5). A genuine magical character nevertheless underlies the last meeting between King Joash and Elisha (2 Kgs 13:14–19). The king's shooting of arrows while the prophet lays his hands upon him, determines the fate of the war against Aram (vv 15–17). An additional and equally clear example of a magical act is Jacob's manner of recovering the salary of which Laban had robbed him (Gen 30:35–43). Since the Bible cannot tolerate the notion that a man, at his own initiative and ability, could change the order of creation, Jacob testifies in the next chapter that it was God who is responsible for the deed: "but God did not allow him to

hurt me. 'If he said thus: "the speckled shall be your wages,' " then all the flocks bore speckled" (31:7–12).

Further relics of a belief in magic can be found concerning the various implements employed by the miracle workers, as well as in the attribution of certain miracles to a man and not to God (see below). The significance of the relation between magic and miracle lies in the fact that what appears now to be a miracle in its literary formulation, may, in certain cases, have been originally an act of magic, later adapted to the world of biblical thought.

I. Implements for Performing a Miracle

Many miracles are performed simply by speaking. Usually, the prophet proclaims the word of the Lord, such as: "This is the sign which the Lord has spoken: Surely the altar shall split apart … And the altar was split apart … according to the sign which the man of God had given by the word of the Lord" (1 Kgs 13:3–5; see also 1 Kgs 17:14–16; 2 Kgs 3:15–17; 4:43–44). Occasionally, however, the speaking is accompanied by the employment of a miraculous instrument. Elisha, for example, cures the water of Jericho with salt that he casts into it (2 Kgs 2:20–21), adding the words, "Thus says the Lord: 'I have healed this water.' "

The miracle instrument par excellence is the rod. The rod in Moses' hand is sometimes called "the rod of God" (Exod 4:20; cf. 7:17; Isa 10:26). The Lord's angel also performs a miracle with the aid of a rod (Judg 6:20–21). The notion that the deity holds a rod is very much in line with prevailing beliefs of the ANE. The attribution of ownership of the rod to man is thus an expression of the polemic against myth. The rod is said to belong to Aaron in several of the plague accounts (Exod 7:19; 8:1–2; 12–13), while in other miracles it is said to belong to Moses (Exod 10:12–13; 14:16; 17:5). The demythologization of the rod, however, does not solve the problem of its magical character; on the contrary, if the story of Massah and Meribah sees the rod as a legitimate miracle-producing implement (Exod 17:5–6), the parallel story of the water of Meribah (Num 20:1–13) tries to create the impression that the use of the rod was not indispensable. God commands, "Take the rod; you and your brother Aaron gather the assembly together. *Speak* to the rock before their eyes" (v 8), but Moses sinned by striking the rock with the rod (v 11).

A similar polemic against the rod's power is recognizable in the story of the resuscitation of the Shunamite's son. Gehazi, Elish's servant, does not succeed in bringing the boy back to life by means of his master's staff (2 Kgs 4:31). Only the prophet's own action, together with prayer, is efficacious. The polemic takes on a different form in Exod 4:2: the miracles are performed with the rod simply because it happens to be in Moses' hands at the time.

The brass serpent was prescribed by God as the remedy for the venomous snake bites due to the image's similarity to the cause of the problem (Num 21:4–9). Since, according to the story, it is God himself who instructs Moses to construct the brass serpent, it cannot be seen as a magical implement with any powers in and of itself. Nevertheless, it was taken by the people as precisely that—if not really as a divine entity—as seen from the mention of its later destruction by Hezekiah (2 Kgs 18:4).

The representation of the ark of the Lord as a miracle-performing implement transfers the weight of attention from prophecy to priesthood, closely connected with the ark. The ark, even if it is not exactly an implement, represents the presence of God (e.g., see 1 Sam 4:7–8). The miraculous collapse of the god of the Philistines, Dagon, before the ark of the God of Israel (1 Sam 5:1–5) in the former's own sanctuary, demonstrates that the ark signifies God's presence, before whom all idols are nothing. The deaths of the men of Beth-shemesh who had looked at the ark of the Lord (1 Sam 6:19–20) also supports the notion that the ark represents God, the sight of whom can be fatal. The death of Uzzah, who actually touched the Ark, should be similarly understood (2 Sam 6:1–10).

The replacement of the prophetic rod with the priestly Ark is found in the stories concerning the miraculous happenings it brings about, stories similar to those about the miracles of the rod. The crossing of the Jordan by means of the presence of the Ark (Joshua 3–4) is parallel to the crossing of the Red Sea with the help of the rod (Exod 14:16). The plague engendered by the ark against the Philistines (1 Samuel 5–6) recalls in many details the plagues of Egypt in which the rod played a part (cf. the overt allusions to the plague narrative in 1 Sam 4:8; 6:6). The ark takes an important role in the story of the fall of the walls

of Jericho (Joshua 6) and serves to actualize the notion that "the Lord will fight for you, and you shall hold your peace" (Exod 14:14).

J. The Performer of the Miracle

The persons active in the performance of miracles are the prophets, especially Moses, Elijah, and Elisha. More than once, clear similarities can be seen between their respective deeds, such as crossing the sea (Exodus 14) or the Jordan (2 Kgs 2:8, 14); multiplying food and oil (1 Kgs 17:8–16; 2 Kgs 4:1–7, 42–44); and resuscitating a dead child (1 Kgs 17:17–24; 2 Kgs 4:18–37). Other miracles are attributed to priests Aaron, for example, is party to some of the miracles performed by his brother Moses, as in the story of the signs performed before Pharaoh (Exod 7:8–13), the plague narratives (Exod 7:19; 8:1–2, 12–13; 9:8–9), and in halting the plague in the wake of Korah's rebellion (Num 17:11–13). In the miracles in which the ark plays a central role the priests are also counted partners, namely the story of the crossing of the Jordan on dry land (Joshua 3–4) and the collapse of the walls of Jericho (Joshua 6).

The performance of miracles by human beings alone was liable to cause the event to break the bounds of miracle and be viewed instead as magic (see H above). In the story of the resurrection of the dead man whose corpse touched the bones of Elisha (2 Kgs 13:20–21), the narrator does not involve God in the deed because of the abhorrent nature of the subject at hand: burying the dead. However, it is precisely this story which preserves something of the original character of the Elisha stories, in which the miracle is attributed to the prophet and not to God (cf. 2 Kgs 8:4). In several of the Elisha stories the part played by God is rather small (2 Kgs 4:1–7, 38–41; 6:1–7). Only Elisha's title, "man of God," makes any reference to his dispatcher.

The uniqueness of portraying Elisha as a miracle worker, whose stories are told to his own credit, can be seen by a comparison of his stories to the parallels elsewhere in the Bible: in the story of the sweetening of the waters of Marah (Exod 15:22–26), Moses expresses his helplessness in his cry to God, who then shows him the solution (v 25). In the parallel story of the curing of the waters of Jericho, Elisha solves the problem quite easily (2 Kgs 2:20–21a), and only afterwards attributes the miracle to God: "Thus says the Lord: 'I have healed this water' " (v 21b). Note that when the narrator refers to the execution of this announcement he reverts and says:"So the water remains healed to his day, according to the saying of Elisha [and not of the Lord!] which he spoke" (v 22).

In the story of the reviving of the Shunamite's son it is the prophet's act which lies at the center (2 Kgs 4:33a, 34–35). Only a few words, "and he prayed to the Lord" (v 33b) refer to God's part. The proportions are reversed in the parallel story of the resurrection of the widow's son by Elijah. Here it is prayer which stands at the center of things (1 Kgs 17:20–22), and between one prayer and the next appear a few words revealing that the prayer was in fact accompanied by an act: "And he stretched himself out on the child three times" (v 21a). In most miracles, then, both man and God take part in the performance of the miracle, such as in the plagues of Egypt (Exodus 7–11), or in bringing forth water from a rock (Exod 17:1–7). To treat one example in more detail, we take the crossing of the Red Sea: The Israelites cry to the Lord (14:10), and complain to Moses (vv 11–12). Moses promises the salvation of the Lord (vv 13–14), and God then instructs him as to what he should do (v 16). Moses stretches forth his hand, but it is the Lord who causes the sea to go back by a strong east wind and makes the sea into dry land (v 21). Also when God commands Moses again to stretch forth his hand in order to cause the waters to return and drown the Egyptians (v 26), it is God who routs the Egyptians in the midst of the sea (v 27). The narrator finally indicates the impression of the act on the people: "Thus Israel saw the great work which the Lord had done against Egypt" (v 31a). But Moses' part is not discounted: "and believed the Lord and his servant Moses" (v 31b).

Some miracles are formulated in one tradition (the main one) as a cooperation of God and man, but reappear in another which attributes the feat to God alone. In the Song of the Sea, Moses is not at all mentioned, let alone given credit for the miracle (cf. especially Exod 15:1, 8, 10); it is not Moses who stretched forth his hand, but rather the Lord: "You stretched out Your right hand; the earth swallowed them:" (v 12). In other references to this miracle as well, no mention of Moses' role is to be found (Josh 2:10; 4:23; Ps 66:5–6; 78:13; 106:9–11; 114:1–3; 136:13–15). An exception to the rule is Psalm 77,

which unexpectedly incorporates into its conclusion reference to Moses and Aaron in an apparently secondary passage (v 21).

The activity of God exclusively in the performance of miracles is particularly conspicuous in events in which the miracle is of heavenly origin, such as fire coming down from the heavens in order to punish (e.g. Gen 19:24), or on the altar in order to express God's choice and will that he be worshipped on that same altar (Lev 9:24; 1 Kgs 18:38–39; 1 Chr 21:26; 2 Chr 7:1–3; in the last two of these stories the Chronicler adds this miraculous motif where it is not present in the Former Prophets.

Natural phenomena which come down from the heavens, though not at their normal time or in the normal way, are also attributed only to God (even if the initiative is at times taken by man), as in bringing down rain at the time of the summer harvest at Samuel's request (1 Sam 12:10–12) or the hailstones that the Lord casts down on the Amorites (Josh 10:11). God alone also alters the course of the heavenly bodies (while man is partly only in expressing the request; cf. Josh 10:12–14; 2 Kgs 20:10–11).

Alongside the Lord, one also finds his angels active at times. Occasionally, great plagues are attributed to an angel, such as the plague which struck the Assyrian camp (2 Kgs 19:35). In the plague of pestilence in the wake of David's census, God is the initiator but it is the angel who carries it out (2 Sam 24:15–16). The reason for the separation is apparently the desire to prevent the attribution of calamity to God. The separation between the entity responsible for executing the calamity and the Lord is observable in the introductory story of the book of Job: it is Satan who exercises control over Job's property, family, and person (1:12; 2:6) in order to test him. However, the angels also have a positive function: to deliver those worthy of deliverance (1 Kgs 19:11; Dan 3:25; 6:23), or to perform a miracle as a sign of the fulfillment of promises (Judg 6:17–21; 13:20).

K. The Initiative for the Performance of a Miracle

Human initiative for the performance of a miracle derives from man's needs or problems. He does not seek to have his problem solved particularly by a miracle, but prays to God out of recognition that he is incapable of coping with the difficulty. The problem which incites to prayer may be an expression of trial (see M.1 below) such as thirst (Exod 15:25) or hunger (Exod 16:4), or punishment of sin, such as the plagues of Egypt, Miriam's leprosy (Num 12:9–10), the plague of the snakes (Num 21:6), or Jeroboam's withered hand (1 Kgs 13:4). In all of these examples the one praying is the prophet, the intercessor between God and those suffering a miraculous punishment initiated by God. The notion of the interceding prophet is so deeply rooted in biblical literature that even in a story revealing a direct connection between God and the wrongdoer, such as God's revelation to Abimelech in a dream in the night, God commands the king to ask the intercessor, Abraham, to pray on his behalf (Gen 20:7, 17).

When man's suffering is not directly due to sin, he can still turn to God in prayer (which leads to a miracle), such as Hannah's prayer for a son (1 Sam 1:11–12), or Hezekiah's turning to the Lord in the time of his illness (2 Kgs 20:2–3). Similarly, the seekers of signs initiate miracles and prays. Gideon, for example, seeks a sign to strengthen him in his mission (Judg 6:17, 36–40). Likewise, prophets can desire a sign for the people, as with Samuel who asks for rain on a summer harvest day (1 Sam 12:17), or Elijah who wants an answer from God in the form of fire on the altar (1 Kgs 18:36–37). Prophets may initiate a miracle in order to salvage their injured honor (1 Kgs 20:35–36; 2 Kgs 2:24). Occasionally, man's initiative gains particular attention, such as in the halting of the heavenly bodies at Joshua's request: "And there has been no day like that before it or after it, that the Lord heeded the voice of a man; for the Lord fought for Israel" (Josh 10:14), as well as in the resuscitation of the son of the widow from Zarephath: "Then the Lord heard the voice of Elijah: and the soul of the child came back to him, and he revived" (1 Kgs 17:22).

God initiates miracles in order to give man his just retribution—either reward or punishment—and even to bestow grace upon them (see M.2 below), or to teach them a lesson, as in the opening of the mouth of Balaam's donkey (Num 22:28), or the series of miracles performed for Jonah. A miraculous revelation is generally solely God's initiative, such as the appearance of an angel in the fire of the altar (Judg 6:20), or the burning bush that is not consumed (Exod 3:2).

L. Miracles of Life, Death, and Healing.

The majority of biblical miracles are directly or indirectly connected with life and death, the exceptions to this rule being primarily the signs (*ʾôtôt*). Among life-miracles are counted the attainment of immortality (Enoch, Gen 5:24; Elijah, 2 Kgs 2:11–12), and the revivification of the dead (1 Kgs 17:17–24; 2 Kgs 4:32–37; 13:20–21). The miracle is capable of bringing forth new life: to make barren wives bear children (Gen 21:1–2; 25:21–26; 30:22–24; Judg 13:2–24; 1 Sam 1:11–20; 2 Kgs 4:14–17).

Healing from severe illness is also likened to revival of the dead. When Aaron intercedes on Miriam's behalf he says: "Please do not let her be as one dead" (Num 12:12); Hezekiah, who is cured from the boil, is said to have "lived" (2 Kgs 20:7), and those bitten by the serpents, when they look at the brass serpent, "shall live" (Num 21:8). The words "shall live" are used also for one saved from thirst (Judg 15:19).

A considerable part of the interest in life and death issues are centered in the area of healing. The reason for this concentration lies in the biblical concept that God is the Healer par excellence (see Hos 6:1; Jer 17:14; Ps 41:5). The book of Chronicles also expresses the idea that turning to earthly physicians is a sin (2 Chr 16:12; note the midrashic treatment of King Asa's name, which means "physician" in Aramaic).

This notion is given clear expression in those miracle stories which employ the root *rpʾ*, "heal," in reference to God's action (cf., for example, Gen 20:17–18; 1 Sam 6:3; 2 Kgs 2:22; 20:5), and particularly in the story of the healing of the waters of Marah: "If you diligently heed the voice of the Lord your God and do what is right in His sight … I will put none of the diseases on you which I have brought on the Egyptians. For I am the Lord who heals you" (Exod 15:26). Sickness and healing are two sides of the same coin. At the end of the story of the waters of Marah, God promises not to bring sickness on Israel if they will keep his commandments; yet in the conditional curse of Deuteronomy 28, God threatens with sickness any transgressors (vv 22, 27–28). In several miracle stories one finds illness (punishment) and healing (grace) one alongside the other (see Gen 20:17–18; Num 21:6–9; 1 Kgs 13:4–6). Miriam is punished with leprosy for not acknowledging Moses' authority and for her rebellious speech to him, and she is healed after Moses' prayer (Num 12:13). The order of events is just the opposite in the story of Naaman's leprosy (2 Kings 5). Naaman, who acknowledges God and his servant Elisha, is cured first, whereupon his leprosy falls upon Gehazi, the prophet's servant, who did not acknowledge the authority of his master and even lied to him boldfacedly (v 27).

M. Purpose of the Miracle

1. Trial. The performance of a miracle is closely connected with putting to trial, either through a miracle by which God tests man, or a situation in which man tests God. The words which reveal the theological basis of the story of the waters of Marah, namely, "There He made a statute and an ordinance for them. And there He tested them" (Exod 15:25b), translate the miracle from its momentary importance into something atemporal. The main purpose of the miracle was not to quench the Israelites' thirst; it is no coincidence that a succeeding verse describes the bountiful supply of water in their next station in the wilderness (v 27), illustrating that if the Lord had wanted to give them water, he need not necessarily do so miraculously. The sweetening of the waters is thus a trial, intended to test the Israelites' faith in their delivered: after God brought them out of Egypt with signs and wonders, and performed the great miracle of the parting of the sea, the people complain about the first difficulty that confronts them (v 24). The Israelites failed the test, but were not punished; the miracle at Marah is a fitting opportunity to give a sermon on obeying the Lord and observing his commandments (v 26).

From the trial by thirst the text moves on to a trial by hunger: "that I may test them, whether they will walk in My law or not" (Exod 16:4). In the continuation of the chapter it becomes clear that God was testing Israel in the matter of observing the Sabbath, in particular the prohibition to go out and gather manna on the Sabbath day (v 29). And, to be sure, even though they received a double portion on the sixth day, and this did not rot (v 24), some people could not withstand the trial (v 27). This deed provokes a strong response from God (v 28).

The progressive deterioration expressed in the portrayal of the people's behavior continues when they change from being the tested into the testers. The issue of thirst again arises. This time, immediately upon arriving at the place of encampment, and with no indication of the gravity of the thirst, the Israelites complain: " 'Give us water, that we may drink.' And Moses said to them, 'Why do you contend with me?

Why do you test the Lord?' " (17:2). The miracles of the wilderness wanderings are understood, then, as a series of trials which the people and their God undergo. This representation of the period as one in which the Israelites tested God is also presented in Num 14:22–24 (cf. also Ps 78:40–43, 56–58).

The issue of miracles and trials is not limited to the period of wilderness wanderings. The book of Deuteronomy is aware of the possibility that a prophet propagating idolatry might seek to convince his hearers by performing a sign or wonder (13:1-3). The legislated solution of this difficulty is as follows: "You shall not listen to the words of that prophet … for the Lord your God is testing you to know whether you love the Lord your God …" (vv 4–5 [—Eng 3]).

An individual may, at times, test God by requesting a sign. Gideon asks for two signs from God in order to confirm that God will fulfill his promise to deliver Israel through him. When Gideon makes the request for the first sign he showed no fear (Judg 6:36–37), and God answers his request as if this testing of God is appropriate (v 38). In his second request, on the other hand, Gideon already fears that he may have stretched things a bit too far: "Do not be angry with me, and let me speak just once more" (v 39; cf. Gen 18:32; Judg 16:28). This time Gideon is aware that he is testing God: "Let me test, I pray, just once more with the fleece" (v 39). Gideon's language is cautious: "let me test," and not "let me test you."

Unlike the Gideon story, in the story of Hezekiah's request for a sign, God offers the king the choice of two opposite possibilities: "Shall the shadow go forward ten degrees or go backward ten degrees?" (2 Kgs 20:9). The king chooses the more difficult of the two. Also when God allows Ahaz to ask for a sign he gives him a choice between two contraries: "Ask it either in the depth or in the height above" (Isa 7:11).

Like Gideon, Jonathan, son of Saul, also tests God's readiness to give his enemies into his hands before going out to battle. But whereas Gideon asked for a sign despite God's announcement that he would deliver him, God's intention is not made clear to Jonathan. Jonathan does not turn directly to God asking for a sign. He describes two possible situations, the actualization of one of which would indicate God's intention to grant victory (1 Sam 14:9–10). The character of the sign requested is also somewhat different: while Gideon expected a sign involving the disrupting of the order of creation, Jonathan expects a human response perfectly within the range of possibility. Avoiding a direct request for a sign is observable also in the story of the Philistine's return of the Ark of the Lord (1 Sam 6:6–9), though their avoidance derives from their being foreigners, non-Israelites.

In the story of the competition between Elijah and the prophets of Baal, the request for the sign is not solely at the initiative of the prophet. Elijah only determines the "stage directions"—the place, time, and manner. Elijah's request is not made because of his own lack of faith in God; just the opposite is true (cf. his confident lack of concern demonstrated in his giving advantage to his opponents). The test is meant to prove to his rivals who the real God is, and that Elijah is the real God's emissary (1 Kgs 18:36–37).

A clear example of the decline in the legitimacy of asking for a sign from God is found in the three versions of the story of Hezekiah's request for a sign. In the primary version (2 Kings 20) the king asks for a sign confirming his promised healing (v 8), and even chooses, as mentioned, the more difficult option (v 10). In Isaiah 38, however, one finds an obvious change: Hezekiah does not ask for a sign (the request at the end of the chapter, v 22, is a secondary edition based on the version in the book of Kings). It is the prophet who suggests a sign as a direct continuation of the promise of healing: "And this is the sign to you from the Lord …" (v 7). In the version of Chronicles, the whole matter of the sign shrinks to an incidental remark: "and he prayed to the Lord; and He spoke to him and gave him a sign" (2 Chr 32:24). The Chronicler does not reveal why the "sign" was given or what the sign was. The sign is again mentioned in Chronicles as part of the reason for the visit of the Babylonian embassy. Whereas according to the books of Kings and Isaiah the Babylonians came, "for he (Merodach-baladan) heard that Hezekiah had been sick" (2 Kgs 20:12; Isa 39:1), in 2 Chronicles 32 they came because of their interest in the miracle, namely, "to inquire about the wonder that was done in the land," for which reason "God withdrew from him, in order to test him, that He might know all that was in his heart" (v 31). Again, note the careful language: according to Chronicles it is God who tests Hezekiah and not vice versa. The notion that one should not request a sign from God because God should not be tempted is expressed in Ahaz's words (Isaiah 7). The Lord suggests that he ask for whatever sign he wants (v 11), but Ahaz answers: "I

will not ask, nor will I test the Lord" (v 12). However, it is precisely this answer with its denigrating attitude toward sign seeking that provokes the prophet's anger (v 13). Isaiah's indignation can be understood in light of the fact that the initiative for requesting the sign came from God. Man must not shrink from asking for a sign when it is God himself who instructs him to do so.

2. Reward and Punishment. Stories in which a miracle is performed as a reward for one person (and never for a group) are few. It happens on occasion that a person's extraordinary piety is rewarded: the ascension of Enoch in Gen 5:23–24 (the only miracle of reward in the entire Pentateuch); the widow whose creditors come to take her children as slaves asks Elisha to rescue her on the basis of her husband's piety: "and you know that your servant feared the Lord" (2 Kgs 4:1); Hezekiah is healed after his prayer: "Remember now, O Lord, I pray, how I have walked before You in truth and with a loyal heart" (2 Kgs 20:3 = Isa 38:3). Later literature describes the reward of those willing to be martyred for their faith, as seen in the deliverance of Daniel's three friends from the fiery furnace (Daniel 3), and Daniel himself from the lion's den (chap. 6). Three additional stories depict the miraculous reward of people who gave hospitality to God's messengers: the provision of the widow who takes Elijah into her home (1 Kings 17:8–16) and the resuscitation of her son (vv 17–24); a son born to the Shunamite woman who received Elisha and his revival after his death (2 Kgs 4:8–37). Finally, note how Genesis 18, which describes at some length the generous hospitality Abraham and Sarah bestowed upon the three men, is very similar to the story of the Shunamite woman and constitutes a clear parallel to the birth of Orion in reward of hospitality given to the gods in Greek classical literature (see G above). Nevertheless, Genesis 18 is not formulated as a story of reward—this to prevent the impression that God's intention is in any way influenced by the quality of the hospitality shown by Abraham toward his guests.

Miraculous punishments are several times more frequent than those of reward and, unlike the latter, are not limited to individuals. Punishment miracles come as recompense for an attitude towards God or his messengers (and not for harming one's fellow). Both the individual and the group may be punished for an improper cultic act (Lev 10:1–2; 2 Chr 26:16–26; 2 Kgs 17:26); for unintentional violations of sanctity (1 Sam 6:19–21; 2 Sam 6:6–9); impugning a prophet's honor (Num 12:1–16; 16; 1 Kgs 13:4, 6; 20:35–36; 2 Kgs 1:1–17; 2:19–22; 5:20–27). An individual who transgresses God's word is punished (Gen 19:26; 1 Kgs 13:24–25, 28), as well as a group complaining against God (Num 11:1–3, 4–34). On occasion, the group is punished for the sin of the individual, as seen, for example, in the closing of all the wombs of Abimelech's house for taking Abraham's wife (Genesis 20), and the punishment of the Egyptians by plagues for the sin of their king (Exodus 7–12). King David chooses collective rather than personal punishment for his census of Israel (2 Sam 24:14–15, though he later reneges [v 17], apparently a later addition; cf. the smooth transition from v 16 to v 18).

3. Grace. The miracles of grace include several of Elisha's miraculous feats (such as 2 Kgs 2:19–22; 4:38–44; 6:1–7). The visitation of barren women, like Hannah (1 Samuel 1), is also an act of grace, even though it is part of the divine plan of Israel's history. Such an integration of miracles of grace and the divine will is even more prominent in the visitation of Samson's mother: the angel brings tidings of his birth because of the role already reserved for him in delivering his people (Judg 13:5). Similarly, in the patriarchal narratives the births of Isaac and Jacob fulfill God's promise to Abraham concerning offspring and land. Many national miracles combine God's grace with the accomplishment of his promises, such as the dividing of the Red Sea, the provision of the Israelites in the wilderness, and the miracles performed for them during the conquest of Canaan. The cessation of punishment after the wrongdoer shows regret is also an act of grace (as in Num 12:14; 21:8; 1 Kgs 13:6).

4. Faith in God and in his Messenger. A clear and frequent purpose of the miracle is to inspire faith in God: thus Elijah asks, "Hear me, O Lord, hear me, that this people may know that You are the Lord God" (1 Kgs 18:37); the people in their reaction to the falling fire exclaim, "The Lord, He is God …" (v 39). Lack of faith in God in spite of his miracles stirs up God's anger; in his words to Moses, God states, "How long will these people reject Me? And how long will they not believe Me, with all the signs which I have performed among them?" (Num 14:11). Faith in God leads to fear of God: "… that all the peoples of the earth may know the hand of the Lord, that it is mighty, that you may fear the Lord your God forever"

(Josh 4:24; note also the nations' fear in the wake of God's miraculous deeds in Exod 15:14–16; Josh 2:19; 5:1). Non-Israelites express their faith in God in a positive manner: After hearing Moses recount the miraculous deliverance from Egypt, Jethro says "Now I know that the Lord is greater than all the gods" (Exod 18:11). Similarly, Naaman declares after being healed from leprosy, "Indeed, now I know that there is no God in all the earth, except in Israel" (2 Kgs 5:15). Likewise, Nebuchadnezzar and Darius are overwhelmed after seeing the miracles done to deliver those willing to be martyred (for their faith in God), namely Daniel and his three friends (Dan 3:28–29; 6:27–28).

The fear of God which results from observing a miracle has, in Israel, its practical implementation and expression in a renewed commitment to observe God's commandments. See, for example Exod 15:26; cf. M.5 below. A strengthened faith in God is frequently combined with a strengthened trust in God's messenger. After the miracle of the crossing of the Red Sea it is said: "Thus Israel saw the great work which the Lord had done in Egypt; so the people feared the Lord, and believed the Lord and His servant Moses" (Exod 14:31). The crossing of the Jordan also serves to enhance the image of Joshua, Moses' successor: "On that day the Lord magnified Joshua in the sight of all Israel; and they feared him, as they had feared Moses, all the days of his life" (Josh 4:14). So also, in the story of the competition between Elijah and the prophets of Baal, Elijah asks that the miracle be done in order that the people might come also to acknowledge God: "Let it be known this day that You are God in Israel, and that I am Your servant, and that I have done all these things at Your word" (1 Kgs 18:36).

Prominent in the Elisha narratives are miracles designed to increase respect for a prophet. Elisha's servant, for example, tells the king the *gĕdōlôt* of his master (2 Kgs 8:4), a term otherwise reserved exclusively for God's *"great things"* (cf. A.2). Moreover, the aim of the introduction to the Elisha stories (2 Kgs 2:1–18), a story which demonstrates Elisha's miraculous ability, is to announce that "the spirit of Elijah rests on Elisha" (v 15). The story of the healing of the waters of Jericho enhances the prophet's reputation by ending with the words: "So the water remains healed to this day, according to the saying of Elisha which he spoke" (2 Kgs 2:22; cf. further 4:38–41).

Miracles function at times as a kind of "commission paper" for God's messengers, as seen in the signs to be performed by Moses when he returns to Egypt; the miracles are performed so "that they may believe that the Lord God of their fathers … has appeared to you" (Exod 4:5; cf. vv 8–9). God may give a sign in order to make known whom he has chosen, as in the budding of Aaron's rod (Num 17:16–20).

5. The Remembrance of Miracles. A miracle must be observed by someone. Seeing a miracle has a decisive effect on those who witness it: "Then the fire of the Lord fell and consumed the burnt sacrifice … and when all the people saw it, they fell on their faces; and they said, 'The Lord, He is God! The Lord, He is God!' " (1 Kgs 18:38–39; cf. Exod 4:30–31; 14:31; Lev 9:24; 1 Sam 12:16–18). The emphasis on having seen miracles as a major basis for faith characterizes the book of Deuteronomy: "did God ever try to go and take for Himself a nation from the midst of another nation, by trials, by signs, by wonders … according to all that the Lord your God did for you in Egypt before your eyes?" (Deut 4:34; cf. also 1:30; 7:19; 29:1). Other passages in Deuteronomy even identify seeing with knowing: "Know today that I do not speak with your children, who have not known and who have not seen the chastening of the Lord your God … His signs and His acts which He did in the midst of Egypt" (11:2–3); "but your eyes have seen every great act of the Lord which He did" (v 7; for the identification of seeing and knowing cf. also Josh 24:31 with Judg 2:7). Such an identification emphasizes the importance of the direct effects of seeing a miracle for faith in God.

A story may substitute the recounting of miracles for the actual observation of them. Someone who has obtained God's salvation tells of his wonders: "I will praise You, O Lord, with my whole heart; I will tell of all Your marvelous works" (Ps 9:2; cf. also 71:14–17; 96:3–4). In the story of the plagues God announces: "But indeed for this purpose I have raised you up, that I may show My power in you, and that My name may be declared in all the earth" (Exod 9:16; cf. also Josh 2:10; 9:9–10). When Gehazi tells the king of Elisha's miraculous feats (2 Kgs 8:4), this inspires the king to rescue the woman from her distress.

In several cases, the text testifies that the story of God's salvation was transmitted from generation to generation. Gideon reveals this awareness in his complaint over Midianite subjection: "O my lord, if the

Lord is with us, why then has all this happened to us? And where are all His miracles which our fathers told us about, saying, 'Did not the Lord bring us up from Egypt" (Judg 6:13; cf. Pss 79:13; 145:4–5). The purpose of retelling the story to succeeding generations is to inspire faith: "that you may tell in the hearing of your son and your son's son the mighty things I have done in Egypt, and My signs which I have done among them, that you may know that I am the Lord" (Exod 10:2). Compare also the opening of the historical Psalm 78 meant to encourage observance of God's commandments: "I will open my mouth in a parable; I will utter dark sayings of old, which we have heard and known, and our fathers have told us. We will not hide them from their children, telling to the generation to come the praises of the Lord, and His strength and His wonderful works that He has done … That the generation to come might know them, the children who would be born, that they may arise and declare them to their children, that they may set their hope in God, and not forget the works of God, but keep His commandments; and may not be like their fathers, a stubborn and rebellious generation" (vv 2–8).

A miracle story by itself, without any obligatory features, may fall short of its mark. To avoid this possibility, the people are obliged to make the yearly Passover sacrifice, which is meant to arouse the next generation to ask: "what do you mean by this service" (Exod 12:26), whereupon the parents are to respond: "It is the Passover sacrifice of the Lord, who passed over the houses of the children of Israel in Egypt when He struck the Egyptians and delivered our households" (v 27; cf. also 13:8–10). The book of Deuteronomy expands this question of the sons to cover all God's commandments: "When your son asks you in time to come, saying, 'What is the meaning of the testimonies, the statutes, and the judgments which the Lord our God has commanded you?' then you shall say to your son: 'We were slaves of Pharaoh in Egypt, and the Lord brought us out of Egypt with a mighty hand; and the Lord showed signs and wonders before our eyes, great and severe, against Egypt, Pharaoh, and all his household" (6:20–22).

A solid testimony of a miracle's occurrence (more so than the commandment bound up with its commemoration) is a tangible object taken from the site of the event. Joshua commands, at the time of the crossing of the Jordan, to take 12 stones from the Jordan "that this may be a sign among you when your children ask in time to come, saying, 'What do these stones mean to you?' " (Josh 4:6; cf. vv 20–23). In the wake of the miracle of the manna, Moses, in the name of the Lord, commands the people to put some of the manna into a vessel to keep as a remembrance (Exod 16:32–34), and Aaron's budding rod is similarly set "to be kept as a sign against the rebels" (Num 17:25 [—Eng 17:10]). Here also (as in previous examples), the object (*reliquae*) is intended to provide a lesson for the people, and not to be venerated as some kind of sacred object. It may be that the trespass offering returned by the Philistines with the ark of the Lord after they were visited with plagues (1 Sam 6:4) also functioned as a *reliquae* of the miracle. The dangers inherent in such *reliquae* can be seen in the echo of the brass serpent in 2 Kgs 18:4.

Now and then a place name commemorates a miraculous event that took place there, such as Taberah (Num 11:3); Kibroth-hattaavah (v 34); Perez-uzzah (2 Sam 6:8). Thus the name of a certain place functions as a kind of monument to the miracle wrought at that very place.

N. The Rationalization of Miracles

Biblical literature sometimes reveals a tendency to make the miraculous seem more rational. This is the case, for example, in the formulation of the miracle of the quail in Num 11:31: "Now a wind went out from the Lord, and it brought quail from the sea." It is the wind, a natural phenomenon, that brings the quail to the camp at the right moment (cf. the more "miraculous" version in Exod 16:13). In a similar manner the book of Deuteronomy removes the element of wonder from the story of the cluster of grapes brought back by the spies from Canaan. It is no longer a grape cluster of fantastic size that must be carried on a pole between two men (Num 13:23–24), but Deuteronomy simply states, "And they departed and went up into the mountains, and came to the Valley of Eshcol, and spied it out. They also took some of the fruit of the land in their hands and brought it down to us" (Deut 1:24–25). Note that Deuteronomy preserves the place name "Valley of Eshcol" (i.e., "valley of the grape cluster"), but obscures the character of the event by simply stating that they brought back "some of the fruit of the land."

The miraculous element at times disappears when a story is transferred from one figure to another, and is replaced by a rationalistic parallel. When God promises Joshua that he will give the city of Ai into his hands, God commands Joshua: "Stretch out the spear that is in your hand toward Ai, for I will give it into your hand," and Joshua hastens to carry out the order (Josh 8:18). According to these verses Joshua's action was meant to signal those waiting in ambush to attack (v 12). The act of stretching out the spear recalls the story in which Moses is the hero in the battle against the Amalekites (Exod 17:8–16). Moses' action, however, is no mere signal but a miraculous implementation of victory: "And so it was, when Moses held up his hand, that Israel prevailed" (v 11). Moreover, the instrument which serves Moses is not a weapon like the spear, but rather "the rod of God" (v 9), the miraculous implement par excellence. Nevertheless, to the Joshua story a secondary verse was added (v 26) which disrupts the continuity between the counting of the victims and the mention of the spoil, an addition lacking in the LXX, and intended to bestow upon the story a miraculous character and assimilate it to Moses' deed: "For Joshua did not draw back his hand, with which he stretched out the spear, until he had utterly destroyed all the inhabitants of Ai."

The account of the war of the three kings against Moab (2 Kgs 3) tells of an optical illusion: the sun shining on the water "paints" it the color of blood. This sight causes the Moabites to think that their enemies had killed one another, and on the basis of this mistaken assumption they confidently advance to take the spoil and are routed (vv 22–23). The blood/water element in this rationalistic story calls to mind two miraculous stories dealing with the transformation of water into blood at the hand of Moses, namely, one of the signs performed before Pharaoh (Exod 4:9), as well as the plague of blood (Exod 7:17ff.).

A. Definition and Terminology

The word "miracle" derives from the Latin *mirari,* "to wonder at." Thaumaturge ("miracle worker") and thaumaturgy ("miracle-working") derive from Gk *thauma,* "wonder," "marvel" (cf. Rev 17:6). That which causes wonder—the extraordinary—is one essential element in miracle. The other is that the extraordinary phenomenon is inexplicable in terms of familiar, everyday causation and so is ascribed to a superhuman force or agency.

Several terms, variously translated, denote this phenomenon in the NT: *dunamis,* "mighty work," "miracle," "wonder" (in the singular, Mark 6:5; usually in the plural, *dunameis,* e.g., Matt 7:22; Acts 2:22); *teras,* "wonder," "portent" (in the NT, only in the plural, *terata,* e.g., Acts 2:22; 2 Cor 12:12); *sēmeion,* "sign," i.e., extraordinary sign, i.e., "miracle" (especially in John, usually in the plural, *sēmeia,* e.g., 2:11, 23; 20:30); *paradoxon,* "strange thing" (in the NT, only in Luke 5:26; plural, *paradoxa*). These words sometimes occur in combination, e.g., *sēmeia* and *dunameis* (Acts 8:13); *sēmeia* and *terata* (Mark 13:22 = Matt 24:24; John 4:48; Acts 2:43; Heb 2:4; cf. Deut 13:1, 2; 34:11; Ps 135:9); *dunamis (-meis), sēmeia,* and *terata* (Acts 2:22; Rom 15:19; 2 Cor 12:12).

Some interpreters have sought to establish distinctions between these terms or between Christian and pagan terms for extraordinary phenomena. *Sēmeia* or *dunameis,* it is said, or especially *sēmeia,* are distinctive Christian terms, denoting God's extraordinary acts performed to effect his purposes and not simply to arouse wonder and awe, for which *teras/terata* is the customary (and pagan) word (see *TDNT* 7:200–269; 8:113–26; Moule 1965). Such distinctions are untenable: early Christian writers, as well as the translators of the OT into Greek and Jewish writers of the 1st century C.E. (like Philo and Josephus) frequently use *teras/terata* in a positive sense, often coupled, or interchangeably, with *sēmeion/sēmeia,* which, when used to designate extraordinary phenomena, functions very similarly to *teras/terata* (e.g., Acts 2:22, 43; 4:30; 5:12; 6:8; Rom 15:9; 2 Cor 12:12; Heb 2:4; see Remus 1982b).

Certain terms are commonly used to describe the reaction to extraordinary phenomena. Those who hear the account of Jesus' healing of the Gerasene demoniac by driving the possessing demons into a herd of swine are "amazed" (Mark 5:20, *ethaumazon;* other examples of *thaumazein:* Matt 8:27 = Luke 8:25; Matt 15:31; John 7:21; Acts 2:7). Those who observe the healing of a deaf man are "astonished" (Mark 7:31, *exeplēssonta;* another example of *ekplēssesthai:* Luke 9:43). After Jesus raises a girl from the dead, people are "amazed" (Mark 5:42 = Luke 8:56, *exestēsan;* other examples of *existanein:* Matt 12:23; Acts 2:7, 12; 10:45; 12:16) or struck with "amazement" (*ekstasis,* Luke 5:26; Acts 3:10). These terms certify to those hearing or reading a miracle account that something extraordinary has occurred. Other terms that indicate the impression made by an extraordinary phenomenon include "fear" or "awe" or "wonder" (*phobos,* Mark 4:41; Luke 7:16; Acts 5:11) or to be "afraid" (*phobeisthai,* Mark 4:41; 5:15 = Luke 8:35; Matt 9:8; 17:6), "astonishment" (*thambos,* Luke 4:36; 5:9; Acts 3:10) or to be "astonished" (*thambeisthai,* Mark 1:27). These terms sometimes occur in combination: "amazement [*ekstasis*] seized them all, and they … were filled with awe [*eplēsthesan phobou*]" (Luke 5:26); "and they were filled with wonder [*thambous*] and amazement [*ekstaseōs*]" (Acts 3:10); "they feared great fear [*ephobēthēsan phobon megan*]" (Mark 4:41); "they were afraid [*phobēthentes*], and they marveled [*ethaumasan*]" (Luke 8:25). All these terms certify to those hearing or reading a miracle account that something extraordinary has occurred.

In early Christian literature outside the NT and in pagan and Jewish literature of the period certain formulas of acclamation identify or name the superhuman agency that works the extraordinary phenomenon, e.g., "God is Great!" or "God is One!" (e.g., *Acts of Paul and Thecla* 38; in *NTApocr.* 2: 363; other examples and discussion of the acclamations *Heis Theos* ["God is One!"], *Megas ho theos* ["God is great!"], *Mega to onoma* ["Great is the name" of the deity So-and-So!] in Peterson 1926: 183–222).

In the NT these formulas do not occur; instead, one finds the identification or naming of the agent or power responsible for the extraordinary phenomenon expressed in phrases such as "to praise God" (*doxazein ton theon,* e.g., Mark 2:12 = Matt 9:8; Luke 5:26; 7:16; 13:13; 17:15; *ainein ton theon,* Acts 3:8–9; *doxazein* in combination with *ainein,* Luke 2:20), "to give praise to God" (*didonai ainon tō theō,* Luke 18:43), or "to rejoice" (*chairein,* i.e., at the wondrous deeds of Jesus, Luke 13:17).

B. Demarcation of the Extraordinary

Miracle accounts presuppose that those who are reported as participating in or observing the deed or event, as well as those who hear or read the account, will agree that something extraordinary has occurred. The canons of the ordinary—that by which something is demarcated as extraordinary—vary from people to people, culture to culture, age to age; and within peoples, cultures, and ages. That which is adjudged extraordinary in one age, e.g., human flight, may be considered commonplace—ordinary—in another. The NT miracle accounts are not unique in the Greco-Roman world; they share with it common canons of the ordinary. What distinguishes them is the divine reference: they attribute the extraordinary phenomenon reported, not to deities of pagan polytheism, but to the one God of the Jewish tradition and/or his agents, Jesus or Jesus' apostles.

Canons of the ordinary in the Greco-Roman world fall into several basic categories corresponding to various areas of human experience. Some of the canons pertinent to NT miracle accounts will serve to illustrate (for further examples, especially from contemporary pagan sources, see Remus 1983, chaps. 2 and 3).

The life stages of the ordinary human being provided a number of such canons. Human reproduction (and animal reproduction generally) had received considerable attention in scientific treatises by Greek philosophers such as Aristotle and in agricultural treatises by Roman essayists such as Cato the Censor and Varro. Widely circulated stories of virgin births—i.e., departures from the ordinary— show it was common knowledge that humans ordinarily come into the world, after gestation of about 9 months, through intercourse of man and woman. Hence, Mary asks how she can bear a child when she has had no sexual relations with a man (Luke 1:34); Joseph, learning of Mary's pregnancy, resolves to divorce her quietly because he assumes she has had sexual relations with another man (Matt 1:18–19).

Normally, humans attain their mental powers slowly and grow to a more or less limited height. Such knowledge is implicit in the story of Jesus' precociousness (Luke 2:41–52), which astonishes (*eksistanto,* 2:47) those who witness it, and in the accounts of Jesus as enormously tall, either before his resurrection (*Acts of John* 90; in *NTApocr* 2: 226) or after (*Gospel of Peter* 40; in Cartlidge and Dungan 1980: 85).

Ordinary human bodies are subject to the limitations imposed by specific gravity, tangibleness or visibility, space, and mortality. It is this canon that gives point to NT accounts of Jesus walking on the sea (Mark 6:45–52 = Matt 14:22–33; John 6:15–21) and rising through the air (Acts 1:9); wondrously eluding enemies (Luke 4:30; John 8:59; 10:39) and transporting himself and others through space (John 6:21); rising from the dead and then materializing and dematerializing (Luke 24:31, 36).

The awe and astonishment, noted above, which greet wondrous healings and resurrections show that implicit in accounts of such deeds is a consensus that they are beyond ordinary human capacities. As a man whose sight Jesus has restored says, "Never since the world began has it been heard that any one opened the eyes of a person born blind" (John 9:32). When the townspeople of Lystra respond to Paul's healing of a lame man by proclaiming Paul and Barnabas divine, Paul counters by asserting that he and Barnabas are but human, constituted as the Lystrans themselves are (Acts 14:15); that is, incapable of wondrous deeds apart from divine assistance.

Ordinary flora and fauna also constituted canons by which people in the Greco-Roman world demarcated the extraordinary. Balaam's second-sighted, talking ass (Num 22:23–30) is familiar to readers of the Bible. Early Christian literature contains accounts of animals that worship the infant Jesus (*Gos. Ps-Matt.* 14, 18–19; in Cartlidge and Dungan 1980: 100–1) and an ass that performs an exorcism and preaches a sermon (*Acts of Thomas* 74, 78–79). In the NT the only accounts of extraordinary events involving animals and plants are those in which Jesus exercises control over them (wondrous catches of fish, Luke 5:1–11; John 21:1–11; the fish with a coin in its mouth, Matt 17:24–27; the withering of a fig

tree cursed by Jesus, Mark 11:12–14, 20–21 = Matt 21:18–19). Absent from the NT are accounts of genetic malformations (e.g., two-headed animals) and reproduction of a species by a different species, which were often interpreted as portents from deity.

Regularity in the cosmic order gives point to certain hyperbolic statements in the NT and to accounts of wondrous irregularities. These hyperbolic statements—faith can move mountains (Mark 11:23 = Matt 21:21; Matt 17:20; 1 Cor 13:1) or transplant trees into the sea (Luke 17:6)—are akin to a common poetic device known as *adynaton*, "the impossible," e.g., rivers flowing upstream, night not following day, the sun changing its course, trees in the sea (see further in Grant 1952: 57–58; on NT hyperbole, see Stein 1985). The subsiding of a storm in obedience to Jesus' command (Mark 4:35–41 = Matt 8:23–27; Luke 8:22–25) and the darkness at noon during his crucifixion (Mark 15:33 = Matt 27:45, Luke 23:44–45) represent wondrous departures from everyday experience of cosmic order. In Greek and Latin literature that order is designated as "nature" (Gk *physis;* Lat *natura;* see further Remus 1984). In the NT this usage is found in Rom 11:21, 24 and 1 Cor 11:14, but not, as it often is in Greek and Latin literature or in much of Western thought generally, in connection with miracle.

C. Conflicts over Miracle

Since canons of the ordinary are social and cultural judgments, conflicts may arise over what is considered extraordinary and whether or not an extraordinary phenomenon is a "miracle," that is, is attributable to deity. Extraordinary phenomena reported among distant peoples and in remote geographical areas, for example, were often not referred to deity by Greek and Latin writers; the exoticness of such phenomena was sufficient explanation of their extraordinariness. The philosophical, historical, and medical traditions of knowledge, much of which was the common stock of educated persons in the Greco-Roman world, frequently offered explanations of extraordinary phenomena that made reference to deity unnecessary. For example, in explaining epilepsy as like other diseases and therefore treatable by medical means, physicians in the Hippocratic tradition of medicine came in conflict with persons who used rituals and incantations to overpower the deities whose indewelling they viewed as the cause of "the sacred disease." Rival traditions of healing are seen also when early Christian claims for Jesus as a healer come in conflict with pagan claims for the deity Asclepius as a healer (see Rengstorff 1953; Dölger 1950; Edelstein 1945, 2:132–38; Remus 1983: 105–16).

In the NT itself, the accounts of the Beelzebul controversy (Mark 3:22–30 = Matt 12:22–32; Luke 11:14–23; 12:10) illustrate both a common means of denying divine reference to an extraordinary phenomenon, namely, stigmatization, and how group loyalties enter into such denials and counterassertions. Opponents of Jesus charge that he casts out demons by Beelzebul, the prince of demons. The wonders worked by "the lawless one" of 2 Thess 2:9 are associated with Satan. This kind of stigmatization—denying divine reference to an extraordinary phenomenon by attributing it to malevolent powers rather than to benevolent deity—was employed by early Christians such as Justin Martyr (*1 Apol.* 54.6, 8, 10; *Dial.* 69.1–3; 70.5) to discredit pagan miracle claims; it drew on Jewish and Christian traditions that associated pagan piety with demons (e.g., 1 Cor 10:20; Rev 9:20). Jesus' defense in the Beelzebul accounts, stating that those who are not for him are against him and implying that those who attribute his exorcisms to Beelzebul are guilty of sinning against the Holy Spirit, would serve as a warrant for early Christians in defending their own thaumaturgy and exorcisms in the name of Jesus.

Another way of stigmatizing an extraordinary phenomenon and denying it divine reference was to characterize the agent of the phenomenon or the phenomenon itself as "false." "False prophets," it is said, will work signs and wonders (Mark 13:22 = Matt 24:24). In 2 Thess 2:9 the signs and wonders worked by "the lawless one" are said to be false. Falsity is often associated with deceit. The "false prophets" of Mark 13:22 = Matt 24:24 work their signs and wonders in an attempt to deceive the elect, and "the lawless one" deceives those who are perishing (2 Thess 2:10). In the last days, the world deceiver will appear as a son of God and will work signs and wonders (*Did.* 16:4).

Another means of stigmatization—and every effective in view of the dire social and legal consequences (Remus 1982a: 153)—was to charge that a wonder worker was in fact a magician. The Simon who attempts to buy the gift of the Holy Spirit (Acts 8:19–20), and who came to be regarded by mainstream

Christianity as the archheretic, was stigmatized in post-NT writings by the epithet *magus*, "magician," and in the NT by the report that he practiced magic (*mageia,* Acts 8:11), in contrast with the apostles, who perform signs and miracles by the power of Jesus (8:13). Similarly, Bar-Jesus, the opponent of the Christian message on the island of Cyprus, is labeled a false prophet and a magician (*magos,* Acts 13:6, 8).

Whether persons in the Greco-Roman world who were accused of practicing magic actually did so may be difficult to determine: "magic" was an elastic term, not least because it was commonly used in polemic. In Robert Grant's dictum, "in polemical writing, your magic is my miracle, and vice versa" (1966: 93). The "wise men" (RSV) who come from the east at Jesus' birth (Matt 2:1–16) are in fact *magoi,* upper caste Persian priests versed in astral lore, figures familiar to the Greco-Roman world through the writings of the Greek historian Herodotus and others. However, Christian writers in the 2d century generally viewed these *magoi* as "magicians" and/or interpreters of the stars whose coming to Jesus signified his greater power, which freed the *magoi* from servitude to magic and astrology and, indeed, had put an end to the power of magic and placed such knowledge of the stars in the service of Christ (*Ign. Eph.* 19:3; Justin, *Dial.* 77.4; 78.1, 7, 9; 88.1; 102.2–4; Iren. *haer.* 3.9.2 [Harvey ed., 3.10.1]; Tertullian, *De idololatria* 9). Early Christians go to great lengths to refute charges that Jesus was a magician or that the miracles they claimed or proclaimed were worked by magic (Just. *1 Apol.* 30; *Dial.* 69.7; Tert. *Apol.* 21, 23).

Another way of denying that an extraordinary phenomenon was a miracle was to assert, as Celsus the 2d century philosopher and critic of Christianity did against Christian miracle claims, that it was an illusion (reported in Origen, *Cels.* 1.41), an hallucination (7.35), or simple fabrication (1.68), even while he affirms pagan miracle claims of a similar nature (3.24, 26).

These various disputes about miracle claims show that the Beelzebul controversy and other disputes about miracle claims in the NT are not unique: they were common in the Greco-Roman world, especially between competing social and religious groups such as Christianity and paganism or between one variety of Christianity and another. The disputes also illustrate how social and cultural factors were operative when persons in the Greco-Roman world, Christians included, observed an unusual phenomenon or heard reports of such and then decided whether or not it was indeed authentically extraordinary, inexplicable in terms of familiar causation, and worked by divine power; that is, was a miracle.

D. Form and Rationale of Miracle Accounts

Certain basic elements are essential to a miracle account, whether in the NT or elsewhere: the deed or event must be perceived to be extraordinary and beyond human capability; it must be inexplicable except by attributing it to or associating it in some way with superhuman agency. These elements are evident in the typical form of miracle stories that involve a thaumaturge: a situation beyond human control is described; the thaumaturge becomes aware of or involved in the situation, and then works a wondrous change in it; proof of the change is adduced; the spectators are astonished. In the NT miracle accounts, other elements often considered essential to stories or to historical accounts are commonly missing or left vague and in the background. The characters are few or described en masse ("a great crowd," Mark 7:34 = Matt 14:14; "all" the spectators, Mark 1:27; 2:12; Acts 9:35; "all the people," Luke 18:43; Acts 3:9) and except for the thaumaturge are usually identified only in a general way ("a paralyzed man," Mark 2:3 = Matt 9:2; Luke 5:18; "a woman with a hemorrhage," Mark 5:25 = Matt 9:20; Luke 8:43; "a deaf man with an impediment in his speech," Mark 7:32; "a man blind from birth," John 9:1; "a certain man lame from birth," Acts 3:2). In the NT gospels, designations of the time of a miracle are either very general ("on the Sabbath," Mark 1:21 = Luke 4:31) or omitted entirely; the geographical locations are occasionally identified explicitly (Capernaum, on the sabbath, Mark 1:21 = Luke 4:31; Bethsaida, time unspecified, Mark 8:22; Jericho, time unspecified, Mark 10:46 = Matt 20:29; Luke 18:35; Bethany, time unspecified, John 11:18), but more commonly they are either very general ("the country of the Gerasenes" or "Gadarenes," Mark 5:1 = Matt 8:28; Luke 8:26; "the region of Tyre and Sidon," Mark 7:24 = Matt 15:21; "the region of the Decapolis," Mark 7:31) or quite vague ("beside the sea," Mark 5:21; "a lonely place,"

Mark 6:32 = Matt 14:13; cf. Luke 9:12; "in villages, cities, or country" in Gennesaret, Mark 6:56). The effect of this lack of detail and specificity is a focus on the thaumaturge and the miracle itself.

An account of a nature miracle that clearly demonstrates this form is Jesus' stilling of the storm (Mark 4:35–41 = Matt 8:23–27; Luke 8:22–25): A storm threatens to swamp the boat in which Jesus and the disciples are crossing the Lake of Galilee; in their peril the disciples appeal to Jesus, who is asleep (this detail, omitted in Luke, heightens the drama as well as foreshadows Jesus' sovereignty over the wind and water); he rebukes the wind and commands the waves to be silent; there is a great calm; the disciples are afraid (Mark, Luke) and marvel at Jesus' power over wind and water. Other NT accounts of nature miracles that display this form are the wondrous catches of fish (Luke 5:1–11; John 21:1–14), Jesus' walking on the sea (Mark 6:45–52 = Matt 14:23–33; John 6:16–21), the feeding of the multitudes (Mark 6:35–44 = Matt 14:15–21; Luke 9:12–17; John 6:1–14; Mark 8:1–9 = Matt 15:32–39), and the changing of water into wine (John 2:1–11). In the OT the form is evident in such accounts of nature miracles as the crossing of the Red Sea (Exod 14:10–31) and some of those associated with Elisha (2 Kgs 4:38–41; 4:42–44; 6:1–7).

Much more numerous in the NT are accounts of healing miracles. The typical form is as follows: the sickness is described (e.g., its duration, the debilitating or life-threatening symptoms, the failure of physicians and medicines to effect a cure); the sick person and the healer encounter one another; the healer, through word or manipulations and use of substances (but sometimes with none of these), works a cure, which usually is sudden; proof of the healing is supplied; the spectators (if any) are amazed.

This form is evident in both ancient and modern healing accounts. Vespasian, the 1st century A.D. Roman general and future emperor, is approached by a blind man, with the request that Vespasian apply spit to his cheeks and eyeballs, and by a man with a crippled hand, with the request that Vespasian step on the hand. After some hesitation, and after consulting physicians, Vespasian complies with the requests, and both men are healed immediately, as is attested by witnesses (Tac. *Hist.* 4.81; Suet. *Ves.* 7; Dio Cass. *Hist.* 65.8; ET in Cartlidge and Dungan 1980: 156). In the 3d century account by Philostratus of a 1st century thaumaturge named Apollonius, a boy bitten by a hydrophobic dog barks, howls, and goes about on all fours, an affliction that has already lasted for thirty days (*VA* 6.43). Apollonius encounters the boy and, knowing what dog it is and where he is to be found, has him summoned and commands him to lick the boy's wound, whereupon the boy returns to normal and, as final proof of his healing, drinks water (i.e., he is no longer hydrophobic). In a 20th century account, a deacon in Oral Roberts' church who has dropped a heavy motor on his foot sits screaming with blood running out of his shoe. Roberts is summoned, kneels, prays, straightens up. The deacon, his pain gone, stops screaming, takes off his shoe, and finds the foot again normal (see Jacobs 1962: 39).

A NT example is the healing of a hemorrhaging woman (Mark 5:25–34 = Luke 8:43–48; less fully, and with significant variations, in Matt 9:20–22): the woman has been afflicted for twelve years; she has consulted physicians and spent all her money seeking a cure, but her condition has only worsened; she touches Jesus' garment, and the flow of blood stops immediately; Jesus asks who touched him, since he has felt power flow from him; the disciples (Luke: Peter) protest that there is a crowd, and many people are touching him; Jesus insists, however, and the woman—fearful and trembling—comes forward and confesses what has happened; Jesus bids her go in peace.

Here and in other accounts the mere touch of the healer or of something that touches him (the fringe of Jesus' garment, Mark 6:56 = Matt 14:36) or has touched him (handkerchiefs or aprons that have touched Paul, Acts 19:12), or even his shadow (Peter, Acts 5:15), is regarded as able to effect a cure. Hence the numerous accounts of Jesus touching the sick or wounded (Mark 1:41 = Matt 8:3; Luke 5:13; Mark 7:33; Matt 8:15; 9:29; Luke 22:51), or being asked to do so (Mark 3:10 = Luke 6:19; Mark 8:22), or of Jesus or his apostle laying hands on them (Mark 1:41 = Matt 8:3; Luke 5:13; Mark 6:5; 8:23, 25; Luke 4:40; 13:13; Acts 28:8) or requested to do so (Mark 5:23 = Matt 9:18; Mark 7:32).

Underlying these and other healing accounts is the idea, common in the Greco-Roman world, that power resides in or emanates from certain persons, objects, and words (see, e.g., Plutarch, *Causes of Natural Phenomena* [*Quaestiones naturales*] 916D; *Philosophers and Men in Power* [*Maxime cum principibus*]

777F). "All the crowd was seeking to touch Jesus, because power was going forth from him and was healing them all" (Luke 6:19; cf. 5:17). "Jesus perceived in himself that power had gone forth from him" when the hemorrhaging woman touched his garment (Mark 5:30). According to Eunapius (4th century C.E.; *VS* 148), after an impressive speech by the famous Christian orator Prohairesios, people kissed his hands and feet and licked his chest as they would a statue of a god, because they thought him possessed of divine potency. Hence, objects associated with potent persons were seen as having power (see above), as were even certain kinds of objects, either in themselves (magnets, stones) or when inscribed (amulets) or sculpted (statues) (see Nilsson 1948a: 103–9). Likewise, the words of a potent person have power; when Jesus identifies himself to those who come to take him in the garden by saying, "I am he" (a revelatory formula), they draw back and fall to the ground (John 18:5–6); when he addresses an illness (Luke 4:39) or a dead person (Mark 5:41 = Luke 8:54) or a demon (see below), these obey.

Consequently the invoking of Jesus' name by his followers has power to heal (Acts 3:6; 4:10, 30) and to exorcize demons (Luke 10:17; Acts 16:18; cf. 19:13). The author of Acts reports that some itinerant Jewish exorcists attempted (unsuccessfully) to appropriate the name of Jesus for exorcistic purposes (19:13–17). According to Origen, the name of Jesus for exorcistic purposes (19:13–17). According to Origen, the name of Jesus has such power against demons that it is sometimes effective even when bad men utter it (*Cels.* 1.6). Jesus' name, along with other Jewish names, is attested in the Greek and Coptic magical papyri from Egypt (see Nilsson 1948b: 5–8; Gager 1972, chap. 4) and accords with common thaumaturgical use of the name of a deity or some other powerful figure, often from a foreign culture and in a foreign tongue (for a parody that illustrates the stereotype, see Lucian of Samosata *Am.* 12; also his *Men.* 6–10).

As in OT healing and resurrection accounts, so also in those in the NT the causes of sickness and death are often not named (Mark 1:30; 5:25; cf. 1 Kgs 17:17; 2 Kgs 5:1). In other such accounts, however, disease and death are associated with or ascribed to sin (John 9:1–3; cf. Num 12:9–12; 16:41–50; 2 Kgs 5:20–27) or Satan (Luke 13:16) or demons (Mark 9:17–18 = Luke 9:39). Where there is no explicit reference to demonic cause of illness, the terminology may suggest it. Thus Jesus, asked to heal a deaf mute, "sighs" or "groans" (*estenaxen*, Mark 7:34), as though struggling with the power that binds (7:35) the man's tongue; or Jesus may "threaten" (*epitimān*) a disease as though an evil power inhabits it (Luke 4:39). In exorcism accounts, where demonic possession is made explicit, such terminology is also employed (e.g., Mark 1:25 = Luke 4:35; Mark 9:25 = Matt 17:18; Luke 9:42). Implicit in such terminology is the concept of power, already noted in healing accounts: a greater power (the thaumaturge) compels a lesser (the demon[s]) to leave a possessed person. Asceticism was seen as a means to such power (see, e.g., *Apoc. El.* 1:21 [*OTP* 1: 738]: fasting "releases sin … heals diseases … casts out demons"), which suggests why at Mark 9:29 some NT manuscripts add "fasting" to "prayer" as necessary in order to be able to cast out a certain kind of demon. The form of exorcism accounts conforms to that of healing accounts generally (see, e.g., Mark 1:21–28 = Luke 4:33–37; Mark 5:1–20 = Matt 8:28–34; Luke 8:26–39; *Ant* 8.46–48; Lucian of Samosata, *Am.* 16; 31; Philostr. *VA* 4.20).

A number of miracle accounts follow the basic form outlined above but are embedded in narrative frameworks that lead up to or focus on a pronouncement by Jesus and have therefore been aptly titled by Vincent Taylor (1935: 30) "pronouncement stories" (Bultmann 1963: 11, 209, calls them "apophthegms"; Dibelius 1935: 26, "paradigms"). An example is the healing of a crippled woman on the sabbath (Luke 13:10–13), followed by a pronouncement (in the form of a rhetorical question) by Jesus. Other examples are Mark 2:1–12 = Matt 9:1–8 = Luke 5:17–26; Mark 7:24–30 = Matt 15:21–28; Mark 11:12–14, 20–26 = Matt 21:18–22; Matt 8:5–13 = Luke 17:1–10; 17:11–19. See also APOPHTHEGM.

Examination of the setting of these various miracle accounts in the life of early Christian communities provides clues to why early Christians transmitted and recorded the accounts and offers important insights into the life of these communities.

E. Setting of NT Miracle Accounts

A number of passages in the NT and other early Christian literature indicate that miracle accounts figured prominently in a number of settings in the life of early Christian communities. One such setting

was the defense of Christian practices and beliefs. Over against Jewish criticisms or in intramural Christian disputes, some of the pronouncement stories cited above for their inclusion of miracle accounts would justify Christian practices regarding the sabbath (e.g., Luke 13:10–13) or Christian attitudes to non-Jews (e.g., Mark 7:24–30 = Matt 15:21–28). A pronouncement story like Mark 2:1–12 = Matt 9:1–18 = Luke 5:17–26 would justify Christians' claims that Jesus had authority to forgive sin and would provide a warrant for their own forgiving of sins by his authority (cf. Matt 16:19; 18:18; John 20:23).

Christian practice of thaumaturgy, especially healing rituals, was another context in which accounts of miracles worked by Jesus played a role, both before and after their collection and recording in the Gospels. That Christians practiced such rituals is evident from a number of texts. Paul cites healing and working of miracles (*dynameis*) as gifts of the Spirit (1 Cor 12:9, 10), and the letter of James (5:14) outlines a procedure for healing that employs prayer and anointing with oil "in the name of the Lord" (cf. Mark 6:13). Outside the NT, Irenaeus (*haer.* 2.32.5 [Harvey ed., 2.49.3]), Justin Martyr (*2 Apol.* 6.6; *Dial.* 30.3; 76.7; 85.2–3), Tertullian (*Apol.* 23.6), Origen (*Cels.* 1.6; 3.24; 7.4, 67), the Acts literature (*Acts Pet. Paul* 77, *Acts John* 79; *Acts Thom.* 47–48; 141), and Christian magical papyri (in Preisendanz 1974, papyri 5b, 18, 19) describe healings and exorcisms by Christians or in Christian communities. A number of these texts invoke the name of Jesus, or recite brief credos about him or "formulas from the holy scriptures" (Origen, *Cels.* 7.67), or refer to healings by him recorded in the Gospels. The stories of healings by Jesus provided precedent and warrant for Christians' practice of healing rituals. The fact that the transmitters and recorders of these stories included certain details of how Jesus healed suggests that early Christians also looked to these accounts for techniques to be used in their healing rituals (cf. the dialogue in Mark 9:28–29, and Dibelius 1935: 84, 86–87).

These techniques were not peculiar to Christians. The use of foreign words (*talitha koum*, Mark 5:41; *ephphatha*, Mark 7:34) is common in pagan healing accounts (e.g., Lucian *Am.* 9, 12, 31; *Men.* 6–10; Philostr. *VA* 4.45) and in the magical papyri (see Nilsson 1948b: 5–8; Gager 1972, chap. 4). There are also parallels to Jesus' use of saliva (Mark 7:33; 8:23; John 9:6; cf. Vespasian's healing of a blind man, cited above), to his sighing (Mark 7:34; cf. the magical papyri cited in Dibelius 1935: 85–86), and to his touching of the afflicted person or taking hold of the person's hand (Mark 1:31 = Matt 8:15; Mark 1:41 = Matt 8:3 = Luke 5:13; Mark 5:41 = Matt 9:25 = Luke 8:54; Mark 7:33; 8:22–23, 25; Matt 9:29; 20:34; Luke 7:14; 13:13; 22:51; cf. Philostr. *VA* 3.39; 4:45).

The similarity between these techniques and those used by pagan healers and persons regarded as magicians was one reason some pagans and Jews in the 2d century charged that the healings attributed to Jesus and his followers were worked through magic (Celsus, in Origen, *Cels.* 1.6, 71; Tert. *Apol.* 21.17; 23.7), which Christians vigorously denied (Just. *1 Apol.* 30; Tert. *Apol.* 23.12–19). Similarly, some modern scholars see a sharp discontinuity between these accounts and pagan healing accounts, claiming that Jesus healed simply by a word and dismissing as insignificant the materials and gestures he employs in some of the healing stories. This position is difficult to maintain: some of the healings include words, materials, and gestures, or simply happen (Mark 5:28–29 = Luke 8:43–44). To say that Jesus healed simply with a word does not in fact distinguish his healings from pagan healings or from magic: words themselves could be construed as magic manipulations, as Origen states explicitly (*Cels.* 1.24–25; 5.45) and as is clear from the magical papyri, amulets, cursing tablets, and literary texts concerning magic, with their abundant formulas for incantations and their special words and syllables for apotropaic and other uses.

Indeed, one reason Christians were successful in winning converts was that as part of their missionary proclamation they told stories of miracles worked by their savior which had affinities with those circulating among pagans. Such stories, pagan or Christian, were winsome because they raised the hope that as the healer had once acted in the past, so now he might do so again. Sick persons who journeyed to the Asclepius temples at Epidaurus in Greece or on the island of Cos came in the hope that they would be wondrously healed as were the persons described in the inscriptions on votive tablets at the temples there (examples in Edelstein 1945, 1: Testimonies 423, 794; Cartlidge and Dungan 1980: 151–53). For pagans accustomed to such stories about their deities and thaumaturgists, Christians' proclamation of miracles

worked by Jesus would serve as a counterpoise to Christian proclamation of a savior apparently so powerless that he was unable to escape the ignominy of death on a cross. The connection of Christian thaumaturgy and Christian mission is made explicit in several NT texts. According to Matt 11:20–21 = Luke 10:13, the working of miracles is expected to lead to repentance (cf. also Mark 6:12–13), and thaumaturgy—healing of the sick, raising the dead, cleansing of lepers, exorcisms—is seen as part of mission in Matt 10:7–8 = Luke 9:2 and Luke 10:8–9. In defense of his apostolic mission and ministry, Paul cites as "signs" (*sēmeia*) of his apostleship his working of "signs" (*sēmeia*), "wonders" (*terata*), and "mighty works" (*dynameis*) (2 Cor 12:12; similarly Rom 15:19). The purpose of his thaumaturgy, says Paul, is "obedience of the gentiles," i.e., their coming to faith in Christ (Rom 15:18).

When Paul's letters were then read in Christian assemblies, his declaration of his thaumaturgical powers would serve to strengthen the authority of Paul and his message. Such proclamation—of wonders worked by Paul as well as by Peter—is explicit in a number of passages in Acts (see below) and would also serve to strengthen the faith of believers. The same would be true of the recounting of the stories of miracles worked by Jesus.

In the life of early Christian communities miracle stories and thaumaturgy thus played important roles. But, as has already been indicated, they also stood in tension with the Christian proclamation of the crucified Christ, as is evident in the writings discussed next.

F. Paul

Paul, as was indicated above, in several passages refers to his thaumaturgical powers as evidence of his apostleship. Far outweighing these passages, however, are others in which he cites his sufferings as demonstrations of his apostleship (1 Cor 4:11–13; 2 Cor 6:3–10; 11:23–27) and insists on his weakness as a condition of the manifestation of Christ's strength in him (1 Cor 4:9–10; 2 Cor 4:7–12; 11:30; 12:1–10). This interpretation of his apostleship he relates to his sickness (2 Cor 12:7–10) but especially to the weakness of a crucified savior in whom he sees the strength and wisdom of God revealed (1 Cor 1:18–25), a view deriving from a wondrous event: the appearance of the risen Christ to him (1 Cor 15:8) and his call to be an apostle (Gal 1:15–16). Paul makes these paradoxical assertions of God's power and strength over against persons who stress thaumaturgy as proof of divine mission. A similar antithesis is found in the gospel of Mark.

G. Mark

Miracle accounts play an important role in the gospel of Mark, constituting a substantial portion of the narratives of the first nine chapters. The description of John the Baptist's work that opens the gospel culminates in his proclamation that one mightier than he is yet to come (1:7). That one is Jesus, whose miracles are the first steps in establishing the reign of God that Jesus, at the beginning of his ministry, announces is near at hand (1:15). With the power of the Spirit that descended on him at his baptism (1:10), Jesus demonstrates, through displays of power, that God's reign is beginning: he heals illnesses (1:29–34, 40–42; 2:1–12; 3:1–6; 5:21–43; 6:53; 7:31–35; 8:22–26; 10:46–52), wondrously feeds multitudes of hungry people (6:30–44; 8:1–9), walks on water and stills wind and wave (6:45–51), and withers a fig tree to its roots (11:14, 20–21; on this difficult passage see Cotter 1986; Achtemeier, *Mark* Proclamation, 23–25). Like one who binds a strong man in order to plunder his house (3:27), so Jesus, having overcome Satan in the wilderness (1:12–13), compels Satan's forces to obey him, driving them out of the humans they afflict (1:23–26, 34; 3:11; 5:1–20; 7:24–30; 9:14–26).

Why Jesus should command the demons not to reveal his true identity can be explained in some cases as a common element in an exorcism story (Jesus commands the demon to be still, 1:25, even as he commands the raging storm to be still, 4:39). In other passages, however, the commands to demons not to reveal who he is (1:34, 3:12), and to persons he heals (1:43, 7:36) or raises from the dead (5:43) to tell no one of it, can be attributed to the evangelist's concern that Jesus not be viewed simply as a miracle worker. Rather, Jesus must suffer and die; this is his "messianic secret," and to deny that necessity is viewed in 8:31–33 as Satanic; these verses provide readers with the key to unlock the Markan "messianic secret" and thus to see the miracles worked by Jesus in relation to his suffering and death. To perform the miracle of descending from the cross, as some of the bystanders mockingly exhort Jesus to do in order

that they may "see and believe" (15:32), would be to attempt to achieve by wondrous display and main force what can only be accomplished through service unto death (10:45). The taunt "He saved others, himself he cannot save" (15:31) expresses ironically the same view of messiahship. Thus it is that Jesus acknowledges publicly that he is the Christ (14:61–62) only *after* it has become clear that the Christ must suffer and die. For the same reason he commands his followers not to reveal he is the Christ until after his suffering, death, and resurrection (8:29–33; 9:9, 31–32; 10:31–32); and the only public confession of Jesus as Son of God that does not meet with a rebuke or a command to silence comes after Jesus' death is accomplished (15:39).

The miracle at the baptism of Jesus through which God designates Jesus as his chosen one (1:11) is followed by the miracles which demonstrate that God's reign draws near, but it is the baptism of his death (10:38), where Jesus is powerless, which the evangelist sees as the decisive victory over the forces that oppose God's reign. (On the preceding, see further Perrin 1971; Kelber 1976; Rhoads and Michie 1982.)

H. Matthew

The basic outline of the gospel of Matthew is close to that of the gospel of Mark, which means that here, too, Jesus is depicted as the Christ who suffers and dies and not simply as a miracle worker, even though Matthew includes virtually all the miracle stories recorded in Mark (missing are Mark 1:23–28; 7:32–37; 8:22–26) but also others not found in any of the other NT Gospels (Matt 9:27–31, 32–34 [cf. 12:22–24]; 14:28–31; 27:52–53; 28:2–4, 9–10, 16–20).

One distinctive characteristic of the Matthean miracle stories is their tautness; many of the colorful details found in the other gospels are lacking (cf., e.g., Matt 8:28–34 with Mark 5:1–20; Matt 9:18–26 with Mark 5:21–43; Matt 20:29–34 with Mark 10:46–52). On the other hand, some of the narratives include material not found in the other gospels (cf., e.g., Matt 14:22–33 with Mark 6:45–52; Matt 15:21–28 with Mark 7:24–30). Also noteworthy is the evangelist's artful grouping of miracle accounts (e.g., Matthew 8–9). These Matthean usages bring to the fore several distinctively Matthean themes that interpret the miracles, and Jesus as miracle-worker, for readers (see especially Bornkamm 1963; Held 1963).

Jesus' miracles are sometimes presented in Matthew as the fulfillment of scripture (1:22–23; 8:17; 12:17), a prominent Matthean theme (on the fulfillment theme in general and its application to the Matthean birth narratives and the miracles they recount, see Brown 1977). These formulaic citations attached by Matthew to miracle accounts served several purposes: instruction in how the miracles fulfilled the scriptures (didactic) as well as defenses of them based on scripture and proof that Jesus is God's promised Messiah (apologetic and theological). He is thus set apart from other thaumaturgists, who do not have such prophetic testimony.

Jesus is Messiah not only in word—in the Matthean discourses—but also in deed (Schniewind *Matthew* NTD, 8, 106), as made clear in Matthew's introduction (4:25) and conclusion (9:35) to the Sermon on the Mount (chaps. 5–7) and miracle stories grouped in Matthew 8–9. In their stark Matthean versions they focus on Jesus the Christ. Thus, in the healing of Peter's mother-in-law, Jesus appears alone with her (8:14–15), in contrast with the other accounts (Mark 1:29–31; Luke 4:38–39). The Matthean version of the Gadarene/Gerasene demoniac(s) (8:28–34) lacks many details of the Markan (5:1–20) and Lukan (8:26–39) accounts, and, in contrast to them, presents the demons' response to Jesus neither as apotropaic ("I adjure you by God," Mark 5:7) nor as supplicatory (Luke 8:28) but as an implicit confession of Jesus' messiahship: He is the one who has "come" to demonstrate God's sovereignty over evil by subjecting demons to torment, even "before the time" of their final judgment that will establish God's reign (Matt 8:29); accordingly, it is not pigs who "drown" in the lake (Mark 5:13 = Luke 8:33) but demons who "die" there (Matt 8:32).

Matthean abridgement and expansion of some of the synoptic miracle accounts bring to the fore two other important Matthean themes: faith (and the negative "little faith") and discipleship. Compared with the Markan (5:21–43) and Lukan (8:40–56) versions of the healing of the hemorrhaging woman, Matthew's is reduced to a scene involving only Jesus and the woman in which her faith in Jesus' power to heal, and Jesus' rewarding of her faith, stand out sharply (9:18–26; the same focus on faith and its reward

in the succeeding account, 9:27–31). In contrast with the Lukan version (7:1–10) of the healing of the centurion's son/slave, Matthew's (8:5–13) is shorter, and the faith of the centurion, which is the heart of the story in both gospels, is accentuated by a distinctively Matthean conclusion: "As you have believed, so be it done for you" (8:13; cf. 9:29; 15:28). On the other hand, the Matthean account of Jesus' healing of the daughter of the Syro-Phoenician woman (15:21–28) is longer than the Markan parallel (7:24–30) by virtue of the inclusion of a dialogue between Jesus and the woman which raises the question of relations between Jews and non-Jews and answers it by reference to her faith, which surmounts the barrier (8:28).

Jesus and his disciples figure in the synoptic stories of Jesus stilling the storm (Mark 4:35–41; Matt 8:23–27; Luke 8:22–25) and of Jesus and Peter walking on water (Mark 6:45–52; Matt 14:22–33). Matthew's versions, however, point to the nature of discipleship and contrast with it "little faith." Immediately preceding the account of the stilling of the storm Matthew has placed sayings on the cost of discipleship: a scribe who wishes to follow (*akolouthein*) Jesus, i.e., be his disciple, is told that he can expect none of the comforts of home (8:19–20); and a disciple who wishes to return home to bury his father is told to let the dead bury their dead and to follow (*akolouthein*) Jesus (8:21–22). Only in Matthew's gospel do Jesus' disciples then *follow* (*akolouthein*) him into the boat, where the storm breaks upon them and they in their distress cry out to him to save them (8:23–25). Jesus asks why they are afraid, "you of little faith [*oligopistoi*]" (8:26); he then threatens (*epitimēsen*) the storm as one would an evil power (see D above) and it subsides. Similarly, Peter, walking on the water toward Jesus at Jesus' command, grows fearful and begins to sink, but Jesus takes his hand and asks why he doubted, "you of little faith [*oligopiste*]" (14:31). Those who follow Jesus and become his disciples could conclude from these passages that they would know peril because of the evil forces that oppose God's reign, but they should not be of "little faith" because he is their living and present Lord (18:20; 28:20) and would deliver them.

Moreover, as he once worked miracles, so now his disciples, at his command and empowered by him, will do the same. In the discourse commissioning his disciples to go forth to proclaim the kingdom (chap. 10), Jesus empowers them not only to cast out unclean spirits (thus also Mark 6:7; Luke 9:11, "demons") but also to "heal every disease and every sickness" (Matt 10:1), indeed, to perform virtually every miracle ascribed to Jesus in Matthew 8–9 (10:8). The passages that follow, depicting the trials and persecution that await such thaumaturgical missionaries (10:17–39), are addressed to the Risen Lord's disciples, i.e., the evangelist's contemporaries, for that is their situation (Vielhauer 1965: 64–67; Higgins 1964: 100–4; Kingsbury, *Matthew* Proclamation, 74, 90–91). Receiving them is the same as receiving him and the one who sent him (10:40). Accordingly, in the pericope that immediately follows the commissioning discourse, Jesus' recital of miracles, in response to John the Baptist's question whether he is the messiah (11:2–6), would apply to his disciples as well as himself: the miracles of both proclaim he is indeed "the one who is to come" (11:3).

That his disciples are expected, both by themselves and by others, to perform miracles is indicated in Matt 17:14–20, a sharply abridged version of the story of a demon-possessed boy (contrast Mark 9:14–29 and Luke 9:37–43). The father has brought him to the disciples for healing; when they are unable to comply he turns to Jesus for help, and the disciples ask Jesus the reason for their inability to perform the healing (the verb "unable" [*adunatein*], 17:16, 19, 20, ties the Matthean narrative together). He, as their teacher and the teacher of the church (28:20), then instructs them: it is because of their "little faith" (*oligopistian*). Nonetheless, for a person with "faith like a grain of mustard seed … nothing will be impossible" (17:20). Their failures, whether walking on water or attempting a healing, make clear that Jesus' disciples possess no miraculous power in themselves; only by faith in him and by his command can they work miracles such as he did and thus proclaim God's reign and him as God's messiah.

I. Luke–Acts

Six of the miracle stories in the gospel of Mark are not included in the gospel of Luke; five of these (Mark 6:45–52; 7:24–30; 7:31–37; 8:1–10; 8:22–26) occur in Mark 6:45–8:26, the "Great Omission." Whether the evangelist did not include the cursing of the fig tree (Mark 11:12–14, 20) so as not to cast

doubt on Jesus' rationality or his ethical character is unclear (see Cotter 1986; Achtemeier 1975: 548). Common to Luke and Matthew ("Q") are Luke 7:1–10 = Matt 8:5–13 and probably Luke 11:14 = Matt 12:22. Peculiar to Luke are 5:1–11; 7:11–17; 13:10–17; 14:1–6; 17:11–19; 22:50–51, and the resurrection and ascension accounts (24:13–35, 36–49, 50–53).

Among the NT gospels only the gospel of Luke has a sequel by the same author—the Acts of the Apostles—and the two writings illuminate one another, also in the miracle accounts (see Achtemeier 1975; Conzelmann 1960: 177–83; Held 1963: 277, n. 2). The characterization of Jesus in Peter's missionary sermon in Acts 2 as "a man attested to you by God in mighty works and wonders and signs" (2:22; cf. Acts 10:38) is an apt summary of the evangelist's treatment of the synoptic miracle traditions. Unlike the gospel of Mark, which has proportionately more miracle stories than either Matthew or Luke but carefully subordinates them to the passion and death, and unlike Matthew, which uses miracle accounts as vehicles for themes central to that gospel, in the gospel of Luke the focus of the miracle stories is on their evidentiary and missionary function: more than in the other gospels the miracles demonstrate that Jesus is the one anointed by God's Spirit to carry out a divine mission in fulfillment of God's promises (Luke 4:18, a quotation from Isa 61:1–2 and 58:6) both through teaching and miracles, which thus serve as the basis of faith and discipleship.

The evangelist's careful balancing of teaching and miracles, and indeed the prominence he accords miracles, are seen already in the programmatic sermon in the synagogue in Nazareth. Much longer than the parallels in Mark (6:1–6) and Matthew (13:54–58), the sermon, after announcing that Jesus will both teach and work miracles (Luke 4:18–22), refers to miracles he has already performed; the account then concludes with a miracle (4:23–30). Whereas the Markan account of the healing of a leper closes with a summary statement of Jesus' popularity (1:45), Luke explains that people come "to *hear* and to be *healed*" (5:16); similarly, Luke 6:18, "to *hear* him and to be *healed*" (Mark 3:8, people come only because they heard what Jesus "did," i.e., worked miracles); 9:11, Jesus *teaches* and *heals* (Mark 6:34, Jesus only teaches).

Luke's customarily careful treatment of synoptic traditions is evident also in the miracle stories. In the Markan account of the healing of a blind man at Jericho the man hears Jesus is coming and, though blind, comes (how?) to Jesus on his own (10:47, 50); in the Lukan version Jesus commands the blind men to be *brought* to him (18:40). In Mark 1:45 it is unclear whether it is the healed leper or Jesus who goes out and begins to "proclaim much" and "to spread the word" (of the healing? the gospel?) and is therefore unable to enter openly into a city; all of these difficulties are avoided in Luke's account (5:15). Moreover, while the Markan account may be taken to mean that the leper disobeyed Jesus' command to tell no one of his healing (1:44), Luke states that the report of the healing simply "spread" (Luke 5:15), with no indication of any involvement by the leper and thus no disobedience on his part. Similarly, in Luke 4:33–34 the demon does not speak again after Jesus has commanded it to be silent, in contrast to Mark 1:24–26; Luke is also careful to report obedience to Jesus' commands by sick persons, details lacking in Mark (contrast Luke 5:24–25, the man "went home," with Mark 2:12, no such mention; Luke 6:8, the man "stood up," with Mark 3:3, no such mention).

Prominent in the Lukan miracle accounts is a concluding acclamation: people praise God (5:26; 7:16; 9:43; 13:13; 18:43) or rejoice (13:17). This typical characteristic of miracle stories confirmed to hearers or readers of a story that a miracle had indeed occurred and commonly identified the power(s) responsible. In the gospel of Luke the acclamations affirm that God is working through Jesus, who by performing miracles is carrying out his divine mission (4:18–30). That miracles perform this evidentiary function in Luke is suggested already by the attention the author devotes to them but is also indicated further in various ways.

In contrast with the Matthean version of John the Baptist's questioning of Jesus (11:2–6), which might be seen as occasioned by miracles worked by Jesus' disciples (Matthew 10), Luke's account is preceded directly by two miracle stories (7:17), so that "all the things" John has heard about Jesus are specifically miracles. Moreover, before Jesus replies he performs many healings (7:21), thus anticipating and substantiating the reply; and he instructs John's disciples to report what they have "*seen* [i.e., miracles]

and heard" (7:22), in contrast to Matthew's Jesus, who places hearing before seeing (11:4; Achtemeier 1975: 552). While the author of Luke may not have shared Philo of Alexandria's view of sight as the most superior and least deceptive of the senses (*Abr* 57, 60, 150, 153, 156, 158–62, 166; cf. his invidious comparison of Ishmael, meaning "hearing God," and Israel, "seeing God," *Fuga* 208), in this passage as well as in others in his gospel "seeing" is conspicuous. At Jesus' entry into Jerusalem his followers praise God for "all the mighty works [*dunameōn*] that they had seen" (19:37). "Blessed are the eyes that see what you see," says the Lukan Jesus (10:23), in contrast to the version of the saying recorded in Matthew, which concludes, "and your ears, for they hear" (13:16). When the risen Jesus eats a piece of fish in the presence of the disciples to demonstrate that it is indeed he, they see him do so, though Luke does not state that in so many words (24:41–43).

As was indicated above, trust in the miracle worker and/or the power(s) responsible for a miracle is the expected response to thaumaturgy. This expectation is especially evident in both Luke and Acts, where faith and discipleship often follow a miracle (Achtemeier 1975: 553–56). Whereas in Mark (1:16–20) and Matthew (4:18–22) the first disciples respond to a simple summons of Jesus, in Luke the call comes after the miraculous catch of fish (5:1–11) and after Jesus' miraculous power has been demonstrated to Peter (healing of his mother-in-law, 4:38–39, which *follows* the call in Mark and Matthew) and to readers (4:31–41). The call of Levi (5:27–28) follows immediately upon a miracle (5:17–26) whereas in Mark teaching intervenes (2:13). Only Luke states that Jesus' women disciples were persons who had been healed by him (8:2).

That Jesus is a thaumaturge in the tradition of Moses, Elijah, and Elisha—that is, that he stands in the tradition of those great Hebrew prophets, thus setting him apart from other thaumaturges of the Greco-Roman world—is suggested by the evangelist in various passages in Luke-Acts that recall or imitate traditions in the Scriptures (on such *imitatio* in Luke-Acts, see Brodie 1984). As Moses worked "signs and wonders [*terata kai semeia*]" (Acts 7:36; cf. Exod 7:9 LXX, *semeion ē teras*) and predicted that "God will raise up for you, from among your compatriots, a prophet like me" (Acts 7:37; see Deut 18:15; similarly, Acts 3:22), so Jesus was "a man attested to you by God through mighty works and wonders and signs [*dunamesi kai terasi kai sēmeiois*]" (Acts 2:22)—indeed, a man "whom God raised" (2:24). After Jesus, like Elijah, resuscitated a dead son and "gave him to his mother" (Luke 17:15 = 1 Kgs 17:32 LXX), the people exclaim that "a great prophet has been raised up among us" (Luke 17:16; cf. a similar story told of Elisha, 2 Kgs 4:18–37; on pagan parallels to the Lukan account, especially Philostratus, *VA* 4.45, see Fitzmyer *Luke 1–9* AB, 656–57). When Jesus' fellow townspeople expect him to work miracles in Nazareth such as those he had performed in Capernaum, he replies that "no prophet is accepted in his home country" (Luke 4:23–24), and by citing the examples of Elijah and Elisha and their miracles among non-Jews he implicitly compares himself to them (4:25–27). Elijah's miraculous assumption (*analēmphthē*) into heaven (2 Kgs 2:11) is echoed in the announcement at the beginning of the Lukan travel narrative, of Jesus' assumption (*analēmpsis*) (9:51; cf. Acts 1:11, Jesus "was assumed [*analēmphtheis*] into heaven"). Sometimes, however, the Lukan Jesus is dissociated from Elijah and indeed appears as his anti-type (Talbert 1984: 93–94); unlike him, Jesus refuses to call down avenging fire from heaven (Luke 9:54–55; cf. 2 Kgs 1:10, 12; contrast also Luke 9:62 and 1 Kgs 19:21), in accord with the general Lukan stress on Jesus' compassion, also present in miracle accounts (Luke 7:13; 8:52).

When Jesus summarizes his ministry in a message to Herod Antipas, it is as a prophet who works miracles and perishes as a result (13:31–33), and in mourning his death his disciples remember him as "a prophet mighty in deed and word" (24:19) who was handed over to be crucified (24:20).

It is as one empowered by the Spirit which inaugurates the various phases of his ministry in Luke (Fitzmyer *Luke 1–9* AB 227–28) that Jesus performs his miracles (4:18; Acts 10:38, "how God anointed Jesus of Nazareth with the Holy Spirit and with power, how he went about doing good and healing all who were oppressed by the devil, because God was with him"). His final words to his disciples in the gospel are a promise that he will send them what the Father has promised, namely, "power from on high" (24:49). This promise is repeated at the beginning of Acts (1:4) and fulfilled on Pentecost, when in fulfillment of prophecy (2:17, citing Joel 3:1) God's spirit is poured out upon the disciples (Acts 2:4, 33).

In Luke's characteristic sequence, the bystanders "*see* [the wondrous giving of the Spirit and of tongues, 2:3–4] and hear" (2:34), and thousands come to faith (2:41). In the next chapter, Peter, calling on the name of Jesus, heals a lame man (3:1–11); Peter then addresses the astonished witnesses of the miracle, attributing it not to any power or piety of his own (3:12) but to God, who glorified his servant Jesus by raising him from the dead (3:13–15) and through faith in his name worked "what you see and hear" (3:16); then follow both hostile reaction and faith (4:1–4).

This pattern is characteristic of the miracle accounts in Acts: empowered by the Spirit (mentioned 57 times), and often in Jesus' name (see D. above, and Conzelmann 1960: 178, n. 3), his followers work miracles that continue Jesus' ministry and, alongside missionary preaching, win many times more followers than he did (e.g., 2:41; 4:4) while at the same time arousing opposition.

In addition to various summary statements of "signs" (*sēmeia*), "wonders" (*terata*), and "mighty works" (*dunameis*) wrought by Jesus' followers (2:43; 4:30; 5:12; 6:8; 8:6; 14:3; 15:12), Acts contains accounts or summary statements of healings and exorcisms (3:1–16; 5:16; 8:7–8, 13; 9:17–18, 33–35; 14:8–10; 16:16–18; 28:7–9; by remote means, whether through Peter's shadow [5:15] 19:11–12 or through handkerchiefs and aprons that have touched Paul [19:11–12]), as well as accounts of resurrections (9:36–42; 20:9–12), of punitive miracles (5:1–11; 9:1–9; 12:20–23; 13:6–11; 19:13–16), of miraculous liberations (5:17–25; 12:5–11; 16:23–30), of nature miracles (2:2–3; 4:31; 8:39), and of dispensations of gifts or powers exceeding normal human capabilities (2:4–6; 28:3–6).

As Peter is featured as the leading apostle in the first half of Acts, and Paul in the second half, so also the miracles attributed to each correspond closely in number and kind (Hardon 1954: 308–9); cf. Acts 2:43 and 14:3; 3:1–16 and 14:8–10; 5:1–11 and 13:6–11; 4:31 and 16:25–26; cf. also 5:15 with 19:11–12; 9:33–35 with 28:7–9; 9:36–42 with 20:9–12; 5:17–25 and 12:5–11 with 16:23–30.

The miracles cited by Jesus in reply to John the Baptist's question (Luke 7:22 = Matt 11:5) are in Acts worked by his followers as well, thus attesting that he is indeed "the one who is to come" (Luke 7:19 = Matt 11:3). Each time the Christian movement is established in a new location, moving from Jerusalem to Judea, Samaria, and "the end of the earth" (Acts 1:8), miracles are an essential element in the process, so that, finally, all opposition overcome, the reign of God and teaching about Jesus Christ are proclaimed and taught "openly and unhindered" (28:31).

J. John

The 7 miracle accounts in the Fourth Gospel are all found in chapters 1–12: (1) water into wine (2:1–11); (2) healing of an official's son (4:46–54); (3) healing of a paralytic at Bethesda (5:1–15); (4) feeding of a multitude (6:1–14); (5) walking on water (6:16–21); (6) healing of a blind man (9:1–41); and (7) resurrection of Lazarus (11:1–44). Number (1) is peculiar to John. Three are reported also in the Synoptic Gospels: numbers (2) (Matt 8:5–13 = Luke 7:1–10), (4) (Mark 6:32–44 = Matt 14:13–21 = Luke 9:10–17), and (5) (Mark 6:45–52 = Matt 14:22–33). Three are parallel in type to miracles reported in the Synoptics: numbers (3) (Mark 2:1–12 = Matt 9:1–8 = Luke 5:17–26), (6) (Mark 10:46–52 = Matt 20:29–34 = Luke 18:35–43; Matt 9:27–31), and (7) (Luke 7:11–17). That there are 7 such accounts is regarded as significant by some, but whether the evangelist did is doubtful (see, e.g., Bultmann *John* MeyerK, 112, n. 3). In addition to these longer accounts, there are (8) the brief report of the boat suddenly at land (6:21) and (9) the falling back and falling to the ground of Jesus' captors when he says, "I am he" (18:4–6), as well as summary statements that Jesus performed miracles (2:23; 3:2) and possessed praeternatural knowledge (2:25; 4:16–19, 29).

Though the number of miracles in John is fewer than in any of the Synoptic Gospels, their importance has long been recognized by scholars, even while their meaning, function, and source have been much discussed and disputed, beginning with the distinctively Johannine terminology for miracle. Aside from the word *terata*, "wonders," in the stock phrase *sēmeia kai terata* (4:48; see A.), miracles are called either *sēmeion,* "sign" (2:18; 4:54; 6:14, 30; 10:41; 12:18) and in the plural *sēmeia,* "signs" (2:11, 23; 3:2; 6:2, 26; 7:31; 9:16; 11:47; 12:37; 20:30) or, consistently in the mouth of Jesus and as a more inclusive term that can embrace Jesus' words (14:10)—or, indeed, his whole mission (17:4) as well as his miracles—

ergon, "work" (e.g., 7:21; 10:32) and in the plural *erga*, "works" (e.g., 7:3; 9:3–4; 10:25, 32, 37–38; 14:10–12; 15:24).

The use of the distinctive term *semeion/-a* for miracle in the Fourth Gospel as well as certain clues in the narrative point to the evangelist's use of traditions, or even a collection ("signs source"), containing accounts of *semeia* (for a discussion of a "signs source" and a survey of the scholarly literature, see Fortna 1970; Nicol 1972; Martyn 1979: 164–68). See also SIGNS/SEMEIA SOURCE. Thus, the statement in 4:54 that Jesus' healing of the official's son (4:46–54) was "the *second* sign that Jesus did when he came from Judea to Galilee" (4:54)—even though 2:23 and 3:2 state that he performed many signs between the first sign (2:11), turning water into wine, and this second one—and the fact that the account of the healing begins by referring back to the water-into-wine account (4:46) and that the geographical location and the pattern of both accounts are very similar (see Brown *John 1–12* 194) suggest that the healing account followed the account of the wine miracle directly in a source employed by the evangelist. The conclusion of chap. 20, that "Jesus did many other signs […] that are not recorded in this book" (20:30), is inappropriate insofar as much material intervenes between this passage and the last of the signs in chap. 11; such a conclusion would be appropriate to a collection of signs, however.

As to the meaning of *semeion/-a*, the view, held by some, that because the miracles in John are designated as "signs" they are therefore somehow distinct from "miracles" (Trench 1953: 343–44; *TDNT* 7:240, 249) is untenable (Remus 1982b: 548–50). The basic sense of *semeion* is "identifying mark" or "sign," with no necessary divine reference. Thus social convention could designate the ringing of a gong, a beacon fire, or the shadow of the pointer on a sundial as *semeia* that signify—have meaning—beyond themselves in the ordinary affairs of life; if a *semeion* was extraordinary, however, it could point to the divine as cause, i.e., be considered a miracle (both uses in Plut. *Vita Per.* 6.2–4). In the gospel of John the *semeia*, measured by common canons of the ordinary current then, are extraordinary and point beyond themselves to the divine. The identity and nature of the divine to which they point, however, is even more extraordinary: They identify Jesus as the light (8:12; 9:5; 12:46) and life (11:25; 14:6) of the world, the bread of life from heaven (6:35, 41, 48, 50, 51), and the Logos who, through the signs, reveals his glory (1:14; 2:11; 11:4), which is also the glory of God his Father (11:4; 11:40), since he and the Father are one (10:30, 38; 14:3, 10, 11, 20; 16:15, 32; 17:21) and since he does the Father's will (4:34; 5:30; 6:38) and works (*erga:* 4:34; 5:36; 9:4; 10:25, 32, 37; 14:10; 17:4).

Not surprisingly, then, the miracles evoke a variety of responses (cf. Haenchen 1962–63; Brown *John 1–12* AB, 531–32) which may reflect the evangelist's milieu as well. The responses can be listed as follows.

1. For some, Jesus' wonderworking certifies him as prophet or thaumaturge sent by God (2:11, 23; 3:2; 4:39, 45–47, 49, 53; 6:2, 14; 7:31; 11:45–48; 12:11, 18). If the gospel, even while providing an account of Jesus' earthly ministry, does so in light of the evangelist's own situation (Haenchen 1962–63: 212–14; Nicol 1972: 145–49; Martyn 1979: 29, 82–89, 129–51; Brown 1979), so that he is at the same time reflecting on reactions in his own day to proclamation of Jesus' *semeia*, then these passages point to a time in the history of the Johannine community, represented in the *sēmeia* traditions, when Jews responded positively to such proclamations and without risk of exclusion from the synagogue. Such exclusion developed later, leading to fear and secret discipleship on the part of some of the Jews who believed in Jesus because of his *semeia* (3:1–2; 9:22, 34; 12:42; 16:2–4; cf. 7:13 and 19:38; see Nicol 1972: 143–45; Martyn 1979: 37–62).

2. Whereas in category 1 the term "the Jews" is used in a neutral sense (3:1; 11:36–37, 45; 12:9), in the gospel generally "the Jews" is more often a negative term designating those Jews who are skeptical toward or reject the *sēmeia* and/or the claims Jesus makes in connection with them (2:18, 20; 5:10, 16; 6:41, 52; 9:18; 10:24–25, 31–33; 12:11). Sometimes the Jews who reject the *sēmeia* are specified further as "the Pharisees" (7:31–32, 47–48; 9:13, 15–16, 40–41; 11:46–47; 12:18–19) or "the rulers" (7:48), though the latter term more often designates persons in category 1 (3:1; 7:26, 50; 12:42). The hostility between Jesus and Jewish authorities in his day is reflected in these passages; but equally, if not more,

important, they reflect antagonism between the evangelist's community and the Jews of his day (see Martyn 1979: 84–89; Brown 1979: 40–43).

3. The fact that the gospel of John includes the *sēmeia* traditions noted in category 1 indicates that the evangelist placed some value on them. Nonetheless, the Johannine Jesus is critical of response to his *sēmeia* of the kind indicated in category one. It is untrustworthy (2:24) and wrongly motivated (6:26); ultimately, it fails (12:37). But there are those who see Jesus' miracles for what they are, signs identifying him as the life and light of the world, the bread from heaven, the one sent by the Father (2:11; 6:69; 9:38; 11:41–42) to do his works (5:36; 10:25). Jesus can therefore invite belief in his works as a way to perceiving that he and the Father are one (10:38; 14:11). Jesus' miracles interpreted in this way would evoke from "the Jews" the quite understandable charge of blasphemy (10:33; cf. 5:18; 8:58–59; 19:7). Even his disciples fail to comprehend his relation to the Father (14:8), eliciting an astonished reaction from Jesus (14:9) and, later, the prediction that the faith they profess (16:30) will not stand the test (16:32)—not surprisingly, for to believe such claims requires a resocialization (Meeks 1972: 70–71); or, in the words of the evangelist, the Spirit/Paraclete must come and bestow true understanding of Jesus and his *sēmeia* (14:16, 26; 15:26; 16:13–14). That will occur only after Jesus is no longer with his disciples (16:7; cf. 7:39).

4. Once Jesus departs to the Father, his working of signs is at an end. Except for 20:31, they are not mentioned after chap. 12. The subsequent chapters prepare for his departure and glorification on the cross, for which the *sēmeia* and the glory they revealed were a prelude. For readers of the gospel, the faith that is required and is pronounced blessed is that which does not need visible verification before believing (20:29). The account of the healing of the official's son (4:46–54), which seems to belong in part to this category (the official simply accepts Jesus' *word* that his son lives, 4:49) and in part to category 1 (he and his household believe *after* the son is healed, 4:53), points to editing of *sēmeia* traditions by the evangelist: 4:48 ("Unless you [plural] see signs and wonders you [plural] will not believe") is inappropriately addressed to the official, who believes without seeing, while the second-person plural suggests that this is a critical comment on the Galileans uho welcome Jesus because they have seen all the things (i.e., the *sēmeia*) he has done in Jerusalem (4:45; see Bultmann *John* MeyerK, 204–207; Fortna 1970: 41; Nicol 1972: 28–29). At this point in the gospel, 4:48 anticipates 20:29 and a time when believing without seeing will be a necessity.

For the evangelist and his readers that time is the present, and in his gospel Jesus speaks both as the earthly ("the hour is coming") and the exalted one ("and now *is*") (4:23; 5:25). Even as the disciples after the resurrection "remember" and believe what Jesus said about the temple-body *sēmeion* (2:18–22; cf. 14:26: the Paraclete will "remind you of all that I said to you"), so in the evangelist's "now" the Spirit/Paraclete has disclosed to him what was only hinted in the words and works of the earthly Jesus and what his disciples were incapable of receiving before his exaltation (16:12).

The Johannine Jesus therefore unfolds the full, symbolic import of his *sēmeia*—their *sign*ificance. The turning of water into wine (2:1–11) symbolizes what happens in Jesus' entire ministry: the revealing of his, and his Father's, glory (2:11; 1:14). Just as no one, even his mother (2:4), can demand a *sēmeion* from him (6:30), so no one can take Jesus' life without his willing it (10:17–18)—at the proper "hour," namely, his glorification on the cross (2:4; 12:23; 17:1)—as he demonstrates through miraculous invulnerability until that hour (7:30; 8:20; 18:6).

John 6 contrasts two understandings of the *sēmion* of the loaves and fish (6:1–14; see Borgen 1965; Meeks 1972: 58–59). The literalists in the narrative desire a steady supply of food from Jesus (6:15, 26) or demand from him a *sēmeion* like the wondrous manna from heaven (6:30–31)—something not to be expected from this man of ordinary, familiar parentage (6:42). The evangelist, however, inteprets the miraculously multiplied loaves as symbolic of Jesus as the true bread from heaven, given by the Father even as the manna was (6:32–33, 41); unlike ordinary bread, which perishes (6:27), and manna, which sustained life only for a time (6:49), Jesus is the life-giving (6:33, 51) bread of life (6:35, 48), and those who eat of it will neither hunger nor thirst (6:35) and, indeed, will live forever (6:51). Work (*ergazesthe*)

for such bread, says Jesus (6:27); but, in fact, one receives it—i.e., believes in Jesus as the one sent by God—as gift, i.e., a work (*ergon*) that *God* does (6:29; cf. 6:36–40, 44–45).

To the blind man who receives the gift of sight (9:17) Jesus, as a further gift, reveals his true identity. The blind man believes, and thus truly sees (9:35–38), whereas, ironically, those who have sight do not in fact see because they reject the *sēmeion* which points to Jesus as the light of the world (9:5; cf. 1:5, 9; 12:35–36, 46) and which thus brings judgment: the sightless see; whereas the seeing are sightless (9:39; cf. 12:40) and, abiding in sin (9:40–41; cf. 12:46), have incurred judgment (3:18, 36). Even as Jesus sought out the blind man after he has been put out of the synagogue (9:35), so he will find those in the evangelist's day who are expelled from the synagogue for confessing Jesus as the Christ (9:22; cf. Martyn 1979: 37–62).

The raising of Lazarus (John 11) is anticipated by the two *sēmeia* in chaps. 4 and 5, both of which demonstrate Jesus' power to give life (5:21). This final *sēmeion* abounds in typical Johannine irony that, again, plays off literal versus symbolic meaning (see Brown *John 1–12* AB, 431, 434; on Johannine irony, see Duke 1985). Jesus' delay in going to Lazarus' aid demonstrates greater love than if he had gone immediately, since Lazarus' sickness, which results in his death, is yet "not unto death" (11:1–6), for, though he will die, yet he will live when he hears Jesus' voice (11:43), even as those who, though they die (cf. 16:2) but believe in Jesus, will live (11:25). Martha takes Jesus' assertion that Lazarus will rise as a commonplace statement of Jewish belief in resurrection of the dead on the last day (11:24), not realizing he means in the present. Indeed, because Jesus is the resurrection and the life, those who live and believe in him will, unlike Lazarus, never die (11:26). Jesus' gift of life to Lazarus glorifies Jesus as a miracle-worker (11:4) but, ironically, leads to his own death (11:46–53), the "exaltation" (3:14; 8:28; 12:32–33) which is, ironically, his ultimate glorification (see Meeks 1972: 62–64). As a result, readers of the gospel, without seeing *sēmeia,* pass even now from life to life when they hear his word (5:24; cf. 3:36) or from death to life in response to his voice (5:25). Such life-giving power characterizes the "greater works [*erga*]" which the Father will show the Son (5:20–21) and which those who believe in the Son will themselves do (14:12).

K. The Letter of James

James 5:14–15 outlines a procedure for healing: the sick person calls the elders of the church who pray over the person after anointing him/her "with oil in the name of the Lord." Oil was commonly regarded as a healing and refreshing agent (Isa 1:6; Luke 10:34; Plato, *Menex.* 238A; Philo, *Somn* 2.58; Jos. *Ant* 17.172 = *JW* 1.657; Pliny, *HN* 15.19; 23.34–50; Seneca, *Ep.* 53.5; for subsequent references and the development of rites of anointing in the orthodox and Roman Catholic churches, see Mayor 1913: 170–73). However, other elements in the procedure, as well as the procedure itself, indicate that (as in Mark 6:13) more than the common medicinal powers of oil are involved here. This is a wondrous healing, and the oil is one of the means employed (on the use of material means in thaumaturgy, see D above). The praying mentioned in vv 14 and 15 stands in the tradition of prayer connected with wondrous healings (1 Kgs 17:21; 2 Kgs 4:33; Sir 38:9) or with miracles generally, examples of which are cited in 5:17–18. Whether the invocation of the name of the Lord occurs in the prayer or apart from it is unclear, but it functions to bring the power of that name to bear on the sickness (see D above); 5:15 states therefore that the *Lord* will raise up the sick person. Sin is not given as the cause of sickness here, but the long association of the two (see D above) may underlie the statement that if the sick person has sinned, it will be forgiven (5:15)—another reason for invoking the name of the Lord, for only the Lord has the authority to forgive sin and the power to overcome any demonic power associated with it.

The faith that prays for healing (5:15) is the faith of the community, including that of the sick person who has called the elders (Schlatter 1932: 280–81). The next verse specifies further the involvement of the entire community in prayer for healing (5:16a). The role played in health and healing by community belief is attested in modern anthropological and sociological studies (Cannon 1942; Lévi-Strauss 1967: 169–73; Kiev 1964: 8–11, 15, 26, etc.). In the healing ritual in James 5:14–15, the community is represented by the elders, i.e., authorities who, by reason of age or other qualifications, have been designated as leaders. They, rather than charismatics (as in 1 Cor 12:9, 28, 30), are entrusted with healing.

Verses 5 represent an institutionalization of caring for the sick and healing that developed in early Christianity (in addition to the early Christian sources cited in E above, note the role of church leaders in caring for "the weak" or "the sick" [*asthenountōn*] in Acts 20:35; Polycarp, *Phil.* 6).

L. The Book of Revelation

In the Jewish apocalyptic tradition taken over by early Christians, the appearance of signs and wonders (*sēmeia kai terata;* see A above) or the working of wondrous signs (*sēmeia*) by deceivers presage the last days and the great eschatological reversal that will deliver the elect from their tribulations and punish their oppressors. In the NT this tradition of apocalyptic miracles is represented in passages such as Mark 13:22 (= Matt 24:24), 2 Thess 2:9, and several passages in the book of Revelation (Gk *apokalypsis*). The visions revealed to the seer (Revelation 1) disclose the future and proclaim that, despite appearances to the contrary, the Lord reigns supreme over all opposing forces (19:6, 15–16; 21:22). The readers and hearers of the book (1:3), who are suffering persecution (probably late in the 1st century), can take comfort in this, and, because they have been forewarned, can recognize the revelatory signs (*sēmeia*) that will precede their deliverance.

In 12:1–3 two *sēmeia* appear in the sky, one a woman in the throes of childbirth (i.e., the birth pangs of the messianic age), the other a many-headed and many-horned dragon. The woman represents light (12:1: sun, moon, stars); the dragon, i.e., Satan (12:9), representing the forces of darkness, attempts to destroy her and her child, but is prevented from doing so and departs to war on her other offspring, i.e., the followers of Jesus (12:4–17). The next chapter, veiling its references to the Roman empire and emperor worship in apocalyptic imagery, forewarns these followers that the dragon's authority will pass to certain beasts (13:2, 12), one of which will work miraculous *sēmeia* (fire from heaven and power of speech to an image) that will deceive people into worshiping the first beast (13:13–15). In 19:20 this second beast is identified as a false prophet; from its mouth, and the mouths of the dragon and the first beast (the Roman Empire), issue demonic spirits that work *sēmeia* and assemble the kings of the earth for the day of the great eschatological battle against God (16:13–14).

Prior to that day the Lord, too, has prophets endowed with miraculous powers (11:3–6) that recall miracles worked by Moses (Exod 7:17, 19) and Elijah (1 Kgs 17:1; 2 Kgs 1:10). The prophets are killed; but then, miraculously sufflated (Rev 11:11; cf. Ezek 37:5–10), they rise and are taken up into heaven (Rev 11:12; cf. 2 Kgs 2:11). Their fellow sufferers on earth can take comfort in this and await the end when the dragon, the first beast, and the false prophet will be cast into the lake of everlasting fire (Rev 19:20; 20:10) and those faithful to the Lord will worship the Lord in a new earth and heaven (Rev 21:1–22:5).

M. Trajectories

The importance of miracle in the NT writings is evident from this overview. In subsequent Christianity miracle continued to be equally if not more important.

Were the miracle accounts in the scriptures to be taken literally or nonliterally? The resurrection of Jesus and of believers, e.g., might be viewed in stark physical terms, after the pattern of John 11:1–44 or Luke 24:36–43 (cf. Celsus in Or. *Cels.* 5:14); or, following Paul's comparison of resurrection to the difference between seed and resulting plant (1 Cor 15:35ff.) or the symbolic interpretation of resurrection in John or the view that resurrection is in the present (John 5:25; 2 Tim 2:18), resurrection might be intepreted in various non-literal ways (gnostics, e.g., Basilides in Hippol. *Her.* 7.27.10; Origen, see Chadwick 1948). Literal interpretation of miracles (e.g., Marcion in the 2d century; see Harnack 1924: 66–67, 259*–60*) is outweighed by typological or allegorical intepretations (Smalley 1964) until the Reformation era, when literal interpretation is reaffirmed, posing problems that the Enlightenment struggled with, and problems that are the subject of continuing study (see Grant and Tracy 1984; Harvey 1966; Keller 1969).

At a number of places in this article reference has been made to the important place of miracles in post-NT Christianity—in mission, apologetic, and healing rituals (see D. and E.). Such activities, and the differing ways in which miracle accounts in scripture were interpreted, involved Christians in conflict with one another and with non-Christians (see C.). In the persecutions suffered by Christians, miracles

came to be attributed to or associated with martyrs or their remains ("relics"), similarly, with the Christian ascetics, whose rigorous life became a new form of martyrdom. The cult of the saints, in which miracle has played such a key role, is a legacy of those periods (see P. Brown 1981; Ward 1982; Weinstein and Bell 1982). The powerful presence of Christ in sacraments, only hinted at in the NT (1 Cor 11:30; John 6:52–58), becomes evident in miracles associated not only with water or baptism (e.g., *Acts Thom.* 52; Jerome, *Life* of St. Hilarion 20; Augustine, *City of God* 22.8; Gregory the Great, *Dialogues* 1.10) but also with the eucharist (e.g., *Acts Thom.* 5; Gregory, *Dialogues* 2.24).

For Christianity, as for so much of religion generally, "Miracle is faith's dearest child" (Goethe). Much of that legacy in the West is nurtured by the NT.

HAROLD E. REMUS

MIRIAM (PERSON) [Heb *miryām* (מִרְיָם)]. **1.** A woman in Israel's wilderness community who exercised religious leadership alongside Moses and Aaron (Mic 6:4). Introduced as prophetess and Aaron's sister, Miriam led the women in the celebration at the Sea (Exod 15:20–21) and joined Aaron in a rebellion against Moses, for which she was punished with leprosy (Num 12:1–15; cf. Deut 24:9). The Levitical genealogies of Num 26:59 and 1 Chr 5:29—Eng6:3 list her as sister of Aaron and Moses. According to Num 20:1, she died and was buried at Kadesh. The prophet Micah (6:4) regards her as a divinely commissioned leader alongside Moses and Aaron during the wilderness journey.

The seven texts which mention Miriam by name (cf. Exod 2:1–10) bear repeated testimony to her leadership role in the wilderness community. Exod 15:20–21 is generally regarded as the earliest account of the Israelites' celebration of the event at the sea. It is striking that the earliest tradition portrays Miriam, not Moses, as the first to articulate, through ritual song and dance, the religious dimension of Israel's foundational event.

In Num 12:1–15 different layers of tradition present Miriam and Aaron raising controversies with Moses regarding his Cushite wife and his authority in rendering God's word. The latter controversy clearly reflects a crisis of religious leadership. The account seeks to establish the primacy of Moses as God's spokesperson, but in doing so it does not negate the authenticity of Miriam and Aaron as mediators of God's word. Although the background of the Cushite wife controversy is unknown, the use of the feminine singular Hebrew verb in 12:1 suggests that some level of tradition viewed Miriam alone as confronting Moses on the matter. Comparison with other controversy stories in the wilderness narratives suggests that Moses' leadership is at the heart of the Cushite issue and that in presenting the problem, Miriam voiced a matter of community concern (see Burns 1987: 68–71).

While several scholars cite the prophetess designation in Exod 15:20 as a basis for interpreting Miriam's role in the dispute over oracular authority in Num 12:2–9 as a prophetic one, Burns (1987: 48–67) has argued that the controversy of Num 12:2–9 reflects struggles between priestly, not prophetic groups. If that view is correct, Numbers 12 does not contribute to the portrait of Miriam as prophetess. Unlike Deborah and Huldah, no characteristic prophetic activity is attributed to Miriam in the biblical texts. Thus, the prophetess designation in Exod 15:20 may well be an anachronism.

There is little doubt that the view of Miriam as sister of Moses and Aaron is the product of a long history of tradition. The three leaders are presented together without kinship terminology in Numbers 12 and Mic 6:4. The designation of Miriam as Aaron's sister in Exod 15:20 may be an attempt by a late

priestly writer/editor to relate this early cult leader to Aaron. From there it was a small step to include her in the Levitical genealogies of Num 26:59 and 1 Chr 5:29—Eng6:3. Contemporary scholarship suggests that biblical genealogies reflect much more about functional relationships than actual biological ties (see especially Wilson *GHBW*). Thus, in linking Miriam with Moses and Aaron, late priestly genealogists offer much the same view of Miriam as do Numbers 12 and Mic 6:4, that is, as a religious leader alongside Aaron and Moses. The record of Miriam's death and burial at Kadesh has a similar function insofar as the deaths of the three wilderness leaders are artificially constructed in such a way as to coincide with the last three stops on the wilderness journey.

In presenting Miriam, biblical writers from earliest to latest periods of composition offer only glimpses of a woman in the wilderness community who exercised leadership in the cultic sphere and who claimed authority as a spokesperson for the Divinity. Martin Noth (*HPT*, 182) was undoubtedly correct in saying that "at one time much more was told about her which is now completely lost."

2. A Calebite relative of Ezrah (1 Chr 4:17). The writer of 1 Chr 4:15–23 includes Miriam in an early list of Calebites. The text of v 17, in which the name appears, is difficult. In the MT the verse begins with a list of the four children of Ezrah and then continues, "and she conceived Miriam" and two others. The RSV (following the LXX in part) transposes Mered and Bithiah, the pharaoh's daughter, from v 18 of the MT to v 17, thus presenting them as Miriam's parents.

RITA J. BURNS

MIRMAH (PERSON) [Heb *mirmâ* (מִרְמָה)]. Benjaminite who appears in an extended genealogy of Benjamin (1 Chr 8:1–40). Mirmah is one of the seven sons of Shaharaim by his wife, Hodesh (1 Chr 8:10). The name means "deceit" and is found nowhere else in the MT nor in the Apocrypha and deuterocanonical literature. 1 Chr 8:8 indicates that Shararaim had already divorced Hushim and Baara and was living in Moab. Rudolph (*Chronikbücher* HAT, 77) sees the structure of this extended genealogy lying in the geographical breaks showing parallel lists of Benjaminite families and their dwelling locations at a given time, probably either Josiah's reign or the postexilic period. Williamson (*Chronicles* NCBC, 82) sees no structure whatever in the genealogy. However, there is an obvious connection between the family of Mirmah and Moab. This connection seems to hearken back to a time when Moab had not yet achieved independence from Israel (Myers *1 Chronicles* AB, 60; Braun *1 Chronicles* WBC, 128). Mirmah is referred to as one of the *roʾšē ʾābôt* or "heads of a family."

G. EDWIN HARMON

MISHAEL (PERSON) [Heb *mîšāʾēl* (מִישָׁאֵל)]. Var. MESHACH. Three individuals in the Hebrew Bible bear this name.

1. A Levite in the line of Kohath, son of Uzziel, and cousin of Aaron (Exod 6:22). When Nadab and Abihu, Aaron's sons, were killed for presenting unauthorized offerings, Moses instructed Mishael and his brother Elzaphan to remove their bodies from the camp (Lev 10:4).

2. One of the men who stood on Ezra's left hand during the great public reading of the law (Neh 8:4; 1 Esdr 9:44). Not designated as a Levite, Mishael's position on this occasion suggests that he was possibly an influential or representative member of the Israelite community.

3. One of Daniel's three companions who were among those selected by Nebuchadnezzar to receive special training (Dan 1:6). Surnamed Meshach by the Babylonians (Dan 1:7), Mishael joined Daniel and his friends in rejecting the king's rich food in favor of a simple Hebrew diet (Dan 1:8–21). He also provided prayer support when Daniel faced the challenge of recounting and interpreting Nebuchadnezzar's dream (Dan 2:17). As a result of the accurate narrative and his friendship with Daniel, Mishael ("Meshach") was promoted to a leadership position over the province of Babylon (Dan 2:49).

In a separate story, Mishael ("Meshach") and his companions were thrown into a fiery furnace because of their refusal to bow down to a statue erected by Nebuchadnezzar (Dan 3:8–30). In light of this remarkable stand of faith, Mishael came to serve as an example to the threatened Palestinian Jewish community during the first two centuries B.C.E. of trust in God and subsequent deliverance (1 Macc 2:59; Pr Azar 66; *4 Macc.* 16:3, 21; 18:12).

The Hebrew name "Mishael" (*mîšā‹ēl*) possibly means "Who is what God is?" Similarly, the Babylonian surname Meshach (*mêšak*) has been arguably associated with the Akk *Mišaaku,* meaning "Who is what (the god) Aku is?" (*IDB* 4: 302). Some have suggested that the etymological difficulties surrounding *mêšak* may indicate an intentional alteration of the original form in order to blur an undesirable connection with a foreign god (Montgomery *Daniel* ICC, 129–30).

TERRY L. BRENSINGER

MISHAL (PLACE) [Heb *miš›āl* (מִשְׁאָל)]. Var. MASHAL. One of the cities assigned to the tribe of Asher (Josh 19:25–26). Mishal is also designated as one of the four cities in Asher's territory which are to be set aside for the Levitical tribe of Gershom (Josh 21:30; 1 Chr 6:59 [—Eng 6:74] where the variant Mashal is found).

Mishal is mentioned in Egyptian literature as *m-s-i-r,* "r" being an Egyptian equivalent for the "513 l" which did not occur in that language. The name is found in the Execration Texts from the 19th century B.C. (Aharoni *LBHG* [1967 ed.], 133) as well as in the accounts of the military campaigns of Thutmose III (ca. 1490–1436 B.C.; *ANET,* 243). Mishal is listed there with other sites from the plain of Acco, suggesting that it is the same as the city of Asher (M.R. 164253; Aharoni *LBHG* [1967 ed.], 381; Kallai *HGB,* 207, 429).

DAVID W. BAKER

MISHAM (PERSON) [Heb *miš‹ām* (מִשְׁעָם)]. A Benjaminite, son of Elpaal, one of those who helped build Ono and Lod (1 Chr 8:12). The origin and provenance of "Misham" is unknown. Noth (*IPN*, 251) compared it to the Ar *mis‹āmun,* meaning "rapidly flowing (from a river)." Curtis and Madsen (*Chronicles* ICC, 160), noting the uniqueness of the name, suggested that v 12a, which lists the sons of Elpaal, is a transcriber's blunder since Elpaal's sons are also listed in vv 17–18. If the sons of Elpaal—Eber, Misham, and Shemed—were deleted from v 12a this would make Elpaal the *one* who built the towns of Ono and Lod. Misham could then be identified with the more common Meshullam (v 17).

TOM WAYNE WILLETT

MISHMA (PERSON) [Heb *mišmā‹* (מִשְׁמָע)]. 1. A son of Ishmael, and brother of Mibsam (Gen 25:13; 1 Chr 1:29). 2. A son of Mibsam son of Shallum, son of Shaul, son of Simeon (1 Chr 4:25). One may conclude from the fact that Mishma and Mibsam occur together both in Genesis 25 and 1 Chronicles 4 that 1 Chr 4:25 testifies to the settlement of these 2 Ishmaelite tribes or clans, wholly or in part, in the Negeb during the exilic and/or postexilic period. See also MIBSAM.

Heb *mišmā‹* means "hearing"; a verbal noun like this does not easily form a tribal name. If one disregards the Masoretic vowel pattern (which may be borrowed from Mibsam, since both names seem to occur as a fixed formula), the name can be explained as **Mušāmi‹,* derived from **Šama‹īl* and denoting "those who have joined (the tribe of) *Šama‹īl".* Similarly, in the recent past the Âl Nebhân were also called Menâbhe, and the tribe of Amīr in pre-Islamic Nagran were joined by the people of Muha›mir (Knauf 1989: 69, and n. 342). In this case, the tribe Mishma can be identified with the *Išamme‹* (*I-sa-am-me-›*, i.e. *y (ĕ)šami‹* for ancient Ar *yušāmi‹,* the imperfect form corresponding to *Mušāmi‹*), an Arab group encountered by Ashurbanipal (Knauf 1989: 9, n. 40).

ERNST AXEL KNAUF

MISHMANNAH (PERSON) [Heb *mišmannâ* (מִשְׁמַנָּה)]. One of the eleven warriors from the tribe of Gad who joined David at his wilderness stronghold (1 Chr 12:14—Eng12:13). For further discussion, see MACHBANNAI.

RAYMOND B. DILLARD

MISHNAH. An early 3d-century C.E. compendium, largely legal, containing regulations and beliefs foundational of rabbinic Judaism and thus of all later Jewish thought.

———

A. Language and Date
B. Origin and Redaction
C. The Mishnaic System
D. Content
E. Context

———

A. Language and Date

Written in terse Hebrew, the Mishnah builds upon the Hebrew Bible in its attention to the latter's legal materials and language (lexicon and morphology) (Segal 1958: 5–12; 150). Nonetheless, the text stands quite independent of biblical antecedents, developing autonomous areas of interest that it expresses through very few, tightly controlled rhetorical patterns (Neusner 1981: 243–48).

The Mishnah attributes its materials to about 150 authorities, who flourished in the three-century period from ca. 50 B.C.E. to 200 C.E. (fewer than 80 authorities are cited with any frequency). These teachers, usually given the title "rabbi," appear in the Mishnah regularly grouped into roughly three consistories: (1) teachers who flourished before Rome's destruction of the Second Temple in 70 C.E. (the Pharisaic period), (2) those who taught after that first war against Rome but before the Bar Kokhba revolt in 132–35 C.E. (the Yavnean period), and (3) authorities living in the period from the Bar Kokhba revolt to the Mishnah's reduction to writing *ca.* 200 C.E. (the Ushan period) (see Danby 1977: 799–800).

B. Origin and Redaction

Jewish theology, especially from the Babylonian Talmud (5th–6th centuries C.E.) on, accords the Mishnah the status of *Oral Torah.* Deemed part of the dual revelation to Moses on Sinai, the Mishnah is thought to contain authoritative and binding explanations of the Hebrew Bible. The Mishnah thus serves as complement and supplement to the *Written Torah's* otherwise sketchy legal materials, found in the Covenant, Holiness, and Deuteronomic Codes.

This theological viewpoint, that the Mishnah has the full status of Sinaitic revelation, has sharply influenced subsequent historical judgments about the text. Until recently, scholars held that early rabbinic teaching contained a more or less accurate record of oral judgments handed down over many centuries (see e.g., Albeck 1979: 24–39). These particular statements of the oral law were collected into many and varied editions (scholars termed such supposed collections "Rabbi So-and-so's Mishnah"), each a partial legal record of actual Judaic practice near the turn of the millennium (Epstein 1979: 96–199).

In line with a new literary theory (Neusner 1981: 281–83) scholars now view the Mishnah not as a mere legal register. Rather, the Mishnah comprises a set of extended essays that frame critical topics (the nature of sacred time and space, for example) in particular formulary patterns, so as to argue in behalf of the rabbinic world view (Neusner 1981: 122–26). The Mishnah—and the rabbinic movement for which it serves as constitution—constitute the direct *literary* response to nearly 3 centuries of Roman occupation of the Jews' homeland. This theory allows readers to understand how the text speaks far beyond the mere details of its sometimes picayune rules, addressing directly the imperial context.

Jewish reaction to Roman rule is first evident in several messianic movements, including earliest Christianity and the Essene community at Qumran, but especially in renewed nationalism surrounding the appointment of Bar Kokhba as messianic general. But after two unsuccessful wars against Rome, including the defeat of Messiah Bar Kokhba's army, a communal sense of failure, powerlessness, and

disappointment took hold, especially in the mid-2d century. In response, the rabbis composed a holy book, the Mishnah, that reflects upon—and overcomes—Israel's current oppressed situation (Neusner 1981: 282–83).

C. The Mishnaic System

In adducing various topics, the Mishnah divides life into its component parts as the rabbis themselves saw things. These parts constitute a theological network representing three major interests: *priestly* attention to holiness, *scribal* concerns for the correspondence of word and act, and ordinary *householders'* regard for daily conduct.

The Mishnaic system built of these parts is comprehensive, in that virtually any part of early rabbinism fits within; the system is thoroughly interconnected, for to understand any single paragraph or chapter, one needs to know a myriad of others; and the system is elegantly rigorous, because the Mishnah carefully combines formulaic patterns and themes to emphasize the detailed rules under discussion. This book, which constituted Judaism's primary first-order systematics, thus may be described as a sustained, rational discourse on a set of intellectual categories and problems, which establishes a comprehensive framework for the religion.

It should now be clear that the Mishnah's topics do not merely represent everything in Scripture; the Mishnah often reads the Hebrew Bible in quite unpredictable ways, sometimes even ignoring basic scriptural conceptions. For example, one of the Mishnah's crucial concerns is to establish the correspondence of a householder's actions and intentions. Earlier biblical materials ruled that anything placed upon the altar immediately became sanctified (e.g., Exod 29:37). The Mishnah, for its part, held that only items offered with the priest's proper intention take on consecrated status (Eilberg-Schwartz 1986: 149–63). In like fashion throughout the Mishnah, the major ideas expressed, building upon but not limited to the scriptural account, are those of the rabbinic movement. So too the Mishnah's interests do not reflect real legislative settings alone. At least two-thirds of the Mishnaic law addressed the Temple and its regular maintenance—a full 130 years after the Temple had been destroyed.

D. Content

The rabbis' theological program—neither wholly fundamentalistic nor solely determined by legislative needs—emerges clearly from an analysis of the categories utilized by the Mishnah's composers and redactors. The Mishnah comprises six major sections, subdivided into sixty-three individual tractates ranging from three to twenty-four chapters and raising the following questions.

1. The Divison of Agriculture (*zĕrā‘îm*). How does God's ownership of the Land of Israel affect Israelites' use of that Land and its produce?

2. The Division of Appointed Times (*mô‘ēd*). How does God's interaction with Israel in history serve to orient the calendar, marking out special times requiring special actions by Israelites?

3. The Division of Women (*nāšîm*). How does the special sanctity demanded of Israelites by God affect their relationships within the family unit, and especially with women?

4. The Division of Damages (*nĕzîqîn*). How does the unity and equality of God's holy people Israel demand special action in business, government, and day-to-day dealings?

5. The Division of Holy Things (*qodāšîm*). How does the worship of God demand special action in the Temple, God's holy locus?

6. The Division of Purities (*ṭohărôt*). How does extending the holiness required in God's Temple to everyday life demand special attention to all aspects of life vis à vis cultic purity?

Although compiled after the Temple's destruction, the Mishnah's clear aim is to establish continuity with that institution and its rite. The consequent need for holiness expressed within each division stems from the particularity of God's relationship with Israel. The Mishnah as a whole thus puts forward larger questions: What must a Jew do to reflect the special relationship between self and God? How does one cooperate in God's overall scheme? The answers lead us to the details of rabbinic law, expressed in the individual rulings and disputes that make up the Mishnah's bulk.

More central to understanding the Mishnah's importance as a cultural artifact are the basic assumptions of the system, not only as a whole, but in each of its parts as well: (1) God owns the Holy Land [*Division*

of Agriculture] and (2) gives it to the people with whom he has had a long-standing historical relationship [*Division of Appointed Times*], namely Israel (hence the appropriate Judaic idiom, the Land of Israel). (3) The Israelites owe God and his appointed representatives payment for their use of the Land [*Divisions of Agriculture and Holy Things*], in addition to (4) special actions in response to history [*Division of Appointed Times*]. (5) The holiness required in God's worship must also inform mundane activity [*Division of Purities*], extending to both levels of the Israelite clan: (6) one's own immediate family [*Division of Women*] and (7) the larger family of the Children of Israel [*Division of Damages*].

E. Context

In its details and emphases, then, the Mishnah attended to recent history. Long-standing Roman domination over the Land of Israel conditioned the Mishnah's assertion that God alone rules sovereign over the Land and history. Under Roman imperial rule, the rabbis erected a framework of thought and practice on which to build Judaism's future.

So it is that the early rabbinic cultural system, embedded in the details of the Mishnah's rules, set the agenda for later rabbinic thought. It was complemented by other works, notably the Tosefta (a one-generation-later supplement of similar type), as well as Midrashic literature, much of which aims at connecting the legal traditions explicitly with the Hebrew Bible and its concerns. In even closer fashion, the Mishnah provided the starting point for the two Talmuds, which at least formally constitute paragraph-by-paragraph commentaries on it. Similarly, Jewish literature up to our own day deals largely with the topical program first introduced by the Mishnah.

ROGER BROOKS

MISHRAITES [Heb *mišrāʿî* (מִשְׁרָעִי)]. Members of one of the clans from Kiriath-jearim on the N border of Judah (1 Chr 2:53). This family of Judahites was one of the groups from which the Zorathites and Eshtaolites came. (Zorah and Eshtaol are listed together in Josh 19:41 among the first cities of the Danites before their migration to the N.) The Mishraites apparently descended from Shobal, the grandson of Caleb, who in turn was the great-grandson of Judah, son of Jacob. This, however, is not clear since, instead of being the physical ancestor of the inhabitants of Kiriath-jearim, Shobal may have been the founder of the city. All the clans in 1 Chr 2:50–55 originated in the S, and all were in close relation to Judah. It is widely held that these lists in their geographical arrangement reflect ancient sources (Coggins *Chronicles* CBC, 22). The form *mišrāʿî* is an adjective from *mišrāʿ,* the name of an unknown person. In the Babylonian vocalization the first vowel shows up as *a* and not as *i,* which is the case in the Tiberian system (Kahle 1902: 70).

EDWIN C. HOSTETTER

MISPAR (PERSON) [Heb *mispār* (מִסְפָּר)]. Var. MISPERETH. One of the leaders of the group of returnees from Babylonian exile who is listed along with Zerubbabel in Ezra 2:2 [= Neh 7:7 = 1 Esdr 5:8]. Nehemiah, supported by 1 Esdras, gives the name as Mispereth. One name has apparently been dropped

from the Ezra list, for those in Nehemiah and 1 Esdras include twelve leaders in what is probably a symbolic representation of all Israel. For further discussion concerning the list in Ezra 2, see AKKUB.
CHANEY R. BERGDALL

MISREPHOTH-MAIM (PLACE) [Heb *miśrepôt māyim* (מִשְׂרְפוֹת מָיִם)]. A place in the S border of Sidon. It is also used as a parallelism for the S boundary of Sidon (Josh 11:8). Being located on the border, there is a tradition of regarding it as a frontier city. Though its exact location is disputed, it is thought to be at the N end of the Plain of Acco on the Israel-Lebanon border, and generally identified with Khirbet Musheirefeh. In view of a lack of sufficient archaeological evidence, either from the LB Age or early Iron Age, some have doubted the above identification. It should be noted that Mahalab reckoned to Asher (Josh 19:29) in the northernmost area is located S of the Litani river and the land that remained to be possessed began at Misrephoth-maim (Josh 13:1–6), which must have been a natural border. The fact that the Litani river is mentioned nowhere in the Bible makes one wonder if by Misrephoth-maim the Litani is actually meant. Another feature of this place-name is that the second part of the name can be vocalized *miyyam* to mean "on the west." It is probable that *mym* is intended to express both meanings. Misrephoth-maim is referred to in the book of Joshua as the border of the territory of the Sidonians (Josh 13:6) and as the S border of the hill country of Lebanon, the inhabitants of which the Lord undertakes to drive out. Hence, it has a significant function in the Deuteronomistic History (see Judg 3:3f; 10:6; and 1 Kings 5:6).
PAUL BENJAMIN

MITANNI. A confederation of HURRIAN states located in N Mesopotamia and Syria in the second half of the 2d millennium B.C. Its capital was Wašukanni, perhaps near the head of the Habur River at Tell Fakhariyah. The circumstances surrounding the formation of Mitanni and its early history are unknown. However, Mitanni became the most powerful state in Mesopotamia and Syria during the Amarna period and survived in substantially reduced form into the reign of Shalmaneser I of Assyria (1274–1245 B.C.).

Like much concerning the Hurrians and their history, Mitanni is known primarily from sources stemming from Egypt, Syria, the Hittites, and Mesopotamia. Furthermore, the chronology of Mitanni is fraught with difficulties. The fragmentary information about Mitanni's history must be correlated with the chronologies of a number of nations, some of which are themselves imprecise.

One important issue encountered in discussing Mitanni is that a number of terms was used to describe it. The term "Mitanni" was essentially a political term used to define the confederation of Hurrian states and their vassal states. Hanigalbat was an Assyrian geographical term applied to the lands of northern Mesopotamia in which Mitanni was located. Hurruhe was a Hurrian term referring to the "Hurrian land," apparently located in the northern part of Mitanni. It also seems to have described a separate kingdom within Mitanni, perhaps the earliest Hurrian state. Nahrina/Nahrima/ Aram Naharaim were Canaanite, Egyptian, and Aramaean terms meaning "Land of the two rivers," also describing generally the region in which Mitanni was located. Khor/Khurri were the terms used by the Egyptians for Syria-Palestine because of the Hurrian population they encountered primarily in Syria (Gelb 1944).

At certain times in Mitannian history, all of these terms designated the same entity. Mitanni, the political body, was constantly changing, though, as vassals changed allegiances or were conquered. Hurruhe became an independent state in the later period of Mitannian history. The geographical terminology employed by the Assyrians and western groups remained in use after Mitanni fell, and the ethnic terminology of the Egyptians (Khor/Khurri) rapidly came to mean simply "The North." Thus, the sources must be approached cautiously where these designations are employed.

A. Ethnic Identity of Mitanni

Mitanni was essentially Hurrian, though there is evidence for a small Indo-Aryan element among the population. This group has been credited with the transformation of the scattered Hurrian states before c. 1550 B.C. into Mitanni, but this remains an open question. The language of Mitanni was Hurrian, not

"Mitannian" as was initially believed (Gelb 1944). Moreover, the dialect of Hurrian in use in Mitanni is grouped with that of Kizzuwadna (Cilicia) and Ugarit (Diakonoff *SCCNH* 1: 77–90).

As Mitanni expanded, West Semitic–speaking peoples in the Syrian city-states and Assyrians came under Mitannian sway. In the vassal states in the west there were certainly people knowledgeable in Egyptian if not Egyptians, and in the east people with Babylonian names are attested within Mitannian territory. In Mitanni's later years, Hittites also were present in states that were under Mitannian control at times.

B. History of Mitanni

The first known ruler of Mitanni was one Kirta, father of Šuttarna I. These names appear on a seal at Alalakh belonging to Saustatar, a later Mitannian ruler (Goetze 1957; Wiseman 1953; Albright *YGC*). It may have been Šuttarna I who launched Mitanni on its period of expansion (Drower *CAH* 10: 417–525), for the next king, Parattarna, is attested at both Alalakh and Kizzuwadna (Wiseman 1953; Goetze 1957), to the west of Mitanni proper. Moreover, the next king, Saustatar, ruled not only Alalakh and Kizzuwadna, but also Assyria and Nuzi in the land of Arraphe (Smith 1940; Goetze 1957; Wiseman 1953; Starr 1937–39; Gelb 1944). This Saustatar is called "son of Parsatatar" on his seal inscription at Nuzi (*HSS* 9.1). Possibly Parsatatar and Paratarna are the same individual (Starr 1937–39).

At this juncture in Mitannian history the chronology is most unclear. The major question is: How did Mitanni's expansion relate to the campaigns of Tutmosis I (1525–c.1512 B.C.), Tutmosis III (1504–1450 B.C.), and Amonhotep II (1450–1425 B.C.) of Egypt, all of whom are known to have operated up to the Euphrates and taken *mariyannu* as prisoners? At present, it appears that Paratarna and Saustatar predate Tutmosis III and that it was the confederation they created that opposed Egypt during that pharaoh's reign (Redford 1979).

Traditionally, a major source used for reconstructing the chronology of this period is the Inscription of Idrimi of Alalakh, an "autobiographical" account of his exploits to gain the throne of Alalakh and his reign. This inscription provides names of his contemporaries and the length of his reign. However, the validity of this text as a true autobiography has been called into question. Instead, it may have been a "pseudo-autobiography" written at a later date and containing more legend than fact (Sasson *SCCNH* 1: 309–24). Therefore, the entire issue of the dates of Paratarna and Saustatar must remain open.

Another issue to be considered is the nature of Mitannian rule. Each of the states known to have been vassal to Mitanni had its own king bound to Mitanni by a vassal treaty sworn by oath and sanctified by sacrifice. The kings governed the internal matters of their realms and could make treaties with other states vassal to Mitanni, as Alalakh and Kizzuwadna did. There is evidence from NUZI, however, that the Mitannian king had some control over the distribution of real estate within the vassal states (*HSS* 9.1). In disputes between vassal states the king of Mitanni was the arbiter as he was in any cross-jurisdictional matter (Drower *CAH* 10: 417–525). In part because they were so loosely organized, these vassal states shifted allegiance readily in the face of danger. Thus, even the notion of a monumental Mitannian empire may be simply an impression created by the surviving documents.

After Saustatar, the Mitannian kings are known primarily through Egyptian sources. Relations were tense between the two nations until the time of Tutmosis IV (1425–1417 B.C.) when Artatarma I sent his daughter to Egypt to be the wife of the Egyptian pharaoh. This is the first instance of diplomatic marriage between the two states, a certain sign of warming relations. At the same time, Mitanni was smaller than it had been. Assyria became independent in the east, and some of Mitanni's Syrian territory had been lost to Egypt. Presumably, the change in the two nations' relationship reflects the desire of both to have peace in Syria. Šuttarna II of Mitanni also sent a daughter, Gilu-Hepa, in a diplomatic marriage, perhaps to Amonhotep III. She was accompanied by 317 Mitannian handmaidens.

The institutions of diplomatic marriage, attested in the Near East from the 3d millennium B.C. on, served a number of purposes during the late 2d millennium. First, it signaled the sincere desire of the nations involved to have peace and was a serious goodwill gesture. Second, the bride's household, composed at least in part of personnel from home, served as a kind of listening post on activities in the host country. Valuable information might be passed on in the normal course of communication between the bride and

her family. Third, the bride's father endowed her with an enormous dowry including semi-precious gems, textiles, furniture, elaborate vessels, objects of art, and the like. These dowries, therefore, were a means of transmission of valuable luxury goods among the courts of the time and helped in the spread of artistic styles and motifs throughout the Near East. In return, the bride's father received a substantial "bride price." When Egypt was involved, the price was gold, for which all of the nations of the time were hungry. The "dowry" and "bride price" arrangement, was, in fact, a sort of high-level luxury trade.

When Tušratta came to the throne of Mitanni, he wrote in very friendly terms to Amonhotep III assuring the pharaoh that the excellent relations their two nations had enjoyed would be reinstated. Apparently there had been some difficulties, possibly connected with a usurper who had murdered Tušratta's brother. In addition, with Tušratta's ascent to the kingship, the kingdom of Hurri under Artatama I broke away from Mitanni declaring himself rightful king. This matter was placed before the gods in a kind of divine court to adjudicate between Tušratta and Artatama I. Though weakened by the loss of Hurri, Tušratta was able to defeat a Hittite army and send some of the booty to Egypt as a sign of his good faith with the pharaoh. Tušratta also sent his daughter Tadu-Hepa to Egypt to marry Amonhotep III. Tadu-Hepa seems to have been married to the next pharaoh, Amonhotep IV, as well.

Tušratta and Amonhotep III and IV communicated frequently. Aside from the usual Amarna letter bickerings about the exchange of gold, an interesting topic of correspondence was the statue of Ištar of Nineveh that Tušratta sent twice to Egypt to help heal the pharaoh.

Tušratta's reign was beset with difficulties. The Hurri lands broke away and coveted his throne. The Hittites emerged under their King Suppiluliumas as a formidable political and military power, Egypt lost interest in its Near Eastern territories during the reign of Amonhotep IV, and the Assyrians were a growing threat.

First, the Hittites made Kizzuwadna a vassal state. Then, they allied themselves with the Hurri-lands. The First Syrian Wars of Suppiluliumas destroyed Mitannian control of Syria, but Tušratta continued to support revolts against the Hittites in the formerly Mitannian vassal states. These became the reason for Suppiluliumas' Second Syrian Wars, those that took him to the heart of Mitanni. Before embarking on this campaign, Suppiluliumas entered into a diplomatic marriage with Babylon and a peace treaty with Ugarit. With the south of Mesopotamia and the Syrian coast secure, Suppiluliumas marched to Wašukanni taking Mitannian cities and garrisons along the way. Tušratta was murdered in a coup that included his son Sattiwaza (perhaps spelled Kurtiwaza or Mattiwaza) who became king of Mitanni. Meanwhile, Mitannian territory was shared by a state called Alše and Assyria (Goetze *CAH* 17: 1–20).

Tušratta's defeat and death were understood as the decision of the gods in favor of Hurri. Thus, Šuttarna son of Artatarma of the Hurri-lands claimed the throne of Mitanni and Sattiwaza fled. He attempted to enter Babylonia but was refused on the grounds that Babylon was neutral. Finally, he was taken in by Suppiluliumas, who married him to his daughter (Goetze *CAH* 17: 1–20).

Artatarma and Šutarna, the kings of Hurri who occupied the throne of Mitanni, lavished attention on Assyria and Alše whom they must have seen as potential protectors. They gave riches from the treasuries of Mitanni to both nations. Tušratta's palace was demolished and a silver and gold door that Saustatar had taken from Assyria was returned. They confiscated the personal property of private individuals, and certain high officials were handed over for punishment (Gadd *CAH* 18: 21–48).

To counter the growing strength of Assyria, Suppiluliumas began yet another great campaign, the goal of which was to reestablish Sattiwaza on the throne of Mitanni. Meeting relatively little resistance from the Assyrians and the Hurri-lands, the prince became king of Mitanni and vassal of Suppiluliumas. The events of his reign are unknown, but he may have been defeated by the Assyrians at some point, perhaps during the reign of Ashur-uballit I (1365–1330; Goetze *CAH* 17: 1–20; Gadd *CAH* 18: 21–48).

From the time of Sattiwaza until the reign of Shalmaneser I of Assyria (1274–1245 B.C.) the Assyrian sources record a series of encounters with and rebellions in Mitanni. Mitanni was an ally of the Hittites at the Battle of Kadesh (1285 B.C.) and the Hittite hand is apparent in the revolts that plagued Assyria in the region. Thus, Suppiluliumas' vision of a Mitanni that would be a buffer between Assyria and the Hittites was fulfilled. Finally, Shalmaneser I conquered Mitanni and ended the political life of that Hurrian state.

C. The Role of Mitanni in Near Eastern Culture

The culture of the Mitannian state was basically Hurrian. Of special interest are the Nuzi-ware pottery and the "Mitanni style" in glyptic art, a fine example of which is the seal of Saustatar on *HSS* 9.1 (Smith 1965). What is associated with Mitanni demonstrates the syncretism of elements from Syria, Mesopotamia, Egypt, and the Aegean—all attesting to the internationalism of the era.

It must be noted that there is far more information concerning Hurrian culture in general than for Mitannian in particular. Evidence for the Hurrians derives from a number of sites, some of which were controlled by Mitanni, but all of which were influenced by earlier and contemporaneous cultures. The center of Mitanni, its capital Wašukanni, has not yet been excavated, nor have other significant Mitannian cities. The true character of Mitannian, and therefore indigenous Hurrian, art, architecture, literature, and religion must await such research.

At this point in time, Mitanni's major contribution to the Near East is found in its role as the N Mesopotamiaan—N Syrian transmitter in the diffusion of culture in the late 2d millennium B.C. Because of its military and political power it was able to weld a fractious and diverse array of small states into a reasonably unified body which enabled communication across a wide area in the Near East. Through its diplomacy with Egypt and its subsequent relations with Egypt, the Hittites, and Assyria, it was a cultural crossroads. Moreover, Mitanni's friendship with Egypt brought peace to the Near East for a time. Commerce, industry, and the arts flourished during the Amarna period. The city-states that straddled the trade routes of Syria and N Mesopotamia reaped enormous profits from local business and the taxes levied on merchants. In this period of prosperity, Mitanni was an economic power whose vassals shared in the wealth generated by international trade and internal stability. Thus, Mitanni enriched the Near East both economically and culturally.

D. Mitanni and the Old Testament

Mitanni does not appear in the OT. Even if the references to Hurrians in Palestine reflect a Hurrian presence there in the late 2d millennium B.C., the territories they would have been in were well within the Egyptian sphere of influence and not that of Mitanni. These areas figured only in the campaigns of the pharaohs as they marched to meet Mitanni or the Hittites. Otherwise, they were immersed in the politics and military actions involving Egypt and local Canaanite groups.

It was long asserted that the MB Age, before the birth of Mitanni, was the "date" for the patriarchal era. The seminomadic lifestyle of the patriarchs suited the social milieu of that era, and the political situation in Palestine (a sparse population lacking the semi-independent and feuding city-states of later times) would appear to be hospitable to the movements of the Patriarchs (see *BHI*).

On the other hand, some have dated the events of the patriarchal narratives to the Mitannian era (Gordon 1964 and 1965). According to this system, on the grounds of biblical chronology, Abraham would be dated to the Amarna period, hence to the time of Tušratta. The travels of Abraham and his family from N Syria to Egypt and back and their regular interaction with urban centers are to be understood in the context of the mercantile activities of the late 2d millennium B.C. rather than as the wanderings of the nomads of the earlier era. The importance of trade and the well-documented interaction between Syria and Egypt during the late 2d millennium B.C. are cited in support of this theory. Furthermore, the encounter of Abraham with the coalition of kings from the Mesopotamian sphere in Genesis 14 suggests that Abraham's sphere was not entirely peaceful. This incident is seen as reminiscent of the accounts of hostilities in the Amarna Letters.

Placing the patriarchs in the LB Age makes them participants in and beneficiaries of the cross-cultural interaction of the time because few in the Near East were unaffected by the broad and deep changes that occurred during this era. The numerous parallels between the Nuzi texts and the patriarchal narratives and the Ugaritic materials and the OT would therefore be understood in light of contemporaneity and cultural diffusion at the beginning of Hebrew history.

Recently, however, both the MB and LB Age dates for the patriarchal era have been discarded by those who favor a 1st millennium date for the composition of the narratives. In any case, the late 2d millennium B.C. in which Mitanni figured so prominently was a cultural "watershed." During this time, the various

cultures of the Near East mingled their religious, artistic, literary, and technical ideas and skills. The nations that arose at the dawn of the 1st millennium B.C. were the heirs and perpetuators of this legacy.

MARTHA A. MORRISON

MITE. See COINAGE.

MITHKAH (PLACE) [Heb *mitqâ* (מִתְקָה)]. The thirteenth encampment of the Israelites, after leaving the wilderness of Sinai, as listed in Num 33:28–29, where it is placed between Terah and Hashmonah. Its name, "Sweetness," may be based on the existence of a good spring, as is the case with Jothbatha in Num 33:33–34 and Deut 10:7 where the name of the site, "Pleasantness," is definitely connected with a water source. Most scholars are unwilling even to suggest a possible location for this site, though it must lie between the wilderness of Sinai and Kadesh-barnea. For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai see DOPHKAH.

JEFFREY R. ZORN

MITHNITE (PERSON) [Heb *mitnî* (מִתְנִי)]. A descriptive adjective of Joshaphat, one of David's champions, a select class of warriors directly attached to the king for special assignments, named in the list of 1 Chr 11:10–47 (v 43), a list which, up to v 41a, parallels that of 2 Sam 23:8–39. Joshaphat, "the Mithnite," is found among the sixteen persona mentioned in the portion of the list which is unique to Chronicles (vv 41b–47). Because no such place or family is known, it seems possible that the term has become corrupt in transmission. The Greek translation reads a *b* for the *m*, but such a confusion of the Hebrew consonants is not uncommon (Allen 1974: 109). If the text could be restored and/or the place identified, it is probable that it would be in the Transjordan area, since in this portion of the warrior list (vv 41b–47) all of the identifiable places from which these champions came are in this area (Williamson *Chronicles* NCBC, 104).

RODNEY K. DUKE

MITHRAS, MITHRAISM. In Old Persian, the word "mithra" means "contract." Mithra was regarded as a god who stood for a societal structure based purely on relationships ("contracts") between persons. Thus, among the Persians, Mithra was above all the god of the king and his warriors. He was also honored by nations connected with the Persians, for example the Armenians and the peoples who lived around the Black Sea. In the Hellenistic period the cult of Mithra is especially well attested for the Cilician and Pamphylian pirates and the large sanctuaries at Commagene, i.e., in the S and SE of modern Turkey.

From about 80 A.D. onwards there is evidence for a Mithraic mystery cult in Rome. One can only hypothesize as to how this cult arose. M. P. Nilsson supposed that it was not a process which developed

gradually over time, but rather a single accomplishment on the part of one religious genius. There is much which recommends this view. About a dozen of the evidences for the mysteries of Mithra can be dated to between 90 and 140 A.D. From the period after 140 until the year 313, we have hundreds of Mithras monuments, above all from the capital, Rome, and from the military borders (the Danube, the Rhine, and the Wall of Hadrian in Britanny). The cult was exclusively for men and was especially popular among soldiers and the imperial personnel (slave and freedmen). Some persons of the equestrian order who rose to high military positions were adherents of the Mithras cult. For the aristocracy of the Roman empire, the senatorial class, Mithras remained an alien god for a long time. Nor was he admitted among the Roman national deities. Whereas the adherents of Mithras made loyalty to the emperor a part of their religion, the emperors for their part generally displayed reserve towards the mystery cult.

The cult of Mithras was observed in artificial caves which were regarded as an image of the cosmos. The caves were 15–20 meters long and 8–10 meters broad; a religious community, then, will not have exceeded 30–50 persons. The caves were illuminated by means of artificial light. At the far end was always an image of the god about to sacrifice the divine bull. The image represents the creation of the world from that primal sacrifice which is the holy myth of the Mithras initiates.

In the middle of the picture one sees the god who has leapt onto the back of the bull; he is about to sacrifice him by thrusting the knife into the carotid artery. In the upper left corner of the picture is the sun-god; often a sunbeam descends down from him to Mithras, and on this sunbeam a raven flies down to the god to announce that it is time to sacrifice to the bull. In the upper right corner of the picture is Luna. To the left and right of Mithra and the bull stand two Persian shepherds (Cautopates and Cautes). They represent the setting and rising sun. Under the bull are representations of three animals: a scorpion, a snake, and a dog. They are hurrying in order to drink the sperm and blood of the sacrificed bull. A lion often joins this group of animals.

This cultic representation existed as a fresco or a relief. In the latter case, the image could sometimes be turned on a peg. The back of the relief then showed Mithra and Helios consuming the bull in a sacramental meal. Mithras and Helios here represent the two supreme grades in the hierarchy of the seven Mithraic grades, the Pater and the Heliodromus, and the meal was the archetype of the communal meals of the Mithras initiates. Every Mithraeum was at the same time a dining room.

Whether or not the bull was actually sacrificed in the cult is a point of debate. A consideration which suggests that this was not the case is that the Mithraea appear to have been too small for this practice. There are no positive testimonia about a sacrifice.

Ancient Persian religious conceptions live on in Roman Mithraism, but in many respects this was an entirely new religion. It is pervaded by conceptions about the divinity of the stars, conceptions which were developed by philosophers and astronomers in the Hellenistic and Roman periods. Mithraic initiates were divided into seven ranks, each of which corresponded to one of the seven planetary gods. These are the same gods after whom the days of the week are still named today. On the representations of Mithras sacrificing the bull, each of these ranks is represented by a figure. The system is as follows:

Rank	Name	Symbol	Planet	Day of the week
1	Corax (raven)	raven	Mercury	French mercredi
2	Nymphus (chrysalis of the bee)	snake	Venus	vendredi
3	Miles (soldier)	scorpion	Mars	mardi
4	Leo	dog, lion	Jupiter	jeudi
5	Perses	Cautopates	Luna	lundi, Monday
6	Heliodromus (courier of the sun)	Cautes	Sol (sun)	Sunday
7	Pater	Mithras	Saturn	Saturday

A mosaic pavement of a Mithraeum in Ostia represents this sequence of ranks by the image of a ladder with eight rungs. In each of the seven fields between the rungs are the symbols for the seven ranks. Adherents of the religion of Mithras were continually reinitiated as they ascended this symbolic ladder.

Expectations concerning the afterlife were connected with these ceremonies. The initiates hoped that after death their souls would ascend through seven planetary spheres to that of the fixed stars, the true home of the human soul. Platonism influenced this astral piety; it has nothing to do with astrology. Central to astrology is the concept of a fate that cannot be altered, whereas the initiates of the cult of Mithras hoped to return to the soul's original home by leading a righteous and pious life.

In addition to the cosmogonic sacrifice of the bull, there were other Mithraic myths: the birth of Mithras from a rock; Mithras's journey in a carriage together with the sun-god; Helios riding on horseback through heaven; Mithras throwing a spear against the rock (a fount of water then sprung forth from this rock; the mythologem thus has been compared to Moses striking the rock with his staff).

In the 2d and 3d centuries this mystery cult competed with its slightly older rival, Christianity. Polemical passages against the mysteries of Mithras are found in the writings of Christian authors (Just. *Apol.* 66, *Dia.* 70 and 78; Or. *Cels.* 6.22; Tert. *Ad Marc.* 1.13; *De bapt.* 5; *De corona militis* 15; *De praescr. haeret.* 40).

When Constantine lent his support to Christianity, the Mithras initiates who were frequently imperial employees and soldiers, apparently abandoned their cult with almost no opposition. Evidences for the cult of Mithras appear again in Rome in the period 357–87. This time they come from the Roman aristocracy, which opposed the new Christian capital of Constantinople. In doing so they incorporated the cult of Mithras in their religious syncretism. The victorious Christians destroyed most of the Mithraea, and they erected their churches above the Mithraic caves as a sign of the victory of Light over Darkness. Archaeologists have discovered and excavated in Rome many Mithraea under the churches.

MITHREDATH (PERSON) [Heb *mitrĕdāt* (מִתְרְדָת)]. Var. MITHRIDATES. **1.** Persian official

identified as the treasurer (Heb *gizbār,* possibly derived from Old Persian *ganzabara;* see Bowman 1970: 28) of Cyrus (ruled 539–530 B.C.E.); he was charged with the responsibility of counting out the temple vessels to be returned to Jerusalem (Ezra 1:8 = 1 Esdr 2:11). The temple vessels given to Sheshbazzar (ca. 538 B.C.E.) to carry to Jerusalem are specifically identified as those which Nebuchadnezzar had taken from the Jerusalem temple in 587/6 B.C.E. (Ezra 1:7 = 1 Esdr 2:11). The parallel version of the event in 1 Esdr 2:11 identifies the treasurer as Mithridates (Gk *mithridatēs;* note the LXX *mithradatēs*), a Greek rendering of the Persian name (see also v 16). However, the LXX differs from Ezra 1:8 and 1 Esdr 2:11 by taking the Hebrew *gizbār,* "treasurer," for a second name, calling him Mithradates Gasbarenos. 1 Esdras, not dependent upon the LXX, correctly translates the Hebrew *gizbār,* "treasurer," with the Greek *gazophylax.*

2. Persian official named along with Bishlam and Tabeel as co-senders of correspondence to the Persian king Artaxerxes (ruled from 465–425 B.C.E.) (Ezra 4:7 = 1 Esdr 2:16). The content of the actual correspondence is not specified, but the redactor's context suggests that it was unfavorable to the Jews in Judea and Jerusalem. The LXX version translates Bishlam into a prepositional modifier, saying that the letter was written "in peace" (Heb *bišlām* is translated into Gk *en eirēnē*), from Tabeel to Mithradates. Olmstead (1948: 314), following the LXX reading, presents Tabeel as working on behalf of the Jews; he sought to establish legal precedent (hence the collection of Aramaic documents) for Jewish rights to rebuild by corresponding with Mithredath, a Persian official. The parallel account of this correspondence in 1 Esdr 2:16 locates this episode just after the return under Sheshbazzar and conflates the correspondents in Ezra 4:7 and Ezra 4:8, making one group of correspondents to Artaxerxes comprised of Bishlam, Mithridates, Tabeel, Rehum, Beltethmus, and Shimshai the scribe.

MITRE. See DRESS AND ORNAMENTATION.

MITYLENE (PLACE) [Gk *Mitylēnē* (Μιτυληνη)]. The chief city of the island of Lesbos, the largest of the Aegean islands located near the shore of Asia Minor (modern Turkey). Paul briefly visited this city during his third missionary journey (Acts 20:14). Paul, after visiting Macedonia, traveled to Troas and then went cross-country to Assos. Paul joined his companions on the ship at Assos and then sailed to Mitylene. They spent the night at Mitylene (39°06´N; 26°34´E) before sailing S to Chios and Samos, eventually traveling on to Jerusalem. It was common for ships to overnight in convenient harbors and set sail early in the morning to take advantage of the favorable morning winds.

The city is built upon an extension of land that was originally a small island, but which later was connected to the larger island by a causeway. The city, therefore had two excellent harbors, one on either side of this promontory. This area was colonized by the Aeolians prior to 1000 B.C., who provided the dialect for the poetry of Alcaeus and Sappho who wrote in the early 6th century B.C. These poems hint at the internal strife which plagued the city leading to the overthrow of several tyrants.

Mitylene became an important naval power and founded colonies on the coast of Mysia and Thrace. Disputes over some of these colonies brought the city into conflict with Athens. After playing an important role in the Ionian revolt, Mitylene was captured by the Persians. Later the city became an important member of the Athenian alliance. At first, Mitylene joined Athens in the Peloponnesian War, but it revolted twice (428 and 419 B.C.) from this agreement. This action was met with severe punishment which nearly brought annihilation to the city and marked the end of its military power.

Mitylene made an alliance with Alexander the Great and later came under Roman control. The status of "free city" was conferred upon the city by Pompey the Great and it became a popular resort for aristocratic Romans. In A.D. 151, an earthquake destroyed the city. In the Middle Ages the term "Mitylene" was applied to the entire island.
JOHN D. WINELAND

MIZAR (PLACE) [Heb *miṣʿār* (מִצְעָר)]. Mt. Mizar, a peak whose precise location is unknown, is mentioned in Ps 42:7 (—Eng 42:6). The phrase *mēhar miṣʿār* ("from Mt. Mizar") is usually understood to refer to the location of the psalmist. The geographic references of the verse move from the general to the specific locality, an example of focusing that is common in Hebrew poetry, "I remember you (God) from the land of Jordan, the Hermon range (literally "the Hermons"—*ḥermônîm*), from Mt. Mizar." Apparently, the geographical area specified is the headwaters of the Jordan in the Hermon range. "Mt. Mizar" then would specify a peak in that area. Its name has been related to three names in this area with the same or similar radicals (Zaʿura, Wadi Zaʿârah, Kh. Mezâra), which may preserve the hill's name (Smith 1932: 477). On the basis of the meaning of the name *har miṣʿār,* "the little hill," some suggest that it functions to contrast this "little hill" (maybe even Mt. Hermon itself) with the grand hill of God's sanctuary to which the psalmist longs to go, "your holy hill" (Ps 43:3; cf. Ps 68:17–19 [—Eng 68:16–18]). Others suggest that the phrase designates the destination to which the psalmist wishes to go (i.e., Zion "the little hill") rather than the psalmist's present location, "I remember you … far away from the little hill" (i.e., Zion). Goulder (1982: 23–27) interprets it as a reference to Tel Dan at whose sanctuary the psalmist wishes to worship.

MIZMOR. See PSALMS, BOOK OF.

MIZPAH (PLACE) [Heb *hamiṣpâ* (הַמִּצְפָּה)]. Var. MIZPEH. A place-name connected with several biblical sites in and around Palestine. The toponym, deriving from the root *ṣph* meaning "to guard," or "to watch," suggests the location at a site of a military outpost, observatory, or "watchtower" (see the usage of the word in Isa 21:8).

1. Mizpah of Benjamin. The most significant "Mizpah" in the OT was a city of political, military, and cultic significance located in Benjaminite territory. It frequently appears in stories set in the premonarchical period and is associated with a motif whereby all the Israelite tribes gather in solemn cultic assembly to pray before undertaking Holy War against an enemy.

Mizpah is first mentioned (Josh 18:26) in the Benjaminite town-list when Joshua reportedly allotted cities captured in the Conquest to the various tribes. Most scholars now regard this list as a monarchical-era administrative record which has been literarily projected into Israelite antiquity by late editors. The document nevertheless suggests that Mizpah existed in Iron Age II, and that it was located, like the other cities in the second half of the list (Joshua 25–28), in Benjaminite territory astride or W of the Palestinian watershed.

In the account of the outrage at Gibeah and its aftermath (Judges 19–21), Mizpah reportedly served as the base camp where all Israel rallied before the YHWH to hear the victimized Levite's grievance against Gibeah (20:1, 3). All the Israelites except Jabesh-gilead, allegedly swore an oath not to marry their daughters to a Benjaminite (21:1); Jabesh-gilead missed the solemn assembly (21:5, 8) and was accordingly punished. Literary evidence suggests that this information belongs to a postexilic Priestly redaction of the Gibeah Outrage tradition, and should not be regarded as historical (Arnold 1990: 159–65). These passages reflect, instead, the cultic significance of Mizpah in the exilic and postexilic period when it possessed a "house of the Lord" (Jer 41:5); Priestly editors evidently wished to project this importance back into Israel's past.

Mizpah's relation to Samuel is a considerably more complicated question. On the one hand, many scholars consider as ancient and historical the report (1 Sam 7:16) that Samuel judged Israel on a yearly circuit involving Bethel, Gilgal, and Mizpah (Miller and Hayes, *HAIJ*, 96). Moreover, the notice (7:12) locating Eben-ezer between Mizpah and Jeshanah ("the tooth"—cf. 14:4–5) is possibly an old etiology. However, the claim that Samuel summoned "all Israel" to a cultic assembly with him before the Lord at Mizpah (7:5–7), where God responded to their prayers and fasting with a miraculous rout of the Philistines (7:7, 11), evinces motifs and interests so similar to the Gibeah account that one may doubt its historicity. No less dubious is the report that Samuel chose Saul as the first king over Israel in a lottery held in Mizpah (10:17). Once again, late editors have apparently transferred Mizpah's postexilic cultic importance into Israel's early days.

Less historically questionable and more significant for understanding Mizpah's importance is the report in 1 Kgs 15:16–22 that King Asa repulsed the Israelite Baasha's incursion into Judean territory and his attempt to cut off safe access to Jerusalem (ca. 900 B.C.E.). After dismantling the offending Israelite fort at Ramah (er-Ram, 7 km N of Jerusalem), Asa's corvée reportedly used its stones and timbers to fortify two new Judean fortresses presumably farther N: Mizpah and Geba (1 Kgs 15:22 = 2 Chr 16:6). Since Geba guarded one important highway across the Judean-Israelite border at the Geba Pass (see GEBA), it is only logical to assume that Mizpah "watched" over the other major route, the watershed highway, at the frontier between the two countries.

Recent research (e.g., Aharoni 1968: 30) suggests that such border fortresses not only controlled military and economic access to Judah, but served an important cultic function as well. Sites like Mizpah may have contained sanctuaries where travelers could offer proper sacrifices to the national lord on entering or leaving the land. This role may explain the origins of Mizpah's subsequent cultic importance in Judah, and Hosea's vague condemnation against the priests, who "have been a snare at Mizpah" (Hos 5:1).

The Bible does not mention Mizpah in relation to events in the three centuries after its foundation as a border fortress. In the chaotic period after the destruction of the Temple in Jerusalem (586 B.C.E.),

however, Mizpah achieved its greatest significance. The Babylonian invasion probably devastated most of the cities of S and W Judah, including Jerusalem, but seemingly left the remote N redoubt of Mizpah intact. At this fortress, the newly appointed, pro-Babylonian, governor Gedaliah set up his motley government and established a new capital (2 Kgs 25:23); there the nationalistic Ishmael assassinated the quisling and most of his puppet government as well (2 Kgs 25:25; but see the extended account of these events in Jer 40:1–41:16).

That Mizpah achieved premier sanctuary status in Judah in this period is indirectly proved by Jer 41:4–6, which reports that eighty Israelites made a pilgrimage in order to offer grain and frankincense at the "house of the Lord"—apparently in Mizpah itself. It is likely that Mizpah retained its status as capital of Judah and primary temple for many decades, until the reestablishment of Jerusalem late in the 6th century B.C.E. It is also possible that postexilic literary circles were active in the city during this period, which may account for its inclusion and legitimation in premonarchical stories such as Judges 20, 1 Samuel 7, and possibly Judges 11.

When the returned exiles rebuilt Jerusalem, artisans from Mizpah contributed their services to various architectural repairs on the city (Neh 3:7, 15, 19). Otherwise, little is known about Mizpah during the Dark Ages of Persian and Hellenistic colonialization of Judah. During the Maccabean Revolt in the 2d century B.C.E., Jewish fundamentalist forces under Judas assembled for a religious service in Mizpah in memory of its former preeminence as a holy place (1 Macc 3:46).

Modern debate as to the location of Mizpah began over a century ago when E. Robinson proposed that Nebi Samwil, a formidable mount 8 km NW of Jerusalem, best fit the topographical requirements for Mizpah (1856: 575); a long succession of scholars through W. F. Albright concurred in this opinion. Such an identification is unlikely, however, in view of Nebi Samwil's location (i.e. farther S than er-Ram), its high elevation, and its distance from any militarily strategic point (e.g., the watershed highway). Archaeological investigation, moreover, has not produced findings which would corroborate a Mizpah identification for Nebi Samwil (Kochavi 1972: 185).

The most likely site proposal was first advanced by A. Raboisson (1897), who suggested that a mound 12 km N of Jerusalem named Tell en-Naṣbeh (M.R. 170143) not only fit Mizpah's topographical requirements, but retained an Arabic version of the original Hebrew place name. A series of scholars concurred, and W. F. Bade finally excavated the tell from 1926 to 1935. While this expedition found no incontrovertible proof linking Mizpah to Tell en-Nasbeh, its findings are strongly suggestive of such an identification (McCown: 1947). See NASBEH, TELL EN-.

Tell en-Nasbeh was occupied in the Iron, Persian, and Hellenistic ages, fitting Mizpah's chronological requirements. Moreover, its massive Iron Age walls, glacis, and towers correspond to the type of fortress construction one would expect on the basis of 2 Kgs 15:22. its N-facing gate was well positioned to receive travelers *en route* to Jerusalem. Some sixty-eight *lmlk* seals confirm Tell en-Nasbeh's Judean setting, and a seal inscribed to "Jaazaniah servant of the king" may relate to an official of Gedaliah named ion 2 Kgs 25:23. The site lay astride the watershed highway just a few km S of the probable Judean-Israelite border, which extended some 8 km SE toward Mizpah's twin fortress, Geba. Together, these strongholds guarded Judah's N border for most of its 300-year history.

2. Mizpeh of Moab (*miṣpēh*). David reportedly brought his Bethlehemite parents to the court of the king of Moab in this city while Saul pursued his renegade rival (1 Sam 22:3). Its location is purely a matter of conjecture; both Kerak and Rujm el-Meshrefeh SW of Madaba in Jordan have been proposed.

3. Mizpeh of Judah (*hamiṣpeh*). This town was purportedly assigned to the tribe of Judah by Joshua after the Conquest (Josh 15:38). It is specifically listed among towns in the Shephelah (15:33), and is therefore often identified with a site bearing a linguistically similar modern place-name: Tell es-Safiyeh (M.R. 135123), 13 km NE of Kiryat Gat (however, others identify Tell es-Safiyeh with ancient Philistine Gath; Aharoni *LBHG*, 434).

4. The land of Mizpah (*hamiṣpâ*). A coalition of kings representing N Palestinian peoples including the Hivites near Hermon "in the land of Mizpah" (Josh 11:3) supposedly gathered at the waters of Merom to fight Joshua's Israelite forces, which defeated and pursued them as far as "the valley of Mizpah" (*miṣpeh*)

on the E (11:8). These references are vague, and the area difficult to locate. If the "Mizpah" so named represents a city, it might lie in the extreme N of Palestine; some have proposed modern Qalat es-Subeibeh, 3 km NE of Banias, on the basis of the rough linguistic similarity of its name to Mizpah.

5. Mizpah of Gilead (*hamiṣpâ*). As a symbol of a covenant of friendship ending his bitter dispute with Jacob, Laban erected a sacred cairn (*maṣṣēbâ*) at a place called "Gal-ed" or "Mizpah" (v 49) somewhere in the land of Gilead (Gen 31:43–55). This pericope is surely an etiological account explaining why a local site somewhere in N Transjordan was called "Mizpah." The reason for the name stated in the text is that the Lord was to "watch" the performance of the covenant makers. It is possible that a ruined watchtower named Mizpah gave rise to a local folktale relating how the ancient patriarchs had built a cairn (note the similar Hebrew term *maṣṣebâ*) to seal their peace agreement. Whatever the origins of this tale, the extremely vague topographical references in the piece do not allow a reasonable location of the place.

The tragic story of Jephthah's vow (Judg 10:17–11:40) might involve this same village in Gilead. The assembled Israelites swore a solemn oath of witness (see Gen 31:44–52!) in Mizpah with the bastard Jephthah of Gilead agreeing to follow him in battle against the attacking Ammonites. Possessed by the spirit of the Lord, Jephthah made the rash vow, which would later lead to the death of his daughter at Mizpah, in exchange for divine help in crushing Ammon.

The possibility that two "Mizpahs" are involved in this story cannot be excluded, and that the site of the cultic Israelite assembly (10:17; 11:11) is none other than Mizpah of Benjamin (cf. Judg 20, 1 Sam 7). In any case, Mizpah of Gilead (called *miṣpēh* in Judg 11:29) was a distinct site, possibly that mentioned in Gen 31:49 (see also Josh 13:26, where a "Ramoth-mizpeh" is named). Proposals for the modern location of this village are simply based on phonetics: Suf near Jerash, and Kh. Jelʿad, some 24 km NW of Amman.

PATRICK M. ARNOLD

MIZZAH (PERSON) [Heb *mizzâ* (מִזָּה)]. The fourth son of Reuel and the grandson of Esau (Gen 36:13, 17; 1 Chr 1:37). In Gen 36:17 he is listed as one of the "tribal chiefs" (Heb *ʾallûpîm*) of Edom, and as such the name probably represents a clan within the Esauite-Edomite tribe of Reuel. There is no clear explanation for the meaning of the name.

ULRICH HÜBNER

MMŠT. One of the 4 place-names found in stamp impressions on the handles of Judean storage jars, which are known as the "royal-stamp jar handles." See STAMPS, ROYAL JAR HANDLE. Since the name does not appear in the Bible, the pronunciation is unknown. By convention, the hypothetical pronunciation "Memshat" is generally used.

Since the other place-names found in the stamps—Hebron, Soco, and Ziph—are major Judean cities, the appearance of the otherwise unknown *mmšt* is puzzling. Some have proposed that the word is an abbreviation or dialectical variant of *memšelet,* "government" or "administration," and that the fourth city is therefore Jerusalem. Strong objections have been raised against this solution, and it retains only a few adherents.

Royal stamps bearing the name *mmšt* have been found predominantly in N Judah. This fact plus the lack of a suitable Iron Age sites in the far S seems to rule out various proposals for a locale in the Negeb. Most commentators therefore look to the area around Bethlehem or in the NW of the kingdom in the Aijalon-Zorah region for possibilities: ʿAmwas near Latrun has been proposed. A definitive solution, however, awaits further investigation.

H. DARRELL LANCE

MNASON (PERSON) [Gk *Mnasōn* (Μνασων)]. The name Mnason, possibly a Hellenized form of Manasseh (Bruce 1985: 99), may be derived from *mnasion* a word used in ancient Cyprus for a measure of grain. Sinaiticus replaces Mnason with Jason, a rather common name among Hellenized Jews. Mentioned only in Acts 21:16, Mnason provided lodging for Paul and his gentile companions.

Mnason was a native of Cyprus like Barnabas (Acts 4:36). Munck (*Acts* AB, 209) suggests that he may have been among the Cypriots who left Jerusalem after the stoning of Stephen and preached the gospel directly to the Greeks at Antioch (Acts 11:19, 20).

The fact that Mnason is called an "early disciple" has engendered considerable discussion. Rengstorf (*TDNT* 4:458, n280) considers Mnason a personal disciple of Jesus. Hughes (*ISBE* 3: 388) suggests that he was one of the 120 in Acts 1:15. Knowling (1912: 448) proposes that he was a convert of Barnabas from among the Hellenized Jews in Jerusalem. The matter is not easily resolved. Luke did not consider Jesus' circle of disciples to be small (Luke 6:17; 19:37), therefore Mnason's discipleship could go back to the days of Jesus' ministry. However, in Acts 15:7 Peter uses the term "early" (*archaiô*) to refer to the time when Cornelius was converted (Acts 10:1–11:18). Thus, Mnason's conversion may have occurred at any time from early in Jesus' ministry through the early years of the Jerusalem church.

A textual problem in Acts 21:15–17 betrays some uncertainty as to where Mnason lived. According to D and a handful of Syriac manuscripts, Mnason's house was in a village between Caesarea and Jerusalem. The arrival of Paul and his companions in Jerusalem is then described in v 17 where "the brethren" (presumably the whole Christian church) received them gladly. But the most natural reading of the vast majority of manuscripts (contra Knowling 1912: 447) suggests that "the brethren" were limited to Mnason and his associates in Jerusalem and that Paul was received "gladly" by only a few. It was not until the next day that Paul met James and the elders (Acts 21:18). Verse 22 implies that the bulk of Jewish Christians were still unaware that Paul had arrived. While Delebecque (1983: 446–55) considers D Luke's own clarification of an earlier text, it is more likely D's copyist attempted to smooth over the Jerusalem church's apparent snub of Paul.

If Mnason was living in Jerusalem at that time, it is likely, as Haenchen (1965: 607) and Stählin (*Apostelgeschichte* NTD, 275) suggest, that he identified himself with the Hellenists of Acts 6 and the theology of Stephen (Acts 6:14). Most of Paul's eight gentile companions were uncircumcised (cf. Acts 20:4). The typical Christian in Jerusalem would find hospitality problematic under such circumstances. But as a Hellenist, Mnason would be open to such hospitality. As an "early disciple" he was known and respected by the church at Jerusalem. As a Cypriot he had connections with people Paul knew and trusted. Thus, the "disciples of Caesarea" (Acts 21:16) considered Mnason the logical choice to host Paul and his companions in Jerusalem.

The mention of Mnason's name and the reference to his being an "early disciple" suggest that he may have been a source of information about events in Caesarea and Jerusalem that are reported in Acts (see Bruce *Acts* NICNT, 402–3; Foakes Jackson and Lake 1933: 270 and Ramsay 1911: 309n).

MOAB (PLACE) [Heb *mo›āb* (מָאָב)*; mô›āb* (מוֹאָב)]. MOABITES. In ancient times, the region immediately east of the Dead Sea and the people who occupied that region. Most of the ancient references to Moab are provided by the Hebrew Bible which seems to use the term primarily in reference to the people (Num 22:4).

A. The Name

None of the various etymologies that have been proposed for this name is entirely convincing. Gen 19:37 attributes it to the unusual circumstances of the birth of two brothers, Moab and Ben-ammi, who are said to have become the ancestors of the Moabites and Ammonites respectively. The narrative records that Lot's two daughters conceived through their father and that the elder daughter named her son "Moab" saying he is "from my father" (Heb *mē›ābî*). G. A. Smith connected the name Moab with the Hebrew verb *ya›ab* ("to desire"); this *mô›bî* would be the participial form of the verb meaning "the desirable" land or people (1914: col. 3166). Others have attempted to explain the name on the basis of Arabic cognates; e.g., *ma›âb* which can mean " (the land of) the sunset." In this case, the name Moab would have been coined by Bedouin tribes of the desert for whom the land of Moab would have been the land of the sunset (Vollers). A recent proposal connects the name Moab with that of a prince of "Upper Shûtu," *Shemu›abu (m),* known from the Egyptian Execration Texts. The Egyptians knew the Shûtu as a nomadic people who inhabited parts of Palestine, so "Upper Shûtu" may have included the region of ancient Moab. Note also in this regard that Num 24:17–18 identifies the Moabites as "the sons of Sheth." Except for the initial *šîn,*

on the other hand, the consonants of *Shemu-ʾabu (m)* correspond to those of Moab. According to the proposal, therefore, *Shemu-ʾabu (m)* was a dynastic name which came to be applied to the region east of the Dead Sea and the people who inhabited the region. The *šîn* would have been dropped along the way for some reason or other (Grohman 1958: 39–48).

B. The Land

The settled population of ancient Moab was concentrated on the narrow strip of cultivable land sandwiched between the ragged and steep Dead Sea escarpment and the Arabian desert (approximately 90 km/60 miles N–S by 25 kms/15 miles E–W). For the most part this is rolling plateau about 1,000 m (3,000 feet) in elevation or 1,300 m (4,300 feet) above the Dead Sea. It is bisected by the steep Wādî el-Mūjib river canyon (the River Arnon of biblical times), and is bounded on the S by another major canyon, Wādî el-Ḥesā (the River Zered of biblical times). Both the Mūjib and the Ḥesā emerge from the desert side of the Moabite plateau and drain W to the Dead Sea. Less prominent wadis along the entire length of the Dead Sea escarpment create the ragged effect mentioned above.

The soils of the Moabite plateau tend to be thin; there are relatively few springs; and the waters of the Mūjib and the Ḥesā are virtually inaccessible due to their steep canyon walls. The plateau is, however, well watered by winter rains, and the soil is porous enough to hold this moisture for cereal crops and pasturage for sheep and goats. Places where the soil is deeper and springs are available (especially along the wadis which cut into the plateau from the Dead Sea escarpment) support fruit trees and vineyards. Thus, despite its deficiencies, Moab is reasonably good agricultural land and accordingly is strewn with ruins of settlements from ancient times. Moab's favorable agricultural situation is presupposed by the biblical story of Ruth, which has as its setting a time of famine of Judah. According to the story, Naomi and her family emigrated temporarily to Moab where food was still available (Ruth 1:1, 6).

It is useful to distinguish between the main Moabite plateau (the region between the Mūjib and the Ḥesā) and N Moab (the region N of the Mūjib). The main plateau is somewhat isolated by the geographical barriers mentioned above—Wādî el-Mūjib on the N, Wādî el-Ḥesā on the S, the Dead Sea escarpment on the W, and the Arabian desert on the E. Northern Moab is more open to the outside world, on the other hand, and was much better known to the biblical writers. It corresponds roughly to what they called the "tableland" (Heb *mêšor*), or the "tableland of Medeba" after the chief city in N Moab (Deut 3:10; 4:43; Josh 13:9, 16–17, 21; 20:8). Among other towns in N Moab were Heshbon, Elealeh, and those mentioned in Jer 48:21–24.

The openness of N Moab made it more vulnerable to encroachment also, especially by the Israelites and the Ammonites. It often changed hands, and the local population very likely had mixed loyalties. This situation is well illustrated by an inscription from the reign of King Mesha who ruled Moab in the 9th century B.C. (see below). While the inscription assumes that the region N of the Mūjib belonged historically to Moab and credits Mesha with recovering it from Israelite control, it also mentions Israelite elements in the local population, elements which had been there as long as anyone could remember: "And the men of Gad had dwelt in the land of Ataroth always and the king of Israel built Ataroth for them, …" (lines 10–11).

Several biblical passages seek to establish an Israelite claim to this valuable tableland (Num 21:21–31; 32; Deut 2:26–37; Judg 11:12–28). It is maintained in these passages that the Arnon/Mūjib was the true N boundary of Moab, that Moses conquered all of the region N of the Arnon from an Amorite king named Sihon, and that Moses then assigned all of the conquered tableland to the tribes of Gad and Reuben. These passages contrast with others, however, and with the general terminology of the Hebrew Bible, which assume that Moab extended as far N as Heshbon and Elealeh (see Num 21:20, for example, and the oracles concerning Moab in Isaiah 15–16 and Jeremiah 48). In fact, even part of the Jordan Valley—the area immediately NE of the Dead Sea, between the Jordan River and the W slopes of the "tableland"—is occasionally referred to in the Bible as the "Plains (Heb *ʿarbôt*) of Moab" (Num 22:1).

C. Archaeological Explorations in Moab

1. Nineteenth-Century Explorers. During the 19th century, local Bedouin tribes dominated the area between the Mūjib and the Ḥesā, and outsiders who entered this region did so essentially at their own risk.

Among the few daring travellers who traversed the whole Moabite plateau prior to 1870 and whose published observations deserve special mention were Ulrich Seetzen, who passed through the Moabite region in 1806, Ludwig Burckhardt in 1812, Charles Irby and James Mangles in 1818, and F. de Saulcy in 1851. Typically the travellers of this period commented on the numerous ruins from ancient times scattered throughout the Moabite plateau, but the circumstances rarely allowed them to investigate.

De Saulcy's 1851 discovery of the so-called Shīḥān Stele at Rujm el-ʿAbd was an exception. Rujm el-ʿAbd, a stone heap long since dismantled, was located at the site of the village school of present-day Faqūʿ. The stele is a basalt stone (1.03 ×.58 m) which presents in bas-relief a male figure in helmet and short skirt holding a spear. At his left is an animal, possibly a lion. Comparative study indicates close parallels with the monumental art of the "neo-Hittite" cities of N Syria and suggests an Iron Age date (Warmabol 1983). Whether the figure represents a warrior or a god (perhaps Chemosh) cannot be determined.

An even more important development was the discovery of the famous MESHA STELE (sometimes called the "Moabite Stone"). Discovered by F. A. Klein among the ruins of ancient Dibon (present-day Dhībān) in 1868, the Mesha Stele is a basalt slab, approximately one meter high and engraved with a legible text of more than 34 lines in the ancient Canaanite language and script. One learns from the inscription that it was commissioned by king Mesha of Moab in connection with the building of a sanctuary dedicated to Chemosh. The inscription itself reports the major accomplishments of Mesha's reign and thus provides a brief glimpse of Moabite affairs during the mid-9th century (see below).

In 1870 the American Palestine Exploration Society was founded and undertook to map E Palestine. Two expeditions were sent, the first led by J. A. Paine and Lieut. E. Z. Steever in 1872, the second by Selah Merrill in 1875–77. Both expeditions involved explorations in N Moab, but the results were not very satisfactory in either case. Thus C. R. Conder undertook in 1881 to map the Transjordan and began in N Moab where the Americans had left off. Unfortunately, Conder had to withdraw from the project after only ten weeks in the field because of the limitations of his permit. During that time, however, he surveyed approximately 500 square miles. Specifically, he covered from Wādî Zarqā Maʿīn (which reaches the Dead Sea SW of Mādabā) northward to Wādî Nimrīn/Shuʿeib (which reaches the Jordan opposite Jericho) and northeastward from the upper branches of these two wadis to Amman (Conder 1889a; 1889b).

In 1894 the Ottoman government reasserted its authority between the Mūjib and the Ḥesā, and for approximately a decade thereafter the region was reasonably well policed. Several scholars seized the opportunity. F. J. Bliss, for example, in an 1895 excursion, cleared up the confusion evident in earlier maps regarding the relative positions of the upper branches of the Mūjib. R. Brünnow, assisted by A. von Domaszewski, made three excursions (1895, 1897, 1898) in connection with his monumental study of the Roman road system and fortifications in the Transjordan. Alois Musil, primarily a geographer, explored extensively in S Transjordan and NW Arabia between 1896 and 1902; he devoted the first volume of his *Arabia Petraea* to the region E of the Dead Sea and prepared a 1:300,000-scale map which indicates the approximate locations of numerous ruins in that region.

2. Developments in the 1930s. Political circumstances (the Kerak rebellion in 1910 followed by World War I) prevented significant developments relative to the archaeology of Moab for the next twenty-five years (from 1905 to 1930). The discovery of a third monumental stele in 1930 initiated another flurry of archaeological exploration in the area of ancient Moab. This was the so-called Bālūʿ Stele, discovered by R. Head among the extensive ruins at Bālūʿ. A conical-shaped basalt stone (1.70 m high ×.70 m wide at the base) it bears both an inscription and a raised relief. Unfortunately the inscription is so poorly preserved that even the language cannot be identified. The relief is quite clear, however, and consists of three figures, probably a king (center) flanked by a god (left) and a goddess (right). The composition of the relief as well as its details are derived almost entirely from Egyptian prototypes. Clearly the sculptor was acquainted with Egyptian art, although certain details suggest that the artist was a non-Egyptian who adapted the Egyptian style to some purpose as yet unclear (Ward and Martin 1964: 68). The headdresses of the three figures are particularly interesting. The god wears the double crown of upper and lower

Egypt. The goddess wears a crown similar to that of Osiris. The king's headdress is similar to that worn by the "Shâsu" in Egyptian reliefs from Dynasties 19 and 20 (see below). Thus it seems reasonable to date the Bālūʿ stele to approximately the end of the LB Age and to see it as evidence (along with references in Egyptian texts to be discussed below) that Egyptian influence extended to the S Transjordan at that time.

Beginning in the spring of 1933, Nelson Glueck conducted surveys in the Transjordan. Not surprisingly, in view of the Bālūʿ discovery three years earlier, he concentrated that first season on the Moabite plateau. He spent about three weeks in the area E of the Dead Sea and visited more than a hundred sites. In 1936 he returned to the Moabite region and examined more sites in N Moab and in the southern half of the S plateau—i.e., S of the Kerak-Qaṭrāna road. The importance of Glueck's work in Moab had less to do with the discovery of new sites or with the thoroughness of coverage (since most of the ruins which Glueck visited had been reported already by Musil), than with the fact that he was the first to examine the surface pottery of a large sampling of sites throughout the Transjordan. Glueck's reports published in the *AASOR* became the standard authority on the S Transjordan in general and the Moabite region in particular until the late 1970s.

Three of Glueck's observations were very influential on subsequent treatments of Moabite history. (1) He concluded that there was a virtual gap in the sedentary occupation of S Transjordan between the end of the EB Age and the end of the LB Age—i.e., from approximately 1900 to the 13th century B.C. This was followed, he contended, by a surge of village settlements during the 13th century. These new villages represented new settlers, he believed, namely the Moabites and Edomites. (2) He reported that the borders of the Iron Age kingdoms in the Transjordan, including Moab, were protected by a system of strategically located forts. (3) He reported a concentration of Iron Age sites along the traditional N–S route through the lands of ancient Moab and Edom, the route of the old Roman road and essentially that of the modern paved road, and argued that this would have been the "Kings Highway" mentioned in Num 20:17 and 21:22.

In November of 1933, W. F. Albright and J. W. Crowfoot made soundings at Adir and Bālūʿ respectively. Albright's probe at Adir produced remains primarily from EB through what he called MB I and dated 2000–1800 B.C., although at one spot he also uncovered some Iron II sherds. Crowfoot found Iron Age remains at Bālūʿ, including a small section of casemate wall which he dated to Iron I. However, neither Albright nor Crowfoot uncovered materials from the time of the supposed occupational gap, which seemed to confirm Glueck's position.

3. Archaeological Investigations Since the 1930s. Archaeologists have given only sporadic attention to the Moabite plateau since Glueck's survey and, until 1976, have confined their efforts almost entirely to N Moab. Excavations at six sites have produced remains relevant to this discussion of the ancient Moabites: Dhī bān (excavated 1950–56 and 1965), Khirbet el-ʿĀl (1962), ʿArāʿir (1964), Tell Ḥesbān (1968–76), Khirbet Medeinet el-Muʿarradieh (1976, 1982) and Khirbet Bālūʿ (1986). Dhībān produced remains from primarily Iron II and later periods. The small amount of Iron I material apparently was not located stratigraphically. The excavators of el-ʿĀl reported EB, MB, Iron I, and Iron II pottery, but again none of it in clear stratigraphical context. ʿArāʿir proved to be a prominent Iron Age fortress on the ruins of earlier buildings. The pottery is mainly from the 11th through the 9th centuries B.C. At Tell Ḥesbān, the only one of these sites which has been both excavated and published with reasonable thoroughness, the evidence indicates an Iron Age I–II settlement with nothing earlier than the 12th century. Khirbet Medeinet el-Muʿarradieh and Khirbet Bālūʿ are the only sites in this group located S of the Mūjib. The former turned out to be another Iron Age fort. Constructed near the end of the 13th century at the earliest, the fort was destroyed at the end of the 12th or early 11th century. Excavations at Khirbet Bālūʿ (the same site probed by Crowfoot in 1933) are still underway and are producing primarily Iron II remains.

Three archaeological surveys conducted recently add to the information derived from these excavated sites. The team that excavated Tell Ḥesbān conducted a survey of other archaeological features in the immediate vicinity (approximately a ten-mile radius) and reported sites from all phases of the Bronze and Iron Ages. A survey team directed by the author during 1978–82 and concentrating on the S plateau between the Mūjib and the Ḥesā registered over 400 sites, again representing all phases of the Bronze and

Iron Ages. The third survey, conducted in 1983–86 by Udo Worschech and called the "Northwest Ar el-Kerak Survey," concentrated on the NW quadrant of the southern plateau and Wādî Ibn Hammād.

Mention should be made finally of two tombs cleared at Mādabā which produced artifacts dating from the end of the LB Age and the beginning of Iron I, and of occasional excursions into Moab by members of the Deutsches Evangelisches Institut für Altertumswissenschaft des Heiligen Landes during 1956–64 and 1984–85. Primarily interested in historical geography, the participants in the Evangelisches Institut excursions have sherded a number of sites and made useful observations regarding Moabite toponymy (see especially Kuschke 1962; Donner 1964; Schottroff 1966).

4. Some Implications of the Archaeological Evidence. Although the above is not a comprehensive overview of all archaeological activities on the Moabite plateau, it does cover the items which have relevance for reconstructing the history and material culture of the Moabites. Obviously, the land of ancient Moab still is not very well known archaeologically. Only one Iron Age site, Tell Ḥesbān, has been excavated with any degree of thoroughness, and most of the excavated sites are located N of the Mūjib. Yet the following observations are in order.

By 1970, when Glueck published a revised edition of his *The Other Side of the Jordan*, evidence had begun to emerge which indicated that there was not a total gap during the MB and LB Ages. Recognizing this, he softened his position considerably. The trend has continued, and the recent evidence suggests that the hypothesis probably should be dropped altogether. Obviously the MB and LB Ages were not a high point of urban life in Moab; but people were living on the plateau at that time, and living at some of the same city/village sites which have been occupied off and on throughout the ages. Moreover, while the number of settlements (as represented by surface pottery) increased dramatically during the Iron Age, the artifactual evidence recovered thus far is insufficient to determine whether there was a sudden increase in the number of villages at the beginning of Iron I. In short, rather than an occupational gap during the MB and LB Ages concluded by a sudden surge of Iron I settlements, it may be more accurate to project a gradual increase in the number of settlements from a low point in the MB Age to a high point in Iron II.

The question of border forts surrounding ancient Moab requires further investigation. Clearly there were some Iron I border forts, such as Khirbet Medeinet el-Muʿarradieh excavated by Olávarri. Yet several of the ruins which Glueck proposed as Moabite border forts show predominantly Nabatean and Roman pottery. Without excavating, therefore, it is difficult to know whether these sites were actually fortified during the Iron Age. Glueck's claim that a pattern of Iron Age settlements marked the route of the "Kings Highway" mentioned in Num 20:17 and 21:22 must be qualified as well. It is not at all clear that *derek hāmmelek* should be read as a proper name or that the road(s) to which the Num 20:17 and 21:22 refer passed through the Transjordan. While there are Iron Age sites situated along the route of the later Via Nova, the most recent archaeological evidence does not indicate a particular concentration of Iron Age sites along this route.

There is some conflict between the archaeological findings at Dhībān and Tell Ḥesbān (the sites of ancient Dibon and Heshbon respectively) and evidence pertaining to these two cities supplied by the ancient written records. If *Tipun* in the so-called "Palestinian List" from the reign of Tuthmosis III and *Tbniw* in the inscription from the reign of Ramesses II are to be identified with Dibon (see below), then one would expect Dhībān to show archaeological evidence of occupation during the LB Age. Yet excavators reported nothing from either the MB or LB Ages at Dhībān and only a small amount of Iron I material. Late Bronze remains were to be expected at Tell Ḥesbān also, since the Israelites are reported to have defeated King Sihon of Heshbon at the time of their Exodus from Egypt (Num 21:21–35; Deut 2:30–37; Judg 11:19–22), and the Exodus is usually dated during the LB Age. Yet the earliest significant remains uncovered at Tell Ḥesbān date from the 12th century B.C., well after the close of the LB Age. Moreover, even the 12th century remains at Tell Ḥesbān are meager.

Finally, while certain features of the material culture of the Moabites suggest influence from the direction of Egypt (Bālūʿ Stele relief) and N Syria (Shīḥān Stele), there is even more abundant evidence of close continuity between the material culture of the Moabites and that of their immediate neighbors, including Israel (pottery styles including the collared rim jars and a "pillared building" at Khirbet

Medeinet el-Muʿarradieh, language and script of the Mesha Inscription, etc.). This duality of cultural connections is illustrated by a proto-aeolic capital first reported by Glueck at Meḍiebiʿ, an Iron Age ruin situated on the desert frontier of the S plateau. Although the nearest parallels are from W Palestine (Megiddo, Samaria, Ramat Raḥel), the motif is best known from the coast of Asia Minor.

D. Moab and Moabites in Ancient Texts

Ancient Egyptian, Moabite, and Assyrian inscriptions provide occasional bits of information about ancient Moab and the Moabites. Also Moab figures prominently in the Hebrew Bible.

1. Moab in Egyptian Sources. The so-called Execration Texts from the 19th or 18th centuries B.C. (MB Age) contain possible references to places in Moab. Also these texts mention "rulers of the Shûtu" among Egypt's Asiatic enemies. We have already referred to one of these Shûtu rulers, Shemuʾ-abu (m), and suggested the possibility that "Shûtu" is the Egyptian equivalent of "Sheth" which in turn is paralleled with Moab in Num 24:17–18. It does not follow, of course, that the Shûtu of the MB Age were specifically Moabites, but only that the biblical poet, composing at a much later time, regarded the Moabites as belonging to Shûtu stock.

Egypt maintained a strong presence in Syria-Palestine during the LB Age, beginning especially with the reign of Thutmosis III (ca. 1482–1450 B.C.). The texts indicate contact primarily with the towns and villages along the main roads, but the Egyptians also encountered non-sedentary folk throughout Syria-Palestine whom they referred to generally as "Shâsu." None of the Shâsu references in the Egyptian texts point specifically to the region E of the Dead Sea. Yet the Egyptians no doubt would have considered this region, at least its desert frontier, as Shâsu territory. It has been observed, moreover, that the central figure depicted on the Bālūʿ Stele wears a headdress of exactly the sort worn by Shâsu in Egyptian reliefs from Dynasties 19 and 20. It is tempting to conclude, therefore, that Bālūʿ figure was a Shâsu king. This may, however, be a hasty conclusion. While Shâsu clearly are depicted with this sort of headdress in the Egyptian reliefs, it is less clear that all of those so depicted were Shâsu.

One of the topographical lists from the reign of Thutmosis III, the so-called "Palestinian List" (also called the "Megiddo List"), may indicate that he passed through the Moabite plateau on one of his Asiatic campaigns. This depends, however, on a somewhat tenuous identification of the places mentioned in the list with places in Moab. Two other inscriptions suggest that Ramesses II (ca. 1304–1237) may have campaigned in the region two centuries later. The first of these, a brief topographical list inscribed on a statue of Ramesses II, includes what appears to be the name "Moab." Unfortunately, the list is brief and largely destroyed. The second is actually a grouping of three texts, two of them original lines of palimpsests, from the inscriptions on the outer face of the E wall of the Court of Ramesses II of the Luxor temple. K. A. Kitchen reconstructed the three texts and identified one of the places mentioned, *tbniw*, as Dibon. As indicated above, however, this identification encounters some archaeological difficulties and has been challenged on other grounds as well.

The conclusion that the region E of the Dead Sea was well within the range of Egyptian influence during the Middle and Late Bronze Ages seems certain, even when allowance is made for the various uncertainties mentioned above. Moreover, this conclusion is confirmed by the Bālūʿ Stele which, as indicated above, probably dates near the end of the LB Age.

2. The Mesha Inscription and Other Moabite Fragments. The Mesha Inscription appears on a memorial stele erected by King Mesha who ruled Moab during the 9th century B.C. Mesha seems to have taken the throne roughly midway through the reign of Ahab of Israel (ca. 873–851 B.C.) and lived to see the collapse of the Omride dynasty which occurred soon before 841 B.C. As was typical of royal memorial inscriptions of the day, the Mesha Inscription begins by introducing Mesha and then proceeds to describe the major achievements of his reign. Two items stand out, both mentioned in the opening lines: the recovery of the land of Medeba from Israelite control, and the building at Qarḥoh of a sanctuary dedicated to the Moabite god Kemosh (Chemosh). Apparently, the stele was established on the occasion of the completion of the sanctuary. (See the English translation in *ANET*, pp. 320–21.) After a lengthy prologue, the text recounts Mesha's actions in connection with the recovery of the land of Medeba and what apparently was a fairly extensive building program at Qarḥoh. Recovery of the land of Medeba involved

the taking of at least three Israelite cities: Ataroth, Nebo, and Jahaz. Against Ataroth and Nebo, Mesha launched campaigns that concluded with massacres of their respective populations. Less clear are the circumstances of the taking of Jahaz, which had been fortified by the Israelites and possibly served as an administrative center while N Moab was under Israelite control. The Israelites may have abandoned Jahaz without a fight since Mesha claims to have taken it without any mention of military action or massacre. Moabite loyalists resettled Ataroth, Jahaz, and probably Nebo (although this is not stated specifically).

The sanctuary was only part of a much more extensive building program at Qarḥoh, which in turn probably was the royal (acropolis) district of Dibon, Mesha's capital city.

Mesha's building activities elsewhere in the land included work at Baal-meon (a reservoir), Qaryaten, Aroer, and Bezer. He also built several Moabite sanctuaries (Beth-bamoth, Beth-diblathain, Beth-baal-meon) and improved the road crossing the Arnon. As the inscription draws to a close, Mesha claims that "all Dibon" was loyal to him and that he ruled over a hundred towns which he had brought under Dibonite control. The last lines, which are badly damaged, report a campaign against Hauronen.

The name of Mesha's father may be provided by a small inscription fragment discovered at Kerak in 1958 (or soon before). This basalt fragment, only 14 × 12.5 cm, seems to have a close parallel in a funerary stele discovered near Aleppo in 1891. If so, then the inscription was written in horizontal lines across the garment of a standing figure. Parts of only four lines survive and have been reconstructed by W. L. Reed and F. V. Winnett to read as follows:

… K]*mšyt,* king of Moab, the …
… of Kemosh (to serve) as an altar (?) because he …
… his … And behold I made …

The script resembles that of the Mesha Inscription. Moreover, the first part of the king's name is missing in the Kerak fragment, while the last part of the name of Mesha's father is missing in the Mesha Inscription (*Kmš*[…]). The translation proposed above reconstructs them as the same name, Kemoshyatti.

Two more fragments with bits of Canaanite (Moabite) script have been discovered, one at Dhībān and one at Khirbet Bālūʿ. In neither case can a full word be reconstructed with some degree of certainty. Also an ostracon with a possible *mem* and *waw* has been discovered at Khirbet Bālūʿ.

3. Moab in the Assyrian Texts. The 734–732 B.C. campaigns of Tiglath-pileser III brought all of Syria-Palestine, including the Moabite region, under Assyrian domination. Thus the royal Assyrian documents provide occasional glimpses of Moabite affairs. The first such glimpse is provided by a fragment of a clay tablet discovered at Nimrud. This fragment provides a long list of kings who paid tribute to Tiglath-pileser shortly after 734 B.C. Among the kings listed is one Salamanu of Moab (*ANET*, 282). Another text, a prism fragment dating from the reign of Sargon II (721–705 B.C.), mentions Moab among certain Palestinian kingdoms implicated in an anti-Assyrian revolt led by Ashdod in 713 (*ANET*, 287). The revolt, signalled by Ashdod's refusal to pay the required annual tribute to Assyria, was quickly crushed. Presumably Moab paid off Sargon and escaped punishment.

Two letters, which cannot be dated specifically but belong approximately to the period of Tiglath-pileser and Sargon, also mention Moab. One records the delivery of horses, presumably as tribute, to Calah by officials from Egypt, Judah, Moab, and Ammon. The other, from an Assyrian official and delivered to Nineveh by a messenger named Ezazu, reports a raid on Moabite territory by men of Gidir-land (Saggs 1955).

A certain Kammusunadbi from Moab is mentioned among the local Palestinian kings who rushed with presents to assure Sennacherib of their loyalty when he marched against Philistia and Judah in 701 B.C. (*ANET*, 287). A much shorter text from the reign of either Sennacherib or his successor Esarhaddon reports further tribute from the Ammonites, Moabites, Judeans, and possibly Edomites (*ANET*, 301). A King Musuri of Moab is listed among others (including Manasseh of Judah and Qaushgabri of Edom) who transported building materials to Nineveh during the reign of Esarhaddon (*ANET*, 291). Musuri, Manasseh, and Qaushgabri are listed again among local Palestinian rulers who delivered presents to Ashurbanipal and provided military service for the latter's wars against Egypt (*ANET*, 294).

Finally, two texts from the reign of Ashurbanipal are instructive in that (a) they presume that the kingdoms of the Transjordan are loyal Assyrian vassals and thus due Assyrian protection, and (b) they witness to the fact that protection was needed from the direction of Arabia. The threat seems to have been primarily from the Qedarites, a largely nomadic people who roamed the desert region E and SE of Damascus. One of these texts reports a campaign conducted by Ashurbanipal against Uate›, identified in the text as king of Arabia but elsewhere as son of Haza›il, king of Qedar (*ANET*, 297–98). In the other text Ashurbanipal claims credit for a victory over Ammuladi, king of Qedar, although one Kamashaltu king of Moab seems to have been the actual victor (*ANET*, 298).

4. Moab and Moabites in the Hebrew Bible. The biblical books Genesis through Joshua present an essentially continuous narrative which begins with creation and presents a highly theologized account of Israelite affairs until they are securely settled in "the Land of Canaan." Moab and the Moabites play a fairly prominent, although secondary, role in that story.

The Moabites appear first in Gen 19:30–38, the story of Lot's seduction by his two daughters and the resulting births of the two sons, Moab and Ben-ammi. Gen 36:31–39 (= 1 Chr 1:43–50) may be a Moab-related text as well. These verses purport to present a list of "kings who reigned in the land of Edom before there reigned any king over the children of Israel," but it has been observed (a) that the list seems to have been derived from two different sources, and (b) that one of the sources probably pertained to early Moabite, rather than Edomite, rulers. Specifically, three of the names in the list may have Moabite connections: Bela the son of Beor whose city was Dinhabah; Hadad the son of Bedad, who smote Midian in the field of Moab; and Hadar (or Hadad) whose city was Pau (Bartlett 1965).

According to the biblical narrative which continues through the books of Exodus and Leviticus to Numbers 21, the Israelites escaped from Egypt under the leadership of Moses, wandered for forty years in the wilderness, and arrived finally at the plains "across the Jordan from Jericho." There they remained encamped, we are told, until Moses died (Deuteronomy 34) and Joshua led the Israelites across the Jordan into the land of Canaan (Joshua 1–3). The plains of Moab provide the setting for a considerable portion of the Genesis–Joshua narrative, therefore, from Numbers 21 through Joshua 3. The events reported in these chapters may be summarized as follows.

The Israelites reached N Moab and defeated Sihon, an Amorite king who had taken this region from the Moabites and ruled it from Heshbon. They also defeated Og, another Amorite king who ruled still further N, and thus gained possession of virtually all the Transjordan (Num 21:10–35). Balak, a Moabite king, called on the prophet Balaam to curse the Israelites who now were encamped in the plains of Moab. Balaam, insisting that he could speak only what God gave him to speak, blessed Israel instead of cursing them (Numbers 22–24). Some of the Israelites began to worship Baal of Peor, and one even cohabited with a Midianite woman. Phinehas, son of Eleazer the priest, killed the couple. God commanded Moses and Eleazer to harass and smite the Midianites (Numbers 25). Moses and Eleazer conducted a census of the congregation, after which Yahweh provided further legal and cultic instructions (Numbers 26–30). Israel avenged the Midianites; the Reubenites and Gadites were assigned territory in N Moab; Manassehite clans received territory still further N, and Yahweh provided further instructions (Numbers 31–36). Moses reviewed key events which had occurred while the Israelites wandered in the wilderness and camped in the plains of Moab, reviewed the law which God had handed down to him, viewed the promised land from Pisgah, and died (Deuteronomy 1–34). Leadership was transferred to Joshua at that point, who began preparations for the conquest of Canaan (Joshua 1–3).

Events of the "Plains of Moab" stage in the Israelite journey from Egypt also are mentioned from time to time later on in the biblical narrative as it continues through 2 Kings (see, for example, the summary of conquests in Joshua 12–13 and the exchange of messages between Jephthah and the Ammonite king in Judg 11:12–28).

One must take into account that Genesis–2 Kings is a composite narrative composed long after the described circumstances and events would have occurred. Its composite character becomes especially obvious when one examines the "plains of Moab" segment summarized above. In addition to abrupt shifts in vocabulary and literary style which sometimes are noticeable even in translation, there is corresponding

disunity in the content of the story. For example, the Israelite defeat of Sihon and seizure of his kingdom is reported in Num 21:21–30 as if there were no Moabite king with conflicting territorial claims. Then the Balak/Balaam episode which follows (and which has Balak much concerned about Israelite presence in the plains of Moab) is narrated without any apparent awareness of Sihon's role in political affairs or that the Israelites had already taken from Sihon all of the territory N of the Arnon.

Traditio-historical considerations also caution against an uncritical acceptance of the testimony of the narrative. The story about Lot and his daughters has all the appearances of a folk story, for example. And the claim that Sihon took from Moab the region N of the Arnon and then lost it to the Israelites has obvious propagandistic overtones; it seeks to legitimize Israelite possession of territory which even other parts of the Hebrew Bible recognize as belonging historically to Moab. Moreover, as indicated above, the Sihon tradition is contradicted by archaeological evidence. Heshbon, identified as the capital of Sihon's Amorite kingdom, apparently was not even occupied at the time when these events supposedly occurred.

Nevertheless, even if the Genesis–Joshua account cannot be taken at face value for purposes of historical reconstruction, matters of historical interest pertaining to Moab can be gleaned from the traditions embedded in it. The story of Lot's daughters, for example, in spite of its folkloristic character and derogatory slant, shows that the Israelites regarded the Moabites and Ammonites as relatives. The common heritage of these peoples is suggested also, as we have seen, by their shared material culture. Other passages in the Hebrew Bible indicate that there was constant interchange between the Israelites and Moabites including intermarriage. The genealogical record at the end of the book of Ruth is especially noteworthy in this regard. It claims, namely, that King David himself was descended from the Moabitess Ruth. Among the numerous obscure notations in the genealogies of 1 Chronicles 1–8, on the other hand, is mention of a Moabite ruler of Judaean descent (1 Chr 4:22). 1 Chr 8:8–10 speaks of one Shaharaim (presumably a descendant of Benjamin, although the context is unclear) who "… had sons in the country of Moab after he had sent away Hushim and Baara his wives. He had sons by Hodesh his wife: Jobab, Zibia, Mesha, Malcam, Jeuz, Sachia, and Mirmah. There were his sons, heads of fathers' houses."

The Sihon passages bear witness to the political conflicts between the Israelites, Moabites, and Ammonites during biblical times, indicate that competition for control of N Moab was a central issue in much of this conflict, and remind us that international disputes always involve some degree of propaganda warfare. No doubt the Moabites and Ammonites also had their own versions of earlier history which supported their respective claims to N Moab.

Similarly, the traditions that report religious apostasy and violence at Beth-peor, although projected back to the Mosaic era when all Israel supposedly was camped in the Plains of Moab, probably had more to do with the on-going experiences of Israelite clans who lived permanently among the Moabites (and Midianites!) in the disputed region. While many will have married non-Israelite wives and worshiped local gods at Moabite shrines, there will have been counter efforts to maintain ethnic and religious distinctiveness; and this distinctiveness will have added a local dynamic to the violence which inevitably occurred each time the disputed territory changed hands (e.g., David's selective massacre of Moabites; Mesha's massacre of Gadites).

The cultic center at Beth-peor on the NW edge of the Moabite plateau apparently played a central role in much of this struggle, and the conflicting attitudes which Israelites would have held concerning this shrine are reflected in the conflicting biblical traditions regarding Baalam. Numbers 22–24 reflects an essentially positive attitude toward Beth-peor and Baalam. It was from Beth-peor, we are told, that Balaam uttered his third oracle of blessing upon the Israelites. Numbers 25 and 32 depict Beth-peor as an evil place, on the other hand, symbolic of the evils of religious apostasy. Balaam, correspondingly, is an evil prophet who encouraged Moabite and Midianite women to draw Israelite men into their foreign cult (see also Deut 23:4; Josh 22:17; Neh 13:2; 2 Pet 2:15).

The ambivalent cultic situation in which the Israelites who settled E of the Jordan found themselves is reflected further in Joshua 22.

The Genesis–Joshua narrative continues in the books of Judges–2 Kings (excluding Ruth). The next reported event in Israelite-Moabite relations is an episode associated with the time of the Israelite judges when "Eglon the king of Moab" allied himself with the Ammonites and Amalekites, defeated Israel, and took possession of "the city of Palms." Thus the people of Israel served Eglon for eighteen years, according to the story, until Yahweh raised up a deliverer. This deliverer was Ehud, a Benjaminite, who assassinated Eglon, mustered an army, and seized the fords of the Jordan so that about 10,000 Moabites were killed (Judg 3:12–30).

After the Eglon/Ehud episode, the Judges–2 Kings corpus contains only brief references and one extended narrative (2 Kgs 3:4–27) pertaining to Israelite-Moabite relations. Saul is reported to have "fought against all his enemies on every side, against Moab, against the Ammonites, against Edom, against the kings of Zobah, and against the Philistines; wherever he turned he put them to the worse" (1 Sam 14:47). David, while a fugitive from Saul, left his parents with the king of Moab (1 Sam 22:3–4). Yet we read later in the account of his reign that David "… defeated Moab, and measured them with a line, making them lie down on the ground; two lines he measured to be put to death, and one full line to be spared. And the Moabites became servants to David and brought tribute" (2 Sam 8:2). Unfortunately the text of 2 Sam 24:5–7, which reports a census undertaken by David, is difficult to follow. It seems clear, however, that the census officials began at Aroer on the N bank of the Arnon and worked northward from there. Thus David apparently exercised direct control only over N Moab. Solomon is reported to have indulged the worship of foreign gods in Jerusalem, and Josiah to have reversed this policy two centuries later. In both instances Chemosh, the Moabite god, is mentioned (1 Kgs 11:7, 33; 2 Kgs 23:13).

2 Kings 1:1 and 3:4–5 report that king Mesha of Moab, who had been required to deliver annual tribute to Ahab, rebelled against Israel following Ahab's death. 2 Kgs 3:6–27 recounts then Jehoram's unsuccessful attempt to restore Israelite authority over Moab. After the Omride-Mesha conflict, the Moabites are mentioned only twice more in the Judges–2 Kings narrative. Both instances have to do with Moabite raids W of the Jordan (2 Kgs 13:20–21; 24:2). Apparently, the latter half of the 9th century was a bleak time for the peoples of Palestine, as illustrated by the Elisha stories. None dared challenge the Syrians who exploited the land without providing security. 2 Kgs 13:20–21, intended to illustrate the power of Elisha even after his death, mentions Moabite raids which presumably occurred under the shadow of Syrian oppression. Moabite raids would continue to be a problem in still later years. 2 Kgs 24:2 reports that, when Jehoiakim rebelled against Nebuchadnezzar, Yahweh "sent against him bands of the Chaldeans, and bands of the Syrians, and bands of the Moabites, and bands of the Ammonites."

References to Moab and Moabites in the prose sections of the Hebrew Bible appear outside the Genesis–2 Kings corpus also. The book of Ruth has been mentioned already. Regardless of the historicity of the story, one must consider the underlying assumption of the storyteller that Moab would have been a reasonable place to go in search of grain when famine struck Judah. The Chronicler provides a not entirely convincing story of how Yahweh saved Jerusalem during Jehoshaphat's reign from a combined attack by Moabites, Ammonites, and Meunites (2 Chr 20:1–30). The city was saved, according to the story, without its defenders so much as raising a spear. Mention should be made also of two Moab references in the prose sections of Jeremiah. Near the beginning of Zedekiah's reign, when Jeremiah warned the king against challenging the Babylonian hold on Judah, he apparently attempted to send the same message to neighboring kings by way of their envoys who had come to Jerusalem to confer with Zedekiah. The kings of Edom, Moab, Ammon, Tyre, and Sidon are mentioned in particular (Jeremiah 27, see esp. v.3). Jeremiah 40:11–12, on the other hand, describes circumstances after the Babylonians had captured Jerusalem for a second time and placed the government in the hands of Gedaliah. At that time Jews who had fled to the Transjordan began to return to their homes, and Moab, Ammon, and Edom are specified as the lands to which they had fled.

In the poetical sections of the Hebrew Bible, references to Moab and the Moabites are usually in very generalized contexts which treat Moab as an enemy along with other neighboring nations. Thus in Exodus 15, the so-called "Song of the Sea," the Moabites figure among those terrified by Yahweh's mighty deeds in Israel's behalf (Exod 15:14–15). Moab appears also in Psalm 60 and 108, which partially duplicate

each other. These communal laments appear to Yahweh to show his strength and express confidence that he will do so. The salvation oracle is given as divine proclamation: "Moab is my washbasin; upon Edom I cast my shoe; over Philistia I shout in triumph" (Ps 60:8; 108:9). Similarly, Psalm 83, which probably dates from the waning years of the Judean monarchy before the collapse of the Assyrian empire, calls upon God to take vengeance on various enemies including Moab.

The books of Amos, Isaiah, and Jeremiah include collections of oracles directed against individual foreign nations (Amos 1–2; Isaiah 13–23; Jeremiah 46–51). The oracles in Amos introduce the book, and all of them follow a similar format. They address in turn Damascus, Philistia, Tyre, Edom, the Ammonites, and Moab (2:1–3). The collection of Moab oracles in Isaiah 15–16 and Jeremiah 48 partially duplicate each other. Jeremiah additionally includes a variant version of the Num 21:27–30 oracle pertaining to Sihon and Heshbon. Very little specific information about Moabite history can be derived from any of these prophetical texts. The one cited above from Amos leaves us completely in the dark, for example, as to the identity of the Moabite king who burned the bones of the Edomite king or the circumstances of his deed. The oracles do, however, have some implications for the historical geography of Moab, even if the evidence they provide is difficult to interpret.

In addition to these oracles which focus specifically on Moab, several other poetical texts mention Moab in anticipation of a restoration of Israel and downfall of her neighbors (Isa 11:12–16; 25:10–12; Jer 9:25–26; 25:15–29; Ezek 25:8–11; Zeph 2:8–11; see also Balaam's oracle in Num 24:15–24, esp. v 17). Finally, some mention should be made of the occasional references to Moab in postexilic biblical texts, most of which also mention the Moabites along with Judah's other neighbors in derogatory fashion (Ezra 9:1; Dan 11:41; Jdt 1:12; 5:2; 5:22; 7:8). Neh 13:1 notes that the books of Moses denied Moabites and Ammonites admission to the assembly of God because of their behavior toward Israel at the time of the exodus. The Hebrew text of Sir 36:10, reminiscent of Num 24:17 and Jer 48:45, specifies "Moabite" princes as the object of divine wrath.

E. Moabite History

Moab was one of several relatively small kingdoms that emerged in the Levant during the early centuries of the Iron Age, existed for a time alongside each other, and then fell under the domination of the Assyrians. Those kingdoms which survived the Assyrians with their national identity intact would not survive the Babylonians, Persians, Greeks, and Romans, who dominated the Levant each in turn after the Assyrians. Among these Iron Age kingdoms was Moab. Unfortunately very little is known about the origin of the Moabites or the details of their history.

1. Moabite Origins. According to the Genesis-Joshua narrative reviewed above, the Moabites descended from an ancestor named Moab, Lot's son/grandson (Gen 19:37), and their land was inhabited in earliest times by a race of giants known as the Emim (Deut 2:10). One would suppose also, from an uncritical reading of the narrative, that the Moabites already were organized into a monarchy when the Israelites passed through the Transjordan on their exodus from Egypt (Num 21:10–20; Deut 2:9–19); that the Moabite king on the throne at the time was named Balak (Num 22–24); that a large section of Moabite territory (N Moab) had been lost to an Amorite king named Sihon soon before the Israelites arrived on the scene (Num 21:26–30), and that the Israelites took this Moabite territory from Sihon (Num 21:21–25). As observed above, however, the Genesis-Joshua narrative is not a reliable source of information regarding Moabite origins. For one thing, it was compiled several centuries after Balak and Sihon supposedly lived.

We know now that, contrary to Glueck's findings, the Moabite plateau was occupied to some degree throughout the Bronze Age. Neither does the archaeological evidence suggest a major cultural break in the S Transjordan between the Bronze Age and the Iron Age. There is no reason to suppose, accordingly, that the Moabite kingdom emerged from newcomers to the region. In other words, the Moabites of biblical times may have been, for the most part, descendants of the general population which had inhabited the region E of the Dead Sea from earliest times.

2. Early Moabite Monarchy? All of our information about the Moabite kingdom(s) prior to King Mesha also comes from the Hebrew Bible, beginning with the references indicated above to an early Moabite king named Balak. Judg 3:12–30 mentions another Moabite king named Eglon who ruled "the

city of palms" (probably Jericho) during the time of the Judges. The biblical narratives pertaining to Balak and Eglon have very obvious legendary overtones. But even if they are to be taken as historically trustworthy, one cannot assume that Balak and Eglon ruled over a united Moabite state which included all of the region E of the Dead Sea. More likely, the political situation in S Transjordan during the opening centuries of the Iron Age will have been characterized by political disunity and diversity. There will have been a few modest cities, each with its king who also controlled some of the surrounding countryside. However tribal elders also will have played a role in the political structure, especially among the villages scattered throughout the land. Also from time to time there will have arisen local chieftains who carved out local kingdoms. Eglon may have been a king of this sort. Even Mesha's realm, as we shall see below, may not have encompassed all of Moab.

By the same measure, the biblical claim that David defeated Moab (2 Sam 8:2) does not necessarily mean, as often presupposed by Bible atlases, that he conquered and annexed to Israel all the land of Moab from the Dead Sea to the desert and from Heshbon to the River Zered. More likely, he subjugated only the region N of the Arnon.

3. Mesha's Kingdom. The only Moabite king that we know much about and, correspondingly, the only period of Moabite history for which we have any substantial details, is king Mesha who ruled from Dibon during the mid-9th century B.C. He was a contemporary of the strong Omride dynasty of Israel (Omri, Ahab, Ahaziah, Jehoram) and is reported in the Hebrew Bible to have rebelled against Israelite domination after Ahab's death (2 Kgs 1:1; 3:4–27). The main reason that Mesha and his period is so well known, however, is that he left his own record of his major deeds—the Mesha Inscription. Unfortunately the information provided by the Mesha Inscription does not correlate easily with the related materials in the Hebrew Bible (esp. 2 Kgs 1:1 and 3:4–27). Thus the following proposed reconstruction of events is somewhat hypothetical.

Mesha followed his father to the throne in Dibon roughly midway during Ahab's reign. Most of N Moab was under Israelite domination at the time and Mesha, as his father before him, had to pay annual tribute to the Omrides. The political situation in Israel took a turn for the worse after Ahab died, and Mesha seized the opportunity to rebell. At first the "rebellion" would have consisted of Mesha's refusal to pay the annual tribute, along with preparations for defense in case Israel took military action. When it was apparent that Ahaziah, who followed Ahab to the throne, could not take action because of a personal accident and other difficulties in Samaria (2 Kings 1), Mesha proceeded with military moves of his own intended to restore Moabite control over N Moab. Probably it was necessary only to settle affairs with a few pro-Israelite cities, perhaps only Ataroth and Nebo, since most of the population of the disputed region was Moabite and would have welcomed the change. When Ahaziah died, Jehoram ascended the throne in Samaria and organized a military campaign against Mesha. The account of the campaign in 2 Kgs 3:4–27 is beset with literary problems and its details should not be pressed too far (Miller 1967; Bartlett 1983). The essence of the account is that the attacking army approached Moab from around the S end of the Dead Sea, devastated fields and cisterns throughout the land, laid siege to Kir-hareseth where Mesha had retreated, but then withdrew from the city when Mesha sacrificed his oldest son on the city wall.

Mesha seems to have had a long reign and claims in his inscription to have been an active builder. Near the end of the inscription, where it is badly damaged and concluding lines are broken off entirely, Mesha claims to have undertaken a victorious military campaign against Horonaim. It is noteworthy that, with the possible exception of the Horonaim campaign, all of Mesha's activities reported in the inscription were confined to N Moab, the region N of the Arnon. Whether the Horonaim campaign would have taken him into the main Moabite plateau depends on the location of Horonaim (see below). Even allowing for the possibility that Horonaim was located S of the Arnon, however, the pattern of his recorded deeds strongly suggests that Mesha's effective rule was confined to N Moab.

4. Moab under the Assyrians, Babylonians, and Persians. The Assyrian texts imply that Moab fell under Assyrian domination during the 8th century B.C. as did the remainder of the Levant. Also the Assyrian texts provide the names of four additional Moabite kings: Salamanu, who paid tribute to Tiglath-

pileser; Kammusunadbi, who pledged loyalty to Sennacherib; Musuri, a contemporary of Manasseh of Judah, Esarhaddon, and Ashurbanipal; and Kamashaltu, who defeated the Qedarites later on in Ashurbanipal's reign. Precise dates are unavailable for any of these four kings.

According to Josephus, the Ammonites and Moabites were brought under Babylonian subjection five years after the destruction of Jerusalem (*Ant* 10.9.7). Presumably the peoples of the Transjordan, including the Moabite, submitted to Persian occupation as well, although there is no specific evidence available in this regard.

5. Moab during Hellenistic-Roman Times. We are dependent almost entirely on Josephus for information about circumstances in the Transjordan during Hellenistic and Roman times. That the whole Transjordan was regarded as part of Arabia (i.e., Nabatean realm) by the beginning of the 1st century B.C. is presupposed by Josephus' account of the warfare between Alexander Jannaeus (103–76 B.C.) and the latter's Nabatean contemporary, Obodas I. Josephus reports, namely, that Alexander overcame "the Arabians, such as the Moabites and Gileadites, and made them bring tribute" (*Ant* 13.13.5 §374). Later on, according to Josephus, Alexander "was forced to deliver back to the king of Arabia the land of Moab and Gilead, which he had subdued, and places that were in them" (*Ant* 13.14.2 §382). This leaves the reader somewhat unprepared for Josephus' account of the negotiations between Hyrcanus II and Aretas III after Alexander's death, at which time Hyrcanus supposedly offered to return the Moabite cities if Aretas would support his bid for the Judean throne (*Ant* 14.1.4§18). Pompey's eastern campaign in 64–63 B.C. brought all of Syria-Palestine under the shadow of Rome. Nabatea, including the Moabite region, became a client kingdom. No doubt the bulk of the population consisted of descendants of the ancient Moabites, and the name would survive for a long time—e.g., in that of the two chief cities, Rabbath Moab and Karak Moab. For all practical purposes, however, the history of ancient Moab had come to an end.

F. Moabite Place Names

Since most of the written information about ancient Moab must be gleaned from non-Moabite sources, it is not surprising that the towns and villages of the more accessible region N of the Arnon/Mūjib are much better documented than those of the S plateau. Most of the Moabite towns and villages mentioned in the Hebrew Bible, for example, and virtually all of those which can be located today with any degree of confidence, were situated in N Moab. Noteworthy also is the fact that Mesha's capital city, Dibon, and all of the other places mentioned in his inscription with the possible exception of Hauronen, were located N of the Arnon/Mūjib.

1. Northern Moab. As indicated above, the following site identifications have been proposed for places mentioned in Egyptian sources: *tipun/tbniw* (equated with Moabite Dibon which is identical in turn with present-day Dhībān; M.R. 224101); *kurmin* (present-day ʾUmeiri); and *betaʾe* (present-day Jelūl). While these identifications are plausible, only the Dibon/Dhībān equation can be regarded as reasonably certain. In addition to Dibon, the following towns and villages in N Moab known from the Hebrew Bible and/or the Mesha Inscription can also be located with reasonable confidence: Elealeh (present-day el-ʿĀl; M.R. 228136), Heshbon (Tell Hesbān; M.R. 226134), Nebo (possibly Khirbet el-Mukhaiyat [M.R. 220128] near Jebel en-Nebā), Medeba (Mādabā; M.R. 225124), Baal-Meon = Beth-meon = Beth-baal-meon = Beon (Maʿīn; M.R. 219120), Ataroth (Aṭārūs; M.R. 213109), Mephaath (Umm er-Riṣāṣ), and Aroer (ʿArāʿir; M.R. 228097). Beth-Peor would have been situated on the NW edge of the Moabite plateau, on the spur W of Tell Ḥesbān and overlooking Wādī ʿAyūn Musa. The name of ancient Kerioth probably is preserved in that of present-day el-Quraiyāt M.R. 215105), and the name of ancient Kiriathaim in that of Kirbet el-Qureiye near ʿAyūn ed-Dib.

Bezer and Jahaz seem to have been prominent towns in N Moab and should be represented by equally prominent archaeological sites. Thus Bezer, which is listed in Josh 20:8; 21:36 and 1 Chr 6:63 as a Refuge/Levitical city and described in Deut 4:43 as "Bezer in the wilderness on the tableland" often is associated with Umm el-ʿAmad (M.R. 235132) on the desert side of N Moab. Jahaz, mentioned as the scene of Israel's defeat of King Sihon of Heshbon (Num 21:23; Deut 2:32; Judg 11:20) and depicted as a place of some military importance near Dibon in the Mesha Inscription, possibly is to be associated with present-day Libb (M.R. 222112). Some scholars, however, contending that the Israelites would have

approached Sihon's realm from the desert side, search for Jahaz nearer to the desert frontier (e.g., Khirbet el-Medeineh [M.R. 236110] on Wādī el-Themed).

2. Plains of Moab. Situated in the Plains of Moab were Nimrah, Beth-Jeshimoth and Abel-shittim. Nimrah probably is to be associated with present-day Tell Nimrīn. Eusebius and Jerome identify Beth-Jeshimoth with a place called Ismuth (*Onomast.* 266.27; 233.81; 103.9), the ancient name of which probably is preserved in that of present-day Khirbet es-Suweimeh (M.R. 206131). However, contemporary scholars usually accept Glueck's view that Tell ʿAẓeimeh (M.R. 208132) nearby is the actual site of Beth-Jeshimoth. Earlier scholars generally identified Shittim with Tell Kefrein; but the more recent tendency, again following Glueck, has been to associate it with Tell el-Ḥammām (M.R. 214138).

3. The Southern Plateau. Although the name Rabbath-Moab does not appear in any extant pre-Roman sources, it is by etymology an early Moabite name and is to be equated with present-day er-Rabbah (M.R. 220075). Rabbath Moab/er-Rabbah, which came to be called Areopolis during Late Roman and Byzantime times, has also been equated with Ar Moab. However there is very little to recommend this Rabbath Moab/Ar equation. A more likely site for Ar is probably Khirbet Bālūʿ. Ar seems to have been a city of some importance (the name "Ar" is derived from the word for "city") closely associated with Arnon. The ancient city represented by Khirbet Bālūʿ would have been the gateway to the S plateau from N Moab, on the other hand, since the ancient N–S route through the Transjordan will have descended into the Arnon/Mūjib canyon at Aroer, followed the canyon bed into the Wādī el-Bālūʿ tributary, and then ascended the plateau of the S plateau at Khirbet Bālūʿ.

Kir-hereseth (Kir-heres, Kir-hares) usually is equated with present-day Kerak (M.R. 217066) on the basis of the Targumic rendering of "Kir" as *kerak* (Isa 15:1; 16:7, 11) and the geographical implications of the narrative of 2 Kgs 3:4–27. But neither of these lines of evidence can be regarded as very secure. "Kir" is a common element in Moabite place names, and the Targum rendering may be a simple translation meaning "fortified city" rather than the proper name of a city. Literary critics have raised serious questions about the unity and historicity of 2 Kings 3, and even if taken at face value this narrative does not necessarily support the Kir-hereseth/Kerak identification.

The "ascent of Luhith" mentioned in Isa 15:5b–6 generally is associated with an ancient roadway which ascended the Moabite plateau along the N slopes of Wādī en-Numera. Thus Luhith and Horonaim, which are mentioned together in the Isaiah passage, would have been located along this roadway (but see Worschech and Knauf 1986). Present-day Kathrabbā seems the best candidate for the Luhith.

G. Moabite Religion

The Moabites of the Iron Age will have inherited religious concepts and practices from their Bronze Age predecessors, whose religious practices will have been similar in turn to those of their Canaanite neighbors W of the Jordan (see Mattingly, *EncRel* 10:1–3). Place names such as Beth-baal-peor, Beth-baal-meon, and Bemoth-baal indicate the existance of local Baal shrines, for example. The Bālūʿ Stele indicates strong Egyptian influence near the end of the LB Age, which no doubt will have extended to religion. As indicated above, the god and goddess depicted on opposite sides of the central figure may be Egyptian deities. The place name Horonaim is also suggestive in this regard. A deity named *Horôn* apparently was worshipped in both Egypt and Canaan (e.g., at Beth-horon). The place name Nebo may pertain in some way to the god Nabû worshipped in Babylon (Isa 46:1–2).

Chemosh emerged as the national god of the Moabites, however, and was understood to have the same special relationship with them that Yahweh had with the Israelites. Jeremiah refers to the Moabites as "the people of Chemosh" (48:46; see also Num 21:29). Chemosh appears as an element in royal names (*Kammus*unadbi, *Kamas*haltu); and the flowering of the Moabite kingdom under Mesha prompted the building of a royal compound in the capital city which featured a Chemosh sanctuary.

The Moabites believed that their military successes and failures depended upon Chemosh's favor or disfavor, so that the Mesha Inscription reads very much like some parts of the Hebrew Bible. Moab had fallen into difficult times because Chemosh was angry with his land, according to the inscription. But then it was Chemosh who enabled Mesha to recover the lost territories, commanded him to attack Hauronen, and presumably gave him victory there as well. Thus, Mesha dedicated the sanctuary to Chemosh

"because he saved me from all the kings and caused me to triumph over all my adversaries" and the conquered territories were incorporated into Chemosh's domain. As Joshua is said to have devoted the city of Jericho with all its spoils and inhabitants to Yahweh for destruction (Josh 6:17–21), so also Mesha consecrated the people of Ataroth and Nebo to destruction (*ḥērem*) in gratitude to Chemosh. The narrative in 2 Kings 3 has Mesha resorting to child sacrifice, which also was not unknown in Israel (see, e.g., 2 Kgs 16:3). Jer 48:7 refers to the priests of Chemosh, and the terminology of the Mesha Inscription suggests some system of divination—"Chemosh said to me, 'Go down, fight against Hauronen." Several animal and human figurines have been found on Moabite sites, some of which may have had religious significance.

Chemosh apparently was not just a local Moabite deity. A god named Kamish may appear in lists of deities from the EB archives at Ebla. Gods with similar names appear in a Babylonian list dating from the MB Age and in a LB Age tablet from Ugarit. Possibly Kemosh was the chief deity of the famous city of Carchemish in N Syria. Providing further evidence of the international scope of Chemosh worship (or evidence of the presence of Moabites in Egypt) are theophoric personal names based on Kemosh (*Kemoshyhi, Kemoshzdk, Kemoshplt*) known from ostraca, graffiti, and papyrus fragments discovered at Sakkar.

The reference to '*štr-kmš* in line 17 of the Mesha Inscription has been interpreted two different ways. Possibly it has to do with Chemosh's consort, a female deity presumably associated in some way with the goddess Ishtar or Astarte. Alternatively, it may be a compound name for Chemosh himself—i.e., he would be associated in some way with ʿAshtar, a male Canaanite deity, firstborn of the supreme god El, known from the Ugaritic texts. John Gray, a proponent of this latter view, has collected data which suggests that this Canaanite ʿAshtar (ʿ*Attr*) was identical with a S Arabian god ʿ*Attar* who was associated in turn with the morning and evening star (1949b). According to Gray, Chemosh, Milcom (the god of the Ammonites), and *Šlm* (apparently worshipped in Jerusalem as indicated by the names Jeru*salem Solom*on, and Ab*salom*) were all epithets or hypostases of this same astral deity. Thus the royal Moabite name *Shalam*anu (no less so than *Kammus*unadbi and *Kamash*altu) would be theophoric names pertaining to ʿAshtar=Chemosh=Milcom=Šlm. Likewise, Judg 11:24 would not be mistaken when it identifies Chemosh as the god of the Ammonites, since Chemosh and Milcom would have been alternate designations for the same god.

J. MAXWELL MILLER

MOAB, CITY OF (PLACE). The place where Balak went to meet Balaam, a site located "on the boundary formed by the Arnon, at the extremity of the boundary" (Num 22:36). "City of Moab" is the translated equivalent of "Ar of Moab" (Num 21:28); the two designations probably refer to the same town. Ancient Ar's exact location remains unknown, though several proposals have been made. Neither Rabbah (ancient Areopolis) nor el-Misna‹ fulfill the basic requirement of the text, i.e., location on or near the Arnon gorge. Ar, the city of Moab, may have been located at el-Balu‹a, ca. 7 miles NE of Rabba.

GERALD L. MATTINGLY

MOABITE STONE. See MESHA‹ STELE.

MOADIAH (PERSON) [Heb *môʿadyâ* (מוֹעַדְיָה)]. The eponymous ancestor of a priestly family headed by Pittai at the time of the high priest Joiakim (Neh 12:17). Some have suggested that this name is to be identified with the name Maadiah (Neh 12:5), the etymology of which is also uncertain. If the name Moadiah is a distinct and separate entity, however, the question remains whether it derives from *yʿd* (Yahweh summons) or *mʿd.* The biblically attested meaning of the latter verbal root is "to slip, totter," forming the unlikely construction "Yahweh totters." A more likely meaning, "to promise," is attested in Old S Arabic (KB) which, when connected with the theophoric element, would result in "Yahweh promises."

NORA A. WILLIAMS

MOCHMUR (PLACE) [Gk *Mochmour* (Μοχμουρ)]. A wadi mentioned as a geographical locator in the book of Judith (Jdt 7:18). Otherwise unknown under the name "Mochmur" (the name is missing in the Vulgate), but it has been identified with the Wadi Qana, a tributary of the Jarkon river located 15 miles from Ekrebel (see *MBA*). The wadi forms the boundary between the territories of Manasseh and Ephraim (Josh 16:8; 17:9), and is SE of Dothan, the correct geographical location according to the book of Judith. However, it is quite far from the location of Bethuliah given in the book of Judith; if the purpose of the men of Esau and Ammon was to blockade the water supply of the city, it seems pointless to journey so far to the SE. Enslin (1972) has given as a possibility the Wadi Makhfurlyeh, S of Nablus. This identification is not as precise as that of the Wadi Qana. It is, however, closer to the purported location of Bethuliah. Of course, given the genre of the book of Judith, it is entirely possible that the name is fictitious. See also JUDITH.

MODAD. See ELDAD AND MODAD.

MODEIN (PLACE) [Gk *Modein* (Μοδειν)]. An ancient village located ca. 20 miles NW of Jerusalem in the region of Lydda (Lod). Modein is only mentioned briefly in 1 and 2 Maccabees (cf. Goldstein, *I Maccabees* and *II Maccabees* AB) where its importance is chiefly due to its association with Mattathias and other leaders of the Maccabean revolt (see especially 1 Maccabees 2 and Josephus, *Ant* 12–13). Although Robinson reports that "Sôba has now for centuries been regarded in monastic tradition as the site of the ancient Modin" (Robinson 1841: 328–30), the town is confidently to be identified with modern Ras Medieh (M.R. 150148), a typical tell of the Shephelah of Judah. This site may be more fully described by referring to three facets of its history: the Maccabean rebellion, the monumental tombs erected to the Hasmoneans, and Rabbi Eleazar, another famous inhabitant of this town.

A. The Maccabean Rebellion

Modein is first mentioned in 1 Maccabees 2. In 168 B.C.E., the Hellenistic Seleucid ruler Antiochus Epiphanes captured Jerusalem and desecrated the temple. At this time an attempt was made to force the Jews to abandon their traditional religion and unite with the rest of the Seleucid kingdom in worshiping Hellenistic deities. In the midst of the turmoil in Jerusalem, Mattathias and his five sons (John, Simon, Judas, Eleazar, and Jonathan) escaped to Modein. Soon, however, Syrian officers came to Modein to enforce the policies of Antiochus. Mattathias, because he was both a priest and leading citizen, was chosen to make the required sacrifices with the expectation that once he did so the rest of the town would follow suit. He refused, and when a Jew who *was* willing to make the sacrifice stepped forward, Mattathias, in a righteous rage, killed him at the altar. He then killed the Syrian officer and tore down the altar upon which the sacrifice was to have been made. Following this, Mattathias and his five sons fled into the hills, calling upon those who would defy the Syrian policies to join them in guerrilla resistance. Thus began the Maccabean rebellion which three years later resulted in the recapture of Jerusalem and the rededication of the temple.

References to Modein (Modiith) in the Mishnah indicate that this town came to mark the boundary of Judah. Thus, *Pesah.* 9.2 reads, "What counts as a *journey afar off?* Beyond Modiith, or a like distance in any direction." *Ḥag.* 3.5 reads, "From Modiith and inwards men may be deemed trustworthy in what concerns earthenware vessels; from Modiith and outwards they may not be deemed trustworthy." The two further references to Modein in connection with the Maccabean rebellion reflect this use of the term.

1 Macc 16:4–10 relates the story of an important battle in the Maccabean rebellion which took place in the vicinity of Modein. The aging ruler Simon entrusted command of the armies to his two sons Judas and John without relinquishing his own authority or position. The battle against Kendebaios is launched from an encampment at Modein and serves to mark the first stage of the transition in leadership from Simon to his son John.

The final, although problematic, reference to Modein is found in 2 Maccabees 13. The narrative describes a massive expedition of Seleucid forces under Antiochus V against the Jews. Judas Maccabaeus, after a period of prayer and preparation, decided not to wait for the town to be attacked but instead to march out and confront the Syrian troops at the border of Judea. Making camp near Modein, Judas attacked the Syrians by night, killed some 2,000 men in the encampment, and stabbed the lead elephant to death, producing such havoc that the Syrians were thereafter unable to mount a successful attack against Judea. This narrative has been extensively discussed in commentaries on 2 Maccabees. The discussion reveals that there are a number of important points which are difficult to reconcile with other historical information about this period. For example, such an attack would have represented a drastic shift in Seleucid policies toward the Jews and been at variance with the agreements just described in 2 Maccabees 11. Rather than seeking to perpetuate violence upon them, Antiochus V seems to have adopted a more conciliatory attitude toward the Jews of Judea. Likewise, the statement that the Syrians came equipped with elephants and chariots armed with scythes is hard to reconcile with a military campaign to be launched in the hill country of Judea. The historicity of these details is, therefore, to be doubted although the possibility remains that the narrative incorporates information from the oral traditions about Maccabean victories which circulated soon after they were accomplished (see the more complete discussion in Goldstein, *II Maccabees* AB, 454–58).

B. The Hasmonean Tombs

The references in 1 Maccabees to members of the Hasmonean family being buried in the tomb of their fathers at Modein (2:70; 9:18–21) are explained by the narrative in 1 Maccabees 13:25–30 (cf. Josephus, *Ant* 12.210–12). The reader is told that Simon constructed an impressive tomb with an accompanying monument of polished stone to mark the resting place of his parents and brothers. He also erected seven pyramids, columns, carvings of ships' prows, and other architectural features which could be seen from a considerable distance. Both Eusebius and Jerome are among the later authors who express knowledge of these structures, indicating that for some centuries they remained impressive monuments to the achievements of the Hasmonean family and were undoubtedly visited by pilgrims. Today scant remains at a site awaiting excavation mark the spot near Ras Medieh taken to be the location of these tombs (M.R. 149148).

C. Rabbi Eleazar of Modein

Little is known about one other distinguished resident of Modein, Rabbi Eleazar. Known simply as "the man from Modein," a teaching of his is preserved in *ʾAbot* 3.12: "R. Eleazar of Modiim said: 'If a man profanes the Hallowed Things and despises the set feasts and puts his fellow to shame publicly and makes void the covenant of Abraham our father, and discloses meanings in the Law which are not according to the halakah, even though a knowledge of the Law and good works are his, he has no share in the world to come.' " Although he was associated with the famous Rabbi Gamaliel II at Jamnia, Eleazar's biography ends in tragedy for he was executed on a false charge of treason in 135 C.E., apparently at the order of Bar Kokhba himself (Willoughby, *IDB* 3: 421).

THOMAS R. W. LONGSTAFF

MODERN VERSIONS OF THE BIBLE. See VERSIONS (MODERN ERA).

MOETH (PERSON) [Gk *Mōeth* (Μωεθ)]. An alternate form of the name NOADIAH.

MOLADAH (PLACE) [Heb *môlādâ* (מוֹלָדָה)]. Settlement within the tribal territory of Simeon (Josh 19:2; 1 Chr 4:32), later incorporated into the Negeb district of Judah (Josh 15:26). The differences between the list in 1 Chronicles 4 and that of Josh 19:1–9 seem to be merely editorial in nature, suggesting that both are derived from a single document describing the territory of Simeon sometime early in the period of the monarchy, presumably before Simeon was consolidated with the tribe of Judah (Myers *1 Chronicles* AB, 25–31). The differences between these lists and that of Joshua 15 are more difficult to explain unless they reflect the political and demographic adjustments made necessary by the consolidation process (Boling and Wright *Joshua* AB, 436–37). Moladah is also listed among the towns occupied by those returning from exile in Babylon (Neh 11:26, with a defectively written *holem*). There is general agreement that this list is derived from an official document of the postexilic period (Myers *Ezra, Nehemiah* AB, 187). The name of this settlement, whose meaning is clearly related to the verb *yld* "to give birth," has led to the very speculative conclusion that this was the site of a shrine for barren women (*IDB* 3:421–22). The fact that Khirbet el-Waten, a group of ruins 12 km E of Beer-sheba (M.R. 142074), bears a name that also deals with kinship and childbearing, combined with its location within the appropriate region, provides sufficient evidence for a tentative identification (Boling and Wright *Joshua* AB, 382).

WADE R. KOTTER

MOLDING [Heb *zēr* (זֵר)]. A band used to encircle the interior cultic appurtenances of the tabernacle.

The molding was made of gold and was placed around the ark (Exod 25:11; 37:2), the table for the bread of the Presence (Exod 25:24, 25; 37:11, 12), and the incense altar (Exod 30:3, 4; 37:26, 27). Since these three holy objects were meant to be portable, they were all fitted with rings through which poles were inserted. The molding may thus have been a decorative element and also a strengthening band.

CAROL MEYERS

MOLECH (DEITY) [Heb *mōlek* (מֹלֶךְ)]. Var. MOLOCH. Traditionally rendered Molech (or Moloch, representing *moloch*) the term is of disputed meaning; it occurs eight times in the OT text (Lev 18:21; 20:2, 3, 4, 5; 1 Kgs 11:7; 2 Kgs 23:10; Jer 32:35) and one time in the NT (Acts 7:43). Molech is found generally in contexts of cultic child sacrifice and particularly in phrases containing some or all of the words *hʿbyr ʾt-bnw wʾt-btw bʾš lmlk* ("to cause one's son or one's daughter to pass over by the fire to Molek").

A. Theories Regarding the Meaning of "Molech"
  1. Traditional Interpretation
  2. Eissfeldt's Reinterpretation
  3. Weinfeld's Theory
B. Philological Evidence
C. Biblical Evidence
D. Summary

———

A. Theories Regarding the Meaning of "Molech"

1. Traditional Interpretation. Traditionally, Molech has been understood as the name of a deity to whom children were burned in sacrifice, first by the Canaanites and then by the Israelites, particularly in a cultic installation known as the "Tophet" in the Valley of the Son of Hinnom, immediately south of Jerusalem. In favor of this understanding there is now a broad range of ANE literary evidence which suggests the worship of a god known as Malik or Milku/i from as early as the 3d millennium B.C. through

the OT era. Malik was an extremely popular element in personal names at Ebla, although contexts are presently too scanty to permit firm conclusions regarding the god's nature in the Eblaite cultus. The same god is also evidenced in personal names from the next (i.e., second) millennium at Mari, and in addition, we find in the Mari texts references to recipients of funeral offerings called *maliku,* apparently the shades of the dead or underworld deities. This netherworld connection is reinforced by the evidence from Akkadian texts, in which Malik appears in god lists, from the Old Babylonian period on, equated with Nergal and in which the *mal (i)kū* appear in connection with the Igigi and Anunnaki as chthonic beings involved in the cult of the dead ancestors. Finally, the comparative literary evidence moves closer to home for OT studies, as the Ugaritic texts list a god *Mlk* resident at *ʾṯtrt* (*Ugaritica V* 7:41; 8:17), the same "address" as that assigned elsewhere to the netherworld deity *Rpu* (Rapiu), and testify to the inclusion of beings known as *mlkm* in the cult of the dead in contexts which suggest their similarity to (if not identity with) the *rpum,* the shades of the dead royal ancestors (known later in the Bible as the Rephaim, where the term has been broadened to include all the dead, e.g., Ps 88:11). From this evidence there emerges the picture of a netherworld deity involved in the cult of the dead ancestors (perhaps even their king, given the apparent associations with the West Semitic root *mlk,* "to rule, be king").

2. Eissfeldt's Reinterpretation. Since 1935 the discussion of Molek has been dominated by the thesis of O. Eissfeldt, that the term is cognate with the Punic *mlk* (or "*molc[h]*" in Latin transcriptions) and is thus not a divine name or title but a technical term for a type of sacrifice. *Mlk*/*molc (h)* is found on several stelae excavated from Punic colonies in North Africa (such as Carthage) and the western Mediterranean islands, almost always compounded with another phonemic element (e.g., *ʾmr/Lat omor*), and dating from the 7th or 6th century B.C. to the 3d century A.D. Because the inscriptions regularly name Baal-Hammon (Latin Saturn) or Tanit as the recipient of the sacrifice, while the *mlk* + expression appears in a variety of syntactical positions within the inscriptions, Eissfeldt was persuaded that the latter were not references to a divinity, but terms for the sacrifice or its victim. Given the associations of the OT term "Molek" with child sacrifice and the depiction of lambs about to be slain on stelae inscribed *molchomor,* Eissfeldt proposed that the Punic *mlkʾmr* was testimony to the development of a practice of substitutionary sacrifice of a lamb (*ʾmr*; cf. Heb *ʾimmēr*) for the human child, while the other elements compounded with *mlk* had to do with other variants of the original practice of child sacrifice, the *mlk* per se. The latter was most provocatively attested in a single inscription (Constantine Neopunic 30) as *lmlk,* which Eissfeldt read, "as a *molk*-sacrifice," and compared to OT *lammōlek,* the form in which Molek occurs in seven of the eight OT attestations.

Two independent sources of data have lent substantial force to Eissfeldt's proposal. First, a long series of classical authors, from Sophocles in the 5th century B.C. to Dracontius in the 5th century A.D., write of the Phoenician and Punic practice of cultic child sacrifice by fire (see especially Mosca for texts and discussion). Second, archaeologists digging at Carthage and other Punic colonies in the western Mediterranean have located sacred precincts (or "tophets," using the OT term) containing urns with ashes and bone remains of children and animals (see TOPHETH). Although such precincts have not always been discovered at the locales of the stelae bearing *mlk*-inscriptions, the evidence from Carthage, where the proportion of animal bones mixed with human appears to *decrease* over time, establishes the Punic practice of cultic child sacrifice under the term *molk* for most scholars, regardless of their views on OT Molech.

3. Weinfeld's Theory. A third theory also requires mention, although it has to do not so much with the meaning of "Molech" as with the nature of the associated cult: Moshe Weinfeld's (1972) proposal (following many medieval rabbis) that the cult of Molech was indeed directed to a pagan deity, Baal-Hadad (under the title of "king"), but that historically it never entailed actual sacrifice or burning of children, only their dedication to the deity in a fire ceremony. Weinfeld stresses the use of verbs which need not mean to sacrifice (*ntn,* "to give"; *hʿbyr,* "to cause to pass over") in the descriptions of the cult in the OT legal and historical material, while explicit "death" verbs (such as *śrp,* "to burn"; *zbḥ,* "to sacrifice"; and *šḥṭ,* "to slaughter") are found only in the references of the latter prophets and writings, which Weinfeld terms "moralizing" and "tendentious." Although many scholars are sympathetic with

Weinfeld's qualms about the historical value of the prophetic and hagiographic references, most concur that he has overstated his case regarding the legal material, especially. The verbs *ntn* and *hʿbyr* may or may not of themselves entail sacrifice, but Num 31:23 suggests that *hʿbyr bʾš* (the phrase used of the cult in Deut 18:10 and elsewhere) does indeed entail burning in the fire.

B. Philological Evidence

The adjudication of the issue of the meaning of "Molech" is partially dependent on how one understands the word philologically. Scholars since A. Geiger (1857) have proposed that the form represents a "dysphemism," or tendentious distortion, of the Heb *melek* (king) by substitution of the vowels of *bōšet* (shame); this was apparently done on occasion with *baʿal* (e.g., Ishbosheth). Thus, the term might have referred originally to a "king" god (or even Yhwh himself under that title). If this hypothesis is correct, the Punic cognate proposed by Eissfeldt would be lost and some understanding as a divine name or title necessitated. However, Eissfeldt and his defenders have raised cogent objections to the dysphemism theory, particularly as they have inquired why the simple substitution of the vowels *ō-e* should have suggested *bāšet* to the ancient reader, rather than any other word with the same vowels. For their part, they prefer to see in Molek an o/u-class "segolate" noun, cognate with the Punic *molk.* On the other hand, it is equally possible to see in "Molek" a form of the Qal active participle of *mlk,* meaning "ruler" (as would be suggested by the LXX's translation *archōn,* in the Leviticus passages), or a derivative from an a-class segolate noun, like the Akk *malku/maliku* ("king"), so that the traditional explanation of Molek also remains viable.

C. Biblical Evidence

Inevitably, then, one must attempt a close reading of the biblical texts containing Molech and other related texts to attempt to settle the matter. Within the legal texts, Lev 18:21 and 20:2–5 are crucial because they contain five of the eight attestations of Molech in the MT. On the one hand, Eissfeldt and his supporters have shown that the MT vocalization of *lmlk* as *lammōlek* in 18:21 and 20:2–4 is quite likely in error: the LXX translates without the article, so that the original probably read ***lĕmōlek,*** permitting comparison with sacrificial terms such as *lĕʿōlâ* ("as a burnt offering") in Gen 22:2, so as to yield the rendering, "as a *molk*-sacrifice." On the other hand, the removal of the article does not eliminate the traditional interpretation, and the juxtaposition of 20:5b ("I shall cut off him and all who whore after him, to whore after [the] Molech") with v 6, which condemns "anyone who turns to the ghosts and the 'knowers' to whore after them," is congruent with the portrait of the chthonic deity and denizens connected with the cult of the dead ancestors, as was seen above in the comparative literary evidence. Further support for the latter perspective appears in Deut 18:10, where "one who causes his son or his daughter to pass over by the fire" is condemned at the head of a roster of diviners and mediums.

The historical material compels us to ask after the provenance, duration and status of the cult of Molech in Israel (in addition to our questions about the meaning of the term). Of the two occurrences of "Molech" in the historical books, one (1 Kgs 11:7) is generally eliminated as a confusion of Molech with Milcom, god of the Ammonites (cf. 1 Kgs 11:5, 33). (It may be noted, for example, that the two deities have separate cult places defiled by Josiah in 2 Kgs 23:10, 13.) Otherwise, the cult is repeatedly attributed to the Canaanites as source (indeed, as the very archetype of their depravity [Deut 12:31; cf. passages cited below]), but it is not specifically mentioned in Israel until the reigns of Ahaz (2 Kgs 16:3) and Manasseh (2 Kgs 21:6), the villains of the Deuteronomic History. (Because of Ahaz's religious impressionability on his trip to Damascus [2 Kgs 16:10–16], some scholars have argued for a Syrian or Assyrian source for the cult.) Outside of a general accusation against the N kingdom (2 Kgs 17:17) and a specific indictment of the Sepharvites exiled by the Assyrians to the province of Samaria for "burn[ing] their children in the fire to Adrammelech and Anammelech" (2 Kgs 17:31;), see SEPHARVAIM the cult is attested solely in the "tophet" of Jerusalem's Valley of the Son of Hinnom, which Josiah then defiled as part of his elimination of Canaanite influences on Judah's worship (2 Kgs 23:10). Whether the cult was later revived is disputed: it is not again mentioned in the history, but Jeremiah (7:31–32; 19:5–6, 11; 32:35; and probably 2:23 and 3:24) and Ezekiel (16:20–21; 20:25–26, 30–31; 23:36–39) or the practice, while Isa 57:5,9 may indicate some survival of the cult after the exile (particularly if *melek* in v 9 is to be read as *mōlek;* cf. *RSV*).

Thus, given the relative paucity of clear references to the cult of Molech, it is decidedly difficult to reconstruct its history with confidence; it is equally difficult to comment with authority on its legal or social status during that history. Eissfeldt contended that the sacrifices had been directed to Yhwh as part of the licit, state religion of Judah until Josiah's reform, after which they faded from memory until the original significance of "Molech" was forgotten and the deity born of desperation to interpret the OT references. In fact, the licit status of the cult may be proposed, even if one holds for the traditional understanding of the term, and particularly on the basis of Isa 30:33, in which the prophet, presumably during Hezekiah's reign, depicts the Tophet as prepared to receive the Assyrian king in sacrifice (on this reading the Canaanite cult of Molech would have been subordinated at Jerusalem to that of Yhwh). As for the sociological nature of the cult, many scholars (including Eissfeldt) have argued that the practitioners were parents offering their firstborn sons in (mis-)obedience of the "Law of the Firstborn" in Exod 13:2,11–15; 22:28b–29—Eng 29b–30; and 34:19–20 (cf. Ezek 20:26). However, this seems unlikely, given the references to sons and daughters as victims (2 Kgs 23:10 and elsewhere) and perhaps even to multiple victims within a family (2 Chr 28:3; 33:6).

It is not surprising, given the aforementioned shortage of evidence, that scholars have struggled to find additional references to the cult of Molech. Often the search entails revocalizing MT *melek* in a provocative context. It might be noted that in this activity such scholars are but following the lead of the LXX, which reads *Moloch* in Amos 5:26 (followed by the NT in Acts 7:43) and Zeph 1:5 (but *archōn* in Lev 18:21; 20:2–5 and *basileus* in 3 Kgs 11:5 [MT 1 Kgs 11:7]!). Other verses commonly included in the discussion by this means include 2 Sam 12:30 (=1 Chr 20:2); Isa 30:33; 57:9; Jer 49:1,3 and the Milcom references in Kings, listed above. Since *melek* is an extremely common noun (with over 2,500 occurrences), there is much fodder for speculation, but, with few exceptions, such proposals have commanded little assent.

Other attempts to expand our understanding of the cult have involved appeals to passages concerning child sacrifice or, more broadly, human sacrifice. In addition to the "Law of the Firstborn," discussed above, special stress has been placed on the "Akedah" account (Genesis 22), the vow of Jepthah (Judges 11), King Meša's sacrifice of his son (2 Kgs 3:27) and such prophetic allusions as Hos 13:2; Mic 6:7; and Isa 66:3. While none of these clearly has to do with the cult of Molech (particularly if one concedes that the cult was not necessarily of the firstborn son), they can, to a greater or lesser degree, all assist in illuminating the worldview of those who engaged in the sacrifice of their children.

D. Summary

The "Molech question" remains a good candidate for what Adolf von Harnack once called it: "the greatest question, without a doubt, of the comparative history of religion." We can say what it was apparently not: neither a regular cult (such as one of firstborn sons) nor an occasional one based on military emergency (such as is exampled in 2 Kgs 3:27) seems congruent with the clear biblical references. The repeated occurrence of references to the Molech cult in contexts suggesting divination, along with the chthonic connections of the god Malik (Milku/i) in the comparative literary material, suggest that the sacrifices played a role in the cult of the dead ancestors (so explicitly in Ps 106:37–38), while the OT historical references suggest that the cult was adopted from the Canaanites and practiced mostly (if not exclusively) by the residents of Judah (especially the kings) in the Valley of the Son of Hinnom. See DEAD, CULT OF THE.

As for the meaning of "Molech," the Punic inscriptional and archaeological evidence adduced by Eissfeldt and his supporters presents a strong case for their contention that a cult similar in many respects to that found in Israel was practiced in the Punic colonies. However, the connection of the biblical cult with the Punic practice and the term used to describe it remains loose: no secure archaeological or inscriptional evidence for the presumed Punic/Israelite "missing link" in Phoenicia has been unearthed to date. Indeed, the use of non-inscribed stelae in the earliest layers of the Punic "tophets" leaves open the possibility that the Punic usage of *molk* was an intra Punic development, rather than a feature common to Israel, Phoenicia, and the Punic colonies. On the other hand, those favoring the traditional interpretation

must concede that the portrait of a god Molek remains frustratingly difficult to draw with precision, and that the ultimate "why" of the cult occasions much speculation, but little certainty.

GEORGE C. HEIDER

MOLID (PERSON) [Heb *môlîd* (מוֹלִיד)]. Son of Abishur and Abihail (1 Chr 2:29) and a descendant of the important line of Jerahmeel (by his wife Atarah) of the tribe of Judah. Molid and his brother Ahban conclude this brief genealogical record. Variant spellings are found in the LXX (Vaticanus and Alexandrinus) and many scholars consider those genealogies corrupt suggesting the nature of apparent scribal errors. The genealogies of Jerahmeel in the MT are viewed by most contemporary scholars as being in good order. For further discussion of the provenance and authenticity of the genealogies in 1 Chronicles 2, see MAAZ.

Locating Molid in time is difficult. Some commentators view these genealogical records as complete and place Molid in the latter years of the Egyptian sojourn; others, however, consider such names as reflecting a concern closer to the date of the authorship of the book. Molid is probably derived from the verb *yld* meaning "to bear," "bring forth," or "beget" and is often rendered "begetter."

_____

A. Origin of Montanism

Montanus, a Phrygian Christian, began to prophesy in the small village of Ardabav in Phrgyian Mysia about A.D. 172. Two women, Priscilla and Maximilla, who also prophesied, became his devoted followers and were influential in the dissemination of his teachings.

1. Titles Given the Movement. The followers of Montanus and the prophetesses were usually referred to as Cataphrygians by the Fathers, the title indicating the Phrygian provenance of the movement. They seem to have used the title "the New Prophecy" of themselves. They were later called Montanists after the name of their founder.

2. Sources of Information. The Fathers indicate that the Montanists produced numerous treatises. These have all perished, however, except the treatises written by Tertullian (A.D. 155–220) after he had adopted Montanism. Our knowledge of Montanism depends, therefore, on those few Montanist fragments preserved in the Fathers, on the descriptions of Montanist beliefs and practices the Fathers give in their attempts to refute them, and on certain treatises of Tertullian.

The writings of Eusebius (A.D. 263–340) and Epiphanius (A.D. 315–403) are most important for our knowledge of the earliest period of Montanism in Phrygia because of earlier sources they have preserved. Eusebius preserves quotations from two sources concerning Montanism in Phrygia. The first, and most extensive, is from an unnamed author who claims to have participated in oral debate with Montanists in Galatia and to have written his account of them thirteen years after Maximilla died (*Hist. Eccl.* 5.16–17). Apollonius, the author of Eusebius' second source, claims to have written his treatise against Montanism forty years after Montanus began prophesying (*Hist. Eccl.* 5.18).

Epiphanius claims to have used both oral and written sources in his section on the Montanists, but he does not identify his sources (*Haer.* 48.15). It has been established that he used a source dating from the late 2d or early 3d century as the basis for his account in *Haer.* 48.1.4–13.8. The debate that he describes in this section has the same general contours as that described in Eusebius' sources, which suggests a Phrygian provenance.

Tertullian's writings from his Montanist period (A.D. 207–20) are also important. There is a general consensus today, however, that they should not be used to reconstruct earlier Phrygian Montanism. He appears to have introduced his own modifications to their teachings. His statements, therefore, can only be used with confidence in reference to earlier Phrygian Montanism when they find confirmation in the material in the sources preserved by Eusebius and Epiphanius.

3. Locations of the Early Montanists. Early Montanism was centered in three major geographical areas. Phrygia, where it arose, continued to be the most prominent. Sozomen said in the mid-5th century that there were still multitudes of Montanists in Phrygia (*Hist. Eccl.* 2.32.6). Montanism also appeared quite early in Rome. The third area was N Africa, where Tertullian became its most prominent spokesman. Because the sources related to each region show differences in the Montanist teachings, we must focus on Montanism in each area in order to see what was peculiar to the debate in each place, as well as what belonged to the movement in general.

B. Montanism in Phrygia

We begin with Montanism as it appeared among its founders in Phrygia. All that can be learned about Montanist teachings from the few words preserved from Montanus himself is that he claimed to be the mouthpiece of God (Epiph. *Haer.* 48.4, 10, 11). While this claim was attacked and defended in different ways in the different locales, it nevertheless formed the center of the controversy between the Montanists and the Church. Epiphanius asserts that the Montanists held the same view of the Father, Son, and Holy Spirit as the Church, but erred in the matter of spiritual gifts (*Haer.* 48.1.4). The anonymous source of Eusebius concurs that the point of contention was the prophetic activity (*Hist. Eccl.* 5.16.6–10; 17.4).

1. The Question of Ecstasy. The debate about the Montanist prophecy in Phrygia centered on the manner in which it was done. The possibility of prophecy did not enter the debate. Eusebius asserts that the many divine charisma still in existence throughout the Churches then caused many to accept the Montanist prophets (*Hist. Eccl.* 5.3.4). The opponents in Phrygia attempted to prove that Montanus was a false prophet because he prophesied in a state of ecstasy. Epiphanius sets this as the major topic. "Let us examine," he says, "what constitutes prophecy and what constitutes false prophecy" (*Haer.* 48.3.3). He argues that true prophets in both the OT and NT were always in possession of their understanding when they uttered their prophecies. The Montanists had appealed to Gen 2:21 which, in the Septuagint, reads: "And God cast a state of ecstasy on Adam, and he slept." They juxtaposed Eph 5:31–32 to prove that Adam prophesied on this occasion (Epiph. *Haer.* 48.6; Tert. *An* 11.4), and consequently, that he prophesied in ecstasy. Epiphanius' source can answer this argument only by arguing that ecstasy has many meanings in the Scriptures, and that in Gen 2:21 it refers to sleep. The Montanists had appealed also to Psalm 115:2 and Acts 10:10–14 to support ecstatic prophecy and had cited Abraham, Moses, Agabus, Judas, Silas, the daughters of Philip, Ammia, and Quadratus as prophets of whom they were the successors (Epiph. *Haer.* 48.7ff.; Eus. *Hist. Eccl.* 5.17.2–4). It is noteworthy that none of the earliest sources describing the debate with Montanism in Phrygia indicate that either Montanus or the two prophetesses ever appealed to the Paraclete passages in John 14–16 in support of their prophecy.

2. Montanist Doctrines. Other points of Montanist doctrine also appear in subordinate roles in the sources descriptive of the debate in Phrygia. They did not permit a second marriage after the death of a spouse (Epiph. *Haer.* 48.9). This, along with most of the points which follow, appears to have belonged to the movement universal, for it is also attested in Tertullian (*Marc.* 1.29; *Monog.* 1.1–6; 14.3–5). They also instituted new and more frequent fasts (Eus. *Hist. Eccl.* 5.18.2; cf. Epiph. *Haer.* 48.8.7–8; Tert. *Ieiun.*1; Hippol. *Haer.* 8.19; 10.25).

It is also obvious that all Montanists held martyrdom in high esteem. They appealed to the large number of their martyrs as proof of the power of the Spirit in their midst (Eus. *Hist. Eccl.* 5.16.20; cf. 5.18.5–6). It is apparently in opposition to some boast about martyrs that Gaius asserts in his debate with Proclus that he can point out "the trophies of the apostles" (Eus. *Hist. Eccl.* 2.25.5–7). It was his way, perhaps, of trumping the Montanist claim to have a superior number of martyrs. Tertullian asserts that the Spirit exhorts to martyrdom, never to flight or bribery to avoid it (*Fuga* 9.4; 11.3; 14.3). This esteem has caused some to argue that the Montanists advocated voluntary martyrdom. There are some funerary inscriptions in Phrygia dated from A.D. 248 which contain the enigmatic phrase: "Christians for Christians." This epitaph has been used to argue that the Montanists flaunted their faith. Most references to Christianity on tombs from this period of escalated persecution are in cryptic language. It has been argued that these inscriptions from Phrygia which make open reference to Christian faith must come from Montanists. E. Gibson, however, who has most recently examined these inscriptions concludes that there is no necessary connection between them and Montanism. W. Tabbernee has argued convincingly from the literary sources that, apart from Tertullian, the early Montanists' attitude to martyrdom was not substantially different from that of the Catholics.

The Montanists were also noted for their eschatological views. They anticipated an imminent end to the present order. Maximilla declared: "After me there will no longer be a prophet, but the end" (Epiph. *Haer.* 48.2.4). The assertion that Maximilla predicted wars and anarchy (Eus. *Hist. Eccl.* 5.16.8) should be connected with this oracle, for such were viewed as precursors of the end in the primitive Christian eschatology (Matt 24:6–8). The assertion by Apollonius (ca. A.D. 212) that Montanus renamed Pepuza and Tymion, small villages in Phrygia, "Jerusalem," and "wanted people to gather there from everywhere" is also an allusion to their view that the end was imminent (Eus. *Hist. Eccl.* 5.18.2), for Epiphanius quotes an oracle, outside his early source, which he attributes to either Quintilla or Priscilla in which the prophetess asserts that Christ revealed to her that Jerusalem would descend from heaven at Pepuza (*Haer.* 49.1). Tertullian, however, whose chiliast eschatology did not change much from his Catholic to his Montanist period, speaks only of Jerusalem being brought down from heaven for a thousand years (*Marc.* 3.24), and never mentions Pepuza. Apart from locating the new Jerusalem at

Pepuza and connecting the date of the end with Maximilla's death, the Montanists' eschatology did not differ in any considerable way from that of the earliest Christians (Matt 24:34, 42–44; 1 Cor 7:29; 1 Thess 5:2–3; Rev 21:2).

This brief survey of Montanist doctrine confirms that prophecy was the primary point of contention between the Montanists and the Catholics. The other doctrines represent only minor differences from Catholic belief and practice, differences that would have been irritating, but hardly heretical. The Churches of Asia appear even to have been willing to acknowledging prophecy, providing it was not accompanied by ecstasy.

C. Montanism in Rome

The focal point of the debate shifts when we move from Phrgyia to Rome. The issue no longer is ecstasy but new revelation.

1. Sources. The sources for our knowledge of Montanism in Rome are minimal and difficult to interpret. They consist of a section of Tertullian's *Against Praxeas;* a paragraph in Irenaeus' *Against Heresies*; some fragments preserved by Eusebius of a dialogue between Gaius, a Roman presbyter, and Proclus, a Montanist; some statements in Hippolytus' *Refutation of All Heresies* and in his *Commentary on Daniel*; Pseudo-Tertullian's *Against All Heresies,* in that it appears to be an epitome of Hippolytus' lost *Syntagma*; and the Muratorian Canon.

We shall begin with the later material in Tertullian and Hippolytus and work backwards to the earlier, more fragmentary material so that we have a tentative framework for the earlier pieces of the puzzle.

2. Tertullian's Account of Praxeas. Tertullian provides one of our clearest statements about Montanism in Rome, yet even it has major ambiguities. He says that when Praxeas visited Rome the bishop of Rome at that time "had already acknowledged the prophecies of Montanus, Prisca, and Maximilla" and, consequently, "had brought peace to the churches of Asia and Phrygia." Praxeas, who had come to Rome from Asia, by denigrating the Montanist prophets and their churches, and by citing the negative views of earlier bishops of Rome, forced him to "recall the letter of peace he had already sent and to desist from his intention of admitting the gifts" (*Prax.* 1). This openness to the Montanist prophecy by a bishop at Rome is contrary to all other evidence. Unfortunately, we can only speculate about the bishop's identity. The most widely accepted conjecture is that it was Zephyrinus, bishop from 198–217. This conjecture best fits both the statement that earlier bishops of Rome had viewed Montanism negatively, and the assumed time of Praxeas' activities in the city.

3. Hippolytus and the Question of New Revelation. Hippolytus, (ca. A.D. 170–236) a presbyter at Rome during the episcopacy of Zephyrinus and later, took a radically different view of the Montanist prophecy. While he does not mention the Montanists in his *Commentary on Daniel*, many of his statements appear to have them in view (Klawiter 1975). He relates, for example, the story of a leader of a church in Pontus who, instead of paying careful attention to the Scriptures, began to believe in visions which he himself had seen. His congregation was decimated because he prophesied that the judgment would occur in a year. Many neglected their fields and sold their possessions and, when the end did not occur, were reduced to begging (*Dan.* 4.19). Hippolytus comments: "These things happen to uneducated and simple people who do not give careful attention to the Scriptures" (*Dan.* 4.20). That he had the Montanists in view is further suggested when he adds that some were even then experiencing the same things by paying attention to visions and by appointing additional fasts (*Dan.* 4.20). These were charges commonly leveled at the Montanists, some repeated by Hippolytus himself when he attacked them in his *Refutation of All Heresies* (8.19).

This story provides a clue to Hippolytus' approach to the question of Montanist prophecy. He stressed the importance of basing everything on the authority of Scripture in opposition to believing in visions and dreams. He considered prophecy to have ended. The words of the prophets and apostles contained in the Scriptures should guide the Church. He asserted that the Montanists, however, claimed to have learned more through their prophets "than from the law, the prophets, and the Gospels" (*Haer.* 8.19; 10.25). The crux of the question for Hippolytus was the issue of additional revelation.

4. The Muratorian Canon. The Muratorian Canon, which is usually dated at approximately this same time (ca. A.D. 200) and located at Rome, rejected the *Shepherd of Hermas* for what appears to have been the same reason. It had only recently been written, and could be published "neither among the Prophets, whose number was complete, nor among the apostles." This appears to be a statement about the completion of revelation. Joined with Hippolytus' views, it suggests that there was little sympathy for contemporary prophecy at Rome in the late 2d and early 3d centuries.

5. Pseudo-Tertullian and the Paraclete. Hippolytus also indicates that the Montanists differentiated the Holy Spirit as he appeared in the apostles and as he appeared in the Montanist prophets, and that they considered the latter to have had the greater gift (*Haer.* 8.19). Pseudo-Tertullian offers a clearer statement. He notes that there were two groups of Montanists, the followers of Proclus and the followers of Aeschinus. We know Proclus was in Rome (Eus. *Hist. Eccl.* 6.20.3). Both groups said that the apostles had the Holy Spirit but the Montanist prophets had the Paraclete. They also agreed that the Paraclete revealed more in Montanus than Christ revealed in the gospel, a claim for additional revelation, and that the things revealed in Montanus by the Paraclete were also better and greater, a claim that the new revelation superceded the old (*Haer.* 7). It should also be noted that here and in Hippolytus' *Refutation of All Heresies* we have the first explicit statements that the Montanists used the term "Paraclete" to describe the source of their prophecies. The Montanists at Rome had begun to interpret the experience of their prophets in light of the Paraclete passages in John 14–16. The debate between Gaius and Proclus takes us deeper into this aspect of their teachings.

6. The Debate Between Gaius and Proclus. Eusebius locates the debate between Gaius and Proclus at Rome in the time of Zephyrinus (*Hist. Eccl.* 6.20.3). He tells us only that Gaius asserted that he could point to the trophies of the apostles (*Hist. Eccl.* 2.25.7) which, as we noted previously, probably countered the Montanists' boast about their martyrs, and that he curbed their rashness "in composing new scriptures" (*Hist. Eccl.* 6.20.3). The latter suggests that Gaius had the same attitude toward new revelation that we have seen in Hippolytus and the Muratorian Canon. Bar Salibi, a 12th-century Syrian exegete, says that Hippolytus defended the Johannine authorship of the gospel against Gaius, who credited both the gospel of John and the Apocalypse to the heretic Cerenthus. Eusebius also notes that Gaius attributed the Apocalypse to Cerenthus (*Hist. Eccl.* 3.28.1–2). Gaius' rejection of the gospel of John may have been prompted partially by the Montanists' use of it at Rome to validate new and superior revelation through the Paraclete (John 16:7, 12–13).

7. Irenaeus and Those Who Rejected the Gospel of John. Irenaeus refers to some who reject both the gospel of John and the prophetic Spirit (*Haer.* 3.11.12; *Dem.* 99). The people referred to appear to have been anti-Montanists, but Irenaeus gives no indication of their location. We have already seen that the latter view was present in Rome around the end of the 2d century in Hippolytus, the Muratorian Canon, and Gaius, and that Gaius also rejected the gospel of John. Irenaeus had visited Rome in 177 during the episcopacy of Eleutherus (174–89) to deliver a letter concerning Montanism in Asia and Phrygia. Praedestinatus' statement that Soter, Eleutherus' predecessor at Rome (166–74), wrote a treatise against the Montanists, indicates that Rome was wrestling with the Montanist question prior to Irenaeus' visit (1.26). It is quite possible that the views held by Hippolytus and Gaius were already present at Rome when Irenaeus visited Eleutherus and that he became aware of these views there. It is sometimes argued that the views Irenaeus refers to were those of the *Alogoi*, discussed by Epiphanius (*Haer.* 51), who rejected the gospel of John and the Apocalypse, and that their provenance was Asia. There is no evidence, however, for locating the *Alogoi* in Asia. Epiphanius gives no indication of their location. Labriolle (1913) argued that Epiphanius' discussion of the *Alogoi* was dependent on Hippolytus' attack on Gaius' rejection of John. If this is true, the *Alogoi* were most likely a Roman group. Rome is, in fact, the only place where views similar to those Epiphanius attributes to them are attested in the early Church.

8. Summary of the Debate at Rome. If this reconstruction is correct, we may sum up the Montanist debate at Rome as follows. There was, in general, an attitude at Rome at the end of the 2d century which was hostile to new revelation. To gain a hearing in this environment the Montanists had to justify the validity of post-apostolic prophecy. To do this they appealed to the Paraclete passages in the gospel of

John. On the basis of these same passages, primarily John 16:12–13, they could also, as Pseudo-Tertullian points out, claim that what was revealed by the Paraclete through their prophets superceded what Christ had revealed in the gospel. To refute these claims some of their opponents, including the presbyter Gaius, rejected the authority of the gospel of John.

If the bishop of Rome to whom Tertullian refers in *Against Praxeas* was indeed Zephyrinus, and if Tertullian has not exaggerated the extent of his openness to acknowledge the Phrygian prophets, then his brief recognition of the new prophecy before yielding to Praxeas' pressure was an anomaly in the Roman attitude toward prophecy at the end of the 2d century.

D. Montanism in North Africa

Our earliest sources for Montanism in N Africa are *The Passion of Perpetua and Felicitas,* which some attribute to Tertullian, and the treatises of Tertullian composed after he became a Montanist.

1. Relation to Montanism in Rome. Montanism in N Africa shows the influence of the innovations introduced at Rome. Tertullian knows the distinction between the activity of the Holy Spirit in the apostolic age and in the age of the new prophecy, although he does not accept the view that the Montanists had a fuller participation in the Holy Spirit than did the apostles. He argues that the Paraclete reveals the fuller intention of the apostles (*Monog.* 3). He also interprets the new prophecy in terms of the Paraclete passages in John (*Virg.* 1; *Monog.* 1.1–6; 2.1–4).

2. Differences between Tertullian and Earlier Montanists. We have already noted where Tertullian either agreed with or differed from the Phrygians in their views on marriage, fasting, martyrdom, and eschatology. Two other points of difference need to be noted. The Phrygians, with their two famous prophetesses, allowed women great freedom for ministry in the Church. Origen asserted that the disciples of Priscilla and Maximilla were not obedient to the biblical command to let the women be silent in the churches (*Cat. ad Cor* 14.36). Tertullian, however, would not permit a woman "to speak in the church," or to perform any other function which belonged to a man (*Virg.* 9; *An.* 9.4). Tertullian also argued that the power to forgive sins belonged to the spiritual man, not to the bishop. The position of the earliest Phrygian Montanists on this issue is not clear. Tertullian quotes an oracle in his argument, but ascribes it only to the Paraclete, without identifying the human agent (*Pud.* 21).

3. The Question of New Revelation. The center of the debate in N Africa, as in Rome, was about the possibility of new revelation. The author of *The Passion of Perpetua and Felicitas* asserts that they recognize both new prophecies and new visions. The view of the Catholics comes out obliquely in the exhortation not to think "that the divine grace dwelt only with the ancients, whether in the grandeur of martyrdoms or of revelations" (1.4). Tertullian advances a similar argument about the continuation of the operation of divine grace in the Church, and accuses the Catholics of fixing "boundaries for God" (*Ieiun.* 11; cf. *Virg.* 1.5).

The new revelations which have come through the Montanist prophecies do not, Tertullian argues, relate to the rule of faith. This continues one, unalterable, and incapable of reformation. The prophecies concern discipline. The Paraclete was sent, he argues, because the mediocrity of man could not grasp everything at once. Christian discipline, therefore, is being brought to perfection gradually through the continued activity of the Paraclete. He defines the Paraclete's task as follows: "To direct discipline, to reveal the Scriptures, to reform the understanding, to advance the understanding to better things" (*Virg.* 1.6–8).

4. The Point of Contention between the Montanists and the Orthodox. This passage brings us to the heart of the Montanist issue. The new prophecies do not appear to have involved any basic doctrines of the Church. Epiphanius agrees with Tertullian when he asserts that the Montanists held the same view of the Father, Son, and Holy Spirit as the Catholics. He adds that they accepted the OT and NT, and believed in the resurrection of the dead (*Haer.* 48.1.3–4). Hippolytus does note that some Montanists held a modalist view of God (*Haer.* 8.19), and Pseudo-Tertullian ascribes this view to the Montanists who followed Aeschinus (*Haer.* 7). After the Trinitarian and Christological controversies this charge is brought indiscriminately against all Montanists. Didymus of Alexandria, for example, repeatedly accuses them of believing "the same one is Father, Son, and Holy Spirit (*Trin.* 2.15; 3.18; 3.23; Jerome, 41.3),

even attributing this view to Montanus himself (*Trin.* 3.38; 3.41), something for which there is no evidence in the early sources.

The teachings of the new prophets concerned such things as how many times one might marry, when and how long one should fast, and how one should behave when threatened with martyrdom. These were not inconsequential questions, but they all lay outside matters of the creed. They were issues for which one might have expected to be disciplined, but not pronounced heretical. The issue, of course, concerned these matters only indirectly. The battle raged around the right of the Montanists to propagate their teachings by appealing to the authority of the Spirit. Tertullian brings this out clearly in the following passage: "Let consideration of the Paraclete as some authority belonging to us pass into the background for the present. Let us unroll and read the instruments of the ancient Scriptures which we have in common" (*Monog.* 4.1).

Montanism arose when the Church was consolidating its authority in its bishops, creed, and canon. Whether it arose because of this trend and was an effort to revive a more primitive form of the Church, or whether its appearance was simply coincidental to this trend cannot be determined conclusively. It was, nevertheless, the issue of authority which made Montanism a heresy.

MORDECAI (PERSON) [Heb *mōrděkay* (מׇרְדְּכַי)*; mōrdŏkay* (מׇרְדֳּכַי)]. **1.** A character in the book of Esther.

a. Mordecai in the Hebrew Book of Esther. Mordecai is a central character of the book of Esther, second in importance only to Esther herself. While the credit for effecting the deliverance of the Jewish people from the massacre designed by their enemy Haman and authorized by the Persian king Ahasuerus belongs largely to her, Mordecai also has a significant part to play in the development of the plot.

He is first introduced into the narrative as a Jew living in the acropolis of Susa, the Persian capital (Esth 2:5). He is said to belong to a Benjaminite family which had been exiled from Judea along with the king Jehoiachin in 597 B.C.E. The wording of 2:5–6 may suggest that Mordecai himself had been deported from Jerusalem at that time, though that would make him at least 115 years old in the third year of Ahasuerus (Xerxes), which is when the story of Esther is set (483 B.C.E.). The storyteller may of course be suffering from some chronological confusion, but it is more likely that it is Mordecai's grandfather Kish that is said to have been exiled then.

The name Mordecai is almost certainly derived from Marduk, the name of the chief god of Babylon (though R. Lemosín has recently suggested it was Hurrian or Elamite, meaning "the man *par excellence*" [1983: 209–13]). It was evidently an acceptable Jewish name (cf. the Mordecai 2 mentioned in Ezra 2:2);

it is perhaps a "gentile" name roughly equivalent to some Jewish name (Esther herself has both a Jewish name, Hadassah, and a "gentile" one, Esther).

When we first hear of Mordecai, he is Esther's guardian and adoptive father following her parents' death; he is her cousin and she is the daughter of his uncle Abihail (2:7, 15). Adoption is not a practice known to Hebrew law, though it is well attested in Babylonian legal documents; this reference is perhaps a hint of how well integrated Mordecai is into non-Jewish society.

It has often been thought that Mordecai is presented as some kind of Persian official. He lives in "the acropolis of Susa" (1:1), rather than simply in the city of Susa, and he is several times depicted as sitting "at the king's gate" (2:19, 21; 3:2; 5:9; 6:10, 12; cf. 2:11)—which sounds like technical terminology for the administrative headquarters of the Persian court (so Wehr 1964: 247–60; Loretz 1967: 104–8; Gordis 1981: 384). Perhaps some official position in the palace also explains best how Mordecai comes to gain news of a plot to assassinate the king. Nevertheless, the story makes excellent sense if Mordecai has no status at the court and is no more than one of the countless loungers about the palace gates.

After Esther has been taken into the harem, Mordecai passes on to her his knowledge of the plot against the king's life which he has discovered (2:22). In chap. 3 Mordecai makes his most important contribution to the progress of the story when he jeopardizes the security of the Jewish people by refusing to do obeisance to the newly elevated Haman; it is this inadequately justified stubbornness that proves the root cause of Haman's plot to destroy all the Jews of the Persian Empire. In chap. 4 Mordecai redeems himself somewhat by making a positive intervention on behalf of the Jews and insisting that Esther enter the king's presence uninvited and beg for the life of her people.

His further appearances in the narrative cast him in a rather passive role. Quite by chance he next comes to the king's attention when his loyalty is remembered and rewarded (6:1–11). Thereafter, once Esther has successfully unmasked Haman, Mordecai is promoted to his place as vizier (8:1–2), but simply because of his relation to Esther. His final act is to record the events in which he participated and to add his imprimatur to the observances of Purim, which the Jews had already instituted (9:20–22, 31). Nothing but generalities are reported of his achievements in the Persian government (10:3).

b. Mordecai in the Greek Book of Esther. Mordecai takes on greater importance in the longer and later Greek version of the book of Esther (Clines, *HBC*, 815–19). Here narratives of a dream of Mordecai and its interpretation have been added to form the framework of the entire book (Addition A 1–11 = 11:2–12; F1–10=10:4–11:1); in the dream Mordecai and Haman are portrayed as two dragons locked in cosmic and apocalyptic conflict over the fate of the Jewish people. The effect of the insertion of the dream, as a divine revelation of what is foreordained, is to establish Mordecai rather than Esther as the primary hero of the story.

A secondary element in Addition A is an elaboration of the narrative of Mordecai's discovery of the plot against the king's life (A12–17=12:1–6), foregrounding even more the significance of Mordecai's courage. In Addition C the inclusion of the Prayer of Mordecai (C1–10=13:8–17) serves from a narrative point of view to explain Mordecai's reckless and largely unmotivated refusal to do obeisance to Haman: it was solely to avoid "setting the glory of a human above the glory of God" (C7=13:14). At the same time the addition conforms the character of Mordecai more closely to the ideal of the pious Jew.

In line with the increased prominence given to Mordecai in the Greek book is the assurance in its opening sentences that, even before his elevation to the viziership, Mordecai is "a great man, serving in the court of the king" (A2=11:3); in the Hebrew story, as we have noted, it is far from certain that Mordecai holds any office in the Persian bureaucracy when the story opens. A final stage in the development of the tradition about Mordecai has come about by the time of 2 Maccabees, when the day of festival (Purim) in commemoration of the victory of the Jews over their enemies has become known as "Mordecai's Day" (2 Macc 15:36). Mordecai's usurpation of Esther's role is almost complete.

c. Mordecai in History. The question of whether or not there was a historical Mordecai depends entirely upon a judgment on the historicity of the book of Esther in general. While there is perhaps no element in the narrative that is plainly impossible historically, most scholars find in the accumulation of narrative coincidences a sign that the story is essentially fictional.

Some have indeed believed that Mordecai is identical with the official Marduka known from a Babylonian tablet discovered probably at Borsippa near Babylon and deriving in all likelihood from the earliest years of Xerxes. The Assyriologist A. Ungnad, who published the tablet, believed that the official in question was in Borsippa on a mission from Susa, and that it is unlikely that there should have been two high-ranking Persian officials in Susa with the same name; consequently he claimed that this text thus provides the sole extrabiblical attestation of Mordecai (1940–41: 244). Others argue that the existence of this Marduka at least prevents us from regarding the biblical Mordecai as a purely fictional character (Moore 1975: 74). But there is nothing in the cuneiform document to show that the persons mentioned came from Susa, and since Marduka in fact is called the "scribe" (or possibly "accountant") of Ushtannu, who is known to be the satrap of the province of Babylon and Beyond the River, Marduka was in all probability resident in Babylon or its region, not in Susa.

Since Ungnad's discovery, the name Mordecai has also been found in Aramaic papyri of the 5th century B.C.E., in the form *mrdk,* as the name of an official probably located in N Mesopotamia (Driver 1957: 27–28). Other attestations of names compounded with Marduk also exist (Driver 1957: 56). The evidence, it should be noted, shows only that the name was borne by officials (whether they were Jewish or not) in the Persian Empire (see further, Clines fc.).

No credence is now given to the older theories that the names Mordecai and Esther are rare forms of the names of the Babylonian deities Marduk and Ishtar and so reflect some myth about them (Jensen 1892: 47–70, 209–26; cf. also Zimmern 1903: 514–20). It is equally improbable that Mordecai signifies "worshiper(s) of Marduk" and that the book of Esther represents a conflict between the devotees of Marduk and Ishtar and those of Anahita and Mithra (Lewy 1939: 127–51).

2. A family head who returned to the land with Zerubbabel and is listed as settled in the province of Judah (Ezra 2:2; Neh 7:7).

MOREH (PLACE) [Heb *môreh* (מוֹרֶה)]. The word Moreh has a range of meanings including teacher, diviner, and archer.

A. Oak of Moreh [Heb *ʾēlôn môreh*]

The word *ʾēlôn* is traditionally translated as oak, although it may refer to the terebinth tree. The KJV translation of "Plain of Moreh" is incorrect. The reference to *ʾēlôn môreh* occurs twice in the OT. When Abraham enters Canaan (Gen 12:6), he sets up an altar to the Lord before a tree near Shechem (M.R. 176179). There the Lord promises Abraham that the land will be given to his descendants. An Oak of Moreh is also mentioned in Deut 11:30 as part of a description of the location of Mt. Ebal (M.R. 176182) and Mt. Gerizim (M.R. 176178), mountains which overlook Shechem.

In several other instances, the OT text refers to trees in the Shechem area. In Gen 35:4, Jacob buries idols and jewelry under a tree at Shechem. In a later episode, Joshua sets up a stone under a tree at Shechem as a witness to the pact between the Israelites and the Lord (Josh 24:26). It would seem reasonable to associate these events with a tradition connected to the cult place Abraham was believed to have used.

Two passages in the Abimelech saga also mention trees at Shechem. In Judg 9:6, Abimelech is crowned king at the oak of the "pillar" in Shechem, a tree found by the Beth-millo, within the town. In Judg 9:37, forces attacking Shechem come upon the city from the direction of the Diviner's Oak, which should not then be located within the city. Clearly, it is not possible that both of the trees could be associated with the Oak of Moreh.

Wright (1964: 129–37) discussed the relationship of a cult site excavated at Shechem and the tradition of the Oak of Moreh. He believed that since the MB temenos at Shechem was outside the city wall but included within the city during the time of Abimelech, it was possible to link directly the sacred areas of Abraham, Joshua, and Abimelech. Such a reconstruction is possible, given the persistence of cult sites through time. The evidence, however, is far from conclusive, since numerous sacred sites can cluster in the same area. The exact location of the Oak of Moreh cannot be determined, although a place outside the city walls of Shechem seems the most reasonable.

B. Hill of Moreh [Heb *gibʿat hammôreh*]

Judg 7:1 mentions a hill below which the Midianites camped on the night Gideon attacked them. Moore (*Judges* ICC, 200) attempted to locate the battle in the region of Shechem, because he associated the hill with the Oak of Moreh at Shechem. However, references to the Spring of Harod (M.R. 184217) in Judg 7:1, to the Valley of Jezreel in Judg 6:3, and to Tabor (M.R. 187223) in Judg 8:18, all point to a N location for the conflict. Nebi Dahi (M.R. 183225) is generally accepted as the location of the ancient Hill of Moreh. As Malamat (1953: 65) has noted, the topography of that region fits the geographical requirements of the OT passage quite well.

MELVIN HUNT

MORESHETH (PLACE) [Heb *môrešet* (מוֹרֶשֶׁת)]. Var. MORESHETH-GATH. A satellite village of Gath in the Shephelah (Mic 1:1, 14; Jer 26:18). The *nomen proprium loci* actually occurs only once in Mic 1:14 as Moresheth-gath, "Possession of Gath." In the other two cases the gentilic form, *môrāštî* is employed to describe the prophet Micah. The city is in the vicinity of, but probably distinct from, both Mareshah and the Philistine Gath. Micah certainly implies such distinction as does the spelling. Mareshah is well attested elsewhere, and 2 Chr 11:8 is not a serious problem since Gath was at times under Israelite control. Another suggestion is that "gath" is used literally to mean "wine press," but this does not help with the location: "possession of wine press" (if this is the correct etymology) makes little sense, and the rest of Micah's poem (1:10–16) is centered around Gath. Therefore, the consensus is that Moresheth-gath was a satellite village near the city of Gath, what we might refer to as a "suburb" (cf. 1 Sam 6:17–18).

If this is the modern Tell ej-Judeideh (M.R. 141115) as most believe, about 10 km NE of Lachish, it is significant that in both these locations copious jar handles with the stamp *lmlk*, "to/for the king," have been found. David had a provincial palace at Lachish; and Adullam, Gath, Mareshah, and Lachish, all mentioned by Micah, were fortified by Rehoboam (2 Chr 11:8). The contention of Micah's dirge is that the cardinal sin of Judah was her militarism (1:13); so the wrath of God would destroy the militarized Shephelah as it approaches Jerusalem (1:12). The oracle reflects the campaigns of Sargon against the Philistia in 720 or 714–11 and Sennacherib's destruction of the Shephelah fortifications as he advanced upon Jerusalem in 701 (2 Kgs 18:13–16) laying "siege to 46 of [Hezekiah's] strong cities, walled forts and to the countless small villages in their vicinity" (*ANET*, 288). Moresheth-gath was surely among the villages.

Micah's pun depends on the similarity between "possession of" and "bride of" [Heb *mĕ›ōreśet*]. In the wheeling and dealing of international politics, towns and villages might be given up as royal dowry (1 Kgs 9:16). Such, symbolically at least, was the fate of Moresheth-gath who had pledged herself to the military establishment of Lachish, Gath, and Mareshah. Micah's paronomasia can be translated: "Wherefore pay the dowry for Bride-of-Gath!" (1:14). Her sister cities met a similar fate (vv 13 and 15). See MAROTH.

LAMONTTE M. LUKER

MORIAH (PLACE) [Heb *mōriyyâ* (מֹרִיָּה)]. 1. "The land of Moriah," mentioned in Gen 22:2, where God sent Abraham to sacrifice his son, Isaac, on one of the hills in the region. The passage in which the name occurs (Gen 22:1–19) is known as the Aqedah in Jewish tradition (the "binding" of Isaac). It derives mainly from the E source.

The MT also calls the place *yahweh yir›eh,* "Yahweh will see" in v 14. This seems to be a corruption of an original *›elohîm yir›eh.* "God will see" (found in the Sahidic Coptic version and the unpublished Qumran manuscript 4QGen Ex[a]; see Davila, fc.). The corruption arose through a folk etymology that associated Moriah with the Hebrew root *r›h,* "to see," and the divine name *Yah,* short for Yahweh; thus "vision of Yahweh" or the like. This etymology is incorrect; it does not explain the *o* vowel in the name. The actual meaning is unknown.

This Moriah is described as being in a hilly region, about 3 days' journey from Beer-sheba (Gen 22:4). However, this information is not helpful in establishing where Moriah was found since "the third day" may simply be an epic convention for a short journey. The location of the place is disputed (see below).

2. "The hill of Moriah," according to 2 Chr 3:1, the site in Jerusalem where Solomon built the Temple of Yahweh. It is also identified in the same verse with the threshing floor of Ornan (Araunah) the Jebusite (cf. 2 Sam 24; 2 Chr 21). See ARAUNAH. The text of the rest of the verse is corrupt. It appears to refer to the story in the passages just cited, in which David carries out a census and is punished by Yahweh with three days of plague over the whole country, delivered by Yahweh's angel. 2 Chr 3:1 seems to say that this location is where Yahweh (reading with the) appeared to David, and that David appointed the threshing floor as the site for the future temple.

The obvious question at this point is how the two Moriahs are related. It is generally agreed that the location in Gen 22:2 cannot be the same as the one in 2 Chr 3:1. Jerusalem is in a wooded area, to which it would not be necessary to carry firewood (Gen 22:6). Also, it does not make sense that the whole land should be called Moriah if the word is a name for the Temple Mount, nor that the hill bearing the name should be called merely "one of the hills" in the area (Skinner *Genesis* ICC, 1910: 328–29).

Two possibilities have been suggested. First, it may be that Moriah was originally associated with the binding of Isaac, and that the Chronicler or his source erroneously identified the site of the Temple Mount with Moriah in order to give the temple and Jerusalem a more ancient sanctity (Gold *IDB* 2: 438–34).

A more likely explanation is that Moriah was originally the name of the Temple Mount, and that the actual location given in Genesis 22 was suppressed and replaced by Moriah in order to associate the patriarch with the site of the future temple in Jerusalem. There is no indication that the writer of 1 Chr 3:1 was aware of any connection between Abraham and Mt. Moriah; he only mentions its association with David and Solomon. Surely he would have referred to the binding of Isaac if Moriah had appeared in Genesis 22 in his time (von Rad *Genesis* OTL, rev. ed. 1972: 240). Instead, it is probable that the name that originally stood in Gen 22:2 was replaced by Moriah sometime after the time of the Chronicler, but before the translation of the LXX. Various possibilities have been advanced for the original name. One is the land of the Amorite [*ha›emōrî*], reading with the Syriac Peshitta (Skinner *Genesis* ICC, 1910: 328–29). This name looks somewhat like Moriah, and the similarity could have suggested the change to a scribe. Another possibility is the land of Jeruel [*yerū›ēl*], from 2 Chr 20:16 (Gunkel *Genesis*[2] HAT, 169–71). It seems to be derived from *›ēl,* "God" and the root *r›h,* so its meaning is similar to the false etymology for Moriah. Such a similarity could have led to the substitution of the latter for the former.

Today the site of Mt. Moriah, the temple platform, is located in the SE corner of the Old City of Jerusalem and is occupied by the Muslim shrines known as the El-Aqsa Mosque and the Dome of the Rock. The latter is the third most holy place for Islam, after Mecca and Medina. According to Muslim tradition it was from the Temple Mount that Muhammad ascended into heaven (the vision is described in Sura 17 of the Quran). The W side of the platform includes the Western Wall or Wailing Wall, where Jews have traditionally come to mourn the loss of the temple.

JAMES R. DAVILA

MORTAR, THE (PLACE) [Heb *maktēš* (מַכְתֵּשׁ)]. A neighborhood in Jerusalem, which, at the time of Josiah, may have also been the center of some commercial activity (Zeph 1:11). Three things are noteworthy about the reference to this neighborhood. First, it existed toward the end of the 7th century B.C. (time of Josiah; Zeph 1:1), and second, it is mentioned in connection with the "Second Quarter," which was a W neighborhood incorporated into Jerusalem around the time of Hezekiah (late 8th-early 7th century B.C.). See SECOND QUARTER. Third, the Heb *maktēš* normally refers to a hollow place, or a bowl-shaped depression (hence "mortar"; cf. Prov 27:22), which could easily serve as a geomorphological description of a sunken valley (cf. Judg 15:19?). Given these three items, it is possible that this neighborhood was part of the W annex to the City of David, and only came to be regarded as a "mortar" after neighborhoods were established on the eastern slopes of the W hill. In this case, the "mortar" would likely be associated with (some portion of) the Tyropoeon valley, which lay outside the city until the 8th century B.C. (*EAEHL* 2: 597).

GARY A. HERION

MOSAIC COVENANT. After the mixed band of Hebrews (Exod 12:38; Num 11:4) fled Egypt and were delivered at the sea by Yahweh, they came to Mt. Sinai where they recognized and affirmed a special relationship: Yahweh was their God, they were Yahweh's people (Exodus 19–24). This relationship was described using the sociopolitical analogy of covenant; since it took place at Sinai under the leadership and mediation of Moses, it is known (though neither expression, as such, occurs in the Bible) as the Sinai covenant or the Mosaic covenant.

A. Historical Questions

The historical reconstruction of Israel's Exodus from Egypt and covenant making at Sinai bristles with difficulties: exactly when? where? who? etc. Some scholars regard these as nearly insoluble (*HAIJ*, 54–79), while others are more optimistic (Bright *BHI*, 120–43; de Vaux *EHI*, 359–452). Here we need mention only two issues.

1. Exodus and Sinai. While source critics of the 19th century had already raised the issue that the Sinai complex was originally historically distinct from that of Exodus-Kadesh (Nicholson 1973: 4–5), the publication of G. von Rad's programmatic essay (originally published 1938, Eng trans. 1965) began a

new phase. In it he isolated form critically what he called "the short historical creed," (e.g., Deut 26:5b–9; 6:20–24; Josh 26:2b–13). These give a summary of God's actions on behalf of Israel but contain no mention of the events at Sinai with its theophany, covenant, and law. The historical summary and the Sinai material were originally two distinct traditions; the former was passed on and celebrated at the Feast of Weeks in Gilgal; the latter, at the Feast of Tabernacles at Shechem. The Yahwist, writing at the time of David and Solomon, was the first to combine these two complexes of traditions into one continuous story (Nicholson 1973: 1–11). Ten years later, M. Noth (*HPT*) extended the discussion to include also those themes contained in the historical credo, arguing that they were all originally independent traditions. Differing from von Rad, he saw the combination of themes, particularly that of Sinai, as occurring before the monarchy in the tribal period (Nicholson 1973: 11–20). These opinions were strongly challenged by a number of scholars (Nicholson 1973: 32–52) and, while discussion continues, a large number of scholars would see Exodus and Sinai as being part of *one* tradition from the beginning (*EHI,* 401–19).

2. Covenant Analogy. Scholarly understanding of covenant in the OT has gone through various phases (Oden 1987: 429–47; Nicholson 1986: 3–117); particularly important is the recognition and study of covenant as an analogy borrowed from the sociopolitical realm. We do not have anything in our modern societies exactly like the covenant. Ancient social organization was largely one of clans and tribes; in some areas small city-states existed. From time to time a city-state (e.g., Ashur, Babylon) would extend its power and become virtually an empire. The relationships between these various groups had to be regulated for the stability of social and political life. The covenant served this function. See also COVENANT.

A covenant was an agreement or promise between two parties solemnly professed before witnesses (usually the respective gods) and made binding by an oath expressed verbally or by some symbolic action. As a result of covenant, a new relationship was established (Kalluveettil 1982: 15,211–13), a relationship often expressed in kinship terminology. The goal of covenant was *šālôm,* peace, wholeness of relationship. Covenant is not, however, a univocal term always referring to the same kind of agreement in exactly the same way. A variety of forms occur: family kinship, royal grant, international treaty (parity type or suzereignty type), etc.

Particularly influential has been the theory (connected especially with G. Mendenhall 1954b) that the Mosaic covenant, from its beginning, was understood on the model of the suzereignty treaty (Nicholson 1986: 56–82). This in turn has come in for some telling criticism; the treaty pattern is clearest in the later deuteronomic literature (McCarthy 1978; M. Weinfeld 1972).

B. Covenant in Exodus

The basic description of the making of the Mosaic covenant is found in Exodus 19–24. The account contains three elements: (1) Yahweh's action; (2) Israel's response; and (3) Israel's obligation.

1. Yahweh's Action. Facing certain death at the sea at the hands of the Egyptians, the fleeing Israelites were gifted by Yahweh with new and unexpected life. Guided by Yahweh through the wilderness, they came to Sinai where they had another experience of Yahweh. This awesome appearance (theophany) of God is described in the classic language of the appearance of the storm god, with dark clouds, thunder, and lightning (*CMHE,* 147–69).

2. Israel's Response. God had delivered Israel at the sea, led them through the wilderness, and appeared to them at Sinai. Israel recognized Yahweh's special care on their behalf and sealed a covenant which expressed this realization. The sealing ceremonies are described in Exodus 24 where two ritual actions are significant: (a) a blood ritual (Exod 24:6–8); and (b) a meal ritual (Exod 24:11, 5).

In the larger biblical context, a special relationship existed between the blood and life; one's life was envisaged as inherent in the blood itself (Lev 17:11; McCarthy 1978: 95,255). To share the same blood was to share the same life, to belong in some way to the same family. Moses sprinkled blood on the altar (representing God) and then on the people. They had the same blood "in their veins." The meal ritual is also rich in symbolism. In the ancient world, sharing a meal expressed likewise belonging to one family and sharing one life. To harm someone with whom table-community had been shared was a serious offense (Ps 41:10). Sharing a meal was a common form of covenant sealing (e.g., Gen 26:30; 31:46, 54).

The reference to eating and drinking (Exod 24:11) suggests a covenant meal, while a further reference may be found in v 5 which tells us that bulls were sacrificed as *šĕlāmîm.* Variously translated as "peace offerings" or "communion sacrifices," these were characterized by the fact that the victim was shared. After part was burned for God, part went to the priest, and the rest belonged to the offerer who ate it at a joyful meal with family and friends (Lev 3:1–17; 7:11–21). Both rituals express the meaning of covenant: a relationship of life and *šālôm* between Israel and God.

3. Obligation. These rituals are preceded in the text by a recitation of the words and ordinances of the Lord to which the people promise obedience. Covenant involved obligation (E. Kutsch [1972] has proposed that the word *bĕrît,* usually translated "covenant," should in fact be translated "obligation," but this is problematic [McCarthy 1978: 16–18; Nicholson 1986: 89–109]). Covenant obligation, however, should not be viewed as imposed from the outside. It flows from the very nature of covenant. Because of the new relationship, behavior should change. Israel was gifted with life by Yahweh; the covenant expressed that shared life. New behavior flowed from new covenant life.

This new behavior of Israel was manifested in two areas. The first is the vertical relationship with Yahweh. Freed from the slavery of Egypt, Israel now belonged to Yahweh; they must live as Yahweh's people and special possession (Exod 19:4–6). Their deliverance from Egypt was not just a freedom *from,* but also a freedom *for.* The goal of the liberation from Egypt is Israel's service of Yahweh (Exod 4:23; 5:1,3; 7:16, 26; 8:16; 9:1, 13; 10:3). Israel's first obligation is to worship only Yahweh (Exod 20:2–3); the first and basic sin, therefore, against covenant is idolatry. The second area of new covenant life involves the horizontal relationship with others. In saving Israel from the Egyptians, Yahweh was involved in social behavior; the covenant at Sinai revealed an intrinsic connection between the nature of Yahweh and the demands of social justice. How Israel treated each other would be a sign of how seriously they were devoted to Yahweh. A special area of concern here is the treatment of the poor, the oppressed, the alien. A motive frequently found in covenant law (e.g., Exod 22:21; 23:9; Lev 19:34; Deut 15:1–11) for not oppressing the weak is "because you were once strangers (aliens) in the land of Egypt." It would be a contradiction for Israel, freed from oppression by Yahweh, to become themselves oppressors of the weak. These two aspects of covenant living should not be viewed as separable and distinct; they are flip sides of one coin which are intrinsically connected and stand or fall together. If Israel fails to live out its commitment, the existence of the covenant itself is in jeopardy.

The Pentateuch now presents a large number of laws as having been given to Moses at Sinai (e.g., the Ten Commandments and the Covenant Code [Exodus 20–23]; the Holiness Code [Leviticus 17–26]), but it is very difficult to say how much, if any, of this formed part of the original Sinai experience. All of the laws, deriving mostly from later periods in Israel's history can easily be grouped under the heading of either right worship of God or of correct social behavior. These are all only further specifications of the basic covenant obligations. As later generations of Israel retold and renewed their basic covenant story, they included new laws and regulations which made their covenant real for them in the new situations of their lives. All of these developments were attributed to Moses at Sinai because this was where their covenant began.

C. Covenant in Deuteronomy

Presented as three discourses of Moses, the book of Deuteronomy is addressed to all the people in the plains of Moab and focuses on the covenant at Sinai (Horeb). The covenant themes are so much in evidence that it has been considered a covenant document par excellence.

The initiative is with God who has chosen Israel, a choice based not on Israel's greatness or moral status (Deut 7:4; 9:4–6) but simply on Yahweh's gracious love (Deut 7:6–8). Israel is repeatedly called on to "hear" and "remember" this covenant (Deut 5:1; 6:4; 4:9, 23; 5:15) because it was made not only with their ancestors but is also with all of them "today" (Deut 5:1–3; 26:16–18; etc.). If they truly do this, they will faithfully and loyally obey the covenant with its commands and statutes. The most basic of these is the call to worship only Yahweh (Deut 6:4–5); this then overflows into all areas of life, e.g., concern for the poor (Deut 15:1–18), and justice in the legal system (Deut 16:18–20) as well as in the economic sphere (Deut 25:13–16). It extends even to caring for the natural environment (Deut 20:19–20). All of this

is part of Israel's response of love to the gracious love of God (Achtemeier 1987). Israel's very life and existence depend on this; covenant fidelity will lead to blessing; infidelity, to curse (Deuteronomy 28).

Whether the Mosaic covenant was modeled from the beginning on the analogy of the ancient suzereignty-vassal treaties is the subject of some dispute. While not agreeing with the extreme position of L. Perlitt (1969) that covenant thinking appeared in Israel only at this time (Cazelles 1972; McCarthy 1972b; Nicholson 1986: 109–17), most scholars would agree that the treaty analogy is most clearly present in Deuteronomy and deuteronomic material (McCarthy 1978: 157–208; Weinfeld 1972: 57–157). The elements of the structural form are present, as well as characteristic vocabulary and phrases (McCarthy 1978: 288–89). While the beginnings of Israel's use of the treaty analogy may be older, its form in Deuteronomy seems to have been influenced by the fact that for over a century Israel had been a vassal subjected to the suzereignty of Assyria. The development of the treaty analogy would thus be a creative response to and polemic against the crisis of Assyrian domination (Lohfink *IDBSup*, 229–32; 1977).

D. Covenant Morality

Too often in the past, the Mosaic covenant morality has been caricatured as an extrinsic legalism or minimalism. While it is true that this can and, in fact, has happened, it is also true that authentic covenant morality is of a totally different kind. The morality embodied in the covenant is (1) one of response, and (2) one of dialogue. (1) Israel is called to respond to the blessings and gifts—most basically the gift of salvation—received from God. This response is specified in several ways: to listen to (obey) the word of God; to fear the Lord; to worship (serve) the Lord (e.g., Deut 10:12). Mosaic covenant morality is, however, also (2) one of dialogue. Just as God loved Israel, so Israel is to love God; just as God is faithful to the covenant, so Israel is to be faithful; just as God is righteous, so Israel is to be righteous; just as God freed from injustice and oppression, so Israel is to free from injustice and oppression. The goal of covenant can be summed up in three words: life, peace, justice. These are all terms of relationship. The covenant expresses that God and Israel are one family, sharing one life. It is approached best, not in legal terms, but in interpersonal ones.

A further question might be asked: why the Mosaic covenant at all? Could God not have led Israel from Egypt directly into the land of Canaan, the land of the promise? The entry into the land may have been the ultimate goal, but the more proximate goal of the deliverance from Egypt was "that they might serve me" (Exod 4:23). In Egypt, Israel was the oppressed, Egypt, the oppressor. As history attests, what often happens when the oppressed are freed is that they eventually become oppressors in turn. The slave becomes the taskmaster. The root problem is that they both share a basic set of values; they disagree only on the present arrangement of things. If Israel, newly freed from Egypt, went directly into Canaan and assumed power there, why would they be any different? They went first to Sinai and to covenant. Covenant with Yahweh, a God who frees from oppression, called them to a whole different view of reality, a new set of values, and a totally different style of life. To live the covenant truly is to worship this God and to be concerned for the rights and social needs of others. When Israel failed to do this, the covenant provided the framework and categories for evaluating and critiquing their lives and behavior. Prominent in this regard were the prophets.

E. Covenant in the Prophets

While the prophets are certainly related to covenant, the exact way of describing this relationship is less clear. Some scholars have proposed that the prophets consciously saw themselves as continuing the role of Moses as covenant mediator. Others viewed the prophets in the light of the treaty covenant analogy. Two dimensions in particular were stressed: the prophets indict Israel for covenant failure using the form of a covenant lawsuit (the *rîb*); the punishments they threaten derive from treaty curses which follow on infidelity (Hillers 1969: 120–42). All these suggestions have come in for criticism and modification (McCarthy 1972a: 35–40, 78–79; Clements 1975: 8–23).

The prophets were rooted in Israel's tradition of covenant and covenant obligation (whether or not this was understood as a treaty). When Israel failed to be faithful to its covenant, the prophets appealed to this common memory as the basis of their critique (Tucker 1985: 328–35; Kapelrud 1984). Thus, Israel

yielded to the temptations of the culture around them and fell into false worship; Elijah (1 Kgs 18:21), Isaiah (1:12–16), Jeremiah (7:6,9), Ezekiel (18:5–6), for example, challenge the people to cease following Baal and to adhere only to Yahweh. If they do not do this, their sacrifices and feasts are empty and worthless. Idolatry is the fundamental sin against covenant. In the same way, the Israelites violate the covenant in their dealings with each other. Instead of fidelity, justice, and mercy, lying, stealing, adultery, and murder are found (e.g., Hos 4:2; Jer 7:5–6, 9; Ezek 18:6–8). Amos, Micah, and Isaiah are particularly eloquent in their denouncing violations of the legal and economic systems, so essential to just community living (e.g., Amos 2:6–7; 5:1; 8:4–6; Mic 2:1–3; 3:11; Isa 3:14; 5:11–12). Once again we see that the twofold obligation of correct worship and correct social behavior are two sides of one coin. Attempts of scholars to separate them (e.g., the prophets rejected cult and promoted social justice [Napier *IDB* 3: 901–3]; the prophets taught "do justice first, then worship" [Miranda 1974: 58]) are inadequate.

In evaluating the behavior of the people in the present, the prophets looked to their past covenant tradition. The covenant has been broken and no longer exists. "I am not your God; you are not my people" (Hos 1:9; Jer 11:10; 31:32). Punishment will follow; the people will be exiled out of the land. But this is not the last word. Looking beyond the judgment, the prophets see a new future. God will bring the people through the desert in a new Exodus (e.g., Isa 41:17–20; 51:9–11); they will receive a new heart to enable them to be faithful to the covenant (Jer 31:33; 32:39–40; Ezek 36:26). The Lord will make a new covenant with them; once again, "I will be their God, and they shall be my people," (Jer 31:33; Ezek 34:25; 37:26–27). In depicting their new future, the prophets drew on the images of the old Mosaic covenant.

F. Covenant in New Testament

The early Christians, whose writings are preserved in the NT, were convinced that in Jesus of Nazareth, the hope of a new covenant had been fulfilled (Heb 8:7–9:22). Paul, in the spirit of controversy, draws sharp distinctions between the old covenant and the new (e.g., 2 Cor 3:4–18), but the lines of continuity are clear in the gospels. At the Last Supper, Jesus gives his disciples a cup to drink, "This cup is the new covenant in my blood" (Luke 22:20; 1 Cor 11:25) which will be poured out for the forgiveness of sins (Matt 26:28; see Jer 31:34). Like the old covenant at Sinai, the new one is sealed with a meal and blood ritual. Christians are one family with God, sharing one life. And like the old, this new covenant manifests itself in the new life the Christian should lead. Like Moses on Mt. Sinai, Jesus, on a mountain, gives a new covenant law (Matthew 5–7). Jesus' teachings, example, and life are the commandments of the new covenant (John 15:12; 13:14–15, 34). For Christians, the promise of the Mosaic covenant has become a reality in Christ.

MOSERAH (PLACE) [Heb *môsērâ* (מוֹסֵרָה)]. Var. MOSEROTH. A campsite of the Israelites, the 26th of the 40 stages during their wandering in the wilderness (Deut 10:6), called "Moseroth" (Heb *mōsērôt*) in Num 33:30–31. These are the only references to the name, and its location is unknown.

The name is commonly derived from the verb *ʾsr,* "to bind" (BDB, 558, 564), so this may be the "place of binding" or the place of the covenant. The verb also means imprison, and Payne (1980: 1026) suggests the name means "chastisement" for the trespass at Meribah (Num 20:24; Deut 32:51).

In Deuteronomy, the Israelites left Beeroth ("wells") Bene-jaakan and arrived in Moserah on their way to Gudgodah. In Num 33:30, they left Hashmonah and camped at Moseroth and from there went to Bene-jaakan.

In Deuteronomy, Moses' brother Aaron, the high priest, died and was buried at Moserah, and his son Eleazar was installed as high priest. But in Num 20:22–29 and 33:38, Aaron died at Mount Hor. The latter is traditionally identified with Jebel Nebi Harun at Petra but it is also in the region of Kadesh (Num 20:22; 33:37). Moserah is in the line of march from Sinai (Num 33:16) to Ezion-geber (v 35). But Marsh (*IDB* 2: 296) notes that 13 places on the line of travel are mentioned only here so it is impossible to know the exact route. The reversal of the names, Moserah/oth and Bene-jaakan, suggests two different sources in Numbers and Deuteronomy.

Wright (*IB* 2: 398; *WHAB,* 66, map X) suggests Beeroth may be Birein N of Kadesh-barnea, about halfway to Rehoboth. Pfeiffer and Vos (1967, map 2) place it there. This would presumably put Moserah/oth in the same general area. This is in line with a N route for the Exodus with Sinai at Jebel Helal, i.e., the Israelites stopped at Kadesh-barnea, Bene-jaakan, and Moserah/oth, on the way from Sinai to Ezion-geber. If Sinai is Jebel Musa in S Sinai, the Israelites went from Sinai up the E coast of the Sinai peninsula to Ezion-geber and then went to Kadesh-barnea. i.e., Moserah/oth is on the E edge of the Sinai peninsula, not in N Sinai in the wilderness of Zin. But for the time being, its location cannot be known for certain.

MOSES (PERSON) [Heb *mōšeh* (מֹשֶׁה)]. The man chosen by God to lead the Hebrew people out of Egyptian bondage, to preside over the Sinai ceremony constituting those people as the people of God, and to lead the Hebrew people to the promised land. As such, Moses is arguably the most prominent person in the Hebrew Bible, and he looms large in early Jewish and Christian writings. This entry consists of two articles. The first surveys primarily Moses as a figure in the OT and in early Judaism. The second concentrates specifically on the portrayal and role of Moses in the NT.

A. Historicity of Moses

No portion of the Bible is more complex and vigorously debated than the story of Moses, and few persons have evoked such disparate views. No extant non-biblical records make reference to Moses or the Exodus, therefore the question of historicity depends solely on the evaluation of the biblical accounts.

One interpretation is the assumption of early Jewish and Christian traditions that the Pentateuch is an accurate historical record written by Moses himself. This conservative view persists in both traditions today along with a rejection of all the claims of critical scholarship. Apparently there is no inclination to ask, "How is it possible for 200 years of critical research to be completely wrong?" K. A. Kitchen declares, "Now, nowhere in the Ancient Orient is there anything which is definitely known to parallel the elaborate history of fragmentary composition and conflation of Hebrew literature (or marked by just such criteria) as the documentary hypothesis would postulate" (1966: 115). Following the suggestion of W. W. Hallo (1962: 26), J. H. Tigay traces several stages of the *Gilgamesh Epic* over a period of 1,500 years and concludes, "The stages and processes through which this epic *demonstrably* passed are similar to some of those through which the Pentateuchal narratives are *presumed* to have passed. What is known about the evolution of the *Gilgamesh Epic* shows that some of the results of biblical criticism are at least realistic" (1985: 27).

The opposite extreme is J. Van Seters' declaration: "The quest for the historical Moses is a futile exercise. He now belongs only to legend" (*EncRel* 10: 116). The basis for this radical claim is his conviction that the Deuteronomistic History (Dtr) and the three histories based on it (J, P, and Chronicles) have *no* accurate, authentic material earlier than the last preexilic period (1983: 361–62).

While Van Seters is correct in claiming that some units are collections of disparate data by later editors attempting to make a complete story, his basic theory goes too far. Ancient sources have *linguistic fingerprints* and in reworking the texts the editor-authors did *not* smudge or erase all the fingerprints. Z. Zevit affirms that Dtr's sources "contained high-quality intelligence of a type that a later creative author would have been unable to concoct on his own." To assume, moreover, that these fingerprints "are due to the conscious archaizing of late exilic authors who had no pre-exilic literary models … is to attribute a linguistic sophistication to the ancient historians unparalleled elsewhere" (1985: 77).

1. Critical Analysis. In between the two extreme positions is a whole spectrum of views combining historical and critical concerns.

Early scholars, using mainly *source analysis* (J, E, D, and P), were critical of the Moses narratives, but they believed that behind the biblical text was a historical core with Moses as Israel's leader during the Exodus, Sinai covenant, and desert wanderings. Polarization of scholars began in the 20th century with H. Gunkel's *form-critical* approach, and the gap widened with the *tradition-history* studies of G. von Rad and M. Noth.

This change, according to von Rad, was "the result of the investigation of the history of traditions; and this has only been brought into full play in our own time." Thus, for him, the attempt to isolate an "actual historical course of events … has turned out to be mistaken" (*ROTT* 1: 3). Behind the Hexateuch, von Rad sees, "… only certain interpretations and conceptions of older traditions which originate in milieux very different from one another and which must also be judged, from the point of view of form-criticism, as completely diverse" (*ROTT* 1: 4). Consequently, in von Rad's opinion, "We can no longer look on it as possible to write a history of the tradition attaching to Moses, and of where it was at home" (*ROTT* 1:

291). If we try to date the Moses traditions "we are seldom able to advance beyond very general datings, if we are not in fact altogether in the dark" (*ROTT* 1: vi).

Because the cultic recitals in Deut 26:5–9; 6:20–24; and Josh 24:2–13 make no reference to the revelation of Yahweh at Mt. Sinai, von Rad concludes that the Sinai story was a very late insertion into the redemptive story of the Exodus and settlement in Canaan (*PHOE*, 3–8, 13). He claims that these traditions, joined first by the Yahwist (*PHOE*, 54), had canonical patterns and became cult-legends at separate sanctuaries: *Sinai* with the Feast of Booths at the Shechem covenant festival, and *Exodus/settlement* with the Feast of Weeks at Gilgal (*PHOE*, 43, 45). While the cult had some later influence on the formation of these legends, it did *not* produce them (*PHOE*, 22).

M. Noth, expanding on von Rad's work, determines to penetrate into the preliterary phase of the traditions in order to ascertain the origins and first stages of growth in the development leading to the Pentateuch (*HPT*, 1–2). He isolates five themes, fixed during oral transmission, which were essential for the faith of the separate Israelite tribes: patriarchs, exodus, wanderings, revelation at Sinai, and Conquest/occupation. Since he considers all material connecting these themes as secondary, and observes that the name "Moses" occurs "with striking infrequency" outside of the Pentateuch (*HPT*, 156), he comes to the radical conclusion that Moses is an editorial bracket binding all the themes together (*HPT*, 160–61). For Noth, the most historical reality of the person Moses is his death and burial in Transjordan (*HPT*, 173).

However, this pessimistic view hinges on some very subjective interpretations. In fact, Noth states explicitly that his conclusions about the Sinai tradition are "not conclusive arguments" because one could speak only "in terms of a certain probability" (*HPT*, 62).

A number of younger scholars, using Noth's tradition-history approach, reject his conclusion that all the themes are independent and the binding material secondary. W. Beyerlin, on the basis of Exod 20:2, claims that "the Decalogue originated somewhere where we can count on the presence of those who experienced *both* the Exodus *and* the meeting with God on Sinai" (1965: 145).

In his *Moses: Heroic Man, Man of God,* G. W. Coats claims that the Moses narratives "constitute a body of tradition with valid form-critical character" (1988: 38). Working with the whole range of literary methods, Coats takes issue with Noth's claim that Moses is a secondary redactional bracket: "Moses cannot be eliminated so readily from the various themes of tradition, and, as a consequence, the assumption of independence collapses" (1988: 37).

B. Childs is concerned to highlight the fundamental dialectic of the canonical process within Israel whereby "the literature formed the identity of the religious community which in turn shaped the literature" (*IOTS*, 41). He favors a sociological understanding of Moses' role:

> Especially in such passages as Ex.20.18–20 and Deut.19.15ff., that which is being described is not simply a historical event, but rather an etiology for the establishment of something institutional and ongoing. Moses' role as covenantal mediator in the Sinai tradition has a decided cultic stamp which seems to point to an office within an institution (*Exodus* OTL, 355).

In this connection, Coats' comments are also instructive:

> The issue at stake … is whether a standing office has influenced the shape of the Moses traditions. Is the cultic office of covenant mediator the proper *Sitz im Leben* for this facet of the Moses tradition? Or was the tradition shaped basically by a popular literary process as a narrative convention for depicting the leader with at best only tangential contacts with the cult? (1988: 138).

The most thoroughgoing sociological approach is N. K. Gottwald's *The Tribes of Yahweh.* He acknowledges his debt to Noth and observes (1979: 72) that Noth (*HPT*, 259) leaves unanswered "the problem of what brought about the unity 'Israel' and the common Israelite consciousness." The purpose of Gottwald's study is "to *begin* with the tantalizing enigmatic questions with which Noth's provocative analysis of the Pentateuchal traditions *ends*" (1979: 72). Gottwald believes that biblical scholars, given to "hyperspecialization" of detailed studies with limited scope, have not adequately addressed this historical-sociological problem, and insofar as it has been treated "it has been 'answered' by theological fiat" (1979:

5–7, 73). Thus he contends that "the valid intention of biblical theology can only be fulfilled by 'biblical sociology' " (1979: 911). In following up on this approach, Gottwald (1979: 78) declares:

> The proclamation of the themes in the cult was a communal speech-act, … of a special kind, which we have called cultic-ideological … It was meaning-charged speech elucidating the identity of Israel, … speech that proclaimed the divine power in which the community was grounded, … speech that addressed the community with its most fundamental obligations and reminded it of its most fundamental resources … even speech which allowed for the direct declamation of the divine word to the community.

Then he adds the caveat, "We must necessarily view the finished product of these early historical traditions … as 'unplanned' by any one person or group of persons within any single context" (1979: 78).

2. Historical Analogy. In opposition to tradition-history proponents, a number of mediating scholars maintain that *historical analogy* should play a role in the literary-sociological study of Scripture, especially in connection with the Moses story. Human experience shows that observation and understanding of key events varies with the personality, training, and insight of the participants. This was undoubtedly true of those who followed Moses; therefore, it is highly probable that two or three variant traditions developed fairly soon after the Exodus and Sinai events. From this viewpoint, the variant biblical traditions need not be understood as originating in "completely diverse milieux." Moreover, while culture has influence on gifted persons, it does not initiate their innovative ideas and movements. Rather, the initial impact toward change is made by creative individuals, not culture. Furthermore, all great leaders of people and movements have had to play a number of roles, consequently it is not feasible to squeeze highly talented people into any single mold.

In addition to *source criticism*, the use of *stylistic criteria* (poetic form, syntax, and spelling) for dating texts (*YGC*, 1–52), and data from *archaeology and inscriptions* for portraying the background of the biblical narratives, W. F. Albright employs *historical analogy* because it "plays a particularly important role" for the study of the Bible (1966: 11). He recognizes that it "does not constitute proof when taken alone" (1965: 268), but he concludes that the biblical tradition about Moses "is strongly supported by historical analogy, and is now being confirmed by a rapidly increasing mass of evidence uncovered by archaeologists and philologians" (1976: 120).

Similarly, J. Bright, a student of Albright, reacting to the reductionist views of von Rad and Noth, claims:

> Over all these events there towers the figure of Moses. Though we know nothing of his career save what the Bible tells us, the details of which we have no means of testing, there can be no doubt that he was, as the Bible portrays him, the great founder of Israel's faith. Attempts to reduce him are extremely unconvincing. The events of exodus and Sinai require a great personality behind them. And a faith as unique as Israel's demands a founder as surely as does Christianity—or Islam, for that matter. To deny that role of Moses would force us to posit another person of the same name! (*BHI*, 126–27).

W. Eichrodt comes to a similar conclusion, "*At the very beginning of Israelite religion we find the charisma,* the special individual endowment of a person; and to such an extent is the whole structure based on it, that without it it would be inconceivable" (*ETOT*, 292).

3. Possibilities and Probabilities. Because of the complexities of the biblical text and the lack of certain data, conclusions about a historical Moses are narrowed to possibilities and probabilities.

For some scholars the question of historicity begins with the name "Moses." The biblical writer apparently did not know that it was a shortened Egyptian name, but assuming that Pharaoh's daughter knew Hebrew, he had her use popular etymology to base the name on the verb *māšâ* ("to draw out"): "Because I drew him out of the water" (Exod 2:10). The name actually stems from the Egyptian verb *msy* "to give birth" and appears as "Mose" with the name of a god: e.g., Tuthmosis "Toth is born" and Rameses "Re is born." Since the Egyptians often shortened such names to "Mose," it is implicit that "Moses" was longer at first, but there is no indication as to the deity involved (e.g., no "Yamses"). While the name is proper for the circumstances of the Exodus story, it *alone* does not prove that Moses was a historical figure.

R. de Vaux, holding more to probabilities, affirms that traditions (myth or history) "were not created by cult—cultic practices simply helped to recall traditions" (*EHI* 1: 185). He realizes that oral tradition can be forgetful and at times invents a great deal, yet "it is faithful in some ways" (*EHI* 1: 184). The tradition of Moses in Midian is early and has a historical basis (*EHI* 1: 330). Moreover, Moses was involved with the Exodus and Sinai: "There is … no impelling reason for eliminating Moses from any of these traditions; on the contrary, there is positive evidence for believing that they are closely interconnected" (*EHI* 1: 453).

The "quest for the historical Moses" presents more of a difficulty for Childs (*IOTS*, 178), and very little of his commentary on Exodus attempts to wrestle with historical problems and data. Yet, notwithstanding some expansion of the text in Exodus 3, due to the later prophetic office, Childs affirms that the call of Moses was authentic:

> It (tradition) recognized correctly that a new element entered with Moses which set it apart from the patriarchal period … Moses' call recounts the deep disruptive seizure of a man for whom neither previous faith nor personal endowment play a role in preparing him for his vocation (*Exodus* OTL, 56).

Coats does not attempt a reconstruction of an original Moses tradition because his goal "is to describe the various images used by various texts in the Old Testament for depicting the characteristics of this giant" (1988: 36). It is implicit, however, that he gives credence to Moses as lawgiver: "The earliest picture of Moses available, perhaps the only picture of Moses from the period before the monarchy, depicts Moses as lawgiver (Deut 33:4)" (1988: 199). As another indication, Coats observes, "There is no law tradition without Moses" (1988: 169). It is also implicit that the mediation of Moses in giving the law to the people has its counterpart in his heroic representation of the people before Yahweh with respects to their concerns and intercession for their sins (1988: 159, 165–66).

Gottwald recognizes some historical traces in the text, "Moses is recalled as an actual person who was of Levitical kinship, who intermarried with Midianite 'semi-nomads,' who led a slave revolt, who was reportedly buried in Transjordan" (1979: 35). On the contrary, he contends that "we are not in a position to calculate the part that the historical Moses played in introducing Yahweh, in explicating him as a deliverer from opposition, as one with whom to covenant, and as a law-giver" (1979: 37). Then he comments, "Possibly the later tradition is correct in believing that Moses had the decisive part to play in all these respects. But only possibly" (1979: 37).

Since Gottwald is more confident about a proto-Israelite "Moses group" than the specific person Moses, he makes some additional suggestions:

> … it is highly probable that the notion of Yahweh as a god who delivers from oppression was introduced first among a group of proto-Israelites for whom Moses was one, although not necessarily the only, leader … it is at least possible, conceivably probable, that notions of covenanting between god and people and of divine law-giving were introduced in some form among that same group of proto-Israelites in which Moses was a leader (1979: 36).

Gottwald thinks that covenanting and law giving in this group "were relatively undeveloped," and even if they did occur at Sinai, we do not know how they were understood and practiced (1979: 36–37). See also COVENANT; MOSAIC COVENANT.

4. More Probable Probabilities. It is evident from this survey that all critical theories and reconstructions involve probabilities, and so the issue of Moses' historicity must attempt to ascertain which probabilities are more probable.

For Noth, the first *historical fact* about Israel is that the twelve-tribe confederation settled in Canaan after the occupation and worshipped as a community. There the various tribes told their own unique stories and in time "all Israel" came to feel that it had shared in all of these experiences (*HPT*, 43–45). Gottwald attempts to solve Noth's problem of accounting for "the unity 'Israel' and the common Israelite consciousness" by attributing to the cultic gatherings a special kind of speech-act filled with the charisma of Israel's identity, obligations, resources, and even a divine word. There is no doubt that such issues were discussed in the development of Israel, but can its *origin* be explained by ecumenical-like worship services and consultations without the primary input of a Yahwistic, covenant group inspired by the

Exodus and Sinai experiences under the leadership of Moses? In spite of lapses from some members, the Song of Deborah (Judges 5, ca. 1150–1125 B.C.) indicates that fairly early the Israelite tribal league was a functioning unity motivated by the Yahwistic faith. Bright comments:

> Indeed, had not the nucleus of Israel, already in covenant with Yahweh, appeared in Palestine and, banding with disaffected elements there with whom it made common cause, won notable victories, it is difficult to see why groups of such mixed origin, and geographically so scattered, would have come together in confederation under Yahweh's rule at all (*BHI*, 168).

For von Rad, the fusion of the exodus-settlement and Sinai traditions occurred *first* by the Yahwist, thus blending "the two fundamental propositions of the whole message of the Bible: Law and Gospel" (*PHOE*, 54). Whether articulated or not, human existence (individual, familial, and cultural) has had to deal with the issues of justice and mercy. Is it feasible to separate this reality into monolithic strands and claim that for 200 years separate traditions consistently preserved a half of the dialectic truth without recognition of or concern for the other half? Accordingly, mediating scholars wonder why it is impossible for these two facets to be involved in the difficult experience of the Yahwistic group in the desert after deliverance from Egypt. As R. F. Johnson notes, "But it is easily possible to consider the biblical account of Mosaic leadership a more credible explanation of Israel's early period in Palestine than any other available thesis (*IDB* 3: 442).

In summary, the evaluation of the evidence and counterclaims in the scholarly debate about Moses seems to favor, as the most probable conclusion, a modified form of the Moses story. In response to Yahweh's call in Midian, Moses—the Hebrew with the Egyptian name—led his people out of Egypt, constituted them as a people of God by mediating the covenant at Mt. Sinai, interceded for them during the desert wanderings, and brought them to Moab where he died.

B. Biblical Portraits of Moses

The issue of various portraits of Moses, like the question of historicity, depends on one's interpretation of the biblical text, and again there is great diversity.

The conservative tradition holds that the interchange of divine names is the intention of the author, not the result of separate sources. "We may assume," U. Cassuto claims, "that in each case the Torah chose one of the two Names according to the context and intention" (1961: 31). While "Yahweh" reflects Israelite theology and traditions about God and his people, "Elohim" is appropriate for non-Israelites, universal tradition, and those who think of Deity in abstract terms (1961: 31–32). "However," as Childs observes, "both the extreme artificiality by which meaning is assigned to the use of the names, as well as the constant need to adjust the theory in every succeeding section, does not evoke great confidence in this approach" (*Exodus* OTL, 53). Cassuto is nearer the truth when he comments:

> The stream of this tradition may be compared to a great and wide-spreading river that traverses vast distances; although in the course of its journey the river loses part of its water, … and it is also increasingly augmented by waters of the tributaries that pour into it, yet it carries with it, … some of the waters that it held at the beginning when it first started to flow from its original source (1961: 102–3).

Thus, while Cassuto denies the sources of the critics, he affirms that numerous traditions have come together.

Years of research concerning the source and tributaries of the text resulted in the classical view of source criticism: J and P (southern), E and D (northern) as separate traditions or recensions of Israel's history. Yet these accounts tend to be *one-sided*, like a portrait featuring the most attractive profile. An example is von Rad's separate portraits of Moses in J and E. While recognizing that Moses appears throughout the Yahwist account, he claims: (1) Moses' call "was only for the purpose of informing Israel in Egypt" about Yahweh's intentions, and so it would be "utterly wrong if we were to understand Moses' call as an appointment to be Israel's leader, for in this source document the leadership of Israel is Jahweh's alone"; (2) Yahweh effects the miracles "without any assistance from Moses;" (3) "Moses retires right into the background;" and (4) for the narrator no "particular theological stress" is made of "Moses' function in the various conflicts and crises" (*ROTT* 1: 291–92).

On the other hand, according to von Rad, "There is a noticeable difference in the picture of Moses given by the Elohist:" (1) the idea of Moses' office has changed, "E has pushed Moses much more into the foreground as the instrument of God in effecting the deliverance;" (2) moreover, "Moses is now the miracle-worker, in fact almost to the point of being a magician;" (3) Moses' importance is enhanced "by setting Aaron over against him … Moses is God for Aaron, and Aaron the mouth for Moses—Moses is the creative initiator and Aaron only the executive speaker (Ex. iv. 16);" and (4) Moses is a prophet in E, but "of a special type—he is much more the prophet of action, taking an active hand in the events" (*ROTT* 1: 292–93).

In reaction to the atomizing of the text by radical source-critics, a number of scholars have observed wider frameworks and patterns for understanding the text. These are helpful, and, as Childs notes, "to show a larger pattern which cuts across the sources does not disprove their existence" (*Exodus* OTL, 150). Yet there has been increasing question about E because of its fragmentary nature and the difficulty in determining where it begins and ends. The problem involves the complex history of J and E. In some places, like Exodus 19, it is impossible to untangle them completely. Evidently the two were mixed at times in oral transmission and this condition carried over into the groundwork source behind J and E. In any case, in the growth of these traditions various literate persons, whether working as compilers, redactors, or authors, were prompted by new historical situations to make relevant theological notes about the events described. Thus, after the division of the kingdom, E became the northern counterpart of southern J and such crucial passages as Exod 3:9–15; 20:1–17; and 24:3–8 indicate its distinctive perspective. Some time after the fall of the northern kingdom, the E tradition, even with some of its divergent views, was subsumed within J, and so from the point of view of the JE redactor(s), most certainly in Judah, the E material was understood in the light of J.

Coats affirms that "the classical definition of order in the relationships of the sources holds even in the face of challenges," thus J is the oldest, D next, and finally P. He deviates by claiming that "in those places where E appears, the source is an expansion of J, thus dependent on J" (1988: 36). Nevertheless, G. Fohrer, building on Wellhausen's analysis, makes a definitive defense of the E source stratum (1968: 152–58).

A new approach to Exodus-Deuteronomy is the hypothesis of Coats: *"The Moses narratives, structured as heroic saga, merge with the narrative tradition about Yahweh's mighty acts, structured around confessional themes"* (1988: 37). *"This heroic tradition,"* according to Coats, *"binds the hero with his people. Either by military might, or by skillful intercession, or by familiarity with surroundings and conditions, he defends and aids his own. He brings 'boons' to his people"* (1988: 40). Coats recognizes that the two models are narrative opposites, at times complementary, at times contradictory, but his concern is to define "the relationship between these two structural patterns. Moses is the heroic man and the man of God" (1988: 42). The series of praises to Yahweh for the mighty acts in behalf of his people came from the ritual of Israel's sanctuaries. Yet this tradition was only half of the historical reality. The other half was preserved by common folk who transmitted orally the narratives about Moses. This heroic man was also the man of God because he was the human agent facilitating the acts of God.

Childs, like Coats, values the sources, yet finds great insight in the *composite portraits,* "The final literary production has an integrity of its own which must not only be recognized, but studied with the same intensity as one devotes to the earlier stages" (*Exodus* OTL, 224).

1. Yahwist-Elohist Traditions. In highlighting the JE portrait of Moses it will be helpful at times to note how the stories about Moses complement the confessional themes in the Exodus, desert, and Sinai episodes.

Although the folkloristic narratives of Exod 1:15–2:22 lack specific historical references, they declare that Moses, born during the oppression of a Pharaoh and reared in his court, was a Hebrew from the house of Levi who cared for his own people. After his flight to Midian he showed similar concern for the daughters of the priest Reuel (Jethro), then married one of them.

Exod 3:1–12 relates the essence of the actual call and commission of Moses. The burning bush, however understood, is the means of initiating a dialogue with Moses. In vv 7–9 Yahweh sees, hears,

knows his people's plight, and determines to free them and bring them to a good land. In v 10 Moses is commissioned to be his agent, but he demurs and is given a sign to reassure him. When Moses inquires about God's name he is told, "Yahweh … is my name for ever" (3:15). This new name is an authentic claim of E, in contrast to J where the worship of Yahweh begins with Seth and Enosh (Gen 4:26). The crucial point of the combined JE text is that Yahweh authorizes Moses to confront Pharaoh and free the Hebrews.

According to JE in Exod 5:1–15:21, Moses requests Pharaoh, in Yahweh's name, to let the Hebrews go into the desert to hold a feast. He refuses and when nine plagues do not change his mind, Yahweh kills the Egyptian firstborn. With a cry of anguish, Pharaoh and the Egyptians urge Moses and his people to leave. Pharaoh changes his mind, however, and pursues them. Yahweh's miracle at the Reed Sea provides escape for the people and death for Pharaoh's army.

Behind this composite picture some scholars find two separate accounts. R. de Vaux, for example, holds to an *Exodus flight*, led by Moses, and an *Exodus expulsion*, with the death of the firstborn (*EHI* 1: 373). According to Coats, when the negotiations during the nine plagues fail, Moses has the people acquire silver and gold jewelry from the Egyptians. This spoliation, the beginning of the Exodus, is possible because Yahweh gives the people favor with the Egyptians and Moses is very great in the land (Exod 11:3). Then Moses calls his people to leave in haste under his leadership without the permission or even the knowledge of Pharaoh (1988: 97–98, 108). On the other hand, Childs holds to one exodus after ten plagues, because he shifts Exod 11:4–8 to follow 10:29 so that Moses announces to Pharaoh the death of the firstborn before leaving "in hot anger" (*Exodus* OTL, 161).

Divine and human participation are combined again in the victory at the Reed Sea. Praises to Yahweh, both in poetry and narrative (probably from the cult), attribute "natural" causes to God: the strong east wind; the clogging of the chariot wheels; and the routing of the army. Moses, on the contrary, performs the "wondrous" events: stretching out his hand (rod) to divide the sea and cause its return. Both aspects appear in J's summary: "Israel saw the great work which Yahweh did against the Egyptians, … and they believed in Yahweh and his servant Moses" (14:31). Since belief is rooted in trust and willingness to obey, this affirmation goes beyond a cognitive recognition of Moses: they are ready to obey him.

The dominant feature of the desert wanderings is the sojourn at Mt. Sinai. The essential narrative (Exodus 19–24; 32–34) is a very complex conflation of J and E, with only a few verses from P. A crucial fact is that vv 19:4 and 20:2 bind the Sinai event with the Exodus: the appeal for Israel's covenant obedience is based on God's gracious act of freeing them from Egypt.

In line with the sources, critics tend to see two different traditions in the Sinai pericope. The dominant theme is from E: when God declares the commandments to the people (20:1–17) they are fearful and urge Moses to mediate God's word (20:18–20), which he does, functioning as a *priest*, in the blood ritual ratifying the covenant (24:3–8). The subordinate theme is from J: Yahweh speaks with Moses in the presence of the people so that they will believe him (19:9, 19), then instead of a covenant with the people, Yahweh makes a covenant with Moses in their behalf (34:2-7). For Childs, the two themes, fused in the preliterary stage, are rooted in different settings: E in the covenant renewal ceremony, and J in the tent of meeting (*Exodus* OTL, 358). Coats, on the other hand, considers the two traditions complementary, stemming from the storytelling of the people (1988: 133).

In addition to its cruciality in Israel's history, the version of the covenant in E has important clues related to the historicity of Moses. The covenant ceremony opens with a comment that Moses "told the people all the words of Yahweh and all the ordinances" (24:3), yet in the rest of the ceremony only the "words" are involved. It is apparent that originally 24:3–8 followed the "words" (commandments) in 20:1–17. Later, an editor inserted the collection of regulations in 20:22–23:33, considering it a further revelation to Moses at the mountain. While the first part consists largely of conditional "ordinances" (If [when] … then …) related to agricultural, village life, 22:18–23:19 has a number of regulations which, like the commandments, are in the imperative form, "You shall (not)." Childs considers them as premonarchic and notes that "some of the material stems from a very early period which may reach back into the wilderness period" (*Exodus* OTL, 456). A still later editor, working with the expanded text, added

"and all the ordinances" (24:3), to make clear that the whole collection was included in the "Book of the Covenant" (24:7) used by Moses at the ceremony.

Although there are different expansions within the commandments of Exod 20:2–17 (E) and Deut 5:6–21 (D), the two collections come from a common northern tradition. There is no indication how to separate them, nor does it state there were *ten.* The designation "Ten Words" (Decalogue) comes from Exod 34:28. Each commandment appears elsewhere in the Bible, but in time tradition determined that these were unique and reflected the essence of God's will. The first three pertain to God and the rest refer to human relations. The eight negative commands set the boundary of covenant life with God. To step beyond these restrictions is rebellion leading to death. The two positive words are instruction for living within God's will. See TEN COMMANDMENTS.

There is a timeless, transcultural quality about them, and Noth himself acknowledges that "the Decalogue is the only legal entity in the OT which indicates no certain reference to the conditions of life in an agricultural community." Furthermore, since the writings of the prophets "appear to presuppose the commandments," Noth comments that "for the pre-prophetic period all possibilities of dating are open," yet because of his tradition-history presuppositions he rules out any date "before the conquest" (*Exodus* OTL, 167). If not all, at least some of these stipulations were involved in the desert covenant. Human experience indicates that the guidelines for any religious or political agreement require continual interpretation and additional specifications. Accordingly, it is quite probable *analogically* that Moses began the process of interpreting the commands, regardless of how many there were. Evidently Joshua continued the process after entering Canaan (Josh 24:25–26). It is possible that this updating, not described explicitly, appears in the collection (20:22–23:33) attributed to Moses.

In any event, after the apostasy concerning the golden calf, Yahweh determines to destroy the people and make Moses a great nation (32:1–10). Moses intercedes for them (vv 11–14), even offering to be blotted out of God's book if Yahweh does not forgive their sin (v 32). Thus again, the complementary facets of Moses' role as *mediator* are highlighted: Moses is both God's representative to the people—man of God as *lawgiver*—and the people's representative to God—heroic man as *intercessor.* A special feature of Moses' role as lawgiver is that during the revelation of the law Moses, unknowingly, attains a "shining face." Since the people draw back from him on his return, he puts on a "veil" (Heb *masweh*). The only occurrences of this term in the entire Bible are the three uses in this passage (34:29–35). The practice was also probably associated with the Yahweh-Moses conversations at the tent of meeting outside the camp (33:7–13). That tradition was superseded by the priestly tabernacle inside the camp, therefore the veil as a special symbol of Moses is an early feature. As Coats observes, "The heroic man transfigured by the presence of God, … is uniquely the man of God" (1988: 138).

In JE the Sinai narratives separate the desert journeys into two units: Exodus 15–18 and Numbers 10–36. While the rigors of desert life before Sinai evoke murmurings, Yahweh listens to the complaints and supplies the people's needs. On the other hand, after Sinai the murmurings against Yahweh and Moses provoke God's anger. Moral responsibility was fixed at the covenant with Yahweh, therefore rebellion results in censure and punishment (Numbers 11–14, 16).

When Moses' unique authority is challenged by Miriam, an editor comments, "Moses was very meek, more than all the men that were on the face of the earth" (Num 12:3). This meekness (humility) implies that Moses was not overbearing in his role as leader. Yahweh had commissioned him, therefore Yahweh defends him, "With him I speak mouth to mouth, clearly, and not in dark speech" (Num 12:8). Although Moses intercedes for Miriam's healing, she must spend seven days outside the camp before being restored. When the people believe the majority report of the spies and refuse to leave Kadesh to begin the conquest of Canaan, Yahweh appears at the tent of meeting and threatens again to disinherit his people. Moses makes such an eloquent, rational appeal, Yahweh pardons them, but the adults will pay a price: they will never enter the promised land (Num 13:25–14:23). Even though the designation is not used, Moses functions as the *shepherd* of his people. He is human, however, and because the load of the murmuring people is too heavy, he objects to Yahweh's command to carry them "as a nurse carries a sucking child" (Num 11:10–15).

2. Deuteronomic Tradition. While the portrait of Moses in Deuteronomy (D) retains much of the composite picture in JE, there are some distinctive features and emphases. In the summary of the experiences after Horeb (1:6–3:29) Moses is the *leader,* yet he is no wonder-worker. The reference in 34:11 to signs and wonders is a late addition to D. At the request of the people, Moses continues to be their *mediator* (5:5, 27), yet a new feature appears in the preface to the book: Moses purposes *to explain* what Yahweh has commanded (1:5). Thus Moses is not only a *lawgiver:* he becomes the law's *interpreter.* This claim is basic to the structure of the book. After the commandments are given, the text is largely a series of homilies by Moses. The topic in chap. 6 is the *commandment,* a restatement of the negative first commandment in a positive form (6:4–5), and chaps. 6–11 spell out its meaning and implications. The same is true in chaps. 12–26 for the *statutes and ordinances.* Thirty-six times in chaps. 4–30 Moses states "I command you," therefore these interpretations, while rooted in the Torah of Yahweh, tend to become the Torah of Moses.

The purpose of the instructions is more than didactic, however. Moses strives to elicit obedience from his stubborn people. His persuasive pleas are laced with enticements: "that it may go well with you" or "that you may prolong your days in the land." To ensure that future generations have his teachings, Moses commands the people to keep them foremost in their consciousness and to use every occasion to teach them to their children (6:6–9).

In JE the call of Moses and the communication of God's words to his people indicate that he is a prophet, but in D this role is specifically stressed. To counter the anticipated temptations of pagan divination in Canaan, Moses promises that Yahweh "will raise up for you a prophet like me, … him you shall heed" (18:15). It is implicit in Moses' promise of another prophet and his command to teach the next generation that his task is nearing completion.

As Moses reminds the people of their rebellious history, he reviews, in a paraphrase of Exod 32:11–14, his traumatic intercession with Yahweh, pleading for forty days and nights to disregard the stubbornness, wickedness, and sin of the people (9:25–29). Yahweh spares the people, but he prohibits Moses from entering the promised land: "Yahweh was angry with me also on your account, and said, 'You shall not go in there' " (1:37). Thus the *intercessor* becomes the *suffering mediator.* Moses does not complain, but he intercedes for himself: "Let me go over, I pray, and see the good land beyond the Jordan" (3:25). Although D never explains why Moses has to pay the price, Yahweh rebuffs him, "Speak no more to me of this matter" (3:26).

Thus, Moses vicariously bears Yahweh's wrath against his people. His death alone in Moab takes on a vicarious quality as well. Yahweh buries him and "no one knows the place of his burial to this day" (34:6). There can be no sacred monument where pilgrims can share in a memorial ceremony for Moses. He must live in the hearts of the people as the greatest prophet of all, the one with whom Yahweh spoke "face to face" (34:10).

3. Priestly Tradition. The last source to be incorporated into the Hebrew Bible was P. Features in common with JE and D point to a tradition shared during oral transmission and indicate that P has some early material. Its distinctive differences stem from a long history of separate development in Jerusalem. During the Babylonian exile, the priests had no temple in which to serve, so they turned their attention to preserving and authenticating the priestly traditions and way of life. The JE and D traditions were subsumed within the P framework to form a new composite story of Israel's early history. Still later, probably after the exile, more additions were made by priestly redactors. We know nothing of the various priests involved in this process, but it is clear that they had the last word in forming the Pentateuch. Consequently, the P portrait of Moses will highlight some different features.

The first major change in the picture is Exod 6:2–7:7, originally a doublet of Exod 3:1–4:17 (JE). P is more explicit than E (Exod 3:15) that *Yahweh* is a new name for the God known to the patriarchs as *El Shaddai* (6:3). The E version of Aaron's commissioning (Exod 4:14–16) is shortened and given a prophetic nuance: "See, I make you as God to Pharaoh; and Aaron your brother shall be your prophet" (7:1). In P, moreover, Moses is relieved of the physical aspects in confronting Pharaoh and his magicians:

Moses gives the orders, but Aaron, with his rod, effects some of the plagues (7:19). Furthermore, Pharaoh is hardened so that Yahweh can multiply the signs (11:9–10).

The most radical shift in perspective occurs in the Sinai narratives. In Exod 24:16–18, P notes that Moses enters the cloud of Yahweh's glory on Mount Sinai and stays there forty days and nights. When Yahweh finishes speaking with Moses he hands him "the two tablets of the testimony … written with the finger of God" (Exod 31:18). Between the two passages P inserts the lengthy instructions for making the tabernacle and its equipment. It is P's method of declaring that the blueprints for the tabernacle came from Yahweh himself. When Moses, on seeing the golden calf and the dancing people, shatters the two tablets (Exod 32:19) he is doing more than symbolizing the broken covenant. For P this is a traumatic loss of the blueprints. It is imperative that they be written again. When Moses returns with the second set of tablets (Exod 34:29), the tabernacle, designed by God, can be constructed (Exod 35:1–40:33).

In the tabernacle instructions, Yahweh requests, "And let them make me a sanctuary, that I may dwell in their midst" (Exod 25:9). Therefore, when the cloud of Yahweh's glory fills *the priestly tabernacle, the new tent of meeting,* it is a confirmation that Yahweh is moving from Mount Sinai to his new residence. Another clue for understanding P's claim is Yahweh's statement in connection with the instructions for the tabernacle furniture: "There I will meet with you, and … from between the two cherubim … I will speak with you of all that I will give you in commandment for the people of Israel" (Exod 25:22). Accordingly, Lev 1:1 and Num 1:1 claim that Yahweh reveals the priestly insights and regulations to Moses at the tent of meeting. R. Knierim notes incisively:

> From now on, Yahweh would meet Moses from the sanctuary in Israel's midst, and no longer on Sinai. The mountain belonged to the past. The presence belonged to the sanctuary. Its legitimacy and identity were secured by the continuity of the revelation of God from the mountain. And now, Yahweh could give the ultimately decisive instructions concerning the ongoing life of Israel. These instructions have two foci: the provision of the atonement institution for the continuous liberation from the destructive burden of guilt and pollution (Leviticus 1–16), and the regulations for Israel's societal life as a "holy" community (Leviticus 17–27). The Sinai-pericope aims at the book of Leviticus. This book is the center of the Pentateuch (1985: 405).

In short, Exodus-Numbers is dominated by the P portrait of Moses as Yahweh's unique mediator communicating *all of God's Torah* (commandments, statutes, and ordinances) to the people.

Whereas JE and D recognize the humanity of Moses, P goes on to portray him and Aaron as sinners: "… you did not believe in me, to sanctify me in the eyes of the people of Israel" (Num 20:12). The fault seems to be based on the rash statement in 20:10: "Hear now, you rebels; shall we bring forth water for you out of the rock?" When Moses strikes the rock twice he seems to do so with an assurance he has the power to produce water. In this act he does not really believe in Yahweh, nor does he honor God in the people's presence, therefore he will never enter the promised land.

Because the priests understood Israel's history as Yahweh's divine plan, P was more concerned than JE or D with genealogies and chronological data. Its dates are relative, however, and provide no accurate pegs for setting the dates of Moses. Archaeological surveys of the Sinai peninsula indicate that the only habitation in the Late Bronze and Iron I periods (1500–1000 B.C.) was along the Mediterranean coast and at the mining operations of Serabit el-Khadem. If accurate, the report that Moses did not take the coastal route (Exod 13:17–18) poses a problem for 14th, 13th, and 12th-century dates for the Exodus/Conquest. The scholarly consensus of a 13th-century date for Moses is eroding, but ambiguous data make any alternatives equally tenuous.

C. Post-biblical Portraits of Moses

Since the Torah has a number of intriguing, ambiguous, and even troublesome statements, it was inevitable that thoughtful persons, both common folk and scholars, would feel compelled to expand the portraits of Moses more in line with their own theological and philosophical views.

1. Hellenistic Judaism. Since some Hellenistic and Roman writers were critical of Moses and his laws, scholarly Jews in these cultures countered the false charges and tried to enlighten their opponents.

A prime example is Philo of Alexandria, Egypt (1st century A.D.). He weaves together what he has read and heard in the conviction that he has a better knowledge of Moses than any others. Since Philo believes that Greek philosophy is a development from the God-given teaching of Moses, he uses Greek reasoning and ideas to ensure that his Hellenistic audience will have an accurate understanding of Moses. As a "divine man," Moses is superhuman. His physical, mental, psychological, and spiritual gifts are supreme, and his experiences in the royal court and in Midian prepare him to be the ideal king for leading the Hebrews. Moreover, as the perfect ruler, Moses has the faculty of legislation, to command and to forbid; the role of high priest, to care for things divine; and the function of inspired prophet, to declare what cannot be understood by reason (*Vita Mos* II.2.3.187).

The Jewish historian Josephus Flavius writing for a gentile audience, portrays Moses as the "divine man" of Greek culture as well as the Israelite "man of God." As Israel's lawgiver he becomes the legislator and founder of a "theocracy," the ideal society (*AgAp* 2.16. §165). Josephus claims that Moses' gifts were so evident to the Egyptians he was made the general of the Egyptian army during a campaign against the Ethiopians. Not only was he victorious; he married an Ethiopian princess (*Ant* 2.10.2). This tale is one of a cluster of stories expanding on the intriguing claim that Moses had taken a Cushite wife (Num 12:1).

Moses "surpassed in understanding all men that ever lived and put to noblest use the fruit of his reflections." He found favor "chiefly through his thorough command of his passions, which was such that he seemed to have no place for them in his soul" (*Ant* 4.8.49). In concluding his eulogy Josephus declares, "As general he had few to equal him, and as prophet none, insomuch that in all his utterances one seemed to hear the speech of God Himself" (*Ant* 4.8.49).

2. Palestinian Judaism. Since tradition held that the time of prophecy had ceased, Moses became the mouthpiece for some Jews who felt compelled to share their insights. In the *Testament of Moses,* which reinterprets Deuteronomy 31–34, Moses informs Joshua that God created the world on behalf of his people Israel (*T. Mos.* 1:12). Moreover, from the beginning of the world God designed him to be the mediator of the covenant (1:14). In Deut 34:5, Moses apparently dies alone, but in alerting Joshua of his impending death, Moses states that he is going to sleep with his fathers "in the presence of the entire community" (1:15). Joshua is upset at the news and grieves at the loss of "that sacred spirit, worthy of the Lord, manifold and incomprehensible, master of leaders, faithful in all things, the divine prophet for the whole world, the perfect teacher in the world" (11:16). No place will be appropriate for his burial because "the whole world is his sepulcher" (11:8). The text in 12:6 is broken, but it seems that Moses is assuring Joshua that even in death he will make intercessions for their sins.

The mystery surrounding Moses' death perplexed Judaism, and so various expansions of the text appeared. A fragment of one explanation is preserved in Jude 9: "But when the archangel Michael, contending with the devil, disputed about the body of Moses, he did not presume to pronounce a reviling judgment upon him, but said, 'The Lord rebuke you.' " Origen (ca. A.D. 185–254) claimed that the passage was from the *Assumption of Moses,* but unfortunately the text has been lost. Since the end of the *Testament of Moses* has been lost as well, it is difficult to determine whether the two were separate books, or the *Assumption* was the concluding part of the *Testament*.

Jubilees, an expanded commentary on Genesis 1–Exodus 12, purports to be God's word to Moses on Mount Sinai in addition to the Pentateuch, "the first law" (*Jub.* 6:22). It is a revelation from God and the angel of the presence, with the sacred time from Adam to Sinai divided into 49 Jubilees of 49 years (seven weeks of years). Moses is addressed by "you" and told his own story (chaps. 47–48). The basic message is the necessity of faithful obedience to the Torah. Moses is informed that the Patriarchs set the standard by rigorously keeping his law.

The Essenes considered themselves the "true Israel" and went into the Judean desert at Qumran as a community "to prepare the way of Yahweh" (Isa 40:3) by devoting itself to the study of the Torah. Their "Teacher of Righteousness," convinced that end times were near, claimed to have the key for unlocking all the truths hidden in the revelations of Moses and the prophets. The solar calendar, set forth in *Jubilees,* became the standard for the liturgical year at Qumran because it was based on God's creation and the

authority of Moses. Moreover, the age of Moses becomes the model for the messianic age. The "prophet to come" (Deut 18:15, 18) is an eschatological figure associated with the priestly and Davidic messiahs.

While P claimed that all the laws of Exodus-Numbers were revealed to Moses, later tradition concluded that all of the Pentateuch came from Moses, including the statement of his death and burial. This conviction evoked a probing study (*midrash*) of the whole Torah. The results of this devotion were classified as: *halakah,* interpretation of a religious or civil law as a guideline for life; and *haggadah,* explanation of non-halakic material (genealogies, narratives, poems, parables, and proverbs) as homiletical, edifying, and entertaining narrative. While *halakah* was mainly under the jurisdiction of the scholars, *haggadah* was expanded and carried on largely by the common people. Their creativity and ingenuity resulted in some excessive embellishments with which the scholars took issue at times.

An excellent compendium of these Jewish tales is *Legends of the Bible* by Louis Ginzberg. The birth of Moses is an example of the free rein imagination of *haggadah:* "At the moment of the child's appearance, the whole house was filled with radiance equal to the splendor of the sun and the moon. A still greater miracle followed. The infant was not yet a day old when he began to walk and speak with his parents, and as though he were an adult, he refused to drink milk from his mother's breast" (1956: 288–89). A variant of Josephus' story about the Cushite wife has Moses fleeing from Pharaoh and coming across Kikanos, king of Ethiopia, and his army besieging a city. He finds favor with them, and when Kikanos dies Moses is made king and given Adoniah, the Ethiopian queen, widow of Kikanos, as his wife. He reigns for forty years then goes on to Midian because he still fears Pharaoh (1956: 299–302).

Moses ascends into heaven three times: (1) from the Burning Bush as an assurance about his call and the promise that he will be given the Torah (1956: 311–12); (2) from Mt. Sinai for forty days and nights to receive and study the Torah (392–98); and (3) from Mt. Nebo to see the reward awaiting him and to visit the Messiah (492–93). By kissing Moses on the mouth, God takes his soul to heaven where he continues as a servant of the Lord. God buries his body in a place, unknown to Moses and Israel, at the end of a passage leading to the graves of the Patriarchs (502).

3. Rabbinic Judaism. It became increasingly evident within the more complex cultures of Persia, Greece, and Rome that Moses' law needed updating. The problem was to authenticate the growing corpus of new regulations. The rabbis solved the problem by claiming that this oral tradition was revealed to Moses on Mt. Sinai along with the written law: "Moses received Torah from Sinai and passed it on to Joshua, and Joshua to the Elders, and the Elders to the Prophets, and the Prophets passed it on to the men of the Great Assembly" (*m. ʾAbot* 1:1).

The rabbis accepted the biblical portrayal of Moses, but their preoccupation with the Torah and its implications highlighted Moses' role as *teacher.* Although they disagreed among themselves over the centuries, they considered themselves disciples of the "great teacher."

The *haggadah* has some amusing tales about the revelation of the Torah. On reaching heaven, Moses finds God ornamenting some letters of the text with crown-like decorations. On inquiring about their meaning he is told: "Hereafter there shall be a man called Akiba, son of Joseph, who will base in interpretation a gigantic mountain of Halakot upon every dot of these letters." Moses requests to see this man and is permitted to hear Akiba instruct his students. He is grieved, however, because he cannot understand the discussion. Moses is contented when, in answer to a question, Akiba states, "This is a Halakah given to Moses on Mt. Sinai" (Ginzberg 1956: 395). In general, the rabbis recognized the distinctiveness of their interpretations, but to show their loyalty to the written law, they described their conclusions as a mountain of truth suspended by a hair from the Torah.

NEW TESTAMENT

References to Moses are found throughout the NT literature. Most often he is mentioned in connection with the law or in respect to his leadership role. As will be evident below, Moses is cited notably in comparisons drawn between Judaism and Christianity, usually to express the superceding of Judaism or its fulfillment by Christianity.

A. Pauline Epistles

Paul makes explicit reference to Moses only in Romans and 1–2 Corinthians. In one instance he speaks of death having reigned "from Adam to Moses" (Rom 5:14) using Moses to express the end of the time period before the law was revealed. Elsewhere Paul refers to Moses as the one to whom God spoke the law (Rom 9:15), and in turn the one who himself authored the law (Rom 10:5, 19; 1 Cor 9:9).

In 1 Cor 10:2 Paul expresses the unusual idea that all those who passed through the Exodus were "baptized into Moses (*eis Mōysēn*) in the cloud and in the sea." He is evidently referring to incorporation into the leadership of Moses. While the phrase *eis Mōysēn* is modeled on the baptismal formula *eis Christon* (Rom 6:3; Gal 3:27 cf. 1 Cor 12:13), it can hardly bear a similar sense of immersion in water since the Israelites passed through the sea as on dry land.

In 2 Cor 3:7–18 are found Paul's most sustained remarks about Moses (see Lambrecht 1983b: 368; Theissen 1987: 115–75). Moses is used in sketching two comparisons. With Exod 34:29–35 evidently in mind, Paul opposes "the dispensation of condemnation" and "the dispensation of righteousness" (2 Cor 3:9). The former came with such splendor that Moses had to veil his face because of the brightness it reflected (3:7), a splendor that nevertheless was not lasting. In contrast, for Paul the dispensation of righteousness, i.e., the dispensation of the Spirit (3:8), far exceeds in splendor and is a permanent dispensation (3:11). Paul is thus enabled by hope to be "very bold, not like Moses, who put a veil over his face so that the Israelites might not see the end of the fading splendor" (3:13).

Within the same passage the veil image is also applied to the Jews (see Wong 1985: 54–59). In Paul's view "to this day whenever Moses [i.e., the law] is read a veil lies over their minds" (3:15). But the Christians, however, "with unveiled face" behold as in a mirror (see Lambrecht 1983a: 246–51) "the glory of the Lord" and are "being changed into his likeness" (3:18). This latter comparison suggests a shift in Paul's use of Moses. While he represents that dispensation which has been superseded in the first instance, in the second he is that revelation which the Jews failed to perceive but which becomes comprehensible for one who "turns to the Lord" (3:16).

B. Mark, Matthew, Luke-Acts

The Synoptics and Acts frequently refer to Moses in citing prescriptions of the law. Phrases are used such as "Moses commanded," "Moses said," "Moses wrote," "Moses allowed," and similar constructions (Mark 1:44 = Matt 8:4 = Luke 5:14; Mark 7:10; 10:3–4; Mark 12:19 = Matt 22:24 = Luke 20:28; Matt 19:7–8; Acts 3:22; 26:22). The Pentateuch itself is designated as "the book of Moses" (Mark 12:26), "the law of Moses" (Luke 2:22; 24:44; Acts 13:39; 15:5; 28:23) or just "Moses" (Luke 16:29, 31; 20:37; 24:27; Acts 15:21).

In the Transfiguration scene Moses appears along with Elijah (see Pamment 1981: 338–89; Moiser 1985: 216–17) and both talk with Jesus (Mark 9:4–5 = Matt 17:3–4 = Luke 9:30, 33). While in Mark and Matthew the topic of their conversation with Jesus is not disclosed, in Luke they are depicted as talking about Jesus' *exodos* (9:31). Moses and Elijah function in the Transfiguration episode as foils to Jesus. As representatives of the Israel of old they disappear, leaving Jesus alone. The instruction by the heavenly voice to listen to Jesus (Mark 9:7; Matt 17:5; Luke 9:35) "relates him intimately to the reshaping of Israel as God's people" (Fitzmyer *Luke I–IX* AB, 795).

Among the Synoptics only Matthew refers to "Moses' seat" (23:2). This is an image used to express the teaching authority of the scribes, for teachers and judges of Jesus' time normally sat to perform their functions. In a similar vein, some have seen in Matthew's description of Jesus' teaching (in a sitting position) from the mountainside (5:1–2) as deliberate analogy with Moses' actions on Sinai (e.g., Allison 1987: 203–5). Jesus then would be presented as the second or new Moses, the better lawgiver. However, it is not certain that such a comparison was intended (Donaldson 1985, *passim*). It can be noted, for example, that Moses ascended Mt. Sinai for reasons other than teaching and that he descended the mountain in order to instruct the people (Exodus 19). Nonetheless, elsewhere (chaps. 1–2) Matthew constructs a parallelism between various events surrounding the births of Moses and Jesus which is quite apparent. This seems to be intentional (Brown 1977: 110–19) although Moses is not mentioned by name.

In Acts, Moses is referred to twice as the embodiment of Judaism, such that Stephen could be accused of having spoken "blasphemous words against Moses and God" (6:11) and Paul of having taught the gentiles "to forsake Moses" (21:21). Acts also refers to Moses as the deliverer of the "customs" of Judaism (6:14; 15:1).

Ironically, while Moses was cited in accusation against Stephen, it is Moses who functions in the speech of Stephen as an indictment against those Jews who rejected Jesus (7:2–53). This passage, which contains numerous details about the life of Moses (7:20–24, 30–38, 44), stresses the rejection of Moses by his own people (7:25–29, 39–40, 52), clearly reminiscent of the treatment accorded Jesus by Stephen's listeners (7:52). It thus appears the author of Acts intends Moses to be viewed as the type of Jesus, i.e., Jesus is the prophet who like Moses was rejected by his people (Johnson 1977: 70–76).

C. John

The Fourth Gospel also establishes a parallelism between Moses and Jesus in various respects, yet also proclaims that Jesus surpasses Moses (see Meeks 1967: 319; *IDBSup,* 606). For example, in 1:17 the law "given through Moses" is analogous to, yet fulfilled by, the "grace and truth [which] came through Jesus Christ." Further comparisons where Jesus transcends Moses are made between Moses who "lifted up the serpent in the wilderness" (3:14) and "the Son of man [who himself must] be lifted up" (3:14); also, as Moses "gave … bread from heaven" (6:32), Jesus' Father gives "the true bread from heaven" (6:32).

The Johannine author affirms that God spoke to Moses (9:29) and that Moses gave not only the law (7:19; cf. 7:23; cf. also 8:5 within the interpolation 7:53–8:11) and circumcision (7:22), but also wrote of Jesus in the law (1:45; 5:46). From the author's perspective, those who truly believed the writings of Moses (5:46) would thereby believe Jesus. Thus, rejection of Jesus in fact leads to accusation by Moses (5:45). At the same time there is an ambivalence toward Moses on the author's part (*IDBSup,* 606), for being a disciple of Moses is incompatible with being a follower of Jesus (9:28).

D. Hebrews

The author of Hebrews, concerned primarily to prove the preeminence of Christianity over Judaism, characterizes Moses as similar to Jesus, yet inferior to him. Moses is portrayed as having been "faithful in all God's house as a servant, to testify to the things that were to be spoken later" (3:5; cf. 3:2; Num 12:7), while Christ is described as "faithful over God's house as a son (3:6). Building on the metaphor of God's house as being the community of believers, the author describes Jesus as being worthy of "more glory than Moses as the builder of a house has more honor than the house" (3:3).

Numerous references are also made to Moses in respect to his leadership of those who left Egypt (3:16, 18), the Hebrew priesthood (7:14), the tabernacle he erected (8:5), the law he delivered (9:19; 10:28), and his trembling with fear on the mountain (12:21). With each of these instances aspects of Judaism are

contrasted with Christianity, the former in each case superseded by the latter. Only in 11:23–24 is Moses cited in a context where he is to be emulated, not supplanted. In this passage Moses is held forth as an exemplar of faith; he is one of that great "cloud of witnesses" (12:1) who surround believers in Jesus and who urge the believers to "run with perseverance" (12:1) the race set before them.

E. Revelation

The only explicit reference to Moses in Revelation occurs in 15:3 where those who had conquered the beast are depicted as standing beside the sea of glass with harps of God in their hands while "they sing the song of Moses, the servant of God, and the song of the Lamb." The text of the song is then quoted in 15:3–4.

The phrase "the song of Moses, the servant of God" is reminiscent of Exod 14:31–15:21 where Moses and the people of Israel sing a song to the Lord extolling God's power and exulting in the destruction of their enemies. As that song in Exodus 15 was sung on the shore of the Red Sea, so in Rev 15:3 will the victorious martyrs sing beside the sea of glass. However, there are serious difficulties in interpreting this passage since the song in Rev 15:3–4 is not one of triumph over enemies as in the Exodus text, but rather of glorifying the Lord. Furthermore, it is hard to understand why the author of Revelation would have envisioned Christian saints before the throne of God singing the song of Moses as given in Exodus 15. Consequently some have viewed the phrase concerning Moses in 15:3 as an interpolation.

F. Others

In two texts, Jude 1:9 and 2 Tim 3:8, it is noteworthy that both sources derive their data about Moses from legendary material.

In the letter of Jude, which is concerned with warnings against false teachers in the church, the presumptive attitudes of those teachers toward angels is contrasted with the restraint exhibited by the archangel Michael toward another angel. Michael in "contending with the devil, disputed about the body of Moses," yet "did not presume to pronounce a reviling judgment upon him, but said, 'The Lord rebuke you' " (Jude 9). According to several early Christian writers (e.g., Clement of Alexandria, Origen) this episode refers to the burial of Moses and was recounted in the *Assumption of Moses*, a Jewish apocalyptic work now known only fragmentarily, and without the relevant section.

In a similar context concerned with heretics, the author of 2 Timothy states that "as Jannes and Jambres opposed Moses, so these men [heretics] also oppose the truth" (3:8). While in Exod 7:11 magicians argue against Moses before Pharaoh, their names are not given. Later Jewish tradition, however, supplied their names and histories (see the overview of sources in Dibelius-Conzelmann *Pastoral Epistles* Hermeneia, 117).

FLORENCE MORGAN GILLMAN

MOSES, ASSUMPTION OF. See MOSES, TESTAMENT OF.

MOSES, TESTAMENT OF. A pseudepigraph extant in a single, poorly preserved, incomplete, and at times illegible Latin palimpsest discovered in the Ambrosian library of Milan and published by Ceriani in 1861. The manuscript dates from the 6th century C.E., but orthography and style indicate that it is a copy of an early 5th century writing. The Latin text is clearly a translation from a Greek document which

may be as early as the late 1st or early 2d century C.E. Most early editors assumed that Greek was the original language, but it is now universally agreed that the Greek text available to the Latin translator is itself a translation of a Semitic writing. Whether the Semitic text was Aramaic or Hebrew remains a matter of dispute, but the latter is more probable.

Ceriani, on the basis of quotations in the Acts of the Council of Nicea and scattered patristic references, entitled the manuscript "The Assumption of Moses," an account of Moses' being taken directly to heaven rather than dying a natural death. This story is well known in many Jewish writings and is probably referred to in Jude 9. The present text, however, knows nothing of an assumption and clearly indicates that Moses died a natural death (1:15; 3:13; 10:14). Some ancient quotations and stichometries (lists of books and number of lines contained in each) refer to both and *Assumption of Moses* and a *Testament of Moses.* The relationship between them is not clear. It has been proposed that they were either two distinct works, a single work consisting of two sections, or two separate works which were subsequently joined together. It is more prudent, lacking manuscript evidence, to refer to the present work as the *Testament of Moses* and leave open the question whether an account of Moses' assumption followed the mutilated ending of 12:13.

A. Contents

Couched in the well-known testament genre—deathbed words of an ancient worthy to his people, his family, or his successor—the *Testament of Moses* purports to be the final statement of Moses to Joshua. In summary fashion, Moses outlines the Conquest (2:1–2), the time of the Judges and the united kingdom (2:3–4), and the period of the divided kingdoms (2:5–9). Chapter 3 relates the fall of Jerusalem to the Babylonians (vv 1–3) and the reunion of all the tribes in the lands of their exile (vv 4–14). Moses then foretells the return from captivity (4:1–6) and the rebuilding of Jerusalem. Chronological referents in chaps. 5–8 are confusing (see below on date and provenance), but the general sense is clear. Moses predicts the apostasy which will arise among the Hellenizing Jews in the times of Antiochus, the Hasmoneans, and Herod, and the consequent severe persecutions including the partial destruction of the Temple (6:9).

Chapter 9 recounts an episode of the resolve of a faithful Levite, Taxo, and his seven sons to die rather than desert their faith. This story is followed by an apocalyptic hymn which portrays the destruction of the evil one at the hands of Israel's guardian angel (10:1–2), cataclysmic cosmic events, and the exaltation of Israel at the end of days (10:3–10). The manuscript concludes with a dialogue between Joshua and Moses in which Joshua expresses his fear that after Moses' death the enemies of Israel will overwhelm them. Moses assures him that God's purpose will not fail and that the covenant promises will abide (10:11–12:13). At this point, in the middle of a sentence, there is a break in the text and the remaining contents are lost.

B. Date and Provenance

Proposed dates for the *T. Mos.* range from the time of Antiochus Epiphanes to the middle of the 2d century C.E. Internal evidence and external attestation rule out serious consideration of a date later than the end of the 1st century C.E., and probably a date later than the middle of that century. R. H. Charles' careful analysis which limited the period of composition to 7–30 C.E. was regnant in scholarly circles from the time of his proposal in 1897 until the past two decades (see *APOT* 2: 407–24). Considerable recent scholarship, on both theological and form critical grounds, has revived the proposal of an Antiochan date. The crux of the issue is the apparent disruption of the chronological order of chaps. 6–8. Chapter 6 clearly refers to the reign of Herod the Great, and the particularity of details in chap. 8 seems to point to the persecutions of Antiochus. Charles proposed that chaps. 6–7 had been erroneously inserted between chaps. 5 and 8 in the process of transmission, while the newer thesis (championed especially by Licht and Nickelsburg) contends that the chapters are a post-Herodian interpolation into a document of the Maccabean era. Both proposals have considerable merit. Dislocation in the transmission of an ancient text is well attested, as are reworkings of an older text by subsequent generations. Both proposals perhaps attribute a logic to an apocalyptic author which is not altogether necessary. The most that present research can affirm is that the extant text of the *T. Mos.* should be dated after 4 B.C.E., and probably before 30 C.E.

There is also a strong possibility that some sources incorporated in the text had a considerable prehistory, either oral or written.

Attempts to identify the religious community to which the author of the *T. Mos.* belonged are inconclusive. Almost every well-known religious group of the general period, from the Samaritans to the Sadducees, has been suggested. Three proposals warrant serious consideration: (1) the Hasidim of the Maccabean period; (2) a branch of the Pharisees; and (3) the Essenes. The date assigned to the composition of the *T. Mos.* is a significant though not totally decisive factor. An Antiochan dating would rule out the Pharisees and the Essenes, while a post-Herodian dating militates against the Hasidim.

Increasing awareness of the complexity of Judaism in this period cautions against attempting to identify every document of the era with a specific *known* group. The *T. Mos.* clearly reflects the milieu of movements, including the Pharisees and Essenes, which developed from the circles of the Hasidim, but a more precise identification goes beyond the evidence presently available.

C. Theological Emphases

The theological framework of the *T. Mos.* combines, somewhat awkwardly, the traditional view that the fortunes of the community results from its obedience or disobedience with the conviction that all that has come to pass or will come to pass has been predetermined by God and revealed to Moses. Determinism, however, is the overriding element which undergirds the book's fundamental message. Since God has determined all things in the past and future (3:11–12; 12:4–5), the reader may accept with assurance the assertion that the hour of God's intervention on behalf of his people is at hand (10:1–10). However great the vicissitudes of the past and the travails of the present, God's covenant promises, confirmed by his oath, will not fail (cf. 1:8–9; 3:9; 4:2–6; and especially 12:7–13). The pragmatic purpose of apocalyptic thought, to provide a living hope in a dying age, is the fundamental emphasis.

Claims that the idea of God's creating the world for his people (1:12) and the allusion to Moses' preexistence and role as a mediator (1:14) appear first in the *T. Mos.* are inconclusive. Similarly, the view that the *T. Mos.* is the first writing to speak of an extramundane eschatological triumph for Israel is based on a questionable reading of 10:10. Matters of priority and dependence among the documents of the period are elusive, but these do not detract from the contributions of the *T. Mos.* to an understanding of the ideological milieu of the era.

Recent scholarship has focused on the role of Taxo (9:1–7) and his vow of martyrdom as precipitating the divine vengeance depicted in the eschatological hymn of chap. 10 (vv 1–10). It is proposed that this act is to provoke God to intervene on behalf of his people and thus inaugurate the eschatological age. This proposal is persuasive, on both theological and form critical grounds, but remains moot. It can also be argued that the story is rather a singular example of the woes which will precede the divine intervention rather than an act which precipitates it. Divine vengeance is clearly present. The connection between Taxo's vow of martyrdom and its onset is problematic, possible but not proven.

D. Relation with Other Writings

The *T. Mos.*, like most writings of the period, is replete with allusions to books in the Hebrew canon. Deuteronomy 31–34 is the fundamental base and, in a loose sense, the *T. Mos.* can be read as a midrash on those chapters. Possible relationships with other noncanonical books, e.g., *1 En.* and *2 Bar.* and a number of Qumran writings, have been suggested and carry varying weights of possibility. Questions of the interdependence of writings of this period, as noted earlier, remain unresolved. Such interdependence is certainly possible, but a common ideological setting may also account for the alleged parallels.

Special attention has been called to possible allusions to the *T. Mos.* in the NT. The most often cited passages are Jude 9, 12–13, 16; 2 Pet 2:13; Acts 7:36–43; and Matt 24:19–21 (with parallels). Acts and Jude are the most probable, though the clearest reference in the latter (v 9) properly belongs to the Assumption of Moses and not to the extant Testament. If the author of Jude does cite either as Scripture, interesting questions are raised about the nature of canon.

Although, as one recent commentator has concluded, the *T. Mos.* may not be very original in its theological bases, it does provide valuable confirmation of, indeed the extension of, information about the

thought world of early Judaism and early Christianity, a matter of increasing interest among biblical scholars.

JOHN F. PRIEST

MOST HIGH [Heb *ʿelyôn* (עֶלְיוֹן)]. Meaning "the Exalted One," *ʿelyôn* is the title given to the highest of the gods in the Canaanite pantheon and was appropriated by the Hebrews as a title for Yahweh at various intervals in the life of the nation (e.g., Deut 32:8–9; 2 Sam 22:14; Pss 7:17; 97:9). Used frequently in Gen 14:18–22, *ʿelyôn* appears in combination with the title *ʾēl.* This combination is susceptible of more than one interpretation and can be taken as a divine name with its modifier (Cross 1962: 241; *TDOT* 1: 255–56), or as the name of another deity and, therefore, as an intrusive element (Della Vida 1944: 3–9). Scholars also disagree on the extent to which this title has been assimilated with the Mosaic religion. Some scholars believe that the term has been thoroughly assimilated, the title equated fully with Yahweh and his worship (Anderson *IDB* 2: 412). Others argue, however, that decisive differences existed between the Jerusalem cultus of pre-Israelite times and the Mosaic religion (Cross *TDOT* 1: 256). Later in the nation's history the term fell into neglect, preserved only in poetry and liturgies. But in the late postexilic period it enjoyed new popularity, lending itself easily to an emphasis upon the transcendence of God in, for example, Daniel, 1 Esdras, the Wisdom of Sirach, *Enoch*, *Jubilees,* and *4 Ezra* (*IDB* 2: 412). The term (Gk *hypsistos*) is also used to a limited degree in the NT (Mark 5:7 [= Luke 8:28]; Acts 7:48; 16:17; Heb 7:1).

FREDERICK W. SCHMIDT

MOT (DEITY) [Heb *māwet* (מָוֶת), *môt*]. The word *māwet/môt* is often used in the Hebrew Bible to refer to the realm of death and occasionally it is personified as the chthonic power behind sterility, drought, disease, wickedness, and death itself. We knew of a Canaanite deity bearing the name "Muth" from the account of Sanchuniathon's *Phoenician History* by Philo of Byblos (see Eus. *PE* 1.10.34; Attridge and Oden 1981: 57, 76–77) which tells us that "the Phoenicians call him Death and Pluto." Yet it has been the publication of the Ugaritic texts which have provided us with the most abundant and accurate literature on the Canaanite deity Mot (*mt* vocalized *môtu*), the god of death and the netherworld, who plays an adversarial role to Baal, the god of life.

———

A. In the Ugaritic Texts
B. In the Hebrew Bible
C. Conclusion

———

A. In the Ugaritic Texts

Mot bears the epithet "son of El" (*bn lm*) as well as the epithet "Beloved of El, the Warrior" (*ydd/mdd il ǵzr*). In *CTA* 6.6.24–29 Šapšu, the sun goddess, speaks of El as the father of Mot in a context which illustrates Mot's subservience to and dependence on El, the head of the pantheon. It is easy to see why such a potent combatant as Mot was called "warrior" or "hero," but why was he called the "beloved" of El? Pope (*IDBSup,* 607), noting that the normal response to Mot by both gods and humans was fear and dread, suggests that "beloved" is an intentional euphemism for the opposite sense (cf. Cassuto 1971: 64). Others (e.g., Oldenburg 1969: 132–34) take a different approach implying that Mot was El's beloved precisely because he did battle with Baal who was a rival to El's power. Thus Mot and Yamm, who also bears the epithet *ydd il,* are allies of El and thus called his "beloved." Neither of these interpretations are entirely convincing. Rather than celebrating Mot's victory, El mourns the death of Baal. El rejoices at the news of Baal's revival, and his threatened intervention in the battle scene between Baal and Mot in *CTA* 6.6.16–35 gives the victory to Baal.

In the past scholars have attempted to equate Mot with various other gods of the Ugaritic pantheon including Resheph (C. F. Pfeiffer), Yamm (S. Mowinckel), Horon (W. F. Albright), and Dagan (F. Løkkegaard) as well as the alter ego of Baal (R. deLanghe and I. Engnell). None of these attempts has proven successful (see Watson 1970: 139–41, 162–63 which includes bibliography on above scholars). Mot was a powerful deity in his own right, reflecting one of the most primary forces of nature. There are, however, clear parallels between the Baal-versus-Mot narrative and the Baal-versus-Yamm narrative suggesting that the former may have been modeled at least in part on the latter (Smith 1986b: 327–28; 1987: 292–93).

In the Baal Cycle (*CTA* 4–6), the major texts describing Mot's activities, it is his battle with Baal which takes center stage. We find Mot described as dwelling in the underworld (*arṣ*; for "land" = "underworld" see Tromp 1969: 23–46 and *CAD* E s.v. *erṣetu*) at the base of 2 mountains which seem to stop up the underworld (*CTA* 4.8.1ff.). The description which follows describes his abode as "watery pit/ooze" (*hmry*), "decay" (*mk*) and "slime" (*ḫḫ*). Yet in addition to this watery place Mot also rules over *dbr // šd šḥlmmt.* These terms are difficult to interpret, but they seem to refer to the desert steppe illustrating the forces of drought (Clifford 1972: 79–86; Smith 1986a: 311–14).

When Baal sends messengers to Mot he instructs them of the danger of getting too close to Mot "lest he put you in his mouth like a lamb, crush you like a kid in his jaws" (*CTA* 4.8.17–20). Later in the story we find a description of Baal's descent into the very throat of Death whose insatiable appetite is described in graphic detail:

[špt lʾa] rṣ špt lšmm One lip to the earth, one lip to heaven,
[yʾrk l]šn lkbkbm (Mot) streached out his tounge to the stars.
yʿrb bʿl bkbdh Baal entered his innards,
bph yrd He descended into his mouth. (*CTA* 5.2.2–4)

Elsewhere we have the description of Mot eating with both hands when he is hungry (*bkl<ʾa>t ydy ʾilḥm; CTA* 5.1.19–20; cf. Job 18:13).

Thus Baal declared himself to be the eternal slave of Mot (*ʿbdk ʾan wdʿlmk CTA* 5.2.12). Eventually Baal is rescued by the capable goddess Anat who annihilates Mot in the following fashion:

tʾiḫd bn ʾilm mt She seized El's son Mot
bḥrb tbqʿnn With a word she split him,
bḫṯr tdrynn With a sieve she winnowed him,
bʾišt tšrpnn With fire she burned him,
brḥm tṭḥnn With millstones she grounded him,
bšd tdrʿnn In the field she scattered him (*CTA* 6.2.30–35)

Most scholars have seen a fertility ritual behind these lines involving some type of imitative magic. The piling up of agricultural metaphors has led most scholars to assert that what happens to Mot is a reflex of

the harvesting of grain (e.g., de Moor 1971: 212–15; 1987: 88–89). Others (e.g., Watson 1972: 60–64) disagree arguing that what we have is simply the ritual destruction of a hostile deity.

With the death of Mot, Baal is revived and fertility returned to Ugarit with the heavens raining oil, the wadis running with honey. Due to the cyclical orientation of the agriculturally based religion (cf. de Moor 1971: 9–28), it is not surprising that later on in the story (seven years having elapsed) we once again find Mot engaged in a fierce battle, this time with Baal himself.

yt ʿn kgmrm They butted each other (?) like beasts (?)

mt ʿz bʿl ʿz Mot was strong, baal was strong;

yngḫn kr̆umm They gored each other like wild oxen,

mt ʿz bʿl ʿz Mot was strong, Baal was strong;

ynṯkn kbṯnm They bit eachother like serpents

mt ʿz bʿl ʿz Mot was strong, Baal was strong;

ymṣḫn klsmm They kicked (?) each other like stallions (?)

mt ql bʿl ql Mot fell, Baal fell … (*CTA* 6.6.16–22)

The stalemate is brought to an end when suddenly we hear Šapšu declaring to Mot that he will not prevail over Baal. She threatens the intervention of El who has decreed that Mot must submit. Mot becomes afraid and withdraws from the picture leaving Baal once more enthroned.

In addition to the Baal Cycle we have mention of Mot in a text which scholars have called "Shaḥar and Shalim: The Birth of the Two Gracious Gods" (*CTA* 23). At the beginning of this text we read about a deity known as *mt-w-šr.* On analogy to Kothar-wa-ḫasis, the craftsman of the gods, most scholars see a singular deity here with a double name. Most scholars see *mt* as a reference to Mot yet there is considerable difference of opinion with regard to the translation of *šr* with suggestions including "death and dissolution," "death and evil," "Mot and prince," "radiant Mot," etc. What is clear is that this deity wields two scepters which bear fitting descriptions for the God of death:

bdh ḫṭ ṯkl In one hand a scepter of bereavement,

bdh ḫṭ ʾulmn In the other hand a scepter of widowhood.

Tsumura (1974: 407–13) compares an Aramaic incantation bowl picturing the angel of death with a sword in one hand and a spear in the other.

We find little evidence of a cult of Mot. As of yet we have found no temple dedicated to him, no mention of him in any of the pantheon lists and no sacrificial or offering texts addressed to him (de Moor 1970: 222). On the other hand, there was a vibrant cult of the dead at Ugarit (Lewis 1989: 5–98).

B. In the Hebrew Bible

In the Hebrew Bible *māwet*/*môt* often refers to the realm of death and occasionally refers to death personified. There is a fluidity in the biblical texts between Mot (and Sheol for that matter) as a person and a locality. Scholars vary as to how prevalent Mot was in the Hebrew Bible. On one extreme some scholars (e.g., Smick 1980: 497) argue that Mot "was not mentioned in the OT" (cf. Kaufmann 1960: 311–16), while on the other extreme Mot has been read into almost every mention of death.

There are several passages where it is hard to ignore the presence of a personified Death. The description of insatiable Death in Hab 2:5 (cf. also Isa 5:14; Prov 1:12; 27:20; 30:15b–16; Ps 141:7) is remarkably reminiscent of Mot's insatiable appetite in *CTA* 5.2.2–4 (see above; Lewis 1989: 152–53). Ravenous Death is also depicted in Job 18:13–14 where he is described eating greedily as in *CTA* 5.1.19–20 mentioned above. In light of the descriptions of Mot's (and Sheol's) voracious appetite which includes imagery of Mot swallowing his victims whole, it is not only ironic but also quite significant to find Yahweh swallowing Mot in Isaiah 25:8 (for other swallowing imagery used of Yahweh cf. Lam 2:5; Ps 21:10—Eng 21:9; 55:10—Eng 55:9; Isa 19:3). Likewise, the "covenant with Death and Sheol" in Isa 28:15, 18 is best understood against the backdrop of the Canaanite god Mot.

Death is personified twice in Hos 13:14, a passage describing Yahweh's ransoming Ephraim from the grasp and plagues of Death and Sheol (Andersen and Freedman *Hosea* AB, 639–40). In Psalm 49:15, Death is described as a shepherd of those who descend into the underworld. Cant 8:6 refers to love being "as strong as Death" which Pope (*Song of Songs* AB, 668–69; cf. Pardee 1987) argues as an allusion to Mot rather than the superlative usage suggested earlier by Thomas (1953: 221; cf. Waltke and O'Connor 1990: 269). For additional occurrences of personified Death which have been suggested by scholars see Cooper (1981: 392–400).

Some attempts at seeing Mot in the Hebrew Bible have not been successful. Albright (1950: 11, 13, 17) emended Hab 3:13 to describe a direct conflict between Yahweh and Mot yet his emendation has not generally been followed (Heibert 1986: 37; Tsumura 1989: 40–45). Jeremiah 9:20—Eng9:21 is frequently quoted as illustrating parallels between the worlds of Ugarit and the Bible. Death (*māwet*) is described as entering through windows in Jer 9:20 and this has been compared on numerous occasions with *CTA* 4.6.12 which describes Baal's refusal at first to have windows in his palace due to the threat of Mot (e.g., Cassuto 1975: 35, 133–35; 174). Yet, as noted by many scholars, it is Yamm and not Mot who is the enemy Baal fears. More fruitful background material for Death entering the window in Jer 9:20 may be drawn from the Mesopotamian sphere (see Paul 1968; Smith 1987).

C. Conclusion

At Ugarit, Mot is a decidedly more personal being portrayed as the archenemy of Baal. The degree to which Ugaritic Mot is seen behind biblical texts will continue to be debated. Yet the personification of Death in the Hebrew Bible is too prevalent and enduring to be regarded merely as a poetic metaphor or literary device. In ancient Israel, Death was considered to be a real person. At the same time, however, in the religion which becomes normative Yahweh must absorb all aspects of divinity. Just as he takes on the attributes of other Canaanite deities such as El and Baal, so too he takes on the attributes of Mot, although he is never called by this name. Yahweh, by definition, must absorb any divine powers usually ascribed in the ANE to other deities (cf. Miller 1986: 242–44 who points out similarities with supreme national deities in Mesopotamia such as Marduk and Ashur). Thus the God of the Hebrew Bible has "terrors" (*biʿûtîm*, Job 6:4) corresponding to those of Mot, who is called in Job 18:13 "the king of terrors" (*melek ballāhôt;* Pope *Job* AB, 135–36; Habel *Job* OTL, 287–88). Compare also the "breakers" of Yahweh in Ps 42:8—Eng 42:7 with the "breakers" of Death in 2 Sam 22:5—Eng22:4 (cf. Ps 35:5; 50:22). Yahweh also has a chthonian entourage which makes up his cosmic army: "Before him marched Plague (Deber), Pestilence (Rešep) followed close behind" (Hab 3:5; cf. Deut 32:24; Ps 78:48). Yet in the final analysis, in the eschatological battle described in Isa 25:8, Yahweh swallows up Mot forever (*neṣaḥ*). As Gropp has aptly noted, this once-and-for-all victory "contrasts strikingly with the periodic struggle between Baal and Mot, growing out of an agriculturally based religion. Further, Baal's dominion never extends completely to the realm of Mot. Yahweh's dominion, on the other hand, is quite absolute."

MOZA (PERSON) [Heb *môṣāʾ* (מוֹצָא)]. **1.** Son of Caleb born to his concubine Ephah according to 1 Chr 2:46. The name Moza does not follow the usual patterns of Hebrew personal names, and should be seen as a place name which has been construed as a personal name in order to explain the relationship between Calebite clans in different geographical locations. Many other of the personal names in this list reflect geographical locations (Rudolph *Chronikbücher* HAT, 21–22). Perhaps Moza should be identified with the city Mozah (*hammōṣâ*) mentioned within the tribal boundaries of Benjamin in Josh 18:26 or should be related etymologically to *mṣh,* "to drain out," and was named after a prominent wine or oil press that was located there (Rudolph, 21, n. 2). This section of the Judah genealogy in Chronicles has no extant preexilic parallel, but is probably based on earlier sources. That genealogy contains two sections dealing with the descendants of Caleb (2:18–24 and 2:42–55); this structure was created by the Chronicler who ordered a symmetrical genealogy of Judah which emphasized the prominence of David (Williamson 1979).

2. A Benjaminite, a 7th generation descendant of King Saul according to the genealogy of 1 Chr 8:36, 37 and 9:42, 43. His descendants continue the main line of the Saulide genealogy. The genealogy of Saul preserved in the Chronicler's sources reflects the notion of Saul's continued legitimacy, even after the ascent of David. See MELECH. There is some variation of the vocalization of this name in the LXX but this probably reflects the translators' attempt to grapple with Moza as a personal name. Indeed, in this genealogy, Moza reflects the Benjaminite city Mozah, since this section of the genealogy uses place names as personal names to define a relationship between various Benjaminite cities by positing an ancient kinship relationship between ancestors with the city names. This genealogy contains the geographical names Alemeth, Azmaveth, and possibly Jarah (*yʿrh*), which might be identified with the city Kiriath-jearim (*qryt yʿrym*) (Demsky 1971: 19). The construal of geographical names as personal names is typical of genealogical thinking (Wilson *GHBW*), and is found elsewhere in biblical genealogies (Demsky 1982). On the doubling of the Benjamin genealogy in 1 Chronicles 8 and 9, see AHAZ.

MARC Z. BRETTLER

MOZAH (PLACE) [Heb *mōṣâ* (מֹצָה)]. A town of Benjamin mentioned after Mizpeh and Chephirah (Josh 18:26). The location is uncertain, but it was probably in the vicinity of modern Mevasseret Yerushalayim (M.R. 165135), 7.5 km W of Jerusalem. A derivative of its name seems to have been preserved in the nearby ruin of Kh. Beit Mizza, the heavy *ṣ* of Hebrew passing into the light *z* of Arabic. Suitable Iron Age pottery (including a *lmlk* jar handle), building remains, and burial caves of the 8th–7th centuries B.C.E. have been found there.

The name of Moza [Heb *môṣā*ʾ] appears in the genealogy of Benjamin (1 Chr 8:36–37), suggesting to some scholars that the settlement may have been founded by an Israelite tribesman (Aharoni *LBHG*, 246). One of Caleb's sons is also called Moza (1 Chr 2:46), but it is doubtful whether there is any connection between him and the Benjaminite site (Avi-Yonah *EncJud* 12: 494). It is also possible that the town's name was derived from a water source, since numerous springs exist nearby (Kallai *EncMiqr* 5:229). A third suggestion is that *mōṣâ* (= Heb "source" or "origin") refers to a nearby clay source that modern geologists call the Moza Formation. Neutron activation analysis (NAA) studies have confirmed that many vessels made in the Jerusalem area during OT and NT times were manufactured from these clays (Gunneweg et al. 1985: 272).

Although Mozah is not mentioned in any written sources of the Persian period, the name of this town was stamped on the handles of storage jars from the 5th–4th centuries B.C.E. found in excavations at Jericho, Gibeon, and Tell en-Nasbeh—an indication that Mozah was an administrative and/or pottery manufacturing center.

Sometime during the Second Temple period, Mozah moved from its more defensible location on a hill to a nearby spot in Wadi Beit Nahina (= N. Shmuel), about 2 km S of Kh. Beit Mizza. The Babylonian Talmud (*Sukk.* 45a) states that Mozah was a place below Jerusalem where willows were gathered for Sukkoth, and that it was the same as Colonia. This description fits very well the location of modern-day Moza (M.R. 166134), a small settlement built adjacent to the Arab village of Qālûnya which preserves the Latin name of "Colonia."

The circumstances surrounding the renaming of Moza is given by Josephus (*JW* 7.6.6 §217). Following the Jewish Revolt of 70 C.E., Vespasian settled 800 demobilized Roman soldiers in a town Josephus calls Emmaus (Gk *Ammaous*). The village name was then changed to Colonia-Emmaus, or Colonia, for short. A "source of Colonia" (perhaps Ain Moza) is mentioned by Cyrillus Scythopolitanus (*v. Sab* 67).

Early surveys in the vicinity of Qalûnyah uncovered the remains of a Roman road which once linked Jerusalem with Jaffa, a road station, a bath, Jewish and Roman tombs, and a Byzantine monestary (Press 1952: 559). In 1973, I. Eisenberg carried out a salvage dig at Moza where he discovered remains of the Roman period and apparently part of the colony established there by Vespasian. Among the finds were a *prutah* from the days of Pontius Pilate and a silver coin from the time of Vespasian (1974: 64).

Some have suggested that the Colonia-Emmaus mentioned by Josephus should be identified with the Emmaus of Luke 24:13. However, rather than the 30 stadia (ca. 6 km) figure given by Josephus, Luke records the distance at 60 stadia. Either Luke meant it as a round-trip numeral, or another location is intended (cf. 24:33). Some Gk mss give a 160 stadia figure for Emmaus.

MU. The twelfth letter of the Greek alphabet.

MUGHAYYIR, TELL EL- (M.R. 238225). A site about 12 km NE of Irbid, on an agricultural plateau cut out of the fertile agricultural plain S of Wadi el-Yarmouk by two valleys, the Wadi eš-Sellale and the Wadi Rahub. The region S of the village has a concentration of springs and archaeological sites.

Tell el-Mughayyir lies at the S edge of the modern village of el-Mughayyir, and is situated on the edge of an 80 m escarpment of the Wadi Rahub. Its position affords a panoramic view of the surrounding area. The tell is relatively small, ca. 150 m × 150 m, and has a maximum height of 7 m. The summit of the tell covers an area of ca. 40 m × 30 m.

The region has not been previously well documented despite the richness of its material. N. Glueck surveyed the region from 1939–47, and from 1963–65. S. Mittmann conducted an intensive survey which led to the conception of the joint excavation project in 1974 and 1975. A second project began in 1984 and continued in 1985 with simultaneous excavations at both Tell el-Mughayyir and Khirbet Zeiraqoun under the direction of S. Mittmann and M. Ibrahim. As well as continuing excavation on both these sites the joint project aims to conduct a detailed survey of the area and investigate tombs within the region including an Epipaleolithic site at the edge of the Wadi Rahub.

Tell el-Mughayyir has a long, though discontinuous, history of settlement from the pottery Neolithic to the earliest phase of the EB Age, the EB IV, and then from the Iron Age I until the Hellenistic period. This density of occupation in such a relatively small area makes stratigraphy complicated. Within 3 m were five main strata, each with different construction plans. The architectural phases span the Iron Age II to the Hellenistic period. It seems clear that the walls belong to a closed complex, almost square, which occupied the summit of the mound in each phase.

The findings of the lower layers were the least complicated because an area of packed clay sealed the Iron Age pottery. The upper layers were more complicated, and the architecture of the Persian period, for which there is a ceramic evidence, remains undefined. Further complicating the stratigraphy is the intensive construction of later phases, and the installation of silos, which disturbed lower levels. The function of later building phases is not clear: perhaps the presence of silos suggests an important farm estate.

These storage pits are the most salient feature of all phases. The uppermost phase is represented by two cistern-shaped storage pits about 3 m deep. In phase four were five pits, whose stone-lined openings were covered in every case and marked by vertical stones. Within phase five was a stone circle of a silo opening. Phase three exhibited entirely different types of pits—they consisted of two box-shaped structures made of undressed stones about 1 m high and separated from each other by a 1 m wide corridor.

The dominant ceramic wares were from the Iron Age and Hellenistic periods, though Hellenistic fine wares were notably few. Several of the forms, however, were unique to this region.

MULE. See ZOOLOGY.

MUPPIM (PERSON) [Heb *muppîm* (מֻפִּים)]. A son of Benjamin (Gen 46:21) included among the seventy people who traveled with Jacob to Egypt. The genealogy of Benjamin presents numerous problems which do not contribute to a positive identification of Muppim.

According to the genealogical list of Gen 46:21, Benjamin had ten sons and Muppim was his eighth son. The sons of Benjamin were: Bela, Becher, Ashbel, Gera, Naaman, Ehi, Rosh, Muppim, Huppim, and Ard. However, in the LXX translation of this verse, only the first three persons are his sons. The next five are the sons of Bela, and Ard is Benjamin's great-grandson and a grandson of Bela.

The genealogy of Benjamin in Num 26:38–40 gives Benjamin five sons: Bela, Ashbel, Ahiram, Shephupham, and Hupham. Ard and Naaman, who appeared in Genesis as sons of Benjamin, appear in Numbers as the sons of Bela. The genealogy of Benjamin in 1 Chr 7:6 gives him three sons: Bela, Becher, and Jediazel. Another chronology, found in 1 Chr 8:1–2, gives Benjamin five sons: Bela, Ashbel, Aharah, Nohah, and Rapha.

Confronted with the fact that Muppim appears as a son of Benjamin only in the genealogical list of Genesis, scholars have proposed different solutions. Gray (*Numbers* ICC, 393) believed that Muppim was not a genuine name but that it came about as a faulty reading of the consonantal text. Several scholars (Williamson 1973: 377; *1 and 2 Chronicles* NCBC, 78; Braun *1 Chronicles* WBC, 106–7), accepting the corrupt text of 1 Chr 7:12 as a broken genealogy of Benjamin, identify Muppim with Shuppim and with Shephupham (Num 26:39). But this identification is not universally accepted. The New Jerusalem Bible, without any comment, places Shuppim among the sons of Naphatali while the RSV, following the MT, identifies Shuppim as one of the sons of Ir, a Benjaminite.

CLAUDE F. MARIOTTINI

MURASHÛ, ARCHIVE OF. The modern name given to a group of Babylonian legal documents compiled at Nippur during the last half of the 5th century B.C. The archive records business operations conducted by members of a single family or by their agents. It is named for the family's ancestor. In its original form, it included a few Aramaic documents written on leather, no longer preserved. The greater part was drafted in cuneiform, and about two-thirds of the 879 known tablets and fragments are published (Hilprecht and Clay 1898; Clay 1904; 1908; 1912; Lutz 1928; Krückmann 1933; Stolper 1985). They are the largest coherent source of documentary evidence for conditions in Babylonia at the midpoint of Achaemenid Persian rule (for general expositions see Cardascia 1951; Stolper 1985; and van Driel 1989; for appraisals of contemporary Babylonian documentation see especially Oelsner 1976; Joannès 1982, and van Driel 1987).

A. The Nature of the Business

The firm was active in a region of about 100 km^2 around Nippur (Zadok 1978), though members of the family paid occasional visits to Susa or Babylon. The texts were written in the reigns of Artaxerxes I and Darius II and in the first regnal year of Artaxerxes II (454–404 B.C., with most of the texts dated 440–416 B.C.).

Among the many kinds of transactions recorded, two general areas of concern predominate. In one, agricultural contracting, members of the Murashû firm acquired real properties by lease, pledge, or mandate, receiving land from proprietors in the vicinity of Nippur and irrigation rights from government agencies. They combined these items with resources of their own, chiefly movable inputs—draft animals, plows, harness, seed, and perhaps agricultural labor—in subleases to tenants of their own, some of whom issued subsubleases in turn. In this way, the firm transformed a juridically determined pattern of land tenure into an economically determined pattern of exploitation; enabled landholders to transform fixed allotments into sources of cash income; assured the regular exploitation of allotted lands and the regular production of cash taxes for the Achaemenid government; and presumably turned a handsome profit. In the second area of concern, the supply of short-term credit, the firm issued loans secured by pledges of smallholdings: that is, state allotments of farmland granted to soldiers and workmen on condition of tax and service obligations. When such loans went unpaid, the firm obtained use (though not titular ownership) of the pledged lands; it continued to discharge the tax encumbrances, and the smallholders became the firm's indebted tenants. The records of these pledges and debts—all representing unpaid obligations—form the largest single category of texts in the archive. There was, therefore, some tension between the convenience of the firm's services and its dilatory effect on the position of small-scale landholders.

Since most of the Murashûs' discernible income was in the form of produce (chiefly dates and cereals) and most of their discernible outlay was in the form of silver (chiefly paid in rents and taxes), the firm had

a third major area of operation that has left no surviving record: it transformed crops into cash, possibly through sales of crops to supply the urban populations of the region.

The Murashûs were therefore commercial contractors who dealt in different ways with diverse beneficiaries of crown grants and appointments. Some of the firm's customers were officials or contractors who oversaw the use of crown lands proper, of temple holdings managed in the crown's interest, and of the irrigation facilities that were crucial to all Babylonian agriculture (Stolper 1985: 36–51). Others were the smallholders who occupied "fiefs" called in Babylonian "bow land," "horse land," or "chariot land," that is, allotments intended to support archers, cavalrymen, and chariot crews. The families to whom the government granted such smallholdings were organized in corporate groups called *ḫaṭrus* (a term of uncertain etymology, perhaps borrowed from Aramaic or an Iranian language; see Cardascia *RLA* 4: 150–51), whose overseers were responsible for extracting the taxes and services incumbent on the holdings. The groups were named for military, administrative, craft, or agricultural occupations of their members, for the estates or administrative organizations to which their members were attached, or for the geographic or ethnic origins of their members (Cardascia 1958; 1977; Stolper 1985: 70–100).

Still other customers were the bailiffs of larger, complex estates, including manors called by the names of proprietors characterized as royal officials or as princes, manors named for anonymous social ranks ("estate of the crown prince," or "estate of the queen"), or for the administrative offices of which the holdings were the perquisite and support ("estate of the equerry," "fields of the treasury"). The staffs of many such estates controlled *ḫaṭrus* of attached workers, and therefore administered the smallholders' taxes and services (Stolper 1985: 52–69). The proprietors of such estates included some of the leading figures of imperial politics. The Murashû texts accordingly document the Babylonian interests of some surprisingly eminent persons: Parysatis, Darius II's queen; Arsames, the satrap of Egypt and Darius' uncle; Menostanes, the son of the governor of Babylonia, a cousin of Artaxerxes I, and an ally of the pretender Sogdianus; Artoxares, a courtier who fell from favor under Artaxerxes I but returned as one of Darius II's early allies; and others known from classical accounts of Achaemenid court politics.

Although the archive is chiefly a legal record of the obligations created or discharged by local transactions in agricultural resources, it discloses hierarchies of claims to rents, taxes, and services that also reveal some of the political and administrative structures through which the Achaemenid empire controlled the province of Babylonia and extracted its wealth, and it shows some of the effects that imperial politics produced on local economic conditions (see Lewis 1977: 70–82; Stolper 1985: 122–24, 150–56).

B. The Personal Names

Non-Babylonian groups and individuals with non-Babylonian names are common in the Murashû texts, a conspicuous result of Babylonia's incorporation into the vast and polymorphous Achaemenid empire. Some of the *ḫaṭru* names in particular indicate that the members traced their descent from distant regions of the empire: groups of Phrygians and Sardians, Carians, Melitenians and Urartians, Cimmerians, Tyrians, Arabs, and Indians. Some may have been descended from the victims of earlier deportations; others were imperial troops settled on subsistence allotments in Babylonia. Some members of these groups kept non-Babylonian personal names, but acculturation is clear in the frequency of routine Babylonian and Aramaic names among them. In fact, of about 2,200 personal names in the Murashû texts, about two-thirds are Babylonian and about one-quarter are Aramaic; the residue are Iranian, Anatolian, Egyptian or are drawn from various West Semitic languages.

Since the earliest publications of the Murashû texts, special attention has been given to the Jewish personal names—that is, names compounded with the divine name Yahweh and other West Semitic names considered typically Jewish (Šabbātai, Haggai, Minyāmîn)—on the assumption that the bearers of these names and their families exemplified the descendants of the Jewish exiles in Babylonia in the days of Ezra and Nehemiah. Little can be said of them, however, that distinguishes them from other inhabitants of the region. The term Jew^{w} never appears in the Murash̆ texts, whether to characterize an individual or a group. The bearers of the eighty or so attested Jewish names lived in many villages around Nippur, not in a distinct local enclave. They have no special role in the texts, but figure as smallholders, as petty

officials, or as witnesses. They rarely did business on sabbaths or feast days, but they were assimilated to the extent of giving some of their children Babylonian names. In short, as portrayed in the medium of Babylonian legal recording, they seem no less Babylonian than any other parties to the texts. (See Bickerman 1978; Coogan 1976; Zadok 1977b; 1977c; all citing earlier literature.)

Similar comments apply to the bearers of Iranian names, another conspicuous minority in the Murashû texts. While Iranians always dominated the highest political offices of the Achaemenid empire, they were also to be found at all ranks of Babylonian society, from noble proprietors of large estates through more or less petty officials to chattel slaves. They did not have exclusive control over any of the modest juridical and administrative offices that occur in the Murashû text, but generally shared these functions with indigenous Babylonians. A few bearers of Babylonian names gave their children Iranian names, as if to emulate the empire's rulers. Far more bearers of Iranian names gave their children Babylonian names, undergoing the same acculturation as other immigrant populations in Babylonia (see Zadok 1977a).

The Murashûs were not "bankers" in any conventional sense, but they generated cash and credit in the local economy. They were certainly not tax-farmers under direct contract to the provincial government or the crown (see especially Cardascia 1951: 189–98, with critique of earlier portrayals), but their successful operations depended on the patronage of some government agencies and prominent aristocrats. The archive's detail and specificity are extraordinary, but most of the relationships and conditions that it portrays were not special to Nippur. Other contemporary texts assure that other firms conducted similar operations, under similar conditions and on a similar scale in other parts of Babylonia, sometimes also dealing with exalted figures of imperial politics (van Driel 1987; Stolper fc.).

MURATORIAN FRAGMENT. An early, incomplete listing of NT books, the Muratorian Fragment occupies a prominent place in any discussion of the history of the Christian canon of scripture. Its relative importance in such discussions depends, in large part, on the date and provenance assigned to the Fragment. Until quite recently, Roman provenance and a late 2d or early 3d century date (180–200 C.E.) were taken for granted. It was assumed that the Fragment represented the earliest datable canon list. Those assumptions have now largely eroded, and a new consensus appears to be emerging, one which sees the Muratorian Fragment as a 4th-century, Eastern (either Syria or Palestine) list. If that is the case, the earliest datable NT list would be that of Eusebius in *Ecclesiastical History* 3.25, and the Muratorian Fragment should be read in relation to it, as another, albeit important, witness to canonization process in its final stage.

Discovered by Lodovico Antonio Muratori (1672–1750) in Milan's Ambrosian Library in 1740, the Fragment is preserved in a codex dating to the 7th or 8th century. Small portions of the same list were also found in four Latin mss (11th or 12th century) at Monte Cassino. Muratori himself suggested that the Latin text was a clumsy translation of a Greek original, a suggestion that has received almost universal support.

Beginning in mid-sentence, the Fragment consists of 85 lines. Its abrupt ending has suggested to some that it is defective there as well. NT books which the list accepts as authoritative include: The Four Gospels (Matthew and Mark are not mentioned explicitly but are presumed in the now lost lines 2 and 9); the Acts of the Apostles; 13 letters of Paul (excluding Hebrews); Jude; 1 and 2 John; the Wisdom of Solomon; the *Apocalypse of John;* and the *Apocalypse of Peter.* The list admits that not everyone in the Church accepts the last two works cited. James, 1 and 2 Peter and 3 John are passed over in silence. The *Shepherd of Hermas* is rejected because it is late. Writings emanating from Gnostic, Marcionite, or Montanist (Cataphyrgian) circles are rejected outright.

Adolf von Harnack has been called the "last great apologist" for the importance of the Muratorian Fragment in canon history. He was confident that the provenance and date of the Muratorian Fragment had been firmly established yet felt, however, that its character had been misrepresented. He thought the list, with its authoritarian tone, to be an official document, published in Rome, defining the content of the NT for the whole Church. He was convinced the author must have been the Bishop himself, or less likely someone writing at the Bishop's behest. Harnack suggested Victor, Bishop of Rome (189–199) or less probably, Zephyrinus (199–217), or someone under his authorization, as the author.

But Harnack was not the last great apologist for the Muratorian Fragment. It has found a latter-day advocate in Hans von Campenhausen. While agreeing with his predecessors that the list is Western and must date to the end of the 2d or, at the very latest, the beginning of the 3d century, Campenhausen finds in the Muratorian Fragment a parade example of the synthesis which obtained as a result of the dialectical forces he believed shaped the Christian canon of Scripture: the thesis of Marcionism with its reductionist "canon" and the antithesis of Montanism with its expansionist "canon."

All future defenders of the Muratorian Fragment as a Western, late 2d or early 3d century canon list must come to terms with the challenges leveled at that position by Albert C. Sundberg, Jr. It is Sundberg who initially made the case for the 4th century date and Eastern provenance of the Fragment. The linguistic arguments for Roman provenance based on explicit references to Rome (lines 74–76), the presence of the word *urbs* (standing alone) in line 38, the use of *catholica ecclesia* in line 66, are shown by Sundberg to be inconclusive. Similar arguments for a late 2d or early 3d century date based on the phrase *nuperrime temporibus nostris* in lines 73–77 are also dismissed by Sundberg.

Sundberg believes that linguistic arguments must be supplemented by careful analysis of the internal evidence of the Fragment. His primary attention is directed to the anomolies of this list which cannot be paralleled within the 2d century Church Fathers and which find parallels only in substantially later materials. For example, the *Shepherd* was universally accepted in both the East and the West, but was first called into question in the East by Eusebius. The presence of the Wisdom of SolomonSolomon in a list of NT writings has precedents in the East (Eusebius, Epiphanius, *Codex Alexandrinus*), but not the West.

The equivocal status of the *Apocalypse of John* and the *Apocalypse of Peter* accords better with a later, Eastern setting than a Western (Revelation was subject to question in the East only after Dionysius [265]. The *Apoc. Pet.* was relatively unknown in the West and a contender for a place in the NT only in the East).

Although Sundberg's thesis is not without its detractors, it has won considerable acceptance and further confirmation. Robbins grants that the Fragment is preoccupied with the Johannine literature—Gospel, Apocalypse and Epistles, but notes that debates about the latter, the Epistles, did not arise until after Epiphanius. Methodius, observes Robbins, also made a case for the acceptance of the *Apocalypses of John* and *Peter*, and favored the Wisdom of Solomon. Robbins also shows that questions about the number of the Catholic Epistles find their earliest parallel in Eusebius. Indeed, one of the most important consequences of Sundberg's work on the Muratorian Fragment is the reassessment of Eusebius' role in the formation of the Christian canon of Scripture.

MUSHI (PERSON) [Heb *mûšî* (מוּשִׁי)]. MUSHITES. Son of Merari, grandson of Levi (Exod 6:19; Num 3:20; 1 Chr 6:4—Eng6:19; 6:32—Eng6:47; 23:21, 23; 24:26, 30); also a designation of a levitical family or clan descendant from him (Num 3:33; 26:58). There are discrepancies between the various levitical genealogies of Exodus, Numbers, and 1 Chronicles. Three priestly families—the Gershonites, the Kohathites, and the Merarites—derive from Levi in Exod 6:19, Num 3:20, 26:57, 1 Chr 23:6, but five levitical families—the Libnites, the Hebronites, the Mahlites, the Mushites, and the Korahites—are found in Num 26:58 (only four in the LXX which omits the Mahlites). It is argued that Num 26:58 represents an older tradition wherein priestly families were associated with geographical location (Libni, Hebron, and Korah which is thought to be the name of a city in 1 Chr 2:43). Mushi, however, is not a city, but is generally thought to be a tribal name derived from Moses. In spite of many variations in the levitical genealogies of the Chronicler, consistently Mahli and Mushi are said to be the sons of Merari (1 Chr 6:4—Eng6:19; 23:21; 24:26).

The association of the terms "Mushi" and "Moses," the conflicts between Aaron and Moses (Exodus 32; Numbers 12), and several incidents occurring in the wilderness concerning priests (Lev 10:1–7; Num 16; 25:6–15) have led F. M. Cross (*CMHE*) to argue for the existence of a preexilic Mushite priesthood attached to the Shiloh shrine that rivaled the Aaronid priesthood which later came to dominate in Jerusalem. The paucity of evidence makes it difficult to argue for a Mushite priesthood and its place in the origin of ancient Israelite priesthood, but Cross' reconstruction has a certain plausibility to it. MUSIC AND MUSICAL INSTRUMENTS. This entry contains two articles. The first surveys the subject of music in the broad sense, as it is depicted in the biblical text. The second focuses specifically on musical instruments mentioned in the Bible.

MUSIC IN THE BIBLE

Evidence of music and dance is found throughout the biblical text. This investigation will survey the use of music in the Hebrew Bible and NT, as well as evidence of its social and religious setting in the ancient world.

E. Music in the NT

———

A. Introduction

The myth of "the origin of skills" found in Gen 4:20–22, which records the "first" smith (Tubal-cain), the "first" cattle-breeder (Jabal), and the "first" musician (Jubal), portrays the three occupations most necessary (at least in the mind of the later biblical writer) to the earliest periods of human history. The fact that the musician is placed in the company of the more practical occupations suggests the antiquity of music and the regard in which it was held by Israelite culture.

Certainly Israel's neighbors provided a host of examples of musical expression. Mesopotamia and Egypt have long histories of both popular and religious music, which must have been known to the Israelites. Professional musicians, like the *kalû* harp-player so well attested in ancient texts from Mari and Uruk (Foxvog and Kilmer *ISBE* 3: 437), may well have been models for the levitical musicians in the Jerusalem temple. The types of instruments, liturgical chants, penitential prayers and laments, and hymns of praise created by these ancient civilizations set a standard of style and composition which was undoubtedly relied upon by the Israelites.

Archaeological discoveries have also added to our knowledge of ancient forms of music, the methods used to play them, as well as the postures of dancers captured in midstep in ancient Egyptian tomb paintings (see figs. 72–84 in Sendrey 1974, and 11–12 in Polin 1954). A wide variety of instruments are depicted in these scenes, showing their development through time, and a few have survived, attesting to their manufacture and providing clues to the musical intervals favored and possible reconstructions of notation by modern musicologists (Shanks 1980: 20–22).

As one might expect, music changed and became more complex and institutionalized as ancient Israel's society evolved from a pastoral nomadic tribal society to a village and later to an urban culture. Tracing these developments can provide an excellent sense of the cultural history of this ancient civilization. By examining each of the situations in which the biblical narrative describes the use of music and/or dance, a pattern of behavior and performance emerges.

However, before there were words there was music. From their earliest origins, humans have imitated the sounds around them and experimented with creating new ones (Madge 1977: 60). Once they had exhausted all the possibilities of their own voices, artificial noisemakers began to be invented. (See following article.) First among these were percussive sounds, caused by hitting sticks together or drumming on a log, tapping on a stretched animal skin, slapping one's thigh or stomach with the flat of one's hand. The movement of wind through the trees would have suggested additional sound possibilities: noises made with the mouth and lips, the sound of a leaf as air is blown across it, the blat produced by blowing through an animal horn (Polin 1954: xx). The range of sounds thus created was eventually augmented by the invention of stringed instruments. This would have been a somewhat later development since it required more than materials readily at hand and further experimentation to develop a sense of range and style. Once animal gut was strung on a bow for hunting, however, the twang as the arrow took flight would have announced the tonal possibilities that led to the invention of the harp and lyre.

B. Purposes: Secular

Even in its most primitive forms, music would have been employed by human communities for a variety of purposes. For instance, it could be used to soothe a child (see the Sumerian lullaby in *ANET*, pp. 651–52) or restive flocks of sheep. While engaging in strenuous or monotonous work (e.g., treading

grapes—Jer 25:30 and 48:33—or digging irrigation canals or wells—Num 21:17–18—or raising a new house or barn), musical chants could be used to help maintain the rhythm of the workers and speed completion of the day's toil.

Yet another common use for music and dance would have been in celebrations, both large and small. They were used to mark the major events in the life of the people or just to express their joy and contentment with life. Thus, in Eccl 3:4, in the litany of the events of life, dancing is contrasted with mourning (see also Lam 5:15 and Ps 30:12—Eng v 11). Not all frivolity was acceptable to the biblical writers, however. For example, a mocking drunkard's song is mentioned in Ps 69:13—Eng v 12, and in Job the sufferer observes with incomprehension that the children of the wicked dance while the wicked themselves sing to the rhythm of the tambourine, lyre, and pipe (21:11–12).

The diversions provided by entertainment were essential to their lives, amid so many concerns over hostile environmental conditions and unfriendly neighbors. That could well explain, at least in part, the sanctity of the hospitality code which required that visitors (both relatives and strangers) be housed, fed, and sent away with good feelings. Hosting visitors also afforded a measure of entertainment for both householder and guest, which, as suggested by Laban in his chiding of Jacob, may have included songs and instrumental music (Gen 31:47).

Since the economic base for most of the population, even during the monarchic period, was primarily a mixture of pastoral and agricultural activity, planting, harvesting, and sheepshearing would have been occasions for mass get-togethers and religious celebrations. Thus the maidens of Shiloh danced each year beside their vineyards (Judg 21:19–21), and the sons of David made merry at a feast following the shearing of Absalom's sheep (2 Sam 14:28). In the case of the Shiloh festival and the maiden's dance in Cant 6:13, dancing provided an opportunity for eventual matchmaking, serving both a religious purpose and aiding in the perpetuation of the community (Eaton 1975: 137).

Weddings were also occasions in which music and other merriment took place. Samson's riddle, so filled with alliteration and wordplay (Nel 1985: 542–43), suggests a chant or plainsong style that would fit into the festivities of his marriage feast (Judg 14:14). The ritual of the marriage feast also included a staged meeting between the bride and the groom's party, who were accompanied by musicians playing tambourines (1 Macc 9:37–39; Sendrey 1969: 461). They and the whole company then joined in songs as the feasting and other activities commenced (Jer 16:9). Curiously, the wedding feasts described in the NT (Matt 22:1–13 and John 2:1–11) do not include any mention of musicians or songs. However, these may have been such common aspects of the feast that they were simply to be assumed by the audience.

Births, with their promise of new life and continuity of inheritance, were also marked by ceremony and ritualized singing. Even before the infant was born, chants and incantations were used to guard it and effect a speedy and safe birth (van Dijk 1975: 55). In preparation for the birth, midwives were called in, and in some cases singers were also summoned to celebrate the birth and guard the child (e.g., see the Ugaritic legend of Aqhat, *KTU* 1.17 II: 10–42; *ANET,* pp. 150–51). The use of the "Fear not" formula by the midwives in Gen 35:17 and 1 Sam 4:20, followed by the mother naming the newborn child, suggests a traditional litany to be sung or chanted at the birth of sons. This is at least partially echoed in the Lucan account of Jesus' birth, in which angels tell the shepherds not to fear, then name the child and sing in chorus (Luke 2:9–14).

With the establishment of a royal court, new applications for music and dance were introduced. The coronation of kings was announced by the blaring of trumpets (2 Sam 15:10; 1 Kgs 1:39), and in Solomon's case a procession marching to the tune of pipes (1 Kgs 1:40). The latter marks an intentional paralleling of his father's career. David had also entered Jerusalem in procession as the ark of the covenant was brought to the new capital city. On that occasion the people sang as they marched to the sound of lyres, harps, tambourines, castanets, and cymbals (2 Sam 6:5). Upon reaching the city, David both worshiped and demonstrated his right to rule through the power of Yahweh and the ark by dancing "with all his might" as horns played (vv 14–15). It is quite likely that David's dance and procession were subsequently reenacted by his successors to the throne, thereby legitimizing their rule and invoking the covenant Yahweh made with David (see Psalm 132; Eaton 1975: 138).

There are in fact a whole group of "enthronement psalms" (among them Psalms 2; 20; 72; 89; 101; 110; 144) which reiterate the Davidic dynasty's right to rule and which were probably used in an autumnal festival to commemorate its founding (Johnson 1967: 68–72; Mowinckel 1962: 152).

Among the events that would have taken place in this annual festival is a grand procession, perhaps using Psalm 68, which exhorts the people: "Sing to God, sing praises to his name" (v 5—Eng v 4), in its opening chant. Priests and nobles, advisers and representatives of designated tribes, would march through the streets of Jerusalem to the temple with "the singers in front, the minstrels last, between them maidens playing timbrels" (v 26—Eng v 25). There sacrifices and speeches would be made, which, as in this psalm, would include in condensed form the triumphant acts of Yahweh (Weiser *Psalms* OTL, 487). Both Yahweh, "who rides upon the clouds" (v 5—a title also used for Baal in the Ugaritic epics, e.g., *KTU* 1.2 IV:8) and his chosen king were thus exalted.

Once enthroned in their palaces, kings and their wealthy nobles would have wanted to add all the luxuries found at other royal courts. Thus, as described in Eccl 2:8, they "gathered … silver and gold and the treasure of kings and provinces … singers, both men and women, and many concubines, man's delight." Singers and musicians became one of the trappings of power (2 Sam 19:35), both for entertainment and ostentation (Isa 5:12). Such extravagance led to social criticism by the prophets. Among these voices of dissent was that of Amos, who chastised the wealthy who "stretch themselves upon their couches, and eat lambs from the flock …, who sing idle songs to the sound of the harp …" (6:4–5).

The military also made use of music, but this was principally to rally their forces (Judg 3:27; 6:34), to guide disparate groups of men on the battlefield, or to signal troops to advance (Num 10:9) or retreat. Sendrey (1969: 469–70) suggests there may have been preparatory "war dances" prior to battles. He cites Ezek 6:11, "Smite with your hand, and stamp with your foot," as an allusion to such a dance. Isa 13:3, which enjoins the soldiers to "consecrate themselves" before the coming battle, may also be an indication of ritual activity, including dance.

The trumpets used by Gideon (Judg 7:15–24) served the additional function of startling the Midianites and aiding in the Israelites' surprise attack. Similarly, the blasting of rams' horns by the Israelite priests in the siege of Jericho added to the psychological effect after the people had marched in silence before the city for six days (Josh 6:3–16).

Victories, of course, sparked spontaneous celebration and joy (Judg 11:34). To commemorate these occasions heroic ballads and songs of praise to Yahweh were composed. Among the best examples of these hymns of thanksgiving are the "Song of the Sea" (Exod 15:1–18), the ballad of victory over Sihon and the Amorites (Num 21:27–30), and the "Song of Deborah" (Judges 5). Each of these epic poems, as well as the shorter boastful chants of Lamech (Gen 4:23) and Samson (Judg 15:16), have a rhythmic style. The instrumental accompaniment, while subordinate to the reciting of the verses, would have helped to create mood, heighten tension, and add to the symmetry of the composition (Polin 1954: 14). Dance, too, would have been a part of these celebrations, as processions of women with hand-drums performed a "round-dance" (*māḥôl*) as they joined the victorious soldiers or priests on their way to the sanctuary of Yahweh (Eaton 1975: 137).

Less elaborate chants, designed to accompany rhythmic dancing, were also composed. The progressive phrase sung by village women to welcome Saul and David—"Saul has slain his thousands, and David his ten thousands" (1 Sam 18:7)—must have haunted King Saul. These women would have stamped their feet as they sang and whirled to the sound of the timbrel just as modern bedouin women still do today (Sendrey 1969: 466). Just how pervasive this phrase became can be seen in its repetition among the Philistines two separate times in the narrative (1 Sam 21:11; 29:5). There was probably at one time an entire body of heroic epics and chants which is no longer in existence. They may have been included in either of the lost resources of the biblical writers: the Book of the Wars of the Lord (Num 21:14) or the Book of Jashar (Josh 10:13; 2 Sam 1:18).

C. Purposes: Religious

The use of music for religious purposes can be seen in both popular as well as institutionalized settings. For peasant and king alike, music served as part of the process of mourning or lamentation (2 Sam 3:32–34; Judg 11:40). Funeral processions throughout the ANE included professional mourners, beating their foreheads, moaning, and shuffling to the sound of wailing flutes (Sendrey 1969: 471; Eaton 1975: 137). Sickness and premature death were basic facts of life for these ancient peoples and thus they created songs, musical noisemakers (such as the bells on the robe of the high priest—Exod 28:33–35), and dances with an apotropaic purpose. The hope was that by soothing the sick (1 Sam 16:16) or frightening away the demons who caused the illness, a cure could be effected.

The apotropaic character of religious ritual, including song and dance, is clearly seen in the case of the frightened Israelites who asked Aaron to create a golden calf for them when it appeared that Moses was lost and they needed a tangible object to worship in order to placate their fears. Their worship included loud, frenzied singing and dancing (Exod 32:19), which may be a polemic used by the writer to differentiate between Canaanite worship of idols (as well as the golden calves at Dan and Bethel) and proper Israelite (Jerusalem's) rituals (see Childs *Exodus* OTL, 559–60 for a discussion of this passage). One indication of this is the similarity between their actions and those of the prophets of Baal in 1 Kgs 18:26–29. These prophets chanted an invocation, "O Baal, answer us!," and danced a limping stutter-step. Then, in their frenzy to be answered, they cut themselves and shouted. Elijah mocks them and their ineffectual actions, ultimately ordering their deaths just as Moses orders the deaths of the unfaithful Israelites.

Eventually apotropaic chants and dances became more complex and served as the basis for much of Israelite religious drama and ritual. For instance, the psalms associated with the recitation of the creation story—Psalms 8; 19; 104; 139—contain both the literary as well as musical elements (based on the superscription rubrics, choral markers, and assonances in the text) needed for a proper performance. Similarly, in the narrative sections of the biblical text are found stories which include both apotropaic and celebratory musical expressions. For example, the "Song of the Sea" and the "Song of Miriam" in Exodus 15 suggest relief as well as fear of the elements which had been unleashed to destroy the pharaoh's chariots.

Several examples in the prophetic narratives suggest that music and dance were an intrinsic part of religious expression. For instance, the prophets whom Saul encountered as they processed down from the high place, playing harp, tambourine, flute, and lyre, were prophesying as the music put them into an ecstatic state (1 Sam 10:5). Elisha employed the use of a musician to bring on a prophetic trance in 2 Kgs 3:15.

Pantomime, so common among the prophets who enacted prophecy, could in some cases be identified as a sacred dance. An example of this is found in 1 Kgs 22:11, where the court prophet Zedekiah used stylized iron horns to portray the vigor with which Jehoshaphat and Ahab would defeat their enemies. Undoubtedly, he stomped about like a bull (a common symbol for the Canaanite god Baal) during his performance, which was probably not spontaneous but rather a traditional dance designed to invoke the aid of the gods in this military endeavor (Eaton 1975: 139).

Another occasion for religious singing would have been during pilgrimages to sacred shrines and temples. This was a common activity among the Israelites, starting in the settlement period. For instance, Elkanah and his family annually made the trek to Shiloh to worship before the ark of the covenant (1 Sam 1:3). Following the construction of the temple in Jerusalem and the emphasis placed on annual festivals and sacrifice by the kings (especially Hezekiah and Josiah), annual events like the Passover would have brought many people to the city. Along the way, entertainment would have included the singing of pilgrim songs, such as the "Songs of Ascent"—Psalms 120–134—which extol the opportunity to "go up" to Jerusalem and worship in the sanctuary at Zion, and are probably associated with the three great agricultural festivals (Exod 23:17; Deut 16:16).

As music became more formal, professional guilds of musicians were employed to form choirs and orchestras which served at the various temples and shrines and in the palace. One sign of this is found in the book of Amos. During his stay at Bethel, Amos harangued against the emptiness of the worship in the

temple there, declaring that Yahweh would no longer listen to the worshippers' songs and harps (5:23). Yet another indication of these musician guilds is found in the Assyrian Annals. Following the siege of Jerusalem by the Assyrian king Sennacherib, King Hezekiah was forced to pay a huge ransom for the city which included male and female musicians (*ANET*, p. 288).

The Israelite musician guilds have many parallels throughout the ANE. They in essence represent the movement of music into a formal liturgical setting with a set religious calendar of performances. Sarna (*EncJud* 13: 1317) suggests that the levitical singers, said to have been appointed by David to the task of performing the music in the Jerusalem temple (1 Chronicles 6; 15; 16; 25; 29; 2 Chr 35:15), were actually in place within the cultic community not long after this traditional date. Whenever they were appointed, it would have been their responsibility to make constant praise to Yahweh, and "prophesy with lyres, with harps, and with cymbals" (1 Chr 25:1). Among the themes of their music was the call for Yahweh to have mercy and to care for the people (Psalms 23; 46) and curse the wicked (Psalm 58). They also recited the epic history of Yahweh's past victories at the major festivals and the coronation of kings (Psalms 78; 81; 105).

These levitical singers, whose original leaders are said to be Asaph, Jeduthun, and Heman (1 Chr 25:1) were probably even more prominent in temple worship during the Second Temple period following the Exile. They were joined in the organization and performance of all liturgical music by several other groups, including those associated with Chenaniah, "leader of the music of the singers" (1 Chr 5:27), and Mattithiah and five other men, who were "to lead with lyres" (1 Chr 15:21). Still another group, the Korahites (1 Chr 6:7), were also apparently members of the musical community, since their name appears in the superscription of a number of psalms (42; 44–49; 84–85; 87–88).

Each guild would have ultimately created and become associated with a particular repertoire of songs—thereby aiding in the transmission and survival of this sacred music (Sarna *EncJud* 13: 1317). Their survival during the Babylonian Exile and their importance to the establishment of the Second Temple community can be seen in the list of the exiles who returned with Zerubbabel to Jerusalem. Here it states that 200 male and female singers (Ezra 2:65) as well as 128 "sons of Asaph" (2:41) were a part of the company of returnees.

In light of the later prominence of the guilds, it is interesting to note that the "sons of Asaph" are showcased in the ceremony dedicating the laying of the foundation of the restored temple in Ezra 3:10–11, playing trumpets and cymbals and singing responsively a hymn of praise to Yahweh. However, no musicians or choirs at all are mentioned in Solomon's formal dedication of the temple in 1 Kings 8. It seems likely, however, that such events demanded music and ritual dancing and in fact several times reference is made to "prayer and supplication" (8:28, 30, 33). The absence of performers in the text probably reflects a more focused intent on the part of the writer, who did not choose to crowd his scene with obvious details.

D. Musical Terminology

Despite the fact that the music of ancient Israel is, for the most part, lost to us, there is ample evidence which indicates just how organized music and musical performance actually was. This includes the technical terms found in the Psalms. These consist of rubrics, formal instructions to the choirmasters (*lamĕnaṣṣēaḥ*—a term that appears 55 times in the Psalms and in Hab 3:19). They deal with style, tone (*ʿal-haššĕmînît*—"on the eighth"—Psalms 6; 12, but not an octave, which was unknown to the Israelite musicians), instrumentation (*nĕgînôt*—stringed instruments—Psalms 4; 6; 54; 55; 67; 76), and even the tune to employ (*ʾal-tašḥēt*—"Do not destroy"—Psalms 57–59; 75; and *ʿal-ʾayyelet haššaḥar*—"According to the Hind of the Dawn"—Psalm 22). A few were used to signal the genre type. Among these is *šiggāyôn* (Psalm 7), which is related to the Akk word *šegu,* "to lament," and therefore may serve as the label for a song of lamentation.

Cues are also given. For example, *ʿal mût labbēn* (Psalm 9) may indicate the use of a male soprano voice, *ʾel hanneḥîlôt* (Psalm 5) may be a cue for the entrance of wind instruments. Most of these terms appear in the superscriptions of the psalms, but a few, like *selâ,* appear in the body of individual psalms. This presently untranslatable word, which occurs 71 times in 39 psalms and three times in Habakkuk (3:3,

9, 13), may have served as a breath marker, an indicator to musicians to enter, or simply as an affirmation of what had just been said.

More general terms also appear in the superscriptions. Some of these are labels, like *tĕhillâ* ("song of praise"—Psalm 145) and *tĕpillâ* ("prayer"—Psalms 17; 86; 90; 102; 142; Hab 3:1), which apply to nearly all the psalms. Others are more explicit in designating the type of psalm and in some case the repertoire or guild to which it belongs. Among those most commonly used are the following.

1. *maśkîl.* This term is found in the headings of thirteen psalms (32; 42; 44; 45; 52–55; 74; 78; 88; 89; 142). Its root origin is probably *śākal,* "to comprehend," and thus it has been interpreted by many scholars to designate a didactic poem. This is such a general label; however, the term must have some more particular meaning—perhaps, as Sendrey (1969: 104) suggests, it is the indicator of a penitential song.

2. *mizmôr.* Appearing only in the Psalms, this term is found 57 times, always in association with a personal name; it probably is a label indicating music associated with liturgy and the guilds.

3. *šîr.* While this is a generic term, simply meaning "sing," it also has technical qualities, appearing 30 times in the Psalms as well as elsewhere (Exod 15:1; Num 21:17; Deut 31:19, among others). It is found in the heading as well as in the body of the psalm, and is sometimes accompanied by *mizmôr.* In certain contexts, therefore, it seems to indicate a body or a particular type of religious music. A sign of this is in the title *šîr hamma‘ălôt,* "Songs of Ascent," found in Psalms 120–134.

E. Music in the NT

The destruction of the temple in Jerusalem in 70 C.E. set the stage for new forms of musical expression among the Jews. Public music and dance had already been restricted on the Sabbath (*m. Besa* V:2) and it became even more restrained in response to Greek and Roman rule and culture (Sendrey 1969: 468–69). Only Luke 7:32 and Matt 11:7 specifically mention fluting and dance in the NT and in the former this involves the play of children.

It was in the synagogue, however, that music continued to flourish and serve as an emotional and didactic aid to the maintenance of Judaism. The levitical guilds were now gone and instrumental music was forbidden in the synagogue, leaving vocal music to evolve in a new way. Thus the writers of the NT and the founders of the new Christian movement very likely adopted what they knew of synagogue music to their own worship. That would explain why Paul, who is familiar with musical instruments, considered them "lifeless" (1 Cor 14:7–8) and promoted worship in the form of "psalms and hymns and spiritual songs, singing and making melody to the Lord" (Eph 5:19).

The borrowing from synagogue worship of both hymn and chorus singing added the emotional, communal feeling needed to help build the new movement. Instruction without the freedom to express joy and praise would have quickly become dull. In any case, many of these early Christian groups met in the local synagogue and they would have been familiar with the form of worship conducted there. It would have been only natural to employ the same hymns they already knew while adding new ones to reflect their new theological understanding. Among these may be the "Worthy art thou" hymnic fragments in Rev 4:11; 5:9–10, and the songs of victory and assurance in Rev 7:15–17; 11:17–18. Eventually, as the Christian movement became more international, Hellenistic musical influences were introduced, but antagonism to instrumental music, so closely associated with pagan religions and the spectacles of the Roman colosseum, continued for several centuries (Werner *IDB* 3: 469).

VICTOR H. MATTHEWS

MUSICAL INSTRUMENTS

The evidence concerning musical instruments in the Bible includes scriptural references and archaeological discoveries. The latter provide a context for the scriptural references in the musical usage of the ANE and in the range and character of musical instruments known there. Recent developments in this field include the reconstruction of such musical instruments on the basis of archaeological finds and consequent discoveries concerning the tonal range, timbre, and techniques involved in the playing of such instruments. The limited range of the archaeological finds in Palestine which relate to musical practice during the biblical period raises important questions as to how the scriptural references should be interpreted: Should the translation of biblical terms apparently referring to musical instruments be restricted by the limitations of those finds, and should the limited character of those finds be taken as a general indication of the nature of the biblical musical tradition? Was it primarily vocal, and only instrumental to a secondary extent?

The scriptural references themselves require attention at several different levels. As we have indicated, one of these levels is the relation of the terms used to actual instruments known from archaeological finds. Another level is concerned with the role of those terms within the development of the scriptural material: How do they fit into the various literary and oral contexts to be assumed as part of the history of the present scriptural and intertestamental texts? Since in many cases that history stretches over several centuries, do those terms refer to changing practices and patterns of musical activity? Or even if it is granted that musical traditions are slow to change, do the changes in cultural and religious patterns implied by the history of the scriptural tradition require us to exercise care in assuming that a particular musical term can always be taken to refer to a specific, identifiable piece of musical practice? At the very least these questions caution against the acceptance without further inquiry of the translations used for musical instruments in modern versions of the Bible.

A. Idiophones

Idiophones are musical instruments of resonant material which emit sounds when they are shaken, struck, flexed, or rubbed.

1. *mĕnaʿanʿîm.* Possible translations at 2 Sam 6:5 include "shakers" (probably preferable), "rattles," "castanets," "sistrums." The context is a joyful, whirling dance as part of a procession to Jerusalem. David and the Israelites are "making merry" to the accompaniment of various percussion and string instruments. "Shakers" (i.e., gourds, or clay and pottery shapes, filled with seeds, shaken by the dancer) are an ancient and widespread form of accompaniment to dance. "Shakers" and "rattles" (perhaps distinguishable from shakers only by the way in which they are held) are well attested archaeologically as early as the 2d millennium B.C.E. in Babylonia, and have been found in several Palestinian sites datable to the 14th–10th centuries B.C.E. They have parallels in modern African cultures. Castanets are also known in the ancient world; for example, in the form of Egyptian clappers and Mesopotamian clackers. The "sistrum," (the Vg translation at 2 Kgdms 6:5), which is a rattle within a frame, is best known from Egyptian sources, and may well have been known in Davidic times.

2. *mĕṣiltayīm.* The Heb word *mĕṣiltayīm* may refer to twin cymbals, saucerlike plates with pierced centers for wire finger-holds and reflexed rims. They were capable of producing a high-pitched tinkling when struck together or when one was dashed against the rim of the other (Yadin 1972: 69 for a pair of these inside a bronze bowl in a 14th century B.C.E. stelae temple). Alternatively the reference may be to small bronze cones, sometimes for striking against each other vertically, which produced a resonating or dull clash according to the way in which they were held or struck.

The word *mĕṣiltayīm* appears only in Ezra, Nehemiah, and 1 and 2 Chronicles. Its uses may be grouped as follows: (a) in apparently stereotyped lists (as in Neh 12:27; 2 Chr 5:12; 29:25); (b) as expansions of musical references in 2 Samuel (as in 1 Chr 13:8—an expansion of 2 Sam 5:6—and 1 Chr 15:28, both in connection with the ark's procession to Jerusalem); (c) in other levitical material (e.g., 1 Chr 15:16; 16:5c; and 25:6). Together these present the ritual associations of the use of the twin cymbals by the musicians of the Second Temple. They hint at the varying levels of the tradition and varying emphases on priestly and levitical responsibilities in those different levels. The twin cymbals were used to accompany singing alongside strings and trumpets, to provide other percussion effects, or possibly to lead or begin choral singing. The number of the musicians involved has been understood symbolically. The Psalms use a different form of the word (cf. *ṣelṣĕlîm*).

3. *ṣelṣĕlîm.* The Heb word *ṣelṣĕlîm* appears in 2 Sam 6:5 and Ps 150:5. These are distinct contexts: the former has already been described as a dance-procession, the second is a hymn of praise involving most of the instruments known in Israelite music. In Psalm 150 the cymbals are described as *ṣilṣĕlê tĕrûʿâ* and *ṣilṣĕlê šāmaʿ*. These are generally understood as musical terms, either indicating the kind of cymbal used (high-pitched or low-pitched), or the musical use made of the cymbals (clashed or allowed to ring). It is possible, however, that the additional terms indicate primarily how they were employed in the temple worship and only secondarily what kind of cymbals they were or how they were played. The *ṣilṣĕlê tĕrûʿâ* would then be "cymbals of acclamation," introducing the acclamation of praise by the singers or the assembled crowd, and the *ṣilṣĕlê šāmaʿ*, a calling for attention, although whether this was human attention or divine attention is not clear. The relation of this to the temple worship is dealt with below.

4. *kymbala.* The word *kymbala* frequently indicates the use of cymbals in Gk translations of the OT. It does so also in 1 Cor 13:1. This Pauline verse is open to a number of interpretations. It may be a comparison of "speaking with tongues of men and of angels" with bombastic musical instruments (*chalkos* = a bronze gong, *kymbala* = bronze cymbals), contrasting these with the way of Christian love.

Alternatively it may compare glossolalia and visionary voices with inessentials such as the bronze jars used as theatrical acoustic amplifiers and *kymbala alalazonta,* the cymbals used in the temple ritual, contrasting both with the one essential quality of love.

Following the first interpretation, *kymbala alalazonta* in the context of 1 Cor 13:1 provides difficulties, *kymbala alalazonta,* "wailing cymbals," could have the orgiastic associations of a bacchantic rite, reminding the reader of associations between such orgies and "speaking with tongues." That would be a critical reference to "speaking with tongues," and also, from the literary point of view, a harsh association of ideas. Following the second interpretation, "*alalazonta"* makes better sense, since the root of that word is associated, not least in the Gk translations of the OT, with Jewish "acclamations of praise." As compared with love, glossolalia and the cultic cymbals leading the temple acclamations of praise are both dispensable.

5. *šālīš.* The Vg translates Heb *šālīš* at 1 Sam 18:6 as "sistrum." It is by no means certain that *šālīš* is a musical instrument. The context is the singing and dancing of the Israelite women welcoming Saul and David, so a reference to a musical instrument here would be appropriate. But even if it is a musical instrument, its exact character remains uncertain. The sibilant character of the word *šālīš,* and a possible association with the Hebrew root for "three," makes "sistrum" as likely a translation as any (Sendrey 1969: 381). The sistrum was a common iconographic element in the Egyptian cult of Isis in all periods.

6. *paʿămōn.* In Exod 39:24–26 and 28:35, Heb *paʿămōn* is often translated "bell." It is quite possible that the word originally referred to platelets or bell-shaped objects hung as decoration around the high priest's robe and as a means of deflecting destructive powers. By the 1st century C.E. and perhaps even earlier, these were understood to be "bells" in a modern sense, i.e., bells with a ringing clapper inside each cavity (cf. Philo *Vita Mos* II. 110[23]).

B. Membranophones (*tōp*)

These are musical instruments from which sound is produced by movement of a stretched membrane, often of skin. The Hebrew word associated with this type of instrument is *tōp.* Possible translations include "drum," "frame drum," "tambourine," and "timbrel." In some cases the generic term "drum" may be an appropriate translation (cf. Gen 31:27, where the drum and lyre accompany songs; and Isa 5:12; 30:32; Ps 81:3, where the drum is made to "sound out"). In other cases, a "frame drum" may be indicated, i.e., a hand drum with a skin stretched over a circular (cf. Jer 31:4) or triangular frame, gripped by the left hand, with the fingers of the left hand tightening or releasing the tension on the skin, which is then struck with the palm of the right hand. 1 Sam 10:5 (and possibly Exod 15:20) includes such a frame drum as part of the so-called "Canaanite orchestra" (or "band" in the RSV; on this see C.1.a. below; on the evidence for this, cf. the 10th century B.C.E. Ashdod pottery stand, probably of Philistine origin). Some prefer the translation "tambourine" or "timbrel," but that suggests additional jingling circlets of metal. The evidence for such instruments is late, and the main uses of *tōp* are early. The Heb *tōp* is thus associated with singing, festivals, processions, and bands.

C. Aerophones

Aerophones are musical instruments which produce sound through vibration of air in, through, or around them. They can be subdivided into two main groups.

1. Group 1. In this group of aerophones, sound is produced at the point where air enters the instrument.

a. *ḥālîl.* (1) A double-pipe. A "double-pipe" is composed of two pipes, cones, or cylinders, in a V-shape with a reed or reeds at the point of the V. The two pipes may be the same length, one having several holes and the other one hole only, so that the latter acts as a kind of drone. An example of this may be 1 Sam 10:5, where the *ḥālîl* is another part of the "Canaanite band." Reed-pipes were also associated with funeral songs (cf. Jer 48:36 and Matt 9:23). Reed instruments may have been used to express great pathos.

(2) A single-pipe. This was particularly popular at feasts (cf. Isa 5:12; 30:29).

(3) Pipes or flutes. Extant from the 1st century C.E. is an example of a bone-flute with a blocked top and a narrow entrance into the instrument's vertical cavity. There are other kinds of flutes, some vertical, with the player blowing over the top rim, others transverse, with the opening on the upper side of the instrument. In a context such as 1 Kgs 1:40, the reference may be to several different kinds of pipes or

flutes, although perhaps not including reed pipes. In 1 Cor 14:7 an instrument of the flute family may be intended (*aulos* Gk).

b. *nĕḥīlôt.* The Heb *nĕḥīlôt* (cf. Psalm 5) are probably the lamentation-pipes for which monuments and reliefs give impressive evidence.

There are other Hebrew terms sometimes associated with this class of aerophones, but the evidence concerning them is not strong, e.g., *ʿal ʿălāmôt* (cf. Psalm 46). 1 Chr 15:20 suggests that an instrumental interpretation of this word is inappropriate. It could perhaps refer to vocal instructions (cf. Exod 15:20; Judg 11:34).

2. Group 2. In this group of aerophones the lips of the player produce the vibration of air.

a. *šôpār.* Since the ancient distinction between the Heb *šôpār* and the trumpet does not correspond to the modern distinction between "horn" and "trumpet," the simple transliteration "shophar" (rather than "ram's horn," as a translation of the Heb) has much to commend it. The *šôpār* has two interrelated areas of association.

(1) War. The *šôpār* has sacred associations, even in battle (Josh 6:4–20; Judg 3:27; 6:34). It was used for signaling (1 Sam 13:3; Isa 18:3; 27:13; 58:1; Jer 51:27; 4:5, 19, 21); it was used by the watchman (Jer 6:1, 17; Ezek 33:3–6), and as a warning to repent (Amos 2:2; 3:6; Hos 5:8; Joel 2:1, 15; Zeph 1:16; Hos 8:1). 1QM illustrates these uses of the *šôpār,* except that the trumpet is given greater precision in signaling detailed instructions to the army. The Chronicler has a distinctive view of the relative positions of *šôpār* and *ḥăṣōṣĕrâ.*

(2) Worship. the *šôpār* was sounded throughout the land on the Day of Atonement (Lev 25:9). Zeph 1:16 provides a parallel for this, with clear military links. The *šôpār* is linked with the *tĕrûʿâ;* this has a rich series of associations—warnings concerning holiness and judgment (Lev 26:16ff.), and celebration of victory and blessing for the land. 1 Kgs 1:34, 39, 41 and 2 Kgs 9:13 refer to the use of the *šôpār* in connection with royal coronations.

b. *ḥăṣoṣĕrâ.* In connection with this Hebrew word, a passage in Josephus (*Ant* 3 §291) is particularly relevant:

> Moses further invented a kind of clarion which he had made for him in silver, on this wise. In length a little short of a cubit, it is a narrow tube, slightly thicker than a flute, with a mouthpiece wide enough to admit the breath and a bell-shaped extremity such as trumpets have. It is called asosra in the Hebrew language.

Where *šôpār* and *ḥăṣōṣĕrôt* occur together (Hos 5:8 and Ps 98:6) it is convenient simply to transliterate the former as "shophar" and to translate the latter as "trumpet." But whether or not this is an accurate rendering depends on two factors: to what date should a text such as Ps 98:6 be assigned? And, at what date did the instrument described by Josephus first appear in Israelite-Jewish culture?

The silver trumpets made of hammered metal (Num 10:1) had a specific liturgical function at the end of the OT period (cf. Sir 50:16–19). 2 Kgs 12:13 suggests that they also had a role in the temple at an earlier period. In Numbers, as in Ecclesiasticus, they are signs of divine favor.

The *ḥăṣōṣĕrôt* are played by the priests rather than by the Levites in the later strands of the tradition in Chronicles (2 Chr 5:12). In the earlier strands that distinction is missing or blurred (1 Chr 16:42; cf. 2 Chr 29:25, where the Levites play "the instruments of David"). The Targumic evidence in 1 Chr 13:8 supports the translation of *ḥăṣōṣĕrôt* as "trumpets."

c. *qeren*. The Heb word *qeren* is parallel to *šôpār* in Josh 6:5. Some suggest that *qeren* refers to "horn" without any metal attachment, whether as mouthpiece or as bell. But that should not be taken to suggest that *šôpār* did not also carry the same possible sense. (For the use of *qeren* in Aramaic, see below).

d. *yōbēl.* The Heb *yōbēl* is parallel to *šôpār* in Exodus 19 and Joshua 6. Again, like *qeren,* it is probably an alternative designation for (rather than a subcategory of) the *šôpār.* In Exod 19:13 God gives notice that the *yōbēl* is to be blown as permission for the people to approach the mountain (cf. the use of *salpinx* in Heb 12:19); in v 16 the *šôpār* sounds, and in v 19 it becomes an accompaniment to the divine voice. Read as a consecutive narrative the passage gives the impression that the *yōbēl* and the *šôpār* are the same instrument. The word *yōbēl* may, of course, betray the presence of different strata in the text; the word

marks the start of the sacred festival in Lev 25:34. In Joshua 6 the narrative appears to use different words for the same instruments. Some argue that the verb used in Exod 19:16 and Josh 6:5 with *yōbēl* indicates a louder kind of *šôpār,* but the verb could simply mean a particular way of sounding the *šôpār.* Since the narrative in both places depends on the sacred quality of the instrument rather than on decibels, the verb may not possess a decisively musical significance in either place.

D. Chordophones

These instruments produce sound from the plucking or bowing of strings stretched over or into a sounding box. The Mesopotamian and Egyptian instruments identifiable from depictions and descriptions include three main types: (1) the harp (akin to the warrior's bow with up to twelve strings), with the soundbox on the horizontal or the vertical part of the bow; (2) the lyre (Eg. *knnwr*), with two arms (symmetrical or asymmetrical) raised from ends of the soundbox, supporting a yoke from which the strings (three to eleven in number) descend into or over the soundbox; and (3) the lute, whose strings stretch along a narrow neck and then over a bulging soundbox. Details concerning the length of string, tuning, playing, and damping in the use of these instruments have been partly clarified from three interrelated areas of research: the study of ancient notations, the study of the depictions of players, and modern reconstructions and recordings (Wulstan; Kilmer). The lyre is well represented in Israelite archaeological finds (e.g., the 12th century B.C.E. Megiddo ivory plaque, the 7th century B.C.E. Jasper Seal, and the Bar Kokhba coins ca. 132 C.E.). The lute is less well attested (cf. the 16th century pottery figurine from Tell el-Ajul, and the 15th–13th century Beth-shean bronze statuette). The harp is not found at all.

1. *kinnôr.* The identification of Heb *kinnôr* with the lyre is very probable (cf. *Ant* 7.306, the various versions of the OT which understand *kinnôr* as a *kithara,* and Abraham ben Meir ibn Ezra's description; by contrast, the links of the harp with Syria are insufficient to explain the forty-two uses of the word *kinnôr* in the OT [cf. Juv. *Sat.* 3.63–4 "obliquas chordas"]).

The associations of the *kinnôr* with singing are ancient (Gen 31:27; 2 Sam 6:5; Isa 23:16) and highly significant in the Psalm material (cf. Pss 57:9; 98:5; 147:7; 149:3; 150:3; 1QH 5:30; 11:22f. [*TDOT* 4: 91–98; *RGG* 4: 1201]—cf. also the Wisdom context in Ps 49:5). A feature of David's selection as a *kinnôr*-player by Saul (1 Sam 16:16) was that he should "play [Heb *ngn*] *with the hand*"—as distinct, perhaps, from "with the plectrum"? The "Canaanite prophetic band" seems to have included the *kinnôr* (1 Sam 10:5). The exact nature of the wood used in its construction is unfortunately unclear (1 Kgs 10:12; 2 Chr 9:11), nor can we be sure of the character and associations of its sound, except that considerable variation was possible. It can sound "sweet" (Ps 81:2) or "soft" (Ps 92:4); but does the Heb *hmh* mean "groaning" (cf. Ps 55:17) or "sounding"? Does *šĕʿôn* mean "din" in Isa 24:8, and is this the sound of the instrument, or a tumult of singers? Is it or is it not an appropriate instrument for a lament (cf. Psalms 43 and 137)? The rhythmic character of the *kinnôr* was proverbial (Isa 30:32), especially when played with the plectrum. It remained a cultic instrument in the developed pattern of Second Temple worship and was seen in continuity with the prophecy of preexilic times (1 Chr 25:4).

2. *nĕbāl.* With this Heb term we enter a far more difficult area, as the variant translations in the OT versions show. The term appears parallel to *kinnôr* in 2 Sam 6:5, 1 Sam 10:5, Pss 57:9; 71:22; 81:3; 108:3; 150:3 and in the Chronicler; in Pss 33:2; 92:4; 144:9 it is parallel to *kinnôr* but is itself linked with the term *ʿaśôr* ("ten stringed"?). It appears to have cultic associations in Amos, especially in 5:23 and 6:5, of which some suggest that the language evokes dissolute, noisy improvisation indicating careless self-confidence. Amos seems to imply that the instrument is plucked with the fingers. Josephus (*Ant* 7.306) agrees, describing it as having twelve notes (*phthongous* cf. 1 Cor 14:7). The rabbis regarded it as a larger, lower-pitched *kinnôr,* and modern writers sometimes affirm the use of different sizes of instrument, unwisely using as a basis the evidence from 1 Chr 15:20f. (cf. above on *ʿal ʿălāmôt;* the difficulties in interpreting *ʿal ʿălāmôt* make it doubly difficult to reach a conclusion regarding *šĕmînît,* especially the conclusion that *šĕmînît* refers to an instrument capable of playing an octave lower). Attempts to derive the character of the instrument etymologically can be misleading, as we shall see below; but it is possible that in this case the word *nĕbāl* evokes the picture of a bulging bottle (cf. LXX 1

Kgdms 10:3; Jer 13:12). The lute is the most appropriate stringed instrument known from archaeological work to correspond to such a picture. It would not, however, be wise to assume that *nĕbāl* should always be translated "lute" (it could refer in some contexts to a different size of lyre).

3. *ʿûgāb.* The Heb *ʿûgāb* is usually considered a wind instrument. The arguments for this involve an etymological association with the flute family, the role of Gen 4:21, the weight of discussion among modern commentators (Sendrey), and *Tg. Onq.* on Gen 4:21. But there are arguments against this view: Josephus regarded Jubal as creating two string instruments; the LXX and Peshitta at Gen 4:21 suggest that *ʿûgāb* was a stringed instrument; and Symmachus has *kithara* at Job 21:12 and Ps 150:4. An important new piece of evidence is the discovery of the Hebrew version of Psalm 151 in the Qumran Psalm Scroll. Ps 151:2 (Heb) reads:

My hands have made a *ûgāb*
and my fingers a *kinnôr.*

The parallelism between *ʿûgāb* and *kinnôr* suggests either that *ʿûgāb* was a general word (e.g., "instrument") or a particular string instrument. The harp is a possibility (Bayer). In that case *minnîm* in Ps 150:4b may be a general reference to strings, and *ʿûgāb* a particular example of a stringed instrument. The presence in this psalm of an instrument which otherwise found little place in Canaanite or Israelite instrumentation is not an insuperable problem. In Job 21:12 and 30:31 *ʿûgāb* is an instrument expressive of joy and contentment.

E. Daniel 3

From the Hellenistic period there is pictorial evidence of an increased use of mixed groups of musicians (Fleischhauer 1982: 150). Recent discussions of the "orchestra" of Nebuchadrezzar in Daniel 3 (Mitchell), in attempting to place individual instruments mentioned there as early as the 6th century B.C.E., have neglected this factor. There are undoubtedly early traditions in the book of Daniel and the "orchestra" could be one of these, but the depicting of an Eastern potentate as possessing a mixed orchestra would have constituted a significant barbaric motif in the eyes of an early 2d century B.C.E. reader. According to Daniel 3, this mixed orchestra included the following instruments:

1. *qarnāʾ*. The translation "horn" (Aram *qarnāʾ;* Heb *qeren*) is often favored here, on the grounds of language and because of the assumed rarity of *trumpets* within the depictions of musical instruments from the 6th century B.C.E. "Horn" would then be understood as an instrument formed from the horn of an animal. If, however, the book of Daniel is read as addressed in its final form to Hellenistic times, then the possibilities of translation are much greater. "Pagan" bands included brass instruments. In such a context *qarnaʾ/qeren* could be understood as the equivalent of the *cornu* (Latin) or the *buccina* (Latin), although the distinction between these two names is a matter of debate. The *tuba* (Latin) and *lituus* (Latin, see below) might also to be considered. Perhaps an appropriate translation of *qeren* here might be "bugle-horn."

2. *mašrôqîtāʾ*. The LXX translates *mašrôqîtāʾ* as "*syrinx,*" and the Vg translates it as *fistula,* either of which might point to panpipes, a row of pipes of different lengths bound together, which produce a piccolo-type sound capable of birdlike twittering and running scales. Some scholars relate the Aramaic name to a Semitic root, "to hiss or whistle." The humble "whistle" is also a possible contender for an orchestral place.

3. *qaytrôs.* The LXX translates this Aramaic word as *kithara,* and *qaytrôs* itself may actually be a loanword from the Gk *kithara* or *kitharis.* In a 6th century B.C.E. Babylonian setting this would be the lyre; in a Hellenistic setting the Aramaic name would evoke the Greek style of instrument and of performance depicted on Greek amphora from the 5th century B.C.E. (Michaelides 1978, cf. Rev 14:2; 18:22).

4. *sabbĕkāʾ*. The LXX and Vg translate this Aramaic word as "*sambyke,*" which probably was a stringed instrument of the harp family with a large sounding-board of proverbially barbaric and immoral character (Michaelides). It was employed in Hellenistic times as part of instrumental bands (Fleischhauer 1982: 187). Those who argue for Daniel 3 as representing an actual 6th-century B.C.E. orchestra suggest that it is a loanword indicating an Assyrian-type horizontal harp.

5. *pĕsanterîn.* The LXX and Vg translate this Aramaic word as "*psalterion,*" a member of the harp family and well-known in Greek circles from the 4th century B.C.E.

6. *sûmpōnyâ.* The discussion of this word is complicated by the presence in Luke 15:2 of the Gk word *symphonia,* which is often confused with the Aram *sûmpōnyâ.* In all probability the two are unconnected. *Symphonia,* from which English has the derivation "symphony," can indicate either sound made by voices singing together (Peshitta and Harclean at Luke 15:2 understood *symphonia* in this sense), or voices together with instruments, or simply "a band." Some argue for the translation "bagpipe," others "double pipe," but NEB's preference for "music" is probably correct. *Sûmpōnyâ,* by contrast, is probably a transliteration of a dialect form of the Gk *tympanon,* a kettledrum. This would provide the orchestra in Daniel 3 with a much-needed percussion instrument (one which had been in use from Mesopotamian times; Mitchell).

The impression given by these individual discussions reinforces the view that to the 2d century B.C.E. reader the band of Nebuchadrezzar described in Daniel 3 would have sounded bizarre and absurd, and so would have underscored the book's contempt for idolatry.

F. *salpinx* in the NT

Already several aspects of NT usage have been considered, insofar as the NT reflects traditional folk music practiced over many centuries. There remains, however, one distinctively NT usage which deserves separate attention: the references to *salpinx.*

The Gk word *salpinx* can refer to a wide range of musical instruments. We have seen already that it has a LXX usage covering *qeren, šôpār,* and *ḥăṣōṣĕrôt.* The Gk *salpinx* functioned in military and cultural contexts. It heralded the opening of competitions and the verdict of the judges. It played an important part in Etruscan and Roman military circles. Other instruments referred to by the word *salpinx* were the *cornu* and *buccina,* which were also military instruments, and which, despite their raucous character, were used in various instrumental combinations (Fleischhauer 1982: 16). With the *lituus,* they are depicted in representations of solemn funeral processions, civic ceremonies (cf. perhaps Matt 6:2 with irony or sarcasm), and military triumphs. The *lituus* has been reconstructed from archaeological finds, and its haunting alpine-horn call must have been familiar wherever Roman soldiers made their camps and wherever gladiatorial combat took place. The *tuba* (as the relief on Trajan's Column indicates) accompanied military marching and marked the strategic movements of troops in war (cf. 1QM; 1 Cor 14:8), and with the *buccina* and *cornu* it was intended to create panic among the enemy.

In intertestamental literature the sounding of a *salpinx* was understood to initiate messianic times (1 Thess 4:16; cf. also the holy war tradition in *L. A. B.* 36:3), the gathering of God's people who had been humiliated by the heathen (*Apoc. Ab.* 31.1), or the resurrection of God's people (*Ques. Ezra* B 12; 1 Cor 15:52). The golden trumpet pointed heavenward heralds a series of scenes: it puts heart into the seer, splits the heavens wide open, calls the saints to intercession as they do daily when the trumpets answer each other between heaven and earth, and warns of the coming wrath of God's judgment (*Apoc. Zeph.* 9–12; Matt 24:31). The association of the trumpet with the fire is particularly strong in judgment scenes (*T. Ab.* 12:10; cf. Heb 12:19), and the Feast of Trumpets no doubt lent strength to this tradition (*L. A. B.* 13:6). Proclamation of both the mercies and majesty of God is another function of the trumpet (*L. A. E.* 47:1). Sometimes this is associated with cosmic motifs (*L. A. B.* 32:18).

The use of *salpinx* in the NT is therefore distinctive not only because of its extremely rich group of associations, the trumpet being part of a series of interlocking motifs—musical, ritual, secular, and cosmic—but also because it focuses these motifs in a single Greek word. This is all the more interesting in the case of Revelation because the imagery there is based on what is heard (Rev 1:10). It also explains the construction of the trumpet scenes, since these bring together the devastation of the earth with its plague and its cosmic associations (Rev 8:6–9:13), the call to penitence (Amos 3:6; Joel 2:1, 15; Rev 9:20), the prophetic associations of judgment (cf. Rev 18:22, where the songs to the "*cithara,*" musicians, players of the "*aulos*" and the "*salpinx*" are heard no more), and the announcement of the Day of the Lord (Revelation 14). The holiness of the divine presence is also evoked by the trumpet references (4:1), as they reflect the interplay of heavenly and earthly liturgies (8:1ff).

MUSTARD SEED. See FLORA.

MUSTER GATE (PLACE) [Heb *ša*ʿ*ar hammipqād* (שַׁעַר הַמִּפְקָד)]. One of two inner gates (the Water Gate [Neh 3:26] and the Mifqad, or Muster Gate [Neh 3:31]) of Jerusalem on the E side of an enclosure that surrounded the sacred temple precincts and the royal compounds. To the W was the sacred temple enclosure and its E gate kept by Shemaiah (Neh 3:29). Opposite the Muster Gate to the E was the outer defensive wall of the city and the house of the Nethinim (temple servants) and the merchants (Neh 3:31).

Outside the temple precincts and its E gate was the "open place" or "plaza" of the House of God (Ezra 10:9) where Ezra gathered the people of Judah and Benjamin. It was here that Ezekiel described (Ezek 43:21) a sin offering that was to be burnt in the *mipqād habayit* (or "Mifqad of the House" [of God]). This plaza was also referred to (2 Chr 29:4–5) when Hezekiah assembled the priests and the Levites in the "open place" or "plaza" on the E (of the temple precincts).

MYNDOS (PLACE) [Gk *Myndos* (Μυνδος)]. A city on the coast of Caria in SW Asia Minor to which the Roman consul Lucius addressed a letter (ca. 139 B.C.) proclaiming the renewed alliance between Rome and the Jews (1 Macc 15:23; see 15:16–21 for general text of the letter). It has been suggested that the account of this letter (15:15–24) should be placed immediately after 14:24 (Goldstein, *1 Maccabees* AB, 492–94). Myndos is associated with modern Gumushli, near Halicarnassus.
GARY A. HERION

MYRA (PLACE) [Gk *Myra* (Μυρα)]. An important city on the Lycian coast in SW Anatolia. Its name was later associated with myrrh, but there is no evidence that this spice was ever traded there. For example, Constantine Porphrogenitus declared: "Thrice blessed, myrrh-breathing city of the Lycians, … spouts forth myrrh in accordance with the city's name."

The city of Myra was located on the plateau about 3.5 miles from the coast (36°17′ N; 29°58′ E), but its name also included its port of Andriace (now Andraki). The Myrus or Andracus River flowed past the city to the coast in a narrow valley. Its estuary is now submerged in sand dunes. The ruins of the city of Myra are now located 1 mile N of the village of Demre.

It was at Myra (i.e., Andriace) according to Acts 27:5–6 that Paul and his fellow travelers transferred from a ship from Adramyttium to an Alexandrian grain ship bound for Italy, which had probably sailed directly N from Egypt to Lycia. In Acts 21:1, Codex D and some other mss add the words "and Myra"

after "Patara." The apocryphal *Acts of Paul and Thecla* recount the preaching of Paul at Myra (James 1924: 281–84; Schneelmecher *NTApocr* 2: 363–67).

Though literary texts do not mention Myra until the 1st century B.C. (Bean 1978: 120), many Lycian inscriptions of the Persian period have been recovered from Myra (Jones 1971: 98). In the Hellenistic era, Myra was one of the six largest cities of the 23-member Lycian League (Magie 1950: 532; Stark 1956: 130). In Roman times, it became more important than its rival city Patara, 40 miles to the W. See PATARA.

In 197 B.C., Antiochus the Great conquered Lycia, including Myra. After his defeat by the Romans at Magnesia in 189 B.C., Lycia was granted to Rhodes. Then in 169 B.C. the Romans declared the Lycians free. In 88 B.C. Ptolemy IX of Egypt, fleeing from his mutinous army, took refuge at Myra. Lentulus Spinther, Brutus' lieutenant, coerced the city into donating money for the republican cause in 42 B.C. In A.D. 18 Germanicus, who visited Myra, was honored with a statue, proclaiming him "Savior and Benefactor." Augustus and Tiberius were both hailed as the "Benefactor and Savior of the whole universe" by Myra (Magie 1950: 498, 529; Vermeule 1968: 225). A colossal head of Augustus was recovered at Myra (Vermeule 1968: 175, fig. 107).

Vermeule (1968: 153) comments: "The Lycians were proud, independent, and poor in the Roman period, a fact which is reflected in their lack of major coins." One exception is a fine coin of Gordianus III from Myra. Coins and inscriptions indicate that the chief deity of Myra was Artemis Eleuthera, a mammiferous goddess like Artemis of Ephesus (Kirsten 1978).

The monuments of Lycia, including those of Myra, were first brought to light by the journal and drawings of the celebrated British traveler Charles Fellows (1841). The cliffs near Myra are honeycombed with elaborately carved tombs, some with painted reliefs. These date from the 4th century B.C. Akurgal (1970: 263) declares: "The rock-cut Lykian tombs of Myra are among the most fascinating historical remains of Turkey."

The theater, which originally held about 11,000, had a podium eight feet high (Stark 1956: 152). Of the Roman type, it was one of the finest theaters built in Asia Minor (Fellows 1841: 115). The road between Myra and Andriace is lined with numerous sarcophagi. At some distance from the sea is the granary of Hadrian, "one of the best-preserved monuments of imperial efficiency in Asia Minor" (Vermeule 1968: 225). It has seven long store rooms behind a 200-foot facade.

Though no excavations have been conducted, careful studies of the visible remains, mainly of Byzantine date, were conducted between 1965 and 1968 (Borchhardt 1975). Harrison has identified the remains of five churches at Andriace (1963: 142–43).

The most famous church is that of the legendary St. Nicholas at Myra. Nicholas was born at Patara ca. 300 B.C. and served as the bishop of Myra. Late sources, uncorroborated by contemporary evidence, allege that Nicholas was imprisoned during Diocletian's persecution, that he was present at the Council of Nicaea in 325, and that he died ca. 350 (Anrich 1913 and 1917; Bean 1978: 125–26).

His church, which had fallen into ruins, was not rediscovered until 1841 (Borchhardt 1975: 303). It appears that Nicholas' remains were at first buried outside the city walls with only a small monument. By the mid-5th century inscriptions and literary references attest to his heightened popularity. It was probably in the 6th century that a basilica was erected over his tomb, a time when the legendary tales of his generosity and miracles developed (Kirsten 1978: 468). The first reference to his grave as a martyrium is dated to 565.

Myra became a popular center for pilgrims in the Middle Ages, as oil seeping from St. Nicholas' tomb was regarded to have healing powers. In 1087 men from Bari, in S Italy, carried off the saint's relics to their home as an act of *sacra furta,* "sacred theft" (Stark 1956: 150; Bean 1978: 125; Geary 1978). Nicholas eventually became the patron saint of children, sailors, and merchants, of Greece and of Russia, and was finally transformed in America as "Santa Claus."

MYRTLE. See FLORA.

MYSIA (PLACE) [Gk *Mysia* (Μυσια)]. A region of NW Asia Minor along the Hellespont and the Aegean Sea. The ancient geographers disagree on the exact boundaries of the region of Mysia and it appears to have varied continually from the time of Homer (Strabo 12.4.5–6; and 12.8.1–3). Mysia was divided into Mysia Major and Minor by Strabo and Ptolemy. Mysia Major probably corresponded to the region around Mt. Olympus, which the Mysians occupied through the time of Croesus (see Strabo 12.4.10; 12.8.3; and Hdt 1.36), and Mysia Minor corresponded to the region adjacent to Lydia on the banks of the Caicus River and Pergamum (Strabo 12.8.1).

The Mycians were not indigenous to Asia Minor, but migrated from Thrace (perhaps along with the Lydians) and were originally known as the Moesians (Strabo 12.3.4; 12.4.8; 12.8.3). According to Herodotus, the Mysians were a numerous and powerful people prior to the Trojan War, subjugating regions of Thrace and Macedonia (Hdt 7.20.75). Homer listed the Mysians among the allies of Priam, but assigned them to the regions of Thrace (*Il.* 13.5). The people who are called the "Musoi" (or "Musa") in Hittite and Egyptian documents (14th and 13th centuries) may be the Mysians. After the fall of Priam's Troy, the Mysians controlled the Troad for a short time (Strabo 12.4.6).

Mysia came under the control of the Lydians by the reign of King Alyattes, the father of Croesus. When the Lydian Empire fell to the Persians, Mysia was consolidated into part of Darius' second satrapy (Hdt 3.90). Orontes, the satrap of Mysia, revolted against Artaxerxes in 349 B.C.E. and ruled NW Asia Minor.

After Alexander the Great conquered Asia Minor, the Mysians were controlled successively by Antigonus, until 301 B.C.E. (battle of Ipsus), Lysimachus, until 281 B.C.E. (battle of Corupedium), and the Seleucids. In 283 B.C.E., Philetaerus, Lysimachus' treasurer, established the Pergamene Dynasty of the Attalids with Ptolemaic aid. When Antiochus III was defeated at the battle of Magnesia in 190 B.C.E., the Romans rewarded Eumenes II, the king of Pergamum, with the region of Mysia (Livy 38.39). The Pergamenes, however, had to conquer the region of Mysia Olympene in 184/3 B.C.E. from Prusias (Polyb. 4.50; 4.52; 21.48). When Attalus III bequeathed his kingdom to the Romans in 133 B.C.E., Mysia was annexed to the Roman proconsular province (Cicero *QFr* 1.8), but during the Empire it formed a separate district and was governed by a procurator.

Although the Mysians were stereotyped as lazy cowards (Demosthenes *De Cor.;* Aristotle *Rh.* 1.12.20; and Cicero *Pro* Flac. 27; see also ibid. *Orat.* 8), they proved to be dependable mercenaries. After the defeat of Antiochus III, the peace of Apameia in 188 B.C.E. forbade the Seleucid Empire from recruiting soldiers in Roman domains (Polyb. 21.42; and Livy 27.38.10) and forced the Seleucids to find an increased number of volunteers from Greek free states like Pergamum. Antiochus IV had a unit of 5,000 Mysian mercenaries in his army, under the charge of an individual called a Mysarch. The most infamous Mysarch was Apollonius, who in 167 B.C.E. led his mercenaries in an expedition against the city of Jerusalem (see 1 Macc 1:29–35; 2 Macc 5:23–26; and Josephus *Ant* 13.5.3–4 §246–56). The title "Commander of Mysians" (*sar musim* or *sar misim*) was distorted in 1 Macc 1:29 to "taskmaster" or "tax-gathering official" (*sar missim*).

The two principal cities in Mysia, Adramytium and Pergamum, were major Jewish centers by the 1st century B.C.E. (Cicero *Flac.* 68; Josephus *Ant* 14.247–55). Paul passed through two towns in Mysia: Troas (Acts 16:8, 11) and Assos (Acts 20:13). The church at the city of Pergamum was also addressed by John in Revelation (Rev 1:11; and 2:12–17).

SCOTT T. CARROLL

MYSTERY RELIGIONS. The mystery religions were secret religious cults that flourished during the Greco-Roman period. These religions, involving the worship of deities from Greece, Anatolia, Egypt, Persia, and Syria, manifested diversity in their points of geographical origin, and heterogeneity in their patterns of historical development and theological orientation. Yet, in spite of their differences, the mystery religions warrant being discussed together because they all represent a particular form of religion. Commonly originating in ancient tribal and even fertility rituals, these religions emphasized salvation for individuals who decided, through personal choice, to be initiated into the mysteries, and thereby to feel close to each other and to the divine.

Unlike official, public religions, in which people were expected to show outward allegiance to the gods and goddesses of the *polis*, or state, the mystery religions stressed an inwardness and privacy of worship within groups that were frequently close-knit and egalitarian. The devotees of the mysteries ordinarily shared in celebrations that were public in nature (e.g., parades and processions, with music and dance, and preliminary rituals of purification and sacrifice), as well as in secret ceremonies that remain largely unknown. In descriptions of the Eleusinian mysteries it is said that the secret observances included "things recited" (Gk *legomena*), "things shown" (Gk *deiknymena*), and "things performed" (Gk *drōmena*), and such observances may have been typical of the mystery religions in general. Usually a sacred meal was shared by those initiated into the mysteries. At least some of those who participated in the secret ceremonies underwent an extraordinary experience that could be described as death and rebirth. That some such emotionally gripping experience was of fundamental significance in the mystery religions is confirmed by Aristotle, who concluded, in a fragment preserved in Synesius (*Dio* 10), that initiates into the mysteries did not learn anything (*ou mathein ti*), but rather had an experience (*pathein*) and were put into a certain state of mind (*diatethēnai*).

———

A. "Mystery" and the Mysteries

The word "mystery" (Gk *mystērion*) derives from the Gk verb *myein*, "to close," referring to the closing of the lips or the eyes. The "closed" nature of the mystery religions may be interpreted in two ways.

A person (Gk *mystēs,* pl. *mystai*) who had experienced the *mystērion* was required to maintain closed lips in order not to divulge the secret revealed at the private ceremony. Pledges of silence were intended to ensure that the holy secret would not be disclosed to profane outsiders. Most *mystai* observed their vows of silence, and as a result comparatively little is known of the secret ceremonies of the mystery religions. However, Christian converts who had once been initiated into the mysteries and Christian authors who claimed to possess knowledge about the mysteries sometimes were eager to expose what they believed to be godless secrets of these religions (cf. Arnobius of Sicca, *Adversus Nationes;* Clement

of Alexandria, *Protrepticus;* Eusebius of Caesarea, *Praeparatio Evangelica;* Firmicus Maternus, *De errore profanarum religionum;* Hippolytus of Rome, *Refutatio Omnium Haeresium*). Further, the Greek general Alcibiades may well have been accused of betraying the pledge of silence by engaging in a parody of the Eleusinian mysteries of Demeter and Kore during a drinking party (cf. Plutarch *Alc.* 19.1–2).

An initiate into the mysteries also participated in the closing (and the subsequent opening) of the eyes. As people with closed eyes remain in darkness until they open their eyes to see the light, so the *mystai* whose eyes were opened moved from darkness to enlightenment, both literally and metaphorically. The contrast between closed and open eyes, between darkness and light, was accentuated within the initiatory ceremonies, which often took place at night and which employed the light of torches (at times with reference to the light of the sun; cf. Apuleius of Madaura, *Met.* 11.23–24). The significance of the closing and opening of the eyes is also maintained by Greek terms used to designate priests and initiates. For example, one of the priests in the mystery religions was termed "one who shows sacred things" (Gk *hierophantēs*); in the Eleusinian mysteries the highest stage of initiation was designated that of "beholding" (Gk *epopteia*), and one who attained such an initiatory status was called "beholder" (Gk *epoptēs*). Pindar, in a fragment preserved in Clement of Alexandria (*Strom.* 3.3.17), likewise used visual imagery in his blessing upon one initiated with the Eleusinian mysteries: "Blessed is one who goes under the earth after seeing these things. That person knows the end of life, and knows its Zeus-given beginning."

The word "mystery" (Heb *sôd;* Heb and Aram *raz;* Gk *mystērion*) is also used in the OT, NT, and Dead Sea Scrolls (see Brown 1968). On *mystērion* in 1 Cor 15:51 see D below.

B. Greek Mystery Religions

Within the world of ancient Greece the mysteries that were celebrated included the Eleusinian mysteries, the Andanian mysteries, the mysteries of Dionysos, the mysteries of the Kabeiroi (or, Cabiri, the great gods) at Samothrace, and the lesser known mysteries at Phlya. Mention may also be made of the mysteries founded by Alexander of Abonoteichos in honor of the serpent Glykon, an incarnation of the god Asclepius, since these mysteries were satirized by Lucian of Samosata (*Alex.* 38–43) with images and terms familiar from the Eleusinian mysteries.

1. Eleusinian Mysteries. The most influential and popular of the Greek mysteries were the Eleusinian mysteries. Celebrated at Eleusis (modern Elefsis) near Athens, these mysteries focused upon Demeter, the "Grain Mother," and Kore, the "Maiden." From early times an agricultural cult at Eleusis observed rituals commemorating the fertility and life of grain; the later Eleusinian mysteries employed similar rituals, but directed particular attention at the transformed life of people. Hence Hippolytus could observe (*Haer.* 5.8.39) that among the "things shown" in certain Eleusinian mysteries was a single head of grain that was beheld in silence, apparently as a manifestation of the life in grain and in all. Likewise, Cicero could have Marcus comment (*Leg.* 2.14.36) concerning the Eleusinian mysteries that "we have learned from them the fundamentals of life (*principia vitae*) and have grasped the basis not only for living with joy but also for dying with a better hope." The dramatic story of Demeter and her dying and rising daughter Kore, as told in the *Homeric Hymn to Demeter,* narrates a mythic tale of the rape of Kore by Hades (or Plouton, "Wealthy One"), the grief of Demeter and her quest for Kore, and the subsequent founding of the Eleusinian mysteries by Demeter herself. That tale may well have functioned as the "sacred account" (Gk *hieros logos*) of the mysteries of Demeter and Kore. Just before 600 B.C.E., it would appear Athens took control of Eleusis, and thereafter Athens assumed jurisdiction of the Eleusinian mysteries. Later mysteries of Demeter and Kore were celebrated at a site in Alexandria, Egypt, that was also called Eleusis.

2. Andanian Mysteries. The Andanian mysteries are known from references in Pausanias and from the Rule of the Andanian mysteries, an inscription that may be dated to 92/91 B.C.E. Celebrated at Andania in the southwestern Peloponnesus, these mysteries were dedicated to several deities: Demeter, Hermes, Apollo Karneios, Hagna (Hagnē), and the great gods. According to the Andanian Rule, the epithet Hagna ("Holy One," "Pure One") designated a goddess (as well as a fountain) in the Andanian mysteries; later Pausanias understood Hagnē to be a title of Kore. The Rule of the Andanian mysteries is a public record

of the regulations to be followed in the celebration of the mysteries. The Rule outlines in detail what must be attended to by participants in the mysteries (e.g., the oaths, the clothing, the processions, the tents, the funds, the sacrifices, the musicians, the sacred meal) and what penalties must be assessed for transgressions, but nothing forbidden is divulged by the Rule. Rather, the Rule discusses only the outward trappings of the mysteries, and employs deliberately cryptic phrases (e.g., "the things pertaining to the initiation") to refer to what must be kept secret.

3. Mysteries of Dionysos. The mysteries of Dionysos (or Bacchos) were remarkably diverse in character. Dionysos was the Greek god of fertility, animal maleness, wine, drama, and ecstasy, and his worshipers acknowledged his presence in the phallus set in the *liknon* (a winnowing basket sometimes used as a cradle), in the raw flesh of wild beasts, in the goblet of wine, in performance in the theater, and in spiritual bliss. As portrayed in Euripides' *Bacchae,* the archaic mysteries of Dionysos involved the female devotees of the god (i.e., Bacchae, also known as maenads, or women in a Dionysian frenzy) participating in the raw power of Dionysos by tenderly nursing wild animals or savagely tearing animals (and eventually the impious Pentheus himself) to pieces. According to Livy (39.8–19), the Roman Bacchanalia included sexual irregularities that prompted the Senate to adopt a decree, *Senatus Consultum de Bacchanalibus.* The famous frescoes in the Villa of the Mysteries at Pompeii employ a variety of Dionysian motifs in order to present what also may be interpreted as mysteries of sexuality, but here Dionysian sexuality takes on a more domesticated character. The Rule of the Iobacchoi records the regulations of an Athenian Bacchic club that enjoyed the Dionysian pleasures of eating, drinking, and dramatic performances. Among the Orphics the Dionysian practice of tearing flesh (Gk *sparagmos*) and devouring it raw (Gk *ōmophagia*) became the original transgression for those who wished to live a life of purity and thus to allow the soul to realize Dionysian bliss. An Orphic lamella from Thessaly presents the soul of a dead person professing the twofold nature of a person (i.e., earth, or Titanic flesh, and heaven, or the divine nature of Dionysos—cf. the view of Plato) but stressing the primacy of the divine: "I am a child of earth and of starry heaven, but my race is of heaven (alone)." Similar expressions are occasionally to be found in the highly syncretistic Orphic hymns (cf. hymn 13, "To Kronos").

C. Mystery Religions of Middle Eastern Origin

During the Hellenistic and Roman periods mystery religions originating in the Middle East became increasingly attractive to people of the Mediterranean world. Oftentimes colorful and exotic in their manifestations, these mystery religions derived, directly or indirectly, from Anatolia, Egypt, Persia, and Syria, and encouraged the worship of the Great Mother Kybele and her lover Attis, the Egyptian deities Isis and Osiris (or Sarapis), the Persian deity Mithras, and the Syrian goddess (cf. the Great Mother) and the slain youth Adonis.

1. Mysteries of the Great Mother and Attis. The Anatolian mysteries of the Great Mother (Magna Mater), often named Kybele (or Kybebe; in Latin, Cybele), are rooted in the fierce religious traditions of ancient Phrygia. In 204 B.C.E. the Anatolian goddess was formally welcomed into Rome, and thereafter the worship of the Great Mother was prominent in the Roman world. The mysteries of the Great Mother and her young paramour Attis were renowned for unusual festivals and flamboyant followers. The Christian poet Prudentius describes, with horror and disgust, the gory *taurobolium* (ritual slaughter of a bull), in which a person descended into a pit in order to be drenched with the blood of the sacrificed bull. An inscription dated to 376 C.E. states that a person who thus bathed in the bull's blood was "reborn for eternity" (Lat *in aeternum renatus*). The most spectacular followers of the Great Mother and Attis were the Galli, who imitated the mythological actions of Attis by castrating themselves, and then adopted transvestite practices appropriate for those who voluntarily had become eunuchs devoted to the Great Mother. According to rather late sources, during the springtime, a Roman festival in honor of the Great Mother and Attis commemorated the death of Attis in a dramatic fashion, and reaffirmed life and joy in a portion of the festival aptly named the Hilaria. The actual ceremonies of the mysteries of these Anatolian deities remain unknown, but a formula (termed a *symbolon* in Gk) cited by Clement of Alexandria (*Protr.* 2.15) provides enigmatic hints: "I have eaten from the drum (or, tambourine); I have drunk from the

cymbal; I have carried the sacred dish; I have stolen into the inner chamber." Variant readings for this *symbolon* may be found in Firmicus Maternus (*Err. prof. rel.* 18.1).

2. Mysteries of Isis and Osiris. Although Egyptian "mysteries" of Isis and Osiris were celebrated in ancient Egypt at Abydos and other locales as mystery plays of succession and funerary rituals of mummification and burial, the Egyptian mystery religions themselves became established during Greco-Roman times. The goddess Isis was venerated throughout the Greco-Roman world, and those who revered her produced temples, statues, and paintings, and aretalogies on her behalf. Among the shrines of Isis is the well-preserved temple of Isis at Pompeii, with its sacred utensils, works of art, and adjacent shelter with Nile water for lustrations. The god Osiris, brother and lover of Isis and lord of the realm of death, also attracted many devotees, who sometimes worshiped him as Sarapis or Osiris-Apis (Osiris joined to the Apis bull). In book 11 of his *Metamorphoses* Apuleius portrayed his protagonist Lucius being saved and humanized by Isis, and initiated into her holy mysteries. The portrayal of the initiation of Lucius includes an account of the preliminary rituals as well as a guarded description of the secret ceremonies: "I approached the border of death. I trod the threshold of Proserpine and, borne through all the elements, I returned. At midnight I saw the sun shining brightly. I approached the gods below and the gods above, and in their presence I worshiped them." While the language Apuleius employs is deliberately vague, he does depict the experience of initiation as an experience of darkness, death, and perhaps also rebirth (cf. his use, elsewhere, of the Lat *renatus,* "reborn" or "born again").

3. Mysteries of Mithras. The Greco-Roman worship of Mithras derived from Persian sources, and retained certain Persian motifs, but the mysteries of Mithras are best understood as a Roman phenomenon that thrived in the Roman Empire from the 2d century C.E. on. (The earliest references to the Mithraic mysteries are to be found in Plutarch's account [*Pomp.* 24.1–8] of the Cilician raiders who celebrated secret rites of Mithras.) Men attracted to Mithras, particularly soldiers, sailors, and imperial officers, entered the Mithraea (sanctuaries of Mithras) in order to participate in initiatory rituals and other ceremonies. Tertullian enumerates lustrations, ordeals, and tests of valor in which initiates participated, and Justin Martyr refers to holy Mithraic meals in which initiates took bread and a cup of water (or a mixed cup of water and wine) and uttered certain formulae. Initiation into the mysteries of Mithras took place in progressive stages, and ordinarily seven stages are specified: raven (Lat *corax*), bridegroom (*nymphus;* alternately, occult, *cryphius*), soldier (*miles*), lion (*leo*), Persian (*Perses*), courier of the sun (*heliodromus*), and father (*pater*). These seven stages may correspond with seven stations that decorate several Mithraea at Ostia Antica, and perhaps also with the seven gates of heaven (associated with the seven planets and seven metals) designated for the Mithraic ascent of the soul according to Celsus (in Origen, *c. Cels.* 6.22), as well as with the seven stages of ascent in the "Mithras Liturgy." Often richly decorated with works of art, Mithraea exhibited mythological, astronomical, and astrological imagery, and featured, in the apse of a typical Mithraeum, the figure of Mithras *tauroktonos,* Mithras slaying the bull. (On the possible astrological understanding of the figure of Mithras *tauroktonos,* see Ulansey 1989.) A brief inscription from the Mithraeum of Santa Prisca in Rome may provide a soteriological interpretation of the slaying of the bull: "And you [i.e., Mithras] have saved us, having shed eternal blood." Another inscription from the same Mithraeum describes Mithraic salvation as rebirth and creation, brought about through a sacred and perhaps sacramental repast: "one that is piously reborn (Lat *renatum*) and created (*creatum*) by sweet things."

D. Relationship to Early Christianity

Early Christianity emerged and developed within a religious context that included the mystery religions, and the early Church showed obvious similarities to the mysteries. Like the Greco-Roman mysteries, early Christianity was a religion of salvation and personal choice, and, like the devotees of the mysteries, Christian initiates underwent such ceremonial rituals as purification, fasting, and baptism in order to be admitted to the group. The Christian group itself was understood to be a new community of believers in which, ideally at least, "there is neither Jew nor Greek, there is neither slave nor free person, there is not male and female" (Gal 3:28). For Paul and many after Paul, Christian baptism was interpreted as a death experience (cf. Rom 6:3–4) that was linked to the experience of new life (understood apocalyptically by

Paul). Entry into the Christian community allowed believers to share in a sacred meal, the Eucharist, which commemorated the death of Christ. By eating of the bread and drinking of the wine in the Eucharist, Christians participated in the passion of Christ, and assimilated the saving power of the Cross into their lives. Many early Christians claimed to realize their salvation through a transforming encounter with a dying and rising Christ, so that Paul could speak of living "in Christ" (Gk *en Christō*) and John could refer to being "born again" or "born from above" (Gk *gennēthē anōthen;* cf. John 3:3). Paul compared the mystery (cf. *mystērion,* 1 Cor 15:51) of the death and resurrection of people to the planting and sprouting of a seed (1 Cor 15:36–38) in a manner reminiscent of the Eleusinian mysteries. John incorporated a similar theme into the Fourth Gospel as a saying of Jesus (John 12:24). Further, John narrated the story of Jesus performing the "sign" of changing water to wine (John 2:1–11), a miracle commonly associated with Dionysos (e.g., see Pausanias, book 6: Elis 2, 26.1–2). Finally, the adoration of the Virgin Mary paralleled the forms of veneration traditionally reserved for the Egyptian goddess Isis. Like Isis, Mary was presented as a blessed mother who was acclaimed queen of heaven (Lat *regina caeli*) and was often portrayed with her son Jesus sitting formally on her lap just as Horus sits on the lap of Isis.

Ancient and modern interpreters have tried to account for these similarities between the mystery religions and early Christianity by proposing theories of dependence. Early Christian authors like Justin Martyr (*1 Apol.* 66.4; *Dial.* 70.1) and Tertullian (*De praescr. haeret.* 40) explained that similarities between Christianity and Mithraism were due to demonic imitation of true Christianity. Some modern scholars have tried to argue that the mystery religions and early Christianity were dependent upon each other, and that Christianity in particular borrowed substantially from the mysteries. Even in the early Church, Clement of Alexandria (*Protr.* 12.120) posited, in a somewhat similar vein, that Christianity is indeed a mystery religion with "truly sacred mysteries" that offer pure light and a vision of the only true God, but Clement sharply contrasted the Christian mysteries with what he judged to be shameless and corrupt Greco-Roman mystery religions.

The most balanced and judicious interpretation of the relationship between the mystery religions and early Christianity avoids simplistic conclusions about dependence, and acknowledges the parallel development of the mysteries and Christianity. To be sure, religions may appropriate themes from each other, and, given the syncretistic milieu of the Mediterranean world during late antiquity, it is quite possible that such a relationship may have existed between the mystery religions and early Christianity. It seems clear that from the 4th century C.E. on, Christianity adopted a significant number of non-Christian practices. Yet many of the points of resemblance between the mysteries and Christianity may be attributed to the fact that they responded in a similar fashion to the religious challenges of the Greco-Roman world. As Greco-Roman religions, the mysteries and early Christianity often addressed similar social and religious needs, and offered to devotees similar experiences, rituals, and ways of salvation and transformation.

MARVIN W. MEYER

MYSTICISM. Defined as "piety in so far as primary importance is attached to inner religious experience, to religion as occurring in the soul" (T. Andrae), or as "the sense of the presence of a being or reality through other means than the ordinary perceptive processes or the reason" (J. B. Pratt). W. James lists four characteristics of the mystical experience: ineffability, a noetic quality, transience, and passivity. In some cases the mystical experience leads to a sense of unification with the divine (*unio mystica*) or of loosing oneself into "the void" or "the infinite." In others there is an experience of intimate fellowship with God that leaves personality intact. Accompanying phenomena include visions, auditions, trances, and states of ecstasy.

Whether or not there is mysticism in the Bible is mainly a matter of definition. The personal concept of God in biblical religion does not allow for a sense of unification, which is more characteristic of pantheistic religions. There may, however, be indications of "milder" forms of mysticism in the Bible, even if we do not accept the wider definition of mysticism as "true personal religion."

Visions and auditions are reported by the OT prophets (Isaiah 6; Ezekiel 1–3; Micah ben Imlah 1 Kgs 22:19–23) though the question of prophetic ecstasy is debated. When the prophets speak in Yahweh's name, there is no identification with God on the part of the prophet, for the formula "Thus says Yahweh" is clearly a messenger's formula (Gen 32:4). Ezekiel's frequent use of "like" or "the likeness of" (esp. chap. 1) in the descriptions of his visions could be an indication of the ineffability of his experience (cf. Daniel 7, in which the use of "like" is a literary device). As far as the noetic aspect is concerned, the prophetic experience is certainly thought to mediate a specific kind of knowledge, though evidence does not permit a definite conclusion as to the exact character of the inspirational experience. In some cases the prophets may remain passive, while God speaks to them, but there are also cases when ecstasy is prompted by music (1 Sam 10:5) or when the prophet waits for a message (Hab 2:1; Isa 21:6). Mystics are often reported to quiver; there are also examples of anesthesia or paralysis. One can note Ezekiel's lying

immovable for a considerable time (Ezek 4:4) or of passages such as Jer 4:19, which speaks of pain and anguish, but the reaction could just as well refer to the contents of his vision rather than being the result of a mystic experience (cf. Isa 21:3–4). On the whole, the prophets are never described as introspective, and they are always aware of the distance between them and Yahweh. Moreover, the biblical texts do not provide us with adequate information concerning the mental state of the prophets.

Franken (1954) finds examples of a mystical attitude in many of the Psalms. The psalmist stands silent, waiting for his God (Pss 37:7; 62:6), he "clings" to God (Ps 63:9), he cleaves to him in love (Ps 91:14). Many of the expressions referred to are connected with worship in the temple: the psalmist takes refuge in God (Pss 57:2; 61:5), he has sweet communion with him in his house (Ps 55:14). This is intense religious emotion, but there is no question of loosing oneself in God. There is "communion" but no mystical union with God. Medieval Christian mystics (e.g., Bernard of Clairvaux) used the love lyrics of the Song of SongsSongs to describe the mystic's loving communion with God, but this represents an allegorical interpretation of texts that were likely meant to be taken literally and contain no mystical allusions.

In the NT Paul reports that he knows a man who had been caught up to paradise in the third heaven and heard unspeakable words that a man is not allowed to utter (2 Cor 12:2, 4). It is likely that this refers to some kind of mystical experience and possible that the unspeakable words allude to the ineffability of that experience (however, it could refer to the name of Yahweh, which should not be pronounced). Since Paul is markedly reticent about the details of his experience, even to the point of speaking about himself in the third person, it is impossible to draw any further conclusions.

Visions are mentioned several times in the NT, but nowhere do we get information that would enable us to describe them as mystical. Revelation seems to come closest to a mystical experience (1:10—"I was in the Spirit on the Lord's day"), but it is hard to ascertain how much of the text is based on literary convention. In any case it shows, as do some passages in Daniel, that such visionary experiences were regarded as possible and "normal" in such situations.

When Paul says, "it is no longer I who live, but Christ who lives in me" (Gal 2:20), this is not a description of a transient mystical experience of unification with Christ, but rather a statement of a sense of continuous communion. When the church is said to be the body of Christ and the Christians its limbs (1 Cor 12:27), the point is the various functions of those limbs, and not just a description of mystical unity (cf. Rom 12:4–5). Nor does Jesus' parable of the vine and the branches (John 15:1–8) contain any allusion to the individual's mystical unity with him.

MYTH AND MYTHOLOGY. This entry consists of three separate articles. The first addresses the question of what is meant by the term "mythology," and how scholars have come to apply this term to certain portions of biblical literature. The second entry focuses more specifically on an examination of the "mythic" elements of the OT. The third entry surveys mythology in the Greco-Roman world.

MYTHOLOGY

Parts of the Bible have been classified by many scholars as "mythology." There has been a great deal of debate among scholars concerning the definition of mythology and its role in ancient society and literature.

A. Mythology and Biblical Study
  1. 19th Century Beginnings
  2. David Friedrich Strauss
  3. The Century after Strauss

7. Structural Analysis
8. Conclusions

———

A. Mythology and Biblical Study

1. 19th Century Beginnings. The critical study of myths, and the application of the fruits of this study to materials in both the Hebrew Bible and the NT, began long before the modern period. As early as the initial Christian centuries, the Church Fathers began both to denigrate other religions' myths as the result of the deification of ancient cultural heroes (see C.1 below) and to allegorize what might be seen as myths in the Bible. However, scholarly interest in mythology burgeoned dramatically during the course of the 19th century in Germany and then in Great Britain and elsewhere. Thus the scientific study of myths, including the possible presence of mythical materials in the Bible, is normally said to have begun in the 19th century.

There are several reasons for the notable increase in the attention paid to mythology in the 19th century, among scholars generally and among biblical scholars in particular. First, the Romantic movement's emphasis upon the imagination carried with it a resurgent interest in the earliest sources of humanity's poetic expressions, including above all early myths. Second, some initial results became available from the intense historical investigation of the Bible, which had begun in earnest in the 18th century and which would so dominate the 19th century that these hundred years are often called "the historical century." These results suggested that many of the stories we find in the Hebrew Bible and the NT are a result not of anything like eye-witness testimony but rather of a long process of community tradition. Since this same process is that which is responsible for the creation and preservation of myths, an obvious conclusion was that myths and biblical traditions might fruitfully be studied together. Finally, this same century witnessed the discovery of an increasing number of extrabiblical myths which were very similar to many biblical incidents. For example, by the final third of the 19th century scholars could read a Mesopotamian account of the Flood (now known to be a part of the composite Gilgamesh epic) which in its broad outlines was identical to the account related in Genesis 6–9. These discoveries would eventually force scholars to reconsider the relationship between mythology and biblical tradition.

2. David Friedrich Strauss. In 1835 D. F. Strauss (1808–74) published the first edition of his *Life of Jesus*. Identifying the mythical chiefly with the miraculous, Strauss undertook a comprehensive investigation into the origin of mythic materials in the gospel accounts of Jesus. He argued that the growth of traditions about Jesus was much like the growth of stories about any remarkable man: soon after the death of such a man, the historical gives way to the development of the legendary. Strauss concluded that a great many of the gospel stories—including not just the accounts of Jesus' birth, but also the stories about Jesus' baptism, about the call of the disciples, about various feeding and healing miracles—were mythical rather than historical.

For many readers, especially those unacquainted with the growing body of historical-critical inquiries into the Bible, Strauss' publication was their first introduction to the view that many biblical incidents were not historically "true," at least in the ordinary sense of the word. These readers were naturally shocked, indeed outraged, by the suggestion that the Bible rested upon myth rather than upon historical reality. The crisis which ensued had effects which lasted long after the early end of Strauss' own career as a scholar. These effects included an abiding hesitancy on the behalf of many biblical scholars to speak of the Bible and myth in the same breath, except to deny the presence of the latter in the former.

3. The Century after Strauss. For more than a hundred years after the furor which accompanied the publication of Strauss' *Life of Jesus*, the problem of mythology and the Bible ceased to exist in any significant way. This remained true despite the mounting number of extrabiblical myths with close or remote analogies to stories within the Hebrew Bible and the NT. Though the reasons for the cessation of sustained inquiry into the issue of mythology and the Bible are complex and include the memory of the fate of Strauss and his publication, the chief reason which was offered was simple and direct: there were no myths, at least complete myths, in the Bible. The refusal to label any significant biblical story as a myth was based upon the definition of myth which was accepted and repeated by most biblical scholars throughout this long period (see B below). This definition, made popular by the folklorists Jacob and Wilhelm Grimm in the first half of the 19th century, was that myths were stories about the gods. The key to this definition, upon which most students of biblical religion seized, is that the final word ("gods") is plural. Almost all scholars in the years following Strauss' explosive volume agreed that in order to qualify as a myth, a story had to recount the deeds of more than one deity. Since both the Hebrew Bible and the NT are testimonies to an evolving or an achieved monotheism, the conclusion reached was that there could be no stories about gods, and therefore no myths, in the Bible.

Although this general argument was repeated by almost every major biblical scholar throughout these years, an especially noteworthy and influential proponent was Hermann Gunkel (1862–1932). Gunkel, a member of the important History-of-Religions group of German biblical scholars and among the founders of form-criticism, shaped the study of the Hebrew Bible in the present century as fundamentally as any other single scholar. Fairly early in his career, Gunkel wrote a volume (1895) which utilized fully many of the recently discovered Near Eastern texts, from ancient Mesopotamia especially, and which demonstrated how much mythology lay behind the biblical view of the beginning and end of the world. Despite this demonstration, however, Gunkel continued to maintain, though not always with consistency (Rogerson 1974: 59–63), that the Hebrew Bible was essentially monotheistic and hence contained no complete myths. What we do find in the Hebrew Bible, he claimed, were "original myths" that have come into the Bible only "in comparatively faded colors"; for example, we have in Gen 6:1–4 (the story of the mating of divine beings with women) "nothing but a torso" of a once more elaborate myth (Gunkel 1964: 14–15). Since the religion of Israel "from its beginning tended toward monotheism," Gunkel continued, Israel preserved no myths because "for a story of the gods at least two gods are essential" (1964: 15).

Despite the great changes in the understanding of myth which obtained in such fields as anthropology, sociology, and psychology in the first half of the 20th century, the simple definition of myth as a story about the gods, and with this the denial of the presence of myths in the religion of Israel or in Christianity, continued to dominate biblical scholarship. This is easily documented by brief glances at the most widely utilized introductions to and theologies of the Hebrew Bible. Biblical introductions repeated until quite recently both the statements that myths assume a polytheistic background, hence that no complete myth plays a role in Israel's religion, and that what appear to be myths in the Hebrew Bible are only the fragments of myths borrowed from other Near Eastern cultures (Weiser 1961: 57–59; Eissfeldt 1965: 35–37; Fohrer 1968: 87). The authors of influential biblical theologies similarly relied upon this line of reasoning and then frequently went on to contrast the supposed cyclical, naturalistic, and mythical thinking of Egypt, Mesopotamia, and Canaan with the reputed linear, historical, and anti-mythical thinking of Israel (Wright 1952: 38–48, 125; von Rad *ROTT* 1: 27–28; 136–41; 2: 110–11, 349).

A signal that the century-long pause in addressing squarely the issue of mythology and the Bible was drawing to a close came with the demythologization program begun in the 1940s by the NT scholar Rudolf Bultmann (1884–1976). Bultmann began with an understanding of myth which was at once much broader than the definition used by other biblical scholars (myths are stories about the gods) and much more consistent with the definitions of myth utilized by anthropologists, historians of religion, and others. Myths, for Bultmann, are the ways in which a culture symbolizes and objectivizes its entire world view. The way in which almost all NT stories come to us is thus mythical: "the whole conception of the world which is presupposed in the preaching of Jesus as in the NT generally is mythological"; this conception includes that of a three-storied universe of heaven, hell, and earth, of the intervention of supernatural

beings, and of miracles (Bultmann 1958: 15). The task of the 20th-century human seeking to appropriate the message of Jesus, then, becomes one not of dispensing with biblical mythology but rather of translating this mythology, which represents a worldview different from our own.

Bultmann, of course, created with his demythologizing program a controversy among scholars not unlike that prompted by Strauss a century before. Among the criticisms often voiced was that Bultmann simply substituted his own particular philosophical mythology for that of the NT. Still, the evidence is clear that however much many scholars wished to disagree with Bultmann, he had raised again an issue which had long been too easily side-stepped. That the issue of mythology and the Bible was ripe for more thorough investigation is indicated by the appearance of several studies in the 1950s which began to question the wisdom of the long dominant claim that there are no myths in the Bible. Thus, Davies followed Bultmann's lead in looking about at the understanding of myths in other academic disciplines. He concluded that "mythology is a way of thinking and of imagining about the divine rather than thinking and imagining about a number of gods" and thus that "the content of the myth, whether polytheistic or otherwise is accidental to the nature of myth" (Davies 1956: 88). This conclusion means, of course, that any definition of myth which limits myths to stories about gods is radically inadequate. At about the same time, McKenzie noted (1959: 267) that the definitions of myth utilized by contemporary students of this phenomenon meant that the old view that there were no myths in the Bible was simply untenable.

How far biblical scholarship was moving is plain in B. S. Childs' important volume *Myth and Reality in the Old Testament* (1960). Although some of the statements in his study are not at great variance with those that had been made repeatedly during the previous century, Childs' understanding of myth is throughout informed by developments in other fields of inquiry. Noting the inadequacy of the long-regnant, narrow definition of myths as stories about the gods, Childs was among the first to observe that the real damage done by the continued reliance upon this definition, with its easy elimination of myth from the Bible, was the "tendency among those using this definition to fail to see the essential problem of myth in the Old Testament" (1960:15). Childs' study is largely devoted to the investigation of a number of biblical passages with identifiably mythical origins. In some of these passages (Gen 1:1–2), Childs finds the myth is still present, though in tension with an alternate view, while in other passages (Gen 6:1–4), he concludes that the original material has been demythologized. On the issue of mythical time, Childs rejects the cliché that Israel's neighbors thought cyclically while Israel thought linearly and concludes rather "the evidence of an *Urzeit-Endzeit* [Primeval Time–End Time] pattern within Israel is overwhelming" (1960: 76).

More conclusive proof yet of biblical scholarship's entrance into the wider realm of discussion about the origins and meanings of myth is F. M. Cross' *Canaanite Myth and Hebrew Epic* (1973). This study reflects a mature assessment of the importance of the Canaanite mythical materials unearthed at Ras Shamra in Syria in the late 1920s. These Ugaritic myths, as they are standardly called, demonstrate for Cross the bankruptcy of the position that Israel's religion is completely novel and discontinuous with Canaanite culture. Rather, the common pattern of Canaanite cosmogonic myths shows up repeatedly in biblical literature. This pattern is one of (1) a battle between a divine warrior and a chaotic sea god; (2) the victory of the divine warrior; and (3) the proclamation of this warrior as king with the completion of his sanctuary. The pattern corresponds to the structure of many biblical texts, sometimes in purely mythical form (Psalms 29, 89, and 93), sometimes in the form of a mixture of mythical and historical traditions (Psalm 77; Isa 51:9–11). The conclusion is thus that "in Israel, myth and history always stood in strong tension, myth serving primarily to give a cosmic dimension and transcendent meaning to the historical, rarely functioning to dissolve history" (*CMHE*, 90). Cross thus rejects the notion that we see in the Hebrew Bible either a gradual historicizing of myth or a mythologizing of history. Instead, both myth and history are present throughout. These conclusions mean, of course, that such issues as the relationship of myth to history or the origins, meaning, and functions of myth in general can return to the center of attention within biblical study.

B. The Problem of Defining Myth

In spite of the great attention devoted to mythology in the past two hundred years, nearly every student of this phenomenon laments the difficulty of formulating a truly adequate definition of myth. For example, Mircea Eliade, perhaps the 20th century's leading historian of religion, begins a volume devoted to myth with the admission that "it would be hard to find a definition of myth that would be acceptable to all scholars and at the same time intelligible to nonspecialists" (1963: 5). Closer still to desperation is J. Rogerson's statement that "finding an adequate and all-purpose definition of myth" remains an "impossible task" (1974: 173). This admitted difficulty has not prevented the appeareance of many studies, especially recently, attempting to formulate an adequate definition (Barr 1959; Bascom 1965; Rogerson 1978; Honko 1984; Kirk 1984).

1. Myths as Stories about the Gods. The Greek word from which comes our word "myth" originally meant simply "something said" or "something told," i.e., a story. Later in Greek tradition, the word came to mean a false story or a fabrication, a meaning our word "myth" still has in some contexts. When modern folklorists began to study myth, they utilized that definition made generally known by the Grimm brothers: a myth is a story about the gods.

This definition proved inadequate because it implied at once too much and too little. It implied too much in its suggestion that myths are limited to a polytheistic setting, thus removing from consideration any traditional stories told outside of such a setting. As the classicist G. S. Kirk observes, while some myths do treat the gods, others "are not primarily about gods at all, and have no ancillary implications of sanctity or tabu" (1984: 57). On the other hand, the definition implied too little. It was not sufficiently specific; some criteria were wanted beyond simply "a story" and "about the gods."

2. Toward a More Adequate Definition. Following upon the birth of both anthropology and the study of comparative religion at the end of the 19th century, a long series of definitions for myth were proposed as alternatives to the admittedly inadequate "myths are stories about the gods." A complete list of these definitions would be neither useful nor possible in the present context. But a selection of those proposed by some of the more influential students of myth might prove helpful in demonstrating both variety and continuity in the achievement of this important task of definition. The British anthropologist Sir James George Frazer (1854–1941), perhaps best known as the author of *The Golden Bough,* toward the end of his scholarly career defined myths as "mistaken explanations of phenomena, whether of human life or of external nature" (1921: xxvii). To Bronislaw Malinowski (1884–1942), who was among the first anthropologists to demand extensive field work as a prerequisite to reaching any conclusions about a given culture, a myth is "a pragmatic charter of primitive faith and moral wisdom" (1954b: 101). The definition in a standard dictionary of mythology published after World War II is as follows: a myth is "a story, presented as having actually occurred in a previous age, explaining the cosmological and supernatural traditions of a people, their gods, heroes, cultural traits, religious beliefs, etc." (*FWSDFML,* 778). Eliade, who admitted the problems inherent in any definition of myth, proposes that "myth narrates a sacred history; it relates an event that took place in primordial Time, the fabled time of 'beginnings' … The actors in myths are Supernatural Beings" (1963: 5–6). The American biblical scholar T. H. Gaster suggests that a myth "may be defined as any presentation of the actual in terms of the ideal" (1954: 185). For the theologian P. Ricoeur myths are "traditional narratives which tell of events which happened at the origin of time and which furnish the support of language to ritual actions" (1969: 101). And W. Burkert, a prolific German scholar whose analyses of myths have found a wide audience of late, concludes that "myth is a traditional tale with secondary, partial reference to something of collective importance" (1979: 23).

Even though an initial reading of these selected definitions might suggest something like complete disagreement and hence chaos, there are in fact a number of elements which most of the definitions share. These elements are three, or perhaps four, in number. To qualify as a myth, scholars are beginning to agree, the material has to be (1) a story, and (2) traditional—that is, transmitted, usually orally, within a communal setting; further, these traditional stories must (3) deal with a character or characters who are more than merely human. In light of the apologetic use to which the older, 19th-century definition of myth was put (to deny the presence of myths in biblical text), note that this third criterion can be met by

the presence of a single superhuman being in a tale. In addition, several of the above definitions suggest the addition of a final criterion, that myths (4) treat events in remote antiquity. That these three or four elements are the key criteria is indicated by the current definitions upon which many folklorists rely. A sample of two of these will demonstrate this: (1) "myths are prose narratives which, in the society in which they are told, are considered to be truthful accounts of what happened in the remote past … their main characters are not usually human beings" (Bascom 1965: 4); and (2) myths are "the traditional tales of the deeds of *daimones:* gods, spirits, and all sorts of supernatural or superhuman beings" (Fontenrose 1966: 54–55). Because of its brevity and yet its conclusion of three of the criteria listed above, Fontenrose's definition is perhaps the most adequate and stands the greatest chance of commanding wide assent.

Under the heading of the definitional problems here, one additional issue requires treatment. This is the issue of the possible distinction between myths on the one hand and legends and folktales on the other. This has long been a matter of great interest to biblical scholarship; many scholars have argued, for example, that it is vital to see a particular story in the Bible as a legend or a saga rather than a myth. Regrettably, there is nothing like a consensus among current students of myth on this issue. Some folklorists find a clear distinction between myths, folktales (identified by folklorists with *Märchen* in German, *contes populaires* in French), and legends (German *Sagen*, French *traditions populaires*). The distinctions most often proposed are that folktales are regarded less seriously than are myths, and that legends are both set in a less remote era than are myths and deal solely with human characters (Bascom: 1965: 4, 16). Other scholars doubt that any such distinctions are at all useful or legitimate (Kirk 1970: 31–41; 1984: 55). Burkert, for example, argues that the distinction between myths and legends or sagas so favored by biblical scholars is purely a part of an apologetic tradition and will not stand up to the available evidence (1979: 24).

C. The Meanings and Functions of Myths

For a long time, the material in the Bible which scholars suggested might qualify as mythic and hence might correctly be subjected to mythical analysis was limited to those passages obviously borrowed from the collections of myths among Israel's Canaanite, Mesopotamian, and Egyptian neighbors. Hence, passages like Gen 6:1–4 (the mating of divine beings with humans), Gen 6:5–9:17 (the Flood Story), various references to cosmic mountains in Ezekiel and the Psalms, portraits of Yahweh in a divine-council setting (Psalm 82; 2 Kings 22), or allusions to a battle between Yahweh and a cosmic monster (Job) were identified as mythical in origin and then studied as myths.

The definition of myth utilized at present by the widest array of scholarly disciplines (see B above) suggests rather that a great deal of the material, not just selected borrowings, in both the Hebrew Bible and the NT qualifies as mythic. Of course, not all biblical scholars will agree with this. Some will want to continue to defend the traditional distinctions between myths, on the one hand, and legends or folktales, on the other. In any case, it is clear that much biblical material (1) is in story form, (2) shows the signs of traditional transmission in a communal setting, and (3) refers to a deity and/or supernatural beings. It thus satisfies the three criteria implicit in an adequate definition of myth.

The inclusion of many of the stories in the Bible within the category of myth means that a subject of great interest becomes that of the origins, meanings, and functions of myths. Several recent surveys of this subject are available (Cohen 1969; Kirk 1970; Rogerson 1974: 175–78; Burkert 1979; Segal 1980). The number of different categories of myths' meanings and functions is to some extent arbitrary. Here, six distinct categories are covered, following a brief account of older attempts to account for the meanings and functions of myths. Each of these six categories of mythic explanation will be briefly described, then followed with some account of the advantages and disadvantages of each.

1. Forerunners of Modern Explanations of Myth. From antiquity through the second third of the 19th century, a number of traditional accounts of the rise and meaning of myth were available. Probably the most popular of these was that which saw myths as originating in stories told about human heroes and kings. As these stories circulated among wider groups down through the years, the heroes and kings responsible for their origin became gradually deified. This account of myth is often labeled

"Euhemerism." The label comes from the name of a 4th century B.C. geographer and novelist, Euhemerus of Messene. Euhemerus wrote, in Greek, a travel tale called *Sacred Scripture,* in which he told of a fanciful trip to an Indian Ocean island where he discovered that the gods worshiped in various religions were originally human heroes. Euhemerus' account was translated early into Latin and became an important source for early Christian writers who saw all pagan deities originating in this way. This Euhemeristic tradition certainly continues to flourish and many popular accounts of myth still rely upon it implicitly.

An immediate forerunner to those theories of myth still seen as of great value is the thesis of a German linguist who spent most of his career at Oxford, Friedrich Max Müller (1823–1900). His thesis began from the hypothesis that all European languages are the descendants of the language spoken by the Aryan invaders of India. This Aryan language was notable for its polyonymy (a single object designated by several names) and its homonymy (several objects designated by a single name). These characteristics, along with others such as gender endings, led to confusion at a later era when the language was no longer spoken and was replaced by the early versions of modern European languages. This confusion meant that common nouns were taken to be the names of deities and that originally straightforward descriptions of phenomena, especially the phenomena of nature, were wrongly taken to be stories about deities. These stories are, then, the original myths in Müller's view. Most of the stories are about nature, particularly about dawn and sunset; hence Müller's theory is often called that of "solar mythology."

Euhemerism and Müller's solar mythology are hardly the only models for the origin of myths prevalent before the end of the 19th century. They are, however, typical of many such models in that they attribute the origin of myth to some elementary confusion. In the case of Euhemerism, early people confused human heroes with deities. In the case of solar mythology, early people confused clear accounts of the workings of nature with dramatic narratives about the dealings of gods and goddesses. Few of the theories about myth which still find advocates today ascribe this sort of confusion to the makers of myth.

2. Myths, Like Science, are Attempts to Explain. A view of the origin of myth which still commands wide assent is that which compares myth with science and finds in both an expression of the human desire to explain puzzling phenomena. The only significant difference between the two is that myths come from an early stage in human development, while science comes from an advanced stage. Myths are thus immature science. Myths, in this view, thus meet an intellectual need, the need for explanation. For this reason, this theory is sometimes labeled the "intellectualist" theory.

One of the founders of modern anthropology, E. B. Tylor (1832–1917), was responsible for the fullest statement on behalf of the intellectualist theory (1871). Tylor was a cultural evolutionist who thought that the characteristics of primitive thought were evident in various "survivals" among modern humans. Tylor was also the chief architect of the notion that religion begins as "animism," the ascription of living souls (*anima*) to everything in nature. He thus felt himself able to construct a comprehensive history of human religious development. Though he argued that humans have developed, that we have abandoned the myth-making stage for the scientific stage, he also maintained that the human desire to know the causes of all phenomena has not changed. Hence, myths reflect both a particular stage in human development and the universal and continuing need for humans to explain things. An important implication of Tylor's theory is that, since myths are like science, myths are neither irrational nor illogical, though they may be wrong.

Tylor was not alone in holding this view in his era, nor has this view ceased to find advocates. Among Tylor's near contemporaries, Frazer held most centrally to this basic theory, though he also participated somewhat in the myth-ritual circle (C.4 below). It will be remembered that Frazer defined myths as "mistaken explanations of phenomena, whether of human life or of external nature" (1921: xxvii), a definition in complete accord with the Tylor intellectualist tradition. Though this tradition has never disappeared from the scholarly scene, it has been revived with enthusiasm of late by several anthropologists. R. Horton, for example, argues (1967) that traditional thought in Africa uses the same theoretical models, if different language, as does modern science.

The chief advantage of the Tylorean intellectualist theory is that it does give so-called "primitives" credit for thinking. Unlike other theories according to which early humans cannot and/or do not think

logically and rationally, according to this theory early humans are driven by the same intellectual needs and possess the same intellectual equipment as moderns. Secondly, the theory does accord with the literal, narrative level of many myths. Perhaps the majority of myths, and certainly the etiological aspects of all myths, claim to explain things. Tylor's intellectualist view takes these claims seriously.

This theory also seems to possess some disadvantages. Even though it credits primitives with thinking, it is based upon an evolutionary model which sees primitives as ignorant and wrong. Much anthropological field work in the present century disputes this view. Malinowski, for example, found so-called "savages" fully as scientific as 20th-century Europeans "if by science be understood a body of rules and conceptions, embodied in material achievements and in a fixed form of tradition and carried on by some sort of social organization" (1954a: 34). Secondly, the theory of Tylor seems unable to account for the demonstrable fact that myths are a social phenomenon. If myths are purely a result of the innate human desire to seek explanations, then why should they not remain individual and private?

3. Myths are Expressions of the Mythopoeic Mind. Another explanation of the meaning and function of myths is that which sees them as primarily expressive, rather than explanatory, and as a product of a kind of thinking called "mythopoeic." Mythopoeic thought, according to those who find this concept accurate and useful, is not so much an earlier stage of modern thought, as mythical thinking was for Tylor. It is instead a different kind of thought altogether. Mythopoeic thought works expressively, mystically, and poetically. Such thought seeks to participate with phenomena, not explain them.

For much of his career, the French anthropologist Lucien Lévy-Bruhl (1857–1939) defended the concept of mythopoeic thought and ascribed to it the origin of myths (1923; 1925). Lévy-Bruhl sometimes used the adjective "pre-logical" to describe this mode of thought. By "pre-logical," he did not mean that primitive peoples were incapable of thinking logically but that they did not do so (Segal 1980: 24–25). Rather than thinking logically, such peoples, argued Lévy-Bruhl, thought mystically and made no distinctions between the physical or the material and all other realms of experience. They thus did not explain with reference to natural causation. They rather expressed themselves in myths, which reflected their urge to participate in everything around them.

Even though anthropologists, especially those with some field work experience, have been most reluctant to adopt this theory, which does not seem to describe the thought of the peoples they have studied, and even though Lévy-Bruhl himself renounced his view toward the end of his life, this theory has found a wide hearing among many literary critics, philosophers, and biblical scholars. Biblical scholars appear to rely chiefly upon the work of E. Cassirer for their notion of mythopoeic thought. Cassirer, like the early Lévy-Bruhl, sought the key to understanding myths in the distinctive sort of thinking which he found to produce myths (1923–31). This sort of thinking was antiempirical, and quite different from scientific thought. The influence of both Lévy-Bruhl and Cassirer is particularly evident in an often cited article by H. and H. A. Frankfort, written as the first chapter in a volume about ancient Near Eastern thought (1946). For the Frankforts, ancient mythical thought does not distinguish between subject and object, as does scientific thought. Instead, mythopoeic thought addresses the world as "thou," and participates with this world rather than seeking to analyze it (Frankfort 1946: 4–6). "Primitive thought," the Frankforts maintain, "cannot recognize our view of an impersonal, mechanical, and lawlike functioning of causality" (1946: 15).

An advantage of the theory that myths stem from mythopoeic thought is that it recognizes the special and distinctive character of myths. Unfortunately, this view has seemed to have little more to recommend it. Most scholars who have lived among "primitive" communities have found little evidence there for wholesale thinking of a different sort from that which typifies modern groups. The evidence rather suggests that both some primitives and some moderns think more emotionally, expressively, poetically, and illogically than do other primitives and other moderns. The division, that is, is one within each group, not between primitive peoples on the one hand and modern groups on the other. Early in his study of Greek mythology, Burkert suggests we dispose of "the nostalgic idea of a golden age when a race of poetically minded primitives uttered myths instead of plain speech" (1979: 24). Kirk's summary critique of the theory of mythopoeic thought is similarly harsh but reflects fairly the general assessment today:

"the polarization between fully rational thought (which is usually held to begin, in the Western tradition, at some time after Thales) and non-rational or 'mythopoeic' thought is logically indefensible and historically absurd" (1984: 58–59).

4. The Myth-Ritual Theory. According to this theory, myths are always to be studied together with the rituals which accompany them. This is so because myth and ritual are two parts of a single phenomenon: myths are the spoken counterpart to that which is being performed. This theory is also sometimes called "patternism" because several of its advocates have claimed to have discerned a pattern, in many Greek and Near Eastern myths and rituals, of (1) conflict, (2) death or disaster, (3) lamentation, and (4) rebirth.

The myth-ritual view stems most directly from the statements of the great Scottish scholar William Robertson Smith (1846–94). Smith began his career as a biblical scholar, but then was removed from his position as a professor at the Free Church College, Aberdeen, largely for making popularly available the conclusions of German biblical scholarship. In his lectures on Semitic religion, Smith said, "It may be affirmed with confidence that in almost every case the myth was derived from the ritual, and not the ritual from the myth" (1927: 18). This statement represents what has been called the "boldest" of the myth-ritual positions: the statement asserts not just that myths ought to be studied together with rituals; rather, all myths originate as rituals. Many other myth-ritualists hold a more moderate position, arguing not that all myths started their lives as rituals, but rather that myths and rituals generally belong together in religious life and hence are to be discussed as one.

Taking their lead from Robertson Smith, a group of classicists and anthropologists, chiefly at Cambridge University, offered a total view of myth based upon the presupposition that myths belong with rituals. These included Jane Harrison (1850–1920), Frazer in part (Ackerman 1975), F. M. Cornford (1874–1943), A. B. Cook (1868–1952), G. Murray (1866–1957) and others, a group sometimes called the Cambridge school of myth-ritualists. Their study of myth persuaded them that a basic myth-ritual pattern was very widespread in Mediterranean antiquity and lay behind the structure of Greek drama. They also went further afield, to ancient Mesopotamia, where they read the Babylonian creation myth (*Enuma Elish*) as the "libretto" to the spring New Year "Akitu Festival." This group of scholars thought they had found in Enuma Elish and the festival to which they argued it was attached a pattern: (1) A king, acting the part of a deity, fights with a chaotic monster, (2) is defeated, (3) is mourned, but then (4) rises again.

In either its bolder (all myths originate as rituals) or more modified (myths usually accompany rituals) forms, the myth-ritual theory was long of great importance in biblical scholarship. The list of major scholars influenced by myth-ritualism is long and includes such names as S. Mowinckel, I. Engnell, A. R. Johnson, and many others. But the two most ardent advocates of the position are perhaps S. H. Hooke and T. H. Gaster. Hooke edited several volumes, for which he also wrote introductory essays, outlining the myth-ritual pattern and then applying it to a variety of biblical texts (1933). Gaster found particularly supportive evidence for a myth-ritual position in the Ugaritic texts from ancient Syria. The thesis of several of his publications is that ancient Near Eastern myths reflect "a pattern and a sequence of ritual acts which, from time immemorial, have characterized major seasonal festivals in most parts of the world" (1977: 12). This pattern Gaster detected in several Psalms (Psalms 29, 89, 93, 97, 99), as well as elsewhere in the Hebrew Bible. Though Gaster insistently claimed that he was defending only the more moderate myth-ritual position (that we view myth and ritual together as one thing), both his definition of myth as something which parallels a ritual, and his scheme according to which myths begin as accompaniments to rituals but are later separated from this context (1954: 185–203), suggest perhaps the strongest of the myth-ritual positions.

Unlike the theory which anchors myths in a hypothesized sort of mythopoeic thinking, the myth-ritual position has several advantages and continues to find ready support. Initially, it is undeniable that many myths do accompany rituals. This seems especially true of several Canaanite or Ugaritic myths, which formed a part of the culture out of which early Israel emerged. Secondly, this position possesses the advantage of placing myths in an authentic, "lived" religious setting. As such, it is a good counter to any theories which abstract myths out of the group experiences in which myths are formed and continue to survive.

Still, the myth-ritual theory, like all those offered by students of myth over the past century, runs into several problems (Fontenrose 1966; Kirk 1970: 12–31; *CMHE*, 82–83). If it is undeniable that many myths do accompany rituals, it is also the case that some do not. In some cultures, it appears that no myths are connected with rituals. Frazer himself, who sometimes spoke as a myth-ritualist, noted late in his career that the number of myths directly tied to rituals is "almost infinitesimally small, by comparison with myths which deal with other subjects and have had another origin" (1921: xxviii, n. 1). Moreover, the key examples so favored by the early myth-ritualists and their followers among biblical scholars—the Babylonian Akitu Festival and *Enuma Elish*, and the tales of Attis, Osiris, and Adonis—all turn out to be examples supportive of myth-ritual conclusions only if one utilizes very late and unreliable evidence (Burkert 1979: 100–1). Finally, to explain myths by asserting that they originate as rituals can be seen as a failure to offer any explanation at all (Kirk 1970: 17–19). If myths do originate as rituals, then we require an ensuing explanation of the meanings and functions of ritual; and this has not always been forthcoming.

5. Myths and Society. Another theory of continuing persuasiveness looks first and foremost to the social setting of myths. All of the most adequate definitions of myth offered in the 20th century stress that myths are *traditional* stories, that is, that they originate and are transmitted in a communal context. The theory under consideration here argues that the function of myth is precisely to cement social bonds, to bring together disparate people as a group, and then to support these peoples' group identity.

Once again, this theory can be traced most directly to Robertson Smith. That which Smith found absent from previous discussions of religion was the awareness of religion's social dimension. He then argued, for example, that sacrifices were originally meals shared between a religious community and its deity or deities; these sacrifices thus functioned to cement social bonds. What was true of sacrifice was true generally. Hence, Smith's famous and enormously influential statement that early "religions did not exist for the saving of souls but for the preservation and welfare of society" (1927: 29). The French sociologist Emile Durkheim (1858–1917) acknowledged his debt to Robertson Smith in shaping this idea into a general account of religion. Durkheim thus viewed myths as a means by which "the group periodically renews the sentiment which it has of itself and of its unity; at the same time, individuals are strengthened in their social natures" (1915: 420).

Though many scholars could be cited as among those who developed the implications of what Robertson Smith and Durkheim had concluded about the social function of myths, none did so more powerfully than Malinowski. It will be recalled that Malinowski devoted several years of his life to field work in the southwest Pacific and saw such experience as crucial preparation for any generalizations about culture. His own experience convinced Malinowski that myths are not speculative or symbolic abstractions. Myths rather perform emphatically practical functions. "Myth," Malinowski determined, "performs in primitive culture an indispensable function: it expresses, enhances, and codifies belief; it safeguards and enforces morality." A myth is therefore "not an intellectual explanation or an artistic imagery, but a pragmatic charter of primitive faith and moral wisdom" (Malinowski 1954b: 101).

Given Malinowski's frequent appeal to the practical function of myths as charters for social behaviour, this theory of myth is often called "functionalism" or "the charter theory." Although biblical scholarship rarely refers explicitly to either Malinowski or to the concept of functionalism in mythic interpretation, this particular theory of myth has been widely utilized in the study of the religion of Israel. Whenever we read that a particular biblical story is a model for Israelite behavior or that another story serves to give the nation a sense of identity over against other groups, standing implicitly and perhaps unconsciously behind such statements is a functional theory of mythology. Similarly, the recent return to an interest in the social background of the religion of Israel—the social context of those responsible for the creation of the Israelite nation, the social setting of the Israelite prophets, etc.—assumes that most biblical texts yield an accurate, mirror reflection of group identities. This assumption stands or falls with the critical assessment of the social model for myths.

Like the myth-ritual theory, the social context theory has the advantage of taking into consideration the actual, empirical conditions under which myths are transmitted. The theory has thus had a great deal of appeal to ethnologists, who have repeatedly argued that only "armchair" anthropologists like Tylor or

Frazer could fail to see the centrality of myths' social functions. Secondly, at least on the literal, surface level, many myths are most economically interpreted as charters for socially beneficial behavior. The social context theory proposes that we take this literal level seriously.

Despite this theory's obvious strengths and its continued usefulness in many areas of inquiry, it is not without disadvantages as well. First, the theory has difficulty accounting for the presence of the unusual, the bizarre, or the fantastic in myths (e.g., humans transforming themselves into plants or animals; heroes dismembered and then reassembled; nonhuman beings who speak; people transported vast distances in a flash; etc.). What possible purpose in the interest of group identity and unity can such elements perform? Related to this objection is that which observes that there is much in many myths which appears socially disruptive. Any list of the chief themes in world mythology would have to include incest, murder, cheating, and other similar themes; and these acts are frequently performed by the hero of the myth. How can we see such themes serving as charters for socially beneficial behavior? Thirdly, and most importantly, the functionalist theory of myth has to assume throughout a one-for-one correspondence between empirical social conditions and those social conditions which appear in myths. Though ethnographic research sometimes demonstrates that there is such a correspondence, this research also shows that often many aspects of the society in which the myth lives are nothing like the society depicted in the myth and never have been (Oden 1979–80). It seems particularly important for biblical scholars interested in the social context of Israelite religion as reconstructed from biblical narratives to take into account this objection.

6. Myths and the Unconscious. In several ways, this theory of the origin and meaning of myths is the psychological equivalent to the social theory described immediately above. As the latter theory posits that myths function to fulfill social needs, this theory posits that myths function to fulfill individual, psychological needs. In its various forms, this view begins by presupposing the existence of an unconscious. The human unconscious then needs expression; and the origin and meaning of any myth is to be sought in this need.

There are two chief versions of this psychological theory. The first is that of Sigmund Freud (1856–1939), whose name is synonymous with the birth and impact of modern psychology. For Freud, the human unconscious is a repository of various instinctive drives. These drives include especially sexuality, but also various agressive urges. These drives need expression. However, for anyone to act directly in response to these drives would be enormously disruptive, indeed chaotic. Hence, myths function to express imaginatively what normal humans cannot express in conduct. Myths are thus very much like dreams: both myths and dreams function to release the tension created by the impossibility of acting continually and directly in response to unconscious drives.

A second version of the psychological theory is that associated above all with Carl Jung (1875–1961), who was for some time an associate of Freud. Jung, too, begins by presupposing the existence of an unconscious. However, for Jung this unconscious is also collective, not solely individual, and the unconscious yields not so much aggressive drives as it does a kind of spiritual drive for meaning (Segal 1980: 12). Like Freud's, Jung's research is partly based upon the study of dreams. But Jung's research into dreams and myths convinced him that the same symbolic representations appear in both, and hence "that we must be dealing with 'autochthonous' revivals independent of all tradition." These " 'myth-forming' structural elements" Jung labeled "archetypes" (1969: 71–72). Given that myths come from the unconscious, which is not fully rational, Jung is not willing to endorse a rational or logical investigation into the meaning of myths. Myths simply express the collective unconscious; no more needs to be or can be said about their meaning.

An initial strength of the psychological theory of myth is that it offers one explanation for the universality of myths. Why is it that in every culture, at least in some stage of that culture's development and perhaps at every stage, we find myths? And why is the shape of many of these myths from disparate areas of the world quite similar? Freud and Jung have a ready answer to such questions: myths appear everywhere and mythic themes are similar precisely because all humans have an unconscious. Secondly, this theory offers a powerful account for the strength of myths. People often feel very strongly about their

myths and are willing to defend them at great length. The psychological theory accounts for this strength by locating the drive behind myth in human instinct.

This theory, too, possesses its share of problems. First, the theory is difficult either to prove or to falsify. The evidence for its correctness is the human unconscious; and this remains a posited realm, one not open to the kinds of empirical investigation upon which scholarship depends. Secondly, Jung especially, along with some of his followers, makes a great deal of the universal nature of the dream- and myth-symbols he discusses. Further research has indicated that many of these symbols are nothing like universal. They are rather limited to a quite narrow stratum of Western thought; and even within this stratum, the symbols prove to be less widespread than Jung and his followers believed. Thirdly, and related to the second objection, the psychological theory leaves little room for the kind of cultural relativism that much 20th-century ethnographic research has claimed to discover (Dundes 1984: 270). Psychological theories tend to deal in "universals"; many historians, anthropologists, and others dispute the existence or usefulness of universals when dealing with the great variety of human cultures.

7. Structural Analysis. A final theory for the meaning and function of myth is structural analysis. It is almost wholly the result of the investigations of a single scholar, the French anthropologist Claude Lévi-Strauss. Structural analysis as practiced by Lévi-Strauss "contains the one important new idea in this field since Freud" (Kirk 1970: v–vi). Precisely because of its novelty, this theory is also controversial, and requires somewhat more elaborate description. Some scholars find the theory difficult to understand or to put into practice. Others claim to understand Lévi-Strauss but disagree vehemently with his presuppositions and results. Still others find it the single soundest approach to myth available.
